the Mongolian types a marked presence of leptorhiny is found by having a more prominent nose. In studying the racial anatomy of the nose it is not enough to rely on the relation of the length and the breadth of the nose, the prominence or otherwise of the entire nasal skeleton has to be taken into account. Risley was, therefore, right in making the latter as the deciding factor in comparing the nasal characters of the Mongolian and other races. In his measurement of the Bengali people, however, the test by which the prominence of the nasal skeleton could be judged namely the biorbito-nasal-index was not taken except in the case of a solitary group. In the absence of this test consequently, his conclusion of the Mongolian origin of the Bengali people was not justified on the basis of his own data. Prof. D. B. Bhandarkar has shown, in his interesting account of the cultural affinities of the Nagar Brahmins of Guzarat with the Kayasthas of Bengal the identity of a large number of surnames of these two groups.* A comparison of the Anthropometry of these two, therefore, is instructive. The average stature of the Nagar Brahmins as given by Risley is 1643 mm against 1636 mm. of the Bengali Kayasthas. The average Cephalic and Nasal Indices of the former are 79.7 and 73.1 against 78.2 and 70.3 of the latter. The average biorbito-nasal-index of the Nagar Brahmins is 116.7 but in the case of the Bengali Kayasthas the figure is not available but judging from that of the Chandals of Bengal (one of the lowest classes of the population) which is 114.0, the value of this Index in the case of the Bengali Kayasthas could not be much different. Further, when the data are analysed it is found that 63 p.c. of the Nagar Brahmins are brachy and 53 p.c. are leptorhine against 60 p.c. brachy and 75 p.c. leptorhine in the Bengali Kayasthas. It is, therefore, difficult to understand how the one could have Scythic, and the other Mongolian origin. Besides as Rai Bahadur Ramaprosad Chanda† has pointed out and who incidentally was the first to show weakness in Risley's theory that typical Mongolian characteristic such as the presence of the epicanthic fold absence of bodily hair are not to be found among the Bengalis. This must not be taken to mean that Mongolian admixture is denied altogether in Bengal—it is simply

meant that it is not sufficient to explain the dominant type in Bengal. The only way to account for it is to link it up with that of the Western littoral through Central India, of which as we have already noticed there is some probability judging from the identity of surnames. It is in the central region, therefore, that investigation is necessary to find out how far the continuity of type exists from Bombay to Bengal. The origin of this brachycephalic Alpine type in India was hitherto unexplained. The recent discovery of brachycephalic crania in Sind has lent some probability to the theory of a very early migration of this element in India. But its extension both in the South and in the East will never be fully understood until archaeological excavation of the numerous prehistoric sites yields skeletal materials showing these characteristics. The excavation of the Copper age remains in the Chotoagpur districts discovered by Rai Sarat Chandra Roy Bahadur would be of great significance as they may not improbably throw some light on the racial origins of the people of Bengal.

From a consideration of the foregoing facts it would appear that the greatest necessity in the field of Indian anthropology is the excavation of the archaeological sites in search of remains of its prehistoric inhabitants; for not only the racial history of ancient India cannot be reconstructed without its aid but it also holds as already stated, the secret of the somatic relationships of the present population of India. In the long history of this country whose true antiquity is now being revealed, the only documents that we possess bearing on the physical constitution of its past inhabitants are the two skulls from Bayana and Sialkot, the skulls from an Iron age site at Adittanallur and the recent finds in the Indus Valley. Outside of these we have no materials for guidance. In his account of the first two of the above skulls, which constitutes almost our sole literature on the subject, Sir Arthur Keith has remarked—"There is no anthropological problem more in need of investigation than that of the prehistoric inhabitants of India. We all wish to see applied to India the methods which have brought to light the ancient races of Europe. Nor is there any reason to doubt that there are hidden away in more recent deposits of river valleys and caves, in prehistoric isolated interments and communal cemeteries, records of the ancient races of India. They have not

* *Indian Antiquary*, p.p. 7-37, 1911

† *The Indo-Aryans*, part I, pp. 69-70.

been seen nor found because they have not been patiently and systematically looked for.* It is true as Sir Arthur Keith has noted that no systematic search has been made for the skeletal remains of the prehistoric races of India, and considering the vast number of ancient sites in this country and their accessibility, the lack of interest in these explorations is certainly deploring, but what is worse and inexcusable is the irresponsible manner in which such materials were treated, when luck put them in the hands of our explorers. A great part of the literature on the pre and early historic sites in India is tragic reading for the discovery of numerous human skeletons are recorded, but not a trace of them could now be found anywhere in this country! In his account of the excavation of the Great Temple Mound at Indrapura in the Gorakhpur district which roughly corresponded to the ancient Kingdom of Kosala and assigned to the 4th Century A. D.† Mr. Carlleyle § late of the Archaeological Survey, writes "I have called this the Skeleton Mound, because I found five human skeletons in it. One of the skulls found had a very projecting jaw exactly like that of a Negro. This belonged to the skeleton of a male nearly 6 feet in length; but close alongside of it I found the skeleton of a female, 5 feet 6 inches in length, the facial part of the skull of which had a straight even profile. Another skeleton was placed across or upon the doorway of one of the temples. Four of the skeletons had their heads placed towards the north but the fifth was placed the reverse way." In another part of the same temple, the writer observes, "A human skeleton lay across the doorway. Two more human skeletons of a male and a female lay nearly side by side, while a fourth skeleton lay just beyond the wall toward the west."

Similarly in his excellent work on the "Indian Prehistoric and Protohistoric Antiquities", Bruce Foote records the discovery of a human skeleton lying in a flexed position in a large stone circle in

Central Mysore near Savandurga rock* In describing the cairns numbering over 263 at Jewargi in the Shorapur district in the Madras Presidency, Meadows Taylor† mentions the discovery in one of numerous human skeletons which are mostly of small size as to height but having bones of unusual, thickness and strength. In a Neolithic tomb in South Mirzapur, Cockburn§ found the 'complete fossilized skeleton of an adult male.'

Not a trace of the skeletons mentioned above, and many more recorded in the accounts of the excavations of the prehistoric sites of India not mentioned here, could be found at present. One naturally would like to know what has become of them—the documents that are of priceless value in the reconstruction of our ancient history? It is unfortunate but nevertheless true, that hitherto archaeology in India meant only the reading of some Sanskrit inscriptions and the preservation of ancient monuments. While they are undoubtedly necessary they are not its chief functions. Its proper aim should be the reconstruction of the ancient history of a particular land and people. In Europe as well as in Central America not to speak of Egypt, and the Near East, the unrecorded history has been unearthed by its aid, but in order to be able to do so the fundamental unity of archaeology and anthropology has first to be realised. Neither in Europe, nor in Egypt or America such splendid work would have been possible if the help and co-operation of anthropologists were not sought, for the culture or civilisation of a people is a complex whole and its full study involves the researches of different lines of workers. Actually how much can be achieved by the combined efforts of scientists with pure archaeologists is to be seen in Pumpelly's excavation of Anau where the team the work of geologists, anthropologists, zoologists and archaeologists added so much to our knowledge of the ancient civilisation of Southwestern Siberia. In the excavation of our archaeological sites, this aspect of the question has to be more fully recognised than it has hitherto been in this country not only for the complete-

ness of the work, but also for the proper handling and preservation of such of its finds—specially the bones—which require special treatment in the hands of experts if they are not to be irreparably damaged. Fortunately the discovery of the Indus Civilisation has aroused keen interest in the importance and urgency of archaeological studies, and in Sir John Marshall we have a man of wide learning and experience who can be depended upon to direct such investigations in true and scientific lines.

We may, therefore, confidently hope that the neglect and irresponsibility shown in the past which led to the loss and destruction of much of the discovered skeleton remains of India's prehistoric inhabitants, will not be repeated in future but a more systematic search will be made for them. In that way we will be able gradually to add to our knowledge of the physical characters of the prehistoric inhabitants of India and which alone will enable us to understand her present racial affiliations.

THE GARDEN CREEPER

By SAMYUKTA DEVI

THE house stood on Harrison Road. On the broad parapet of the terrace were arranged flower-pots, containing glorious roses, jasmine and chrysanthemums, also rows of exotic flowers and ferns.

The owner of the house was Shiveswar Ganguli. The name sounds old and orthodox, but the man was young in years and ultra-modern in opinions and theories. Even the present age seemed too backward for him,—he lived in the future. But of that, hereafter. Let us get on with the story.

It was nearing midnight, and the streets were beginning to get deserted. Only some hackney carriages rattled past, now and then, and belated drunkards reeled homewards, shouting and gesticulating. Shiveswar Ganguli was walking about excitedly at this time of night on the terrace. His eyes looked strangers to sleep, and his forehead was covered with beads of perspiration. His curly hair, too, hung damp and unkempt on his brows. Yet, it was not warm, and he carried a rich shawl across his shoulders. One end of the gold embroidered thing trailed behind him on the floor, but he had no eyes for it. He seemed to be listening for some sound. The light from the street lamp near by, shone full on his anxious face.

A large car, with its black hood up, two palanquins and a closed carriage waited in front of the house. There was not much

noise, but every room had its lights turned on, and people moved about all over the place. Only they moved on tip toe, so as not to make any noise. A woman, with face hidden behind a veil, came to him and whispered something "Is she a bit better?" he asked. The woman nodded and went in.

He had grown tired of walking and went and sat down on a bench by the side of the flower-pots. Just as he did so, he heard the blowing of a conch-shell inside, but the sound subsided almost at once. A commotion was heard in the inner rooms. Shiveswar got up hastily and the veiled woman appeared again, beckoning him in.

The inner apartments were tastefully decorated. Modern paintings and pictures abounded. There were landscapes, old paintings of the Mughal School, and many photographs. But not a single picture of any god or goddess of the Hindu pantheon. The first room was furnished in Mughal style too. It contained a huge picture of the Taj Mahal and, surrounding it, pictures of Akbar Shah, Nurjehan, Jehangir, Shah Jehan, etc. A rich carpet was spread on the floor, and fat bolsters of velvet and Lucknow print were arranged on it. Flower vases and incense burners and scent bottles of silver and marble were scattered profusely everywhere. Two huge chandeliers lighted the room.

The next room was a medley of Japanese and English furniture. Painted Japa-

nese mats, hung like curtains in front of the doors, whereas the windows sported curtains of printed muslin. There were a grand piano in one corner of the room and a painted wooden screen. The rest of the furniture were of foreign design and so were the lights and fans.

In a small room, situated in one corner of the verandah, a few pictures of oriental gods and goddesses were scattered here and there carelessly. A glass case, full of earthen dolls and toys, stood in one corner. They too showed signs of neglect.

Another room contained plates and utensils, made in Benares and Kashmir. These were taken care of, properly.

After these rooms, came the inner apartments. In front of a room here, quite a little crowd had collected. These were mostly servants. Inside, there were doctors, midwives, nurses, besides a number of women. Shiveswar pushed his way in and found his mother, Mokshada Devi, rocking a little baby girl in her arms. As he came in, she looked up and said, "So you have come inside the lying-in-room? But why should I take exception to your coming? Nearly all the world had been inside it. And after all this fuss, your wife brings forth a girl!"

She tried to smile scornfully, but her joy at the arrival of this new being, somehow mingled with the scorn.

"Does it matter?" asked Shiveswar. "I cannot see any sense in your antiquated prejudices. Is a girl less valuable than a boy? Is she less important in the scheme of creation? I don't see any difference. But of that, hereafter. What does the doctor say about her?" He looked at his wife as he spoke, and his face became anxious again.

"I don't know, my dear," his mother answered, "they talked in English. You better ask him yourself."

The doctor did not hold out any great hopes. Still, there was hope as long as there was life.

After the doctor had left, Shiveswar returned again to that room. "Why don't you go and lie down?" his mother asked. "You have been on your feet the whole of the time. What did the doctor say?"

"Nothing definite," her son replied. Then after a while, "Mother, we should give a name to the new baby."

The mother did not look over-enthusiastic

at this proposal. "You are absurd," she said, "what's the hurry? This is not the proper time."

But the new mother had recovered consciousness by this time. In a weak whisper, she said, "Why not now? I might not be here to hear it, if you wait much longer."

Her husband bent down over her and whispered, "Don't Hem, please don't. You pain me very much. You are going to get well. But we shall give baby her name to-night, all the same. Mother, what name, do you think, would suit her best?"

His mother had gone to the other end of the room, and was talking to a servant. She came back to them and said, "So it must be to-night? But why do you ask me? You won't go by my taste."

"Still, there's no harm in choosing it," her son said; "perhaps, your choice and ours might be alike."

"One of my friends had a grand-daughter named Muktakeshi," his mother said. "I liked the name. Your daughter is born with quite a mop of hair and it will increase with her growth. So this name would suit her quite." Her son pondered for a moment, with his brows puckered. Then, "All right, mother," he said, "let us compromise. We shall give her a name which shall be half of your choosing and half of mine. Let baby be called Mukti. It was fortunate that I asked you, otherwise, this beautiful name would never have struck me."

"Beautiful indeed!" sniffed his mother. "But do as you please. I have many things to attend to now." With that, she went out of the room.

A nurse came in. The baby's mother smiled a pallid smile, on hearing her name, and looked at the small being sleeping by her side. She was too weak to speak and so remained silent. Her husband too went out.

In the house, joy was subdued on account of the illness of baby's mother. At last the tension ended. The young mother departed to the great unknown. Perhaps she remembered her baby there, perhaps she forgot.

Her mother-in-law wailed aloud in her grief. Her son sat like one stunned, with the baby clasped in his arms.

(2)

Shiveswar's name suited him very little. Though he was not possessed of an excessively

bad temper, still he was very hard to get on with. He was a reformer, an extremely thorough-going reformer. He could not tolerate superstition, in any form or guise. He hated gods and goddesses. Unfortunately, his parents were not of the same ilk; so they named him after one of these objectionable beings and so doomed him to life-long suffering. There was no way of getting out of it now.

When he had first got admitted into a school, this thing did not strike him at all. Even when he was at college and had safely passed through two examinations, he did not trouble himself much about his name. Otherwise, he would have changed it, before it laid for itself a solid foundation in the calendars of the university. But martyrdom was in store for him; so he was too late to effect this reformation.

After he joined the law college, he had devoted himself heart and soul to the carrying of the standard of reform everywhere. One day, he got invited to tea, in the house of Abinash, one of his friends. A hot discussion broke out about social evils. Suddenly, one of his friends, Anadi by name, turned to him and asked, "Well Shiveswar, you have reformed nearly everything you could lay your hands on. Even in this blistering heat, you are sipping hot tea, leaving alone the glass of *sherbet*, because it is orthodox. But why didn't you begin at the beginning? Your name is Shiveswar, is it not? *Shiva*, the leader of the pantheon with five faces, three eyes, lord of two wives and the smoker of *ganja*! *Shiva* the greatest idol of all, appears to be your patron saint! Don't you think it a superstition, to answer to this name at all?"

Shiveswar was non-plussed. Why had not he thought of it before? But no use crying over spilt milk now. What is done is done. "What can I do?" he said, "My name was not chosen according to my taste. My parents hardly consulted me, when they perpetrated this atrocity."

"But don't make the same mistake in the case of your children," said Anadi.

"Certainly not," cried Shiveswar, nearly jumping out of his chair, in his excitement. "You won't find anything of the sort near me."

Shiveswar had been married early, and here too, he had not been consulted. So when the bride came to live with her husband, nearly five years after the marriage ceremony,

her husband set about reforming her at once.

Her name was Haimabati, which is a very orthodox one. So, "Look here, my dear," her modern husband said, "your name is too old-fashioned. I want to change it, a bit. Have you any objection? Don't you think, the name Hemnalini sounds much better than Haimabati?"

The heavily veiled bride remained silent in amazement, at this proposal of her husband. Perhaps, she took it as a jest. Shiveswar waited in vain for her to look up or speak. He could scarcely change her name for her, without her consent. A reformer could never play the tyrant over a woman. So he had to coax and cajole for a pretty long time. At last his efforts were crowned with success, and, "do as you think best", replied his wife. With that he had to remain content, for the time being.

But this reformation brought him small credit, because few ever heard of it. Nobody called the bride by her name, except her husband. He, too, never did so, in public. In her father's family, they addressed her by her nickname Pooti, and no reformation was possible there. But Shiveswar was very much pleased with himself, so it was all right. Thus the first brunt of reformation was borne by his wife.

Then Shiveswar began with his house and furniture. He was a rich man's son and so could indulge in his whims safely. So, as soon as he became a finished lawyer and began to walk the courts, he felt himself important enough to make his will felt everywhere. His father's old house at Bhowanipur and its accumulations of age-old rubbish, first came under his notice. The new house, on Harrison Road, had already been dealt with.

The only inmates of the house were Hemnalini and himself. She spoke very little, naturally, and moreover she held her husband in such high esteem, that it was simply unthinkable for her to try to prevent him from doing anything he wanted to do. She would not even criticise. The only person who could have stood in Shiveswar's way was his mother Mokshada Devi. But she could not be prevailed upon to leave their country house and settle in Calcutta. So Shiveswar went his way, unhampered. In his wild zeal, he demolished the old places, erected for family worship, banished the gods and goddesses and did away with the beautiful arches, nicely wrought altars, the lamps for holy illumination, the conch-

shells, with lotuses engraved on their white bodies. The bereft Musa looked with tearful eyes at her desecrated abode, and left in sorrow.

His friend Anadi came to have a look and cried out, "I say, Shiveswar, what's this? You are behaving like an iconoclast. What are you trying to become? A Christian or a Muhammadan?" "I am trying to become nothing," said Shiveswar gravely. "I am not destroying the old images, in order to institute new ones, in their places. I am on the side of destruction, because I believe obedience to any creed is nothing but slavery. So, I am determined to do without any of them."

"You are mad," said his friend. "This fad of reformation is turning you into an absolute lunatic. Are you determined to upset all the laws of creation? Put an ice-bag on, it might cool your ardour a little. If you don't, I shall enlist your wife's services. Somebody must take proper care of you."

In spite of all his zeal, Shiveswar had a loving heart. He could tolerate everything from the persons, he loved, or, who loved him. But, nothing could shake his convictions. He engaged a music master, a teacher of drawing and painting for his wife. The music she learned was foreign and the teachers taught her merely to copy western pictures. He thought of engaging a Hindustani music master also, in order to teach her Eastern music. But he demurred, because these fellows insisted on singing songs consecrated to Krishna and Radha, whom he abominated. Hemmalini liked the sitar, much more than she liked the piano. But she left everything to her husband, as she had implicit faith in his judgment.

So she took off her old-fashioned gold bangles and put on foreign made bracelets. She left the store-room and the kitchen and began to pass her days among her musical instruments and her books. She liked them. Her husband spared no pains to make her happy. He ransacked all the shops and bought all the clothing, jewellery, books and every other pretty thing, that took his fancy and took them home to her. He could not rest without doing this. The young wife would smile sweetly and say, "Are you determined to buy the whole world for me? Do I need so many things? I can do without most of them."

"Perhaps, you could," her husband would say, "but I cannot. Whenever I see anything beautiful, I want you to see it too, otherwise, my seeing is not complete. I don't see any use in having money, if I cannot buy everything for you. Wealth loses its importance, when it ceases to serve you."

Hemmalini understood him of course, but she felt herself too unworthy of such a great love. She would remain silent in embarrassment. The belief in her own unworthiness took away even from her joy, in being the possessor of such a love. She would escape from his presence, and think and think on his words, sitting in some quiet corner.

But her days were numbered. She left her husband, and all that his love had procured for her. Shiveswar's house lost its only presiding deity. She left behind her a little baby girl, that her husband's great loving heart might have something to cling to.

(To be continued)

A MANUMIT STUDENT ON FREEDOM

Isn't it great to be free?
To say, "come and have fun with me,"
And to shout and to say,
"Oh joy! oh joy! I am free!"
Isn't it great to be free?

To be able to climb every tree
To play with the girls and boys,
And to make all sorts of noise.
Oh, girls! Oh, boys! We're free!"
By BERNICE, AGE 9.

ART IN THE WEST AND THE EAST

I

By NAGENDRANATH GUPTA

IN the mythology of ancient Greece the Muses are represented by a sisterhood of nine divinities, whose favourite haunts were Mount Helicon and Mount Parnassus, and who presided over and cherished various arts. Five of them had different forms of poetry in their keeping. Singing and harmony and dancing claimed the ministrations of two others, while history and astronomy were looked after by the remaining two. But such fine arts as painting and sculpture and architecture were left to look after themselves without the inspiring guardianship of any of the Muses. On the other hand, the ancient Aryan mythology of India names a single tutelary goddess, Sarasvati, of the arts. She is pictured as a standing figure with her feet gracefully and lightly poised on a lotus flower, which is symbolical and suggestive of a whole world of art, and holding in her hands the *vina* , the famous stringed instrument emblematic not merely of music but also harmony, which is the essence of all art. Since all art, imaginative, creative and formative, has the same spring and its various expressions proceed from a common source the conception of a single inspiring divinity is an appropriate one. There is such striking similarity between Aryan and Greek mythologies that there can be little doubt that they were the common inheritance of an ancient people which divided east and west on the adventure of life, and while the Aryans in India concentrated on the evolution of the spirit and scaled the heights of the Upanishads, the Aryans in Greece became the greatest artists and warriors in the world and no mean rivals to their distant cousins in literature and philosophy. But in religion they made no advance beyond the faith they had brought with them.

Of the four Vedas the Sama Veda is most highly praised because it consists of chants or songs of praise. In the *Bhagavad Gita* Sri Krishna says, "among the Vedas I am the Sama Veda." Sarasvati is represented as the essence

of the Sama Veda. The earliest and the greatest artist is the poet, who, in the ancient times merely chanted his poems. Some of the greatest poems were composed before any script and writing materials were known. Early poetry was mnemonic and the verses flowed out of the lips of the poet as clear water gushes out from a spring. It was a spontaneous outpouring and, the listeners committed the verses to memory. This is the fashion in which the Aryan scriptures and poetry were preserved for a long time. Similarly singing must have been known and practised long before musical instruments came into use. Men and women must have sung even as the birds sing for the pure joy of singing.

Every other form of art must be of later origin. The cave-man had enough to do in satisfying his primitive instincts. He had no house to decorate, no walls on which to hang pictures. Still the instinct of art is as ancient as the primitive man and prehistoric paintings and engravings have been discovered in ancient cave dwellings. Decorative and pictorial art has been traced back to the time of Menes, the first king of Egypt, 5500 B.C. and it must have been in existence even earlier. Even the pigments have not lost their brightness and the beautiful Egyptian blue may be still admired, while the motives of decorations may be easily identified. It is inferred that painting as it is now understood was not known to the Egyptians, but as a matter of fact easel and portable paintings cannot be preserved for very long. The sacred scarabs, the vultures, the human figures, the wall decorations of the tombs, the paintings on the mummy cases indicate a length of life that fills the beholder with amazement, apart altogether from the artistic merits of the decorations. The thrill that was created by the opening of the tomb of king Tutankhamen in the valley of the Tombs of the Kings at Luxor, which occupies the site of the 'hundred-gated' Thebes has not yet altogether subsided.

The marvellous objects discovered within the royal tomb are substantial additions to the world's knowledge of Egyptian art. The golden chariot, the wonderful vases, the heads of the typhonic animals forming the framework of the Royal couch are finished works of art and were placed in the sepulchre more than three thousand years ago. Paintings found on the funerary equipment in the tomb show remarkable progress in that art while there are spirited pictures of hunting scenes showing the king and the queen. In one picture the young queen has accompanied her husband to a duck shoot and is handing him an arrow and also pointing out a duck with the other hand. In the sterner chase of the lion and other big game the king is represented driving in his chariot drawn by fiery horses, accompanied by his great Slughli hounds and his followers in the distance. The most valuable treasure found inside the coffin itself is a magnificent manuscript, the first Royal Book of the Dead, consisting of a papyrus roll, over 100 feet long, and 'embellished with hundreds of paintings in colour by Egypt's greatest artists in her supreme period of decorative art.' Egypt alone knew the art of preserving the dead and embalming the flesh and the bones that begin to putrefy a few hours after death in such fashion that the mummies may be seen to this day retaining the resemblance to living humanity. It is a lost art well lost, for the heart is filled with a great pity when one thinks of this manner of disposing of the dead. Here was a great people now extinct possessed of an ancient civilisation, much wealth and many arts. Yet the Egyptians knew nothing about the higher phases of religion and did not realise that the human body is like a cage in which the soul tarries and when the spirit is fled this tenement of flesh is like an empty cage from which the bird has escaped. The poor ignorant Egyptians provided for the dead as for the living, with meat and wine, chariot, chair and couch their thoughts being unable to travel beyond this world. And then one thinks of another ancient people who thought deeper and whose faith was truer and higher, who believed that the flesh is composed of the five elements and should mingle with them after death, who consigned the dead to the flames and scattered the ashes to the winds of heaven. The embalming and preservation of dead human bodies

appear all the more inexplicable in view of the tradition about the phoenix, the fabulous Egyptian bird reputed to visit the temple dedicated to it at Heliopolis every 500 years, and which rose every time as a new phoenix from its own ashes.

The history of Chaldean and Assyrian art is written in the fragments that have been recovered by archaeologists by excavating the ruined cities of Babylon and Nineveh, opposite the modern Mosul, while part of the political history of Assyria has been traced by deciphering the cuneiform inscriptions on tombs, monuments and other remnants of monumental architecture. Assyrian painting and decoration have been found on glazed bricks and stucco and sculptured slabs. There is evidence that Nineveh imitated and adopted the art of Babylonia, though the Assyrians were superior to the Chaldeans in sculpture. The winged bulls of Nineveh, the great alabaster figures, half man and half bull or lion, that formed the portals of palaces, the beautiful positive and negative colours on the walls of Ninevite palaces are triumphs of high art. The sculptures and bas-reliefs are rich in figures and fantastic creations. The Greek historian Philostratus has given a vivid description of the palaces of the Kings of Babylon covered with burnished bronze that glittered at a distance and the opulence of silver and beaten and even massive gold that decorated the chambers and porticoes. It was in one of these palaces that Belshazzar, the last of the Kings of Babylon, made a great feast and commanded that 'the golden and silver vessels from the temple in Jerusalem, taken out by his father Nebuchadnezzar, should be brought forth so that the king, and his princes, his wives, and his concubines, might drink wine therein. And as they drank they praised their gods made of precious and base metals, wood and stone. In that same fateful hour, we read in the Book of Daniel, came forth fingers of a man's hand, and wrote over against the candle-stick upon the plaster of the wall of the king's palace; and the king saw the part of the hand that wrote.' Neither the revellers, nor the astrologers, the Chaldeans and the soothsayers could explain the meaning of the words written on the wall, and hence Daniel was called to interpret them, and he interpreted them as the divine judgment pronounced upon Belshazzar, the king, since he had

been weighed in the balance and found wanting. That same night the king was slain and Darius, the Median took the kingdom. The writing is ever the same on the palace walls of kingdoms and empires, but there are no eyes to see and no Daniel to interpret it. As it was in the past so it is in the present and so will it be in the future. The decree never varies: God numbers every kingdom, and finishes it when it is weighed and found wanting; and it is divided and given to others. As it was with Babylon so was it with the Aryan kingdoms and Buddhist Empire in India, Egypt, Assyria Persia, Greece and Rome and the Moghal Empire; and so it has been now with China, Russia, Germany and Austria. And as to the future it is not given to us to lift the veil. The moving finger writes, and having writ, moves on to other palace walls.

Unlike the vanished kingdoms of ancient Mesopotamia Persia has had a more or less continuous history of art, of which the individuality has been maintained though the country itself has been invaded and conquered by other nations. It has influenced several industrial arts of Europe and the East. "The Lion's Frieze" found in the ruins of the ancient Persian palace at Susa is a piece of the finest sculpture. Under such kings as Cambyses, Cyrus, Darius and Xerxes ancient Persia attained a magnificence which has probably never been rivalled. The palaces at Persepolis, Susa and Ecbatana eclipsed everything known before and were vast treasure houses of art. Ancient Greek writers not unnaturally wrote lightly of Persian conquests and riches, but archaeological researches have proved that the Greek accounts underestimated the extent of Persian achievement. In the Book of Esther there is an accurate account of the royal feast given by the king Abasnerus, the Xerxes of history, "unto all the people that were present at Shushan the palace, in the court of the garden where were white, green and blue hangings, fastened with cords of fine linen and purple to silver rings and pillars of marble: the beds were of gold and silver, upon a pavement of red, and blue, and white and black marble. And they gave them drink in vessels of gold, (the vessels being diverse one from another,) and royal wine in abundance according to the state of the King.* Great and small were alike bidden

to this feast which lasted for seven days. If this was the court of the garden what must have been the interior of the palace like?

It has been observed that of all the nations of the world, living or dead, the ancient Greeks and the Japanese, both ancient and modern, can alone be regarded as nations of artists. The Greeks cultivated physical beauty as a thing of art and they were the finest looking race that the world has seen. Up to this day a man with a fine head and handsome regular features is compared to a Greek or the statue of a Greek god. Pictures of beautiful gods and goddesses were suspended in bed-rooms so that men and women might behold them the last things at night and their eyes might rest on them the first thing on awakening in the morning. Women wore gold chains round their knees so that they might walk with measured and graceful steps. And this national love of the artistic and the beautiful translated itself in their unsurpassable creations of art. It may be doubted how long the Japanese will be able to retain their claim as a nation of artists since they have been drawn into the maelstrom of western materialism. Surface painting being the most quickly perishable form of art no remains of Greek painting are to be found, but there is historical record that the Greeks painted on walls, panels and canvases, and the names of certain schools of painting, such as the Ionic and the Sicyonian, are still known. We know that Apelles, the court painter of Alexander the Great and called the Prince of Painters was a great artist. The name of his most celebrated painting is known, but the picture itself is not in existence. There are Greek books giving accounts of large paintings on the walls of public buildings and other moveable pictures. What significance would the name of Homer have conveyed to the world today if the Iliad and the Odyssey had perished? And in his own time the greatest epic poet of Europe, reputed to have been a wandering minstrel, was a man of so little consequence that partially nothing is known about him, his birthplace is unknown and his date is put anywhere between 1100 and 700 B. C. And yet Homer was the greatest of all the artists of Greece. To read the

Painting. James Ward. Some statements of facts are also taken from this book.

* History and Methods of Ancient and Modern

names and descriptions of pictures that are extinct is like finding a commentary on some famous book of which the text is lost. Even so late as the last century Ruskin wrote that he never intended to republish "the Seven Lamps of Architecture" because the book had become useless on account of the buildings described in it having been either knocked down or scraped and patched up into smugness and smoothness more tragic than uttermost ruin'. And in this century German cannons have irretrievably ruined the famous Cathedral of Rheims.

In architecture, sculpture, designing and painting Greece reached the summit of excellence in the Classic period. The aim, whether in statuary or other forms of figure representation, was the perfection of human beauty in both sexes, and the figures of the gods and goddesses were the highest expression of such beauty. The figure of the Greek god Apollo was the ideal embodiment of the most perfect and the most glorious manhood. The most celebrated works of Phidias, who is designated the greatest sculptor of Greece, and therefore of the world, were the colossal statues of Athene and the Olympian Zeus, the latter being considered his masterpiece. The human ideal was never transcended and the inspiration of the Greek artists was the conception of the physical ideal of manhood and womanhood. The figure of the Sphinx in Egypt is a much older monument and it may not possess the embellishments of the highest Greek art, but it fills a larger place in the imagination of the world than any statue of Greece and Rome. The strange fable associated with the name, the famous riddle which Oedipus solved and the mystery of the Sphinx have all been worked into the immense, rock-cut figure that dominates landscape in the vicinity of the Pyramids. The figure partially resembles the fabled monster, the body and paws are those of a lion, the face and breast those of a woman but the beholder perceives nothing grotesque at all so impressive is the face in its calm dignity, so overpowering is the whole figure in its sovereign power. It still stands as the riddle of the ages, mystic, inscrutable, tranquil, powerful.

From the remains that are still left of the achievements of the art of Greece some idea may be formed of what Hellas must have been in the height of her glory. The traveller, the artist and the archaeologist

may still gaze on what is left of the Acropolis, the Temple of Victory and the Parthenon. The Theseum, the ancient temple of Theseus, with some modern renovations, is still entire. Hellenic art has exercised a potent influence just as Greek literature and Greek philosophy have permeated Europe.

Though independent of origin early Roman art inevitably came under the influence of Hellenistic art, which left its firm impress on the Augustan period. The Emperor Augustus was the patron of all art and the most striking monument intended to glorify him was the *Ara Pacis Augusti*—the Altar of Peace of Augustus. The reliefs of the *Ara* are historical portraits of great importance. The occasion selected was when the Imperial House and the highest aristocracy of Rome accompanied the Emperor when he made the first sacrifice at the altar. 'Priests and officials, proud youth, beautiful women and well-bred children', servants, sacrificial animals, fruits, garlands are all represented with great skill and dignity of treatment. A German writer holds the view that the 'world-propelling genius of Augustan' art was not sculptor but the poet Virgil.*

At a later period Latin art freed itself as an original national art. Under the Emperors Titus and Trajan Roman art established its individuality. The Coliseum and the Arch of Titus, the historical sculptures of the time of Trajan, the fully developed arch of Roman architecture, the cupola of the Pantheon built under Hadrian surpassed the products of previous arts. Latin art was particularly strong in portraiture and the beautiful and varied Roman busts have never been rivalled. And like Greco-Rome has given to the world a literature which will endure when her triumphs in stone and marble will have disappeared. By a strange irony the volcanic eruption which destroyed all life in the cities of Pompeii and Herculaneum left the art treasures of those cities in a state of perfect preservation and the removal of the incrustation of lava has enabled the world to realise that 'the decorative art on the wall spaces at Pompeii, the work of Greek artists, has never been equalled or excelled.*

As the mind's eye roams over the past the solemn question comes unbidden: Where are the palaces of the Pharaohs of Egypt.

* Franz Wickhoff, Roman Art.

the gilded chambers of Cleopatra, the dazzling edifices of Babylon and Nineveh, the vast mansions of unparalleled magnificence in Persepolis and Susa, the proud structures of granite and marble, bronze, gold and silver that lifted up their heads as a challenge to eternity? Time, the great obliterator, has passed his sponge over them and, lo: they have vanished even like the palace raised in a night by the geni of Aladin's lamp. And Earth, the great Mother and the final resting-place of all, has hidden the ruins away out of sight in her own wide and deep bosom. The dead are sometimes better housed than the living the Pyramids, the most massive structures of antiquity, and the Taj Mahal, the most exquisite creation of medieval art, are houses of the dead. Tutankhamen's grave has been found; who can point out the ruins of the palace in which he lived?

The transition from pagan Rome to Christian Italy corresponded with the decline and fall of Rome and the disappearance of ancient Roman art. In early Christian art, in which the strong influence of the form and technique of Roman art is obvious figure decoration was avoided on account of the antipathy to heathenism and pagan gods. The fierce denunciations of some of the Hebrew prophets against Babylonian and other gods fill part of the Old Testament. As, however, the prohibition against the making of images is not confined to the Bible the aspects of prohibition in art among different peoples may be considered together. In the Aryan scriptures there is nothing mentioned, but no Indo-Aryan artist ever thought of making an image of the Brahman, the God of the Upanishad. Even the Puranic divinities were not represented by figures for a considerable time. Buddhist sculptors and images in the time of Asoka illustrated in reliefs and paintings the many incarnations of the Buddha as told in the Avadanas and the Jataka tales but not one of them ventured to make a figure of the Blessed One. Probably the first images of the Buddha were made under the Kushan Kings in the north-western part of India and King Kanishka was a great patron of art. Of the two divisions of Buddhism, Mahayana and Hinayana, the Hinayana sect has been always opposed to any visible likeness of the Tathagata. In

the old Testament there is an emphatic prohibitory mandate in the second commandment. There were to be no other gods before God, and all images and likenesses, graven or otherwise, for worship were forbidden. Before the Exodus Moses had seen the gods of Egypt. The obedience to the commandment was not always absolute, for there was a bronze figure of the serpent in the Temple of Jerusalem itself, but when Israel was at the height of its power and the supremacy of the Synagogue was undisputed for nearly a thousand years all relics and traces of the ancient formative art were destroyed. The iconoclastic zeal appeared among some of the converted Romans also. In the eighth century Leo the Isaurian, known as the "Iconoclast," was Emperor of the Eastern Empire and he issued an edict against the supposed worship of images and this edict was confirmed by a council of bishops. The production of sacred sculpture, certain forms of mosaics and monumental paintings was prohibited and many valuable works of art were destroyed. Leo burned the library at Constantinople containing above 30,000 volumes and a quantity of medals. The Prophet of Arabia was born among a race of idol-word shippers and his hatred of idols and images may be easily understood. On his return to Mecca after the Hejira at Medina all the idols in the Caaba were destroyed. In the Koran the commandment is, "Verily, God will not forgive the union of other gods with himself."* The interpretation was that not only should the followers of Islam have nothing to do with images but these should be destroyed wherever found. This is the explanation of the irrational and furious iconoclasm which destroyed or disfigured most of the sculptures in India and burned many thousands of pictures and palm-leaf manuscripts. The effect on several branches of art so far as the Saracenic world is concerned has been complete sterility. It reminds one of a single potent German word displayed on the highways and byways of Germany when the junkers swaggered along the streets and before the Kaiser and his entourage had bolted like rabbits to their new-found warren in Holland. *Verboten* not allowed: It is not permissible for a Mussalman ruler to stamp his effigy upon his coins. No artist in the ranks of Faith-

* James Ward. History of Painting.

* The Koran Sura IV.

ful may become a sculptor. Saracenic architecture rigidly eschews all figures, even of birds and animals. Persia had a tradition of art before it was converted to Islam and consequently all secular art could not be summarily abolished from that country. Besides, the Sufis regard Mansoor, who proclaimed *Un-al-Huq* (I am God) and was condemned to death, as one of their most spiritual leaders who had attained the fourth or highest stage of Sufi-ism. This doctrine of the identity of the soul with God, became a recognised factor in Persian thought and Persian poetry. One hardly knows whether Moghul painting in India was introduced surreptitiously or openly, but the Emperors under whom it most flourished, Akbar, Jehangir and Shah Jehan, had not the zeal of Leo or Kala Pahar. But the ban under which figure representation is placed does not apply to the inscription on the *Dawan-i-Am* of the palace in Delhi in which it is emphatically repeated three times that the Hall of Audience is Elysium on earth.

The apprehension that the use of figures in Christian art would tend to encourage idolatrous worship was not of long duration. It was found that pictorial representations of scriptural subjects and personages would help the spread of Christianity and the ban on the portrayal of figures was removed. For some time, the classic ideals filled the imagination of the artists. Sometimes Christ was represented by the figure of Orpheus with his lyre and surrounded by animals. The early Christian churches were filled with mosaic decorations of a high order. In the earlier mosaics there was no nimbus round the head of the Christ. Even so late as the sixteenth century the mosaic decorations of a church in Rome, designed by Raphael, were curiously mixed. Numerous Greek deities are represented with a figure of the Creator surrounded by angels. Christian iconography had an early beginning, and the icon is an established fetish among the followers of the Greek Church. The mosaicists were succeeded by the frescanti of Italy. Wall painting in fresco was used in Greek and Roman art. Even in Italy the colours have disappeared from many fresco paintings and only the outlines are left.

Illuminated manuscripts and the painting of miniatures is also an ancient art. The oldest illuminated manuscript in existence is probably the *Egyptian Book of the Dead*,

written and decorated on papyri leaves, and made for Ani about 1500 B. C., but this view will have to be altered after the discovery of the Royal Book of the Dead in the coffin of Tutankhemon. There are fragments of the *Iliad* with miniatures painted on vellum. The famous Paris Psalter, the Irish Celtic *Books of the Gospels and Psalters* and the famous *Book of Kells* in Trinity College, Dublin, are all works of a delicate and beautiful art.

So bewildering is the conflict of opinion about the great complex movement of the Renaissance, specially in Italy, that it seems difficult to decide whether the world has gained or lost by this remarkable awakening and whether the evil of it preponderates over the good. And yet there is no dubiousness about it at all. The revival of the influence of classic art could not eliminate the new force that had appeared in all thought, all literature, all art. Pre-Renaissance and mid-Renaissance art is informed with the image and Passion of the Christ, of infinite sorrow and infinite grace, the marvel of the Nativity, the suffering at Calvary and the glory of the Ascension. The Renaissance was ushered in by Dante and Petrarch and it was borne past on the river of Time to the accompaniment of the swansong of Tasso. What glorious chapters of art are associated with the names of Titian, Michaelangelo and Raphael: So irresistible was the haunting fascination of Leonardo's Mona Lisa that it resulted in the picture being stolen. Ruskin rightly called Michaelangelo the Homer of painting. With equal truth he has been called 'the prophet of classical revivalism'. One of the greatest of the great Florentines, warrior-sculptor, the greatest frescoint of all time, Michaelangelo alone would have shed an undying lustre on the Renaissance in Italy and the highest traditions of art. And Michaelangelo wrote sonnets. But he was one, even if the greatest one, out of many dazzling luminaries in the firmament of art. What other name can be associated with Raphael as an equal? In his short life of thirty-seven years he gave to the world all that is noblest and sublimest in Christian art with its perfect treatment of colours. The laurels on the brow of Titian will never pass to another, and his idylls, landscapes and figures still represent the supreme attainment of art. If the fame of these artists had not overshadowed that of others there would have

been more general recognition of the place of art in the Renaissance. Masters like Fra Angelico, Botticelli, Leonardo La Vinci, Perugino and Tintoretto, if they had been born in other countries, would have won great fame for the lands of their birth. From the meridian reached by Raphael and Michaelangelo the passage of Italian art to the western horizon was swift. It was like a fall from a dizzy summit to the depths below. The process of erosion had been going on in the social influences, in the pride, luxury and hypocrisy of high life. Pontiffs like Sixtus IV and Alexander Borgia had fouled the very fountainhead of the Christian Church. No pagan or heathen of legend or myth, no ruffian in the history of criminology, has rivalled the horrors attributed to the Borgias. Vice flaunted itself openly and unashamed; corrupt patrons corrupted literature and art. The art that had reached a standard of excellence which could not be maintained soon died out. Criticism outside Italy has noted the fact that Rome, the home of classic greatness has twice been the tomb of art. The birthplace is the deathplace of most things but Italy has achieved what no other country in the world has done, for she has produced two literatures and two arts which rank among the highest in the world. Pagan Rome still dominates Europe with her culture, literature and ambition. Christianity has produced no lawmaker to supersede the laws of Rome and the Roman law is still the ideal in England. After the fall of ancient Rome a mixed race appeared in Italy and the Roman disappeared in the Italian, who has also made his mark both as a poet and a painter. Nor is the book of Italian achievement yet closed, for the present holds the promise of another great future.

Painting has been named the Sister of Poetry. If so, the classic and Renaissance periods represent the epic age in art. The Renaissance in France and Flanders and the rise of the Dutch School have an important bearing upon art in North Europe. The Flemish artists Hubert and Jan Van Eyck are reputed to be the inventors of the oil medium in painting but the use of drying oils was known before them. In England such great portraitists as Lely, Reynolds and Gainsborough appeared in the eighteenth century. Hogarth occupies a place by himself as one of the greatest satirists of the vices and weakness of the world. The English school of the nineteenth century produced

several artists of genius. To Turner, the landscape painter, belongs the distinction of being the central figure of the five volumes written by Ruskin on "Modern Painters". Indignant at the ignorant criticism by which the great painter was assailed Ruskin, who was then a mere boy, wrote a vigorous reply which was the beginning of his great book.

While the classic art of Europe may be designated epic, historical pictures in marble and on canvas may be rightly called the dramatic phase of art, while dainty miniatures are really lyrics in colours. The evolution of art has been from idealism to realism. The classic art of Greece was nourished on Homer and Hesiod Greek children were taught by heart passages from these poets and the boys also learned choral odes, popular songs and hymns. Memory-training was cultivated by the Greek Aryans as carefully as by the Indo-Aryans. The Greek artist aimed at reproducing the type and not the individual. The gods and goddesses were not painted or sculptured from living models but from the artists' ideal conception of beauty and manliness. Similarly in Christian art the Virgin, the Christ and scriptural traditions were subjective creations of the genius of the artist. No likeness of Jesus Christ was ever taken in his lifetime and it would have been sacrilegious to draw his image from any living man. All artists endeavoured to idealise the Jewish type of features and countenance. Guido Reni's "Ecce Homo" with the crown of thorns and the agony in the upturned eyes, is one of the most popular figures of the Christ, sublime in its suffering. Raphael and Michaelangelo did portraits but their greatest works were not made from life. Michaelangelo's paintings on the ceiling of the Sistine Chapel in the Vatican representing scenes from the Old Testament, are unapproachable in their grandeur but not a single figure is a portrait. Modern painting is mostly portraiture, while the ateliers in Paris and the studios in other capitals are haunted by artists' models. The modern tendency is towards profane or secular art and inspiration is not often sought from the poets or sacred literature. A writer* to whom reference has been made says 'formative art often limps but slowly after the swift imagination of the poet.' And the poet still draws

* Franz Wickhoff.

banking principles and carry on dishonest practices. As a matter of fact, contemporary newspaper columns, and reports of liquidators are replete with the condemnation of cheating and fraud and other dishonest practices. "The letters of the Chief Director, Colonel Pew" says Prof. Findlay Shirras (referring to the letters which the Chief Director wrote to his dupes just prior to the failure of the Benares Bank) "read, as if they had been written in the years preceding the Punjab and Bombay Bank failures in 1913 to 1917, and not in 1840 *... The whole history of the Bank reads like a bucket-shop circular. The Directors held out promises that could not be realised, and the delusion was maintained only by prevarication". The latest instance of European fraud in Banking is afforded by the failure of the Bank of Barma in 1910, a bank which so styled itself with the set purpose of giving to the ignorant public the idea that the Bank belonged to the Presidency Bank category. The most recent instance of how a European-managed Bank can fail owing to disregard of sound banking principles, is afforded by the failure of the Alliance Bank of Simla.

Banks have failed here, but there is hardly any periodicity in bank failures, the periods of Indian Bank failures being 1829-32, 1857, 1863-66, 1913-17 and 1922-24. (Of these, the failures of 1913-17 were of a serious nature).

Moreover, world crises of the last century had left Indian Banks almost unaffected. Even the crisis of 1907-8, which originated in the United States of America, and at once affected the monetary mechanism of the European countries, was not in any way severely felt by Indian banks, though our Currency Authorities had to pass over a temporary crisis. The magnitude of Indian Bank failures too is not so great. It is only the failures of 1913-17, to which I have already referred, which resemble Bank crises of the West. The fact that within a period of some five years only, more than Rs. 178 lakhs of paid-up capital were involved in the failures, shows that it was a gigantic crisis in the banking history of the land. Figures relating to the deposits of these banks are not to my hand. But assuming that deposits of these banks were in ratio of 5: 1, to their paid up capital, it may be said that about—Rs. 7, crores of deposits were also involved in the failures. But this loss is insignificant

when compared with the tremendous mischief which they created by causing dislocation of and in many cases ruin to our growing industries, and by giving a rude shock to the nation's banking habit and faith in Indian Banks.

Prof. Keynes' reading of the Indian Banking situation just prior to the 1913 failures seems to be more accurate than the palm-reading of the best palmists of our country. "It is hard to doubt" said this great Economist, reviewing the condition of India J. S. Banks, "that in the next bad times they will go down like ninepins. If such a catastrophe occurs, the damage inflicted on India will be far greater than the direct loss falling on the depositors" * Referring to the needs of making good banking laws, the great English decrier of *Laissez Faire* said: "While I am inclined to think that it would be more convenient to deal with this matter in a separate Bill, the important point is that decided action of some kind should be taken with the least possible delay". † But neither the Government, nor our Banks themselves did pay any heed to Prof. Keynes' timely warning, and the inevitable catastrophe happened only a few months after this note of warning had been published.

The average total capital of our Joint Stock Banks during the last 15 years has been Rs. 4 crores, and during the same period a total capital of Rs. 7 crores has been lost in Bank failures. This is horrible and the system must be mended, if we aspire to the status of a modern nation. The following figures show the magnitude of recent Bank failures:—

| Period | No. of Banks | In lakhs of Rs. Paid up Capital. |
|---------|--------------|--|
| 1913-17 | 49 | 178.0 |
| 1918 | 7 | 1.4 |
| 1919 | 4 | 4.0 |
| 1920 | 3 | 7.0 |
| 1921 | 7 | 1.25 |
| 1922 | 15 | 3.29 |
| 1923 | 20 | 46.6 |
| 1924 | 18 | 11.0 |
| 1925 | 17 | 18 |
| Total | 140 | 689.91 |

The causes which are responsible for the slow growth of banking institutions and for frequent failures of Indian Joint-Stock Banks, are well-known, and have been pointed

* Indian Finance and Banking, pp. 354.

* Indian Currency and Finance.

† Ibid.

out by abler hands than mine. So, whatever I shall say will hardly be new or original. Writers on Indian Banking, from Prof. Keynes to Dr. Sinha and Mr. Thakur (the last two gentlemen being the latest contributors to Indian Banking literature) have repeatedly emphasised upon the need of good bankers and sound banking laws. What I propose to do is to re-tell in a short space, some of the principal deficiencies in our banking system.

The first and perhaps the most powerful hindrance to the growth of sound credit institutions in our country is the persistence of our Government in a *Laissez Faire* policy. Our banks and banking system have been modelled after the British system, in which *Laissez Faire* or Free Trade principles dominate. We have no separate banking laws, but banks are established here under the Indian Companies Act. The need of good banking laws has long been felt and the Government have from time to time been represented to and called upon to make such laws. Its attitude towards banks, however, still remains the same, viz.,—'step-motherly' to borrow a word from Mr. Thakur. But one fact which makes all the difference between banks in England and those in India is that during general crises and financial panics, the Bank of England throws its doors open to the panicky banks and the *Free Trader* British Government resorts to its only and most effective weapon for staying off crises, namely, that certain provisions of the Bank Act of 1844 are suspended for a time and the Bank of England is allowed to issue notes without limit. The fact that the Bank of England strengthened by the temporary suspension of the Act of 1844, offers help to every bank which deserves it, calms down all panic and anxiety of depositors with magical rapidity. But in India the Government of India cannot and does not help Indian Banks unless through the medium of Presidency Banks or the Imperial Bank of India. As a matter of truth, the Government of India were ready to help the up-country Banks during 1913-17 crisis through the medium of Presidency Banks, which the latter refused to do as the distributor. In this case, the Presidency Banks badly failed in their duty as national Banks.

The want of a genuine Central Bank and an elastic paper currency is another great disadvantage with our banks. The Presi-

deney Banks could hardly be called Banker's banks in that they competed with J. S. Banks in not a few cases, and, as I have pointed out, they refused to help these banks when they were in a position to do so. As regards the Imperial Bank the best thing that can be said about it is that it offered timely help to Indian J. S. Banks when the latter were faced with a financial panic in 1922, just after the fall of the Alliance Bank of Simla Ltd. But it is time only which can show how often and how faithfully the Imperial Bank can play the role of a Bankers' Bank, though the fact remains that the Imperial Bank of India cannot be expected to play that part in the Indian money market and banking system, which the Bank of England plays in England's money economy, unless credit be linked to currency. The Emergency Clause in the Paper Currency Amendment Act of 1923 has, however, given some opportunity to the Imperial Bank for easing the stress in the Indian money market.*

There is no law which can compel Indian Banks to publish weekly statements, and with the exception of one or two banks, the Joint-Stock Banks do not, as a rule, publish any kind of weekly statement, with the result that the public are kept absolutely ignorant of their financial position. It is, however, true that many of these banks which conduct their business safely and soundly, do not think it fit to publish any statement, perhaps because they apprehend, as it seems to me, that by so doing they will expose the smallness of their paid-up capital and volume of their business. This is an erroneous idea. The best way of hiding the smallness of a bank is to be always able to show that the bank has sufficient cash balances and sufficient reserve and that a substantial amount of debts due by the bank's customers is secured and can be liquidated at short notice. It is, however, important that before calling upon our small banks to publish their weekly statements in an intelligible manner, extensive efforts should be made to educate the public, so as to enable them to look at the figures in the statement analytically and not synthetically. They should be made to understand that a

* The Indian Currency Authorities can now issue Emergency Notes to the value of Rs. 12 crores, and lend the same to the Imperial Bank of India against internal bills.

wonderful pictures in a few lines as vividly and unerringly as the painter on canvas or paper. Take the following example from Tennyson's "The Passing of Arthur" where the funeral barge comes to take away the dying King:—

"Then saw they how there hove a dusky barge,
Dark as a funeral scarf from stem to stern,
Beneath them ; and descending they were ware
That all the decks were dense with stately forms,
Black—stoled, black-hooded like a dream—by these

Three Queens with crowns of gold ; and from
 them rose
 A cry that shiver'd to the tingling stars,
 And, as it were one voice, an agony
 Of lamentation, like a wind that shrills
 All night in a waste land, where no one comes.
 Or hath come, since the making of the world."

Ghostly, weird and haunting, yet noble in its setting of grief, this is a picture as clear to the vision of the mind as it would be to the eye if dimmed by a great painter.

BANK FAILURES IN INDIA

THEIR CAUSES AND CURE

By TARAPADA DAS GUPTA, M. A.

IDLE money, said Sir Basil Blacket in a speech, is idle manhood ; and transferring the rhetoric to the domain of credit, we may more appropriately say that spoilt credit is spoilt manhood. Credit cannot be reckoned as money, though it can for internal purposes, be looked upon as artificial money. It is rather the elixir which intensifies and stimulates the effectiveness and importance of money in the economy of production. Whereas the development of credit in advanced countries has been attended with phenomenal growth of commerce and industry, the stumbling down of growing credit in a country, may and does bring about slump and depression in business and industry, more disastrous and extensive in inflicting injury to society than the average layman can gauge.

India is the land where credit has tended to grow but has been stifled in its infancy from time to time. The industrial and broadly speaking, the general poverty of our country is in a sense reflected by the position that India holds in the world's record of credit and banking.

The following figures speak for themselves*

| | | |
|---|-------------------------------|-----------|
| Average deposit per head of the population. | Banking capital & Reserve. | Deposits. |
|---|-------------------------------|-----------|

| Population. | £ 1,000,000 | £ 1,000,000 |
|-------------|-------------|-------------|
| U. S. A — | 73 | 1052 |
| U. Kingdom | 57 | 775 |
| Australia | 63½ | 2082 |
| Canada | 14½ | 350 |
| India | ½ | 379 |
| | | 235 |

motive which induce the few people who can patronise J. S. banks to open an account with them.

The following figures show the insignificance of Indian J. S. banks in the Indian money market :—

| | Number | Capital & Reserve. | Deposits |
|----------------------|------------|--------------------|----------|
| Imperial Bank 1..... | | | |
| Exchange Banks 18 | 1055 | 8329 | |
| J. S. Banks 74. | 13931. (?) | 7054 | |
| | 1178 | 5790. | |

(?) Cap. plus Reserve are in England or other countries where these banks were registered.

The above figures show that J. S. Banks are prominent by their numerical strength only, though in respect of their volume of activities and quantity of capital and reserve, they pale when compared with the Imperial or Exchange banks.

Of the 71 J. S. Banks only four can be called banks, in the proper sense of the word. These are :—(1) The Central Bank of India, (2) The Bank of India, (3) The Punjab National Bank, and (4) The Allahabad Bank. They together command capital and reserve of about Rs 5 crores, and deposits of about Rs. 40 crores. Roughly speaking, they represent more than 50 p.c. of the strength and resources of J. S. Banks in India.

It will not be out of place to point out that in countries of the West banks have failed, and in many cases, many of them have failed at a time, affecting the entire business and trade of those countries. Inefficient organisation and dishonest practices might have brought about the fall of solitary banking houses in those countries. But widespread bank failures in those countries are generally held to be due to what are known as trade cycles. Of the numerous noteworthy financial crises in Europe and America, India has no parallel.

It is only the crises of 1913 and 1924 which can, in a way, be said to resemble general bank crises of the West. Though the causes which bring about general crises here and in the West are broadly speaking the same, viz, sudden growth of one or more forms of industries, sudden briskness in speculative and credit business—all these galloping towards the inevitable sequel, viz, financial panic ;—yet they differ in details as between the West and India. The banks in the West have behind them a long tradition of modern banking habit and resources of

Central banks to help them during crises. Modern credit institutions under Indian control and management, are comparatively speaking of recent growth. And as such, Indians have not been able to prove themselves as efficient, reliable and even honest as the Westerners.

Before telling anything about the causes of and probable remedies against the deplorable state of our banking system, three facts deserve to be mentioned. These are —

1. The East India Company was generous and sympathetic towards the Early European Banks in India, whereas the Government of India has done very little towards helping Indian Banks, and the little they have done in the direction has been done towards the growth and consolidation of the Presidency Banks. The fact that the East India Company sometimes helped the Early European Banks in their hour of crisis, even in contravention of the express directions of the Board of Directors, in England* only brings into relief the apathetic and unsympathetic policy which the Government of India has persisted in, for a period of about 60 years.

2. Up to the time of the Mutiny, the internal political condition had much influence on the prosperity or otherwise of Banks in India, but since the consolidation of British power in India, it is the internal trade condition as well as the world politics and world condition of trade and commerce which have directly affected the Banks.

3. We often hear and realise that Indian Bank managers and directors are partly responsible for a majority of Bank failures, and that inefficient management, malpractices and fraud by managers and directors bring about the fall of Banking houses. But Indians cannot be said to be original in whatever blunder and fraud they commit. As a matter of truth, misappropriation of and fraud in respect of other people's money by bankers is a legacy which the European Bankers of the forties and fifties of the last century handed down to their legal successors, the Indian Joint Stock Banks. The failure of the Union Bank in 1818 and of the Benares Bank in 1849 revealed the extent to which European Bank managers and directors can disregard honest

* *Early European Banking in India*, by Dr. H. Sinha Ph. D.

big authorised capital is a misnomer, or that the unpaid portion of the subscribed capital is an element of strength to the Bank. I think the Bengal National Bank would not have failed so miserably, as it has, if its financial position were known to the depositors at least for the last few years. It may be that in that case, it might have closed its doors

earlier, but the depositors would then get something more than what they are likely to get.

It will be a revelation to many that the position of the bank had remained unsafe for the last seven years. The following figures taken from the Government Blue Book clears the point:—

BENGAL NATIONAL BANK

| Year | Paid-up capital Rs.(000) | Reserve & rest Rs.(000) | Total Rs.(000) | Fixed Rs.(000) | Deposits | | | Total Rs.(000) | Cash balance Rs.(000) |
|------|-----------------------------|----------------------------|-------------------|-------------------|--------------------------|---------------------|-------------------|-------------------|--------------------------|
| | | | | | Savings Bank Rs.(000) | Current Rs.(000) | Other Rs.(000) | | |
| 1921 | 8.05 | 7.47 | 15.52 | 33.37 | 1.16 | 24.75 | | 59.28 | 2.90 |
| 1922 | 8.05 | 80 | 8.85 | 17.14 | 1.47 | 36.80 | | 85.41 | 3.81 |
| 1923 | 8.05 | 1.35 | 9.40 | 40.62 | 74 | 24.48 | | 65.81 | 42 |
| 1924 | 8.05 | 2.10 | 10.15 | 41.18 | 72 | 28.15 | | 70.05 | 198 |
| 1925 | 8.05 | 2.67 | 10.72 | ... | ... | ... | | 81.05 | 3.85 |

Only the first two columns from the right-hand side disclose how horrible had been the state of things of the bank for a number of years prior to the failure. At one point, the cash balances of the bank came as low as only $\frac{2}{3}$ per cent of the deposit liability, and at no time it exceeded even 8 per cent. of the total liability. Classified figures of deposits for 1925 are not given and there is a foot-note which explains that figures are not available. Moreover, the statistics itself is insufficient for giving the public any light on the internal condition of the Bank, as classified figures of assets are not given. It is essential that the statistics department should be empowered by law, to elicit all informations from banks relating to the nature of both liabilities and assets.

But the banks themselves are not in a small degree, responsible for the credit backwardness of the country. Instances of inefficient management, mismanagement, unsound business, disregard of sound banking principles, dishonest practices such as window-dressing falsification of accounts &c., &c. are too numerous to be mentioned here. Some of the noteworthy causes of mismanagement in Banks are, however, given below:—

1. Want of efficient and trustworthy Indian bank managers is a standing evil to which our banks are subject. Oftentimes most unworthy people become bank directors and managers, who are innocent of banking experience and knowledge of principles and practice of banking.

2. Our Bank managers often forget that

a bank legally closes down its business whenever it fails to pay on demand, and not infrequently do they fail to realise the necessity of maintaining suitable cash balances, reserves, and other marketable assets; and cannot see what world of distinction is there between secured and unsecured assets or that a commercial bank should not lock up its money in securities which cannot be easily liquidated into money or which may depreciate in value, or in industry, or business, which is likely to be in depression. In many cases they allow overdrafts and advances on promote right and left to any and everybody who enjoys influence with the manager or directors, and as such, a good deal of such advances become bad debts.

3. In many cases, our banks spend extravagantly on buildings, furniture and establishment, so as to give themselves imposing appearances. It ought to be remembered that only blank and expensive show is the last thing that counts or adds strength in the long run, to banks, unless they have substantial resources. It was rightly pointed out by Dr. Sinha that Joint-Stock Banks should not and need not imitate Exchange Banks in the matter of gorgeous buildings and expensive establishment. It would, perhaps, sound strange to many that Lloyd's bank is as big as three Imperial Banks of India taken together. But the Calcutta premises of this bank is comparatively less gorgeous and less expensive than the premises of the Central Bank. The thing is the Exchange Banks maintain big houses and costly furniture because they

can well afford them. Indian J. S. Banks need not blindly follow them.

The four sovereign remedies which have, from time to time, been prescribed are (1) good bankers, (2) banking laws, (3) publicity, and (4) a Banker's bank. But even today our banks require these essential safeguards as badly as ever. Suggestions have been made for the foundation of an Institute of Bankers in India and for offering proper training facilities to Indian youths in Presidency and Imperial Banks. The latter suggestion has partially been accepted by the Imperial Bank, though much remains to be desired in that direction. The genuine efforts made by the Tata Industrial Bank for imparting training to suitable Indians deserve mention.

The establishment of a Central National Bank in India with the exclusive right to note-issue and the enactment of suitable banking laws are overdue. The dropping of the Reserve Bank Bill is, therefore, to be regretted by every well-wisher of Indian Banks. And as regards banking laws, it may be pointed out that the Government of India is not likely to take the lead in the matter, unless our legislators persistently press the Government. It seems the diversity and multiplicity of our national problems are not allowing us to direct that amount of attention and energy to the banking problems which the seriousness of the situation demands.

The most pressing need of the Indian Banking system, I believe, is a Bank Act,

containing among others, the following provisions:—

(1) Banks should be compelled to maintain sufficient Reserve and Cash balances.

(2) They should be allowed to grant unsecured credit to the extent of not more than a fifth of their deposit liability.

(3) The reserves of the banks should be made to bear a certain ratio to the deposit liabilities of the banks * and banks should not declare a higher dividend than 1 per cent. unless the reserves bear the required ratio to their deposit liability.

(4) Banks should under compulsion publish weekly statements in a manner intelligible to literate laymen.

(5) The Statistics Department should be empowered to demand all informations which public interest demands.

(6) Bank managers and directors should be severely dealt with, for neglect of duty, wilful or otherwise, and for all kinds of dishonesty and favouritism in their business.

There are those who will point out that under such rigorous restrictions the growth of banks and credit will be arrested rather than helped. But the most effective answer to them is to be found in the example which the Presidency Banks afford, namely, that banks may steadily yet considerably grow under healthy and rigorous legal restrictions. Credit grows best when that growth is well-protected and regulated.

* This is the case in many American Banks.

THE GOSPEL FOR ASIA*

(A REVIEW)

By MAHES CHANDRA GHOSH

IN 1922 Dr. Saunders wrote a biography of Gotama Buddha and the concluding remarks of the book were 'Gotama is himself a morning star of good will heralding the Sun of Love.' In the book under review he takes a comparative view of the Gita, the Lotus (*Saddharma Pundarika*) and the Fourth Gospel, and concludes that

Jesus Christ is the Saviour of the world and that the Fourth Gospel should be accepted as the future Gospel for Asia.

The author frankly admits that it is a "missionary book". In another place he remarks that when a scholar 'has a theory to prove,' he will find ways to prove that theory (pp 178-179). So books written for propaganda work should be read with caution. The author has to some extent tried to do justice to the two non-Christian books but he 'has a theory to prove,' so he

* *The Gospel for Asia* by Kenneth Saunders. Published by the Macmillan Company, New York. Pp. XVII+245. Price 250 dollars.

has not been able to do full justice. The book has excellent materials but his missionary zeal has blinded him to the real merits of the Lotus and the Gita and to the defects of the F. G.

In this review we shall confine ourselves to the study of the Gita and the F. G. At the beginning we shall point out some of the inaccuracies and misinterpretations.

The F. G. begins with the theory of the *Logos*, which has been translated by the word 'Word' with a view to forcing a parallel with the *Logos* of Cleanthes. The author has translated '*Logos Koinos*' of the stoic philosopher by 'Word Universal' without any comment and made it unintelligible. The true translation is 'Reason Universal'.

Commenting on the saying of the Gita that "God is the Father of the World," the author remarks:—

"This phrase is used in a very technical sense and is just one of those verses which are constantly being quoted out of their context to give a wrong impression of the essence of the Gita. What the Gita means is 'I am Procreator of the world' (pp. 80-81)."

These remarks are misleading. The Sanskrit text is:—

पितामहस्य जगो

मत्ता, भवता, पितामहः । IX, 17

The literal translation of the passage is:—
I am the father (*pita*) of the universe, the mother (*māta*), the grandiree (*pitamahah*).

The word *pita* is used along with *mother* and *grandiree*. These words denote personal relationship. So the word *pita* must mean 'father'. Moreover, in the next verse God is called *Sukrit*. The word '*Sukrit*' literally means 'one having good heart'. The corresponding English word is 'sweet heart', Lover. Again in verse XI, 44 we find the following idea:—

"As father with the son, as friend with friend, as lover with beloved, O God, bear with me." In all these cases, the relation between God and man is personal. So the word *pita* really means 'father'. The word 'procreator' which our author uses for *pita* is a synonym for the word *Janaka* and not for *pita*.

The author has translated the word *māyā* of the verse IV, 6 by 'delusive power'. The true meaning here is 'wonderful power'. He thinks that the Gita supports the theory of illusion and that 'the human life is regarded' by it 'as an illusion' (p. 124). It is a mistake. No where does the Gita support the theory of illusion (*māyāvāda*). Its *māyā* is nothing but *Prakriti* which has real existence. The illusion theory of later Vedantists is an altogether different thing. What the Gita says is that all the sensuous worlds from this earth to the heavenly worlds are ephemeral and cannot therefore be our permanent abode. Our true home is, says the Gita, the super-sensuous world which is free from all imperfections. No Christian critic can find fault with it. Everywhere in the New Testament this world is condemned and the upper world glorified.

The author has misunderstood and adversely criticised the Hindu doctrine of Karma (pp. 157-158, etc.). It is, according to him, 'a dark pall' it 'beclouds the nerve of moral aspiration'. In its

extreme form, the Karma theory may not be acceptable; but its basic principle is perfectly logical and psychological. Karma is nothing but the outer manifestation of the inner life; it is character externalised. The theory of Karma says that the past life of a man cannot be annulled. The present is but the continuation of the past. If the past were made absolutely blank, what would remain of the present? The past can never be expunged but the present can be modified through God's grace. It is the only reasonable theory that can make man a responsible being.

Regarding the historical value of the Gospels our author says—"The Fourth Gospel is in some ways nearer to the historical facts than are the synoptics" (p. 45). The subject cannot be discussed here in detail. But this we can say that Biblical scholars have almost unanimously rejected the F. G. as a historical document. Harnack says:—

"The F. G. which does not emanate or profess to emanate from the Apostle John cannot be taken as a historical authority in the ordinary meaning of the word" (*What is Christianity* * p. 20).

Bacon says—"The whole structure of the work reveals a non-historical theoretic purpose" (*The F. G. in research and debate*, p. 438).

Pfleiderer writes:—"The Gospel does not belong to the historical books of primitive Christianity." The historical background of the Gospel is constructed not so much from reminiscences of the life of Jesus as from the experiences in the life of the church of the second century" (*Primitive Christianity*, IV, 2 and 21).

This is the verdict of modern scholarship.

The author says—"It is easy to trace the work of many hands in the Lotus and not difficult to find it in the Gita; but with the exception of a few brief passages, such as the concluding chapter, the Fourth Gospel is an organic unity" (p. 100).

What he says about the Lotus and the Gita is quite true. But his assertion about the organic unity of the F. G. is not correct. Even Bishop Lightfoot and other orthodox theologians admit that there are, in this Gospel, 'parenthetic additions', and 'after-thoughts'. The verdict of scholars may be summarised thus in the language of Bacon:—"Besides its 'parenthetic addition' and 'passages related to the after-thought', the Fourth Gospel is notoriously full of the gaps and seams, the logical discrepancies and inconsistencies which if not due to an extraordinary degree of carelessness on the part of the evangelist, can only be explained as we explain them in other writings of the kind. It must be due to later intervention whether by combination with parallel documents or by editorial revision, supplementation or re-adjustment" (*The Fourth Gospel in Research and Debate*, p. 473).

We note below some of the passages which have been considered as interpolations:—(i) i. 6-8; 16 (verses referring to John the Baptist's testimony.)

2. ii. 1-13 by one hand and 13-25 by another hand.

3. iii. 1-21 (about Nicodemus)

4. v. 3-4 (Angel at the pool)

5. v. 28-29; vi. 39b; vi. 40b, xii. 48b (about the Last Day)

6. vii. 53 and viii. 1-11 (12 verses relating to the woman taken in adultery)

7. x. 22-23 (Jesus in the temple.)

8. xii. 33; 36-43 (fulfilment of prophecy)

9. xiii. 17-19 (about Judas)

salvation. But according to the Gita the mind of the worshipper must be well-disciplined well-balanced, and free from all kinds of depravities and attachment.

(v) In the F. G. the disciples are asked to love one another; but in the Gita we are asked to be loving and compassionate to all.

(vi) In the F. G. all the prophets of by-gone times are declared to be 'thieves and robbers'; but the Gita is pervaded by the spirit of unbounded toleration.

(vii) According to the F. G. there are many souls but according to the Gita the soul is one, the different embodied souls being the manifestation of that one soul.

(ix) According to the F. G. the soul of a man, when dead, remains incarcerated in the grave till the day of judgment when it will be raised and judged, will either see eternal life or be destroyed. But in the Gita the soul of the unenlightened takes, after death, a new body again and again and when finally liberated, becomes unified with the Supreme Being.

(x) The God of the F. G. can never be known or seen by any one except the Logos. But according to the Gita God-vision is the privilege of every man. Worthy devotees see God in the outer world as well in their own souls. This vision is, of course, spiritual.

(xi) The principal theme of the F. G. is to prove that Jesus is the Logos incarnate and that he is to be accepted as the Messiah. But the incarnation-theory plays a very subordinate part in the Gita. The speaker in the Gita is certainly Krishna and in some places he is the Avatara Krishna. But when he assumes the roll of the instructor, he places himself in the place of the Supreme Self and says what that Highest Self can say. Foreigners find it very difficult to understand it, but in India it is a common-place idea. Every one understands that it is God's truths that are coming to us through a human speaker whoever that speaker may be. The speaker is to be taken to be Bhagayana himself and not human Krishna or incarnate Krishna.

To illustrate this, we shall quote texts from the Gita.

In Chapter X, Krishna describes his *Vibhūti* (glory). In one place he says "of the Vishnu I am Vasudeva (= Krishna). Of the Pandavas I am Dhananjaya" (X.37). This passage has no meaning unless God be considered as the speaker. Krishna like Arjuna is one of the *Vibhūti* of God.

In another place Krishna says that the true devotee sees Him everywhere and sees everything in Him and worships Him as abiding in all beings (VI.30,31). The same idea occurs in IV.35.

It cannot refer to Krishna the Avatara. An Avatara cannot metaphysically abide in all things. It can refer only to the all-pervading Self.

In another place he says:—
"Iy. Me, the Formless, all this world is pervaded" IX. 1.

The Avatara Krishna is embodied; he cannot be formless and all-pervasive.

The same idea occurs in the following verse—
"By Thee, O Boundless of form, the universe is filled" XI. 24.

It is addressed to Krishna by Arjuna. 1

Arjuna saw the whole universe in the body of Krishna (Chap. XI). Here Krishna cannot mean the embodied Krishna. It is the Supreme Self in whom Arjuna saw the whole universe with spiritual eyes.

Krishna says:—"The whole universe is strung upon me as rows of gems upon a string" VII. 7.

In this verse Krishna cannot mean the embodied Krishna. Here the Universal Self is called the thread.

Krishna says:—"I am the taste in water, the radiance in the moon and the sun. I am the pure fragrance of the earth and the brilliance in fire, the life in all beings..." VII. 8 ff.

There are many similar passages. Here the reference is to the all-pervading Self and not to the Avatara Krishna.

In another place he says:—"Having thus known me in essence, he immediately enters unto me" XVIII. 55.

The same idea occurs in XI. 54.

The Being into whom human beings enter cannot be the embodied Krishna.

It is useless multiplying examples. Enough has been quoted to prove that in the Gita Krishna speaks as the all-pervading Universal Self.

EXTERNAL EVIDENCE

There are external evidences also to prove that what is embodied in the Gita was expounded by Krishna while he was immersed in Yoga. In the *Asvamedhika Parva* of the *Mahabharata*, we find that Arjuna requested Krishna to repeat to him the lessons of the Gita. In reply to this Krishna said:—

"I cannot recollect it now. I cannot fully explain that to you. I had (on that occasion) explained to you about "*Para Brahman*" while (I was) immersed in Yoga (*Yoga-Yuktana*) XVI. 10-13.

This shows that Krishna while immersed in Yoga, personated God and the words spoken by him were intended to be the words of God.

THE FUTURE GOSPEL

Now the question is—can the Fourth Gospel be the Future Gospel of the world as our author asserts? Our answer is—"No." The following are some of our reasons.

(i) It is Di-theistic; it postulates the existence of the Eternal Logos along with God. Over and above, there is the Devil who is implicitly assumed to be uncreated.

(ii) Its idea of God (the father) is very low. He is perfectly anthropomorphic having a body and voice (V. 37); as well as a local habitation (i.e. in heaven). He is wrathful (III. 36); and blinds the eyes of some of his children and hardens their heart (XII 40).

(iii) The Logos doctrine is unphilosophical and unacceptable. To non-Christians it is an absurd theory. Even many Christians consider it to be 'alien to the world of today.' Jesus himself never claimed to be the Logos. What he said about his 'preexistence' (VIII. 58) is a pure fabrication of the author of the F. G. He replaced the popular notion of the Apotheosis of Jesus by his new theory of the Incarnation of the Logos in Jesus. Again if the Logos could become flesh,

why not God? He too is active. He raises up the dead and quickens them (Ju. V. 21); he draws some men to Jesus (VI. 41); gives to Jesus some men out of the world (XVII. 6) and blinds the eyes and hardens the heart of some men (XII. 40). If then God is active, he can as well be the Creator and Saviour of the world. Then the theory of the incarnation of the Logos becomes useless. It may be noted here that the Jesus of the F. G. is the only incarnation throughout Eternity. What an absurd idea!

(IV) The picture of Jesus as painted in the F. G. falls far short of our ideal of a saint. Jesus lied and misled his brothers (VII. 8-10); called his opponent sons of the Devil (VIII. 44); declared all other prophets as 'thieves and robbers' (X. 8); could not overcome fear (VII. 1, VII. 10, VIII. 59; X. 39; XII. 36), sorrow and doubt (XII. 27; XIII. 21); and would not pray for non-believers (XVII. 9). Some of these, not being recorded in the Synoptics, may not be true, but they are recorded in the F. G.

(V) With reference to Johannine theology, Pfleiderer writes:—"The starting point is the antithesis of God and the world, which forms the presupposition of the Christian doctrine of salvation" (ibid. IV. 163). In one place Jesus says—"He that hateth his life in this world, shall keep it unto life eternal" XII. 25. St. John says—"The whole world (*kosmos holos*) lieth in wickedness" (In. V. 19). This idea is morbid and is to be rejected. This world is God's world and we know Him and find Him in this world and through this world. This world is the Temple of God.

(VI) a. The Gospel idea of salvation is obsolete. It is primarily a negative idea, the meaning being 'deliverance from Perdition, condemnation, Judgment' or 'Escape from Destruction'. Its secondary meaning which is positive is 'to have eternal life in heaven'. Neither on the negative side nor on the positive does it imply development of the soul either here or hereafter.

(b) The Gospel plan of salvation is unreasonable. No intelligent non-Christian can believe that his salvation depends on his accepting, as his Saviour, an unknown person born in an unknown corner of the universe. Trillions and quadrillions of men were born before Jesus, what about their salvation? And what about the salvation of those millions and trillions who were born after him but could not hear of him or having heard, rejected him? Will they be destroyed or tarried into everlasting Hell, as Jesus threatened? The very idea is revolting.

(c) Vicarious punishment is a fundamental principle of Christianity. It asserts that Jesus dies for the salvation of the whole world. But it is a relic of old sacrificial religions. The world disobeys its Lord, the Lord becomes angry; he is to be propitiated; to appease him sacrifice must be offered. But a plan is hit upon to avert the punishment of the whole world. A male Ephegeia (=Jesus) is chosen as the substitute and is offered as sacrifice. The Lord accepts the compromise and is appeased; and the world is thus saved. This is the idea that is at the bottom of vicarious punishment. It may now be spiritually explained but it is, in fact, a childish make believe and unethical withal.

GOOD PRECEPTS

Though there are fundamental defects in the F. G. it contains some good precepts. The following are the best—Jesus asked his disciples to love one another (XIII. 34; XV. 12). Addressing Peter he said—"Feed my sheep" (XXI. 17, interpolation). He said that his meat was to do the will of God (IV. 34). God is to be worshipped in spirit and truth (IV. 24). Except a man be born again he cannot see the kingdom of God. (ut. 3). "The truth shall make you free" (VIII. 32).

The outlook in some of the precepts is narrow; but it may be widened and all these precepts may be made universal.

GITA'S CONTRIBUTIONS

The Gita has made a real contribution to the religious world. It has tried to harmonise the ways of *Jnana* (knowledge and intuition), *Bhakti* (loving devotion) and *Karma* (action). The very idea is grand and the author of the Gita is the first man in the history of the world to try to solve this problem. Even Dr. Saunders says, "Certainly the ways of action, intuition and devotion are reasonably reconciled" (p. 104). There are also other points of importance.

Equanimity even in the midst of dangers, (chap. VI); to rise above passion, fear, anger and distraction (I. 52, 56, IV. 10), to be pure in mind (IV. 10; VI. 16), to strive for the welfare of all beings (including men and other creatures) (v. 35; XII. 4); Universal love and compassion (XII. 13); to regard friends and foes alike (VI. 9, XII. 18); to follow the Golden mean (VI. 16, 17), to perform one's duties without desire for fruits (II. 47); to incite one another with religious discourses (X. 9) to see God in everything and everything in God (VI. 29-31), to be firmly established in God (IV. 10; V. 17; VI. 15) unswerving devotion to God (XII. 11, XVI. 26), to do works for God (XII. 15); to dedicate all works to God (IX. 27)—these are some of the precepts of the Gita. These precepts are excellent and unsurpassed. Still the Gita cannot be the sole Gospel of the world. The following are some of its defects according to our standard.

(i) Its metaphysics is dualistic. Gita's God and Prakriti are both eternal.

(ii) Though according to the Gita the phenomenal aspect of God is real and not illusory, yet this aspect is considered to be less real than the noumenal. But the modern philosophy of religion sees—noumena in phenomena and phenomena in noumena and regards both the aspects of God as equally real but attaches more value to the dynamical than to the statical aspect.

(iii) Gita's theory of incarnation is an useless assumption. When it admits that God is immanent in the world, is ever guiding the human souls and is already here, his coming here again in a particular human form is meaningless. Again as according to the Gita, all human selves are essentially the Divine Self, all men may be said to be the Divine incarnation.

(iv) Gita's contribution to the philosophy of *Karma* (duties) is original. The ideal of *Nishkama Karma* (performance of duties without any desire for fruit or reward) is unique in the religious history of the world. Still it is defective inasmuch as liberated souls are considered to have entered into the transcendental realm of Non-action. But fortunately such souls are non-

existent and are an ideal creation of the author of the Gita according to his conception of the noumenal world.

(v) The *Summum bonum* of the Gita has been variously described. It is (1) going to God or God's essence, (2) entering into Him or His essence, (3) Winning Him, (4) abiding in Him, (5) *Brahmā-Nirvāṇam* (Bliss of Brahma or extinction in Brahma). All these may be explained either dualistically or monistically. The dualists say that the soul becomes united with God but retains his personality. According to the monists the personality is destroyed. If the monistic interpretation be considered to be the true meaning then many will reject this ideal of the Gita.

FUTURE GOSPEL

No Scripture can then be the sole Gospel of the world. We want a new New Gospel which will assimilate all the good points of all the scriptures. Its God must not only be transcendent but immanent also. He is not only the creator, preserver and destroyer of the Universe but is also our father, mother, friend, companion and lover; and the soul of our soul.

The Universe is organic to God and is not an alien body.

To know God, to see him with spiritual eyes, to commune with Him, to feel him as the self of our self; To love God, to love God's creatures as God himself does and to be devoted to their welfare like God himself—these are the fundamental principles of the Religion of the Future.

We have rejected the conclusions of the author. But the book is worth-reading. It contains valuable materials and it shows how the Christian propagandists are trying to abandon the old method of vilifying other religions. The best method of arriving at a truth is the comparative study of all the scriptures from the standpoint, not of a propagandist, but of a historian and scholar. Our author's study is also comparative but he is a propagandist. Not that he does not praise other religions. He does praise; but it is the subtle method of damning with faint praise.

There is a valuable appendix containing illustrative readings from various sources, principally non-Christian.

THE HIGHEST MOUNTAIN IN THE WORLD

By SATYA BHUSAN SEN

FOR more than half a century Mount Everest has been enjoying the enviable reputation of being the highest mountain in the world. Everest is situated in one of the innermost recesses of the Himalayas and consequently it is very difficult to get a proper sight of it from India. Mount Everest is popularly seen from the top of Tiger Hill (8516 ft) which is situated at a distance of about six miles from Darjeeling; but then one must have a clear cloudless sky under the first rays of the morning sun and even then only the topmost pinnacle of it can be seen. Those who desire a closer and fairer view of it must go further afield to Sandakphu and Faloot which are situated on the shoulders of the long and elevated range of mountains just facing the city of Darjeeling and situated to its west. It is reported that every year batches of European tourists and American Globe-trotters flock to these places to have a look at the highest mountain of the world. But from the few points in India whence a sight of Mount Everest is at all available its enormous

height is not apparent—at least not so apparent as to give one the impression of its being the highest mountain in the world. The very fact of Everest being the highest mountain in the world first came to light as a result of a series of scientific measurements.

Sometime about the middle of the 19th Century the Trigonometrical Survey of India extended their base of observation to the foot of the Himalayas and from this newly attained base some day between November 1849 and January 1850 they observed a mountain peak at 27°59' 3" N. L. and 86°54' 7" E., which on measurement was found to be the highest mountain in the world for, it rose to an altitude of 29002 ft. Owing to our ignorance no name was current for this mountain peak. At a meeting of the Royal Geographical Society of London held on May 11, 1857 after much discussion the peak was named after Col. Everest the late Surveyor General of India who organised the Trigonometrical Survey of India on a scientific basis.

By whatever name be it called up-to-

date Mount Everest is known and accepted as the highest mountain of the world. The recent exertions for the Everest Expeditions may also be noted; that so much of energy is being directed to one single peak is due to its being known as the highest mountain in the world. Yet there are indications pointing to the fact that among these very Himalayas within the boundary of Tibet there are one or two mountain peaks which are higher than Everest; but this fact is generally not known to the public as yet.

Dr. Graham is a Himalayan explorer of some repute. In 1883, he ascended to the top of Kabru, a peak of the Kanchenjunga group but from his report many are inclined to believe that it is not Kabru that he ascended to but a lower peak—Kangtsen. Whichever it may be from this mountain peak on the midday of October 8, 1883 Graham was pointing to his friend and Dr. companion Boss—Everest, the highest mountain in the world, standing towards the north-west within 70 miles. To Boss this was the first sight of Everest; he observed that this could never be for those two peaks yonder are higher still—pointing to two mountain peaks standing over the remoter ranges of mountains to the North of Everest. Graham was naturally surprised at this but on observation all agreed that these two peaks really looked higher than Everest. Of course they depended on eye estimation alone but eye estimation was not likely to be misleading here for, from such a height all peaks are likely to be seen in their correct proportions. It is in Graham's account that from their point of observation all mountain peaks of known heights appeared in their correct proportions inspite of closest scrutiny—not even one showed any aberration. But they could not get any clue as to the identity of these two peaks hitherto unknown; of these one showed a composition of rock, the other was a snow peak.

Major L. A. Waddel was a Professor in the Calcutta Medical College. He used to employ his leisure time in excursions in the Himalayas. Once when he reached Faloot, a place on the range of the mountains facing the city of Darjeeling, a Tibetan pointed out to him the peak of Mount Everest. This man was a native of the province of Khumbu in the north-east of Nepal lying to the South of Everest; so some reliance may be placed on him as a local man. This man introduced the Everest group by the name of Lap-chi-

kang and called the main peak by the name of Jomo-kang-kar. He further expressed that this group before them was in fact the Lower Lap-chi-kang and the one that he named Upper Lap-chi-kang was just to the north of Everest—in Tibet. So this latter was of course higher than Everest but a sight of it is not available from Khumbu or any place in Nepal.

This man's statement has some confirmation in collateral evidence also. Waddel has stated in his book that he had seen mentioned in Tibetan books that Upper Lap-chi-kang is a very high mountain and that Lower Lap-chi-kang is situated in the Nepal frontier. There are some topographical accounts of these places in the Tibetan language which were partly translated by the famous Bengali explorer the Late Rai Bahadur Sarat Chandra Das; therein Jomo-kang-kar (which is the Tibetan name for Everest) is found to have the second place in the list of the highest mountain peaks.

So that the existence of mountain peaks higher than Everest is known among the inhabitants near about Everest and is also mentioned in Tibetan literature. It is not known with certainty whether or not the Tibetans have ascertained the heights of these mountain peaks by eye estimation alone. Among the European explorers probably it is in the account of Graham alone that a direct evidence of it and a positive sight of the peaks is found and mentioned. Tibet is to all intents and purposes a forbidden tract, even Nepal is not perhaps wholly accessible to foreigners; so mountains higher and remoter than Everest are out of question, even Mount Everest has been approached by only a limited number of Europeans. Lately there has been some attempts to climb to the top of Mount Everest and perhaps some day in the near future the topmost pinnacle of it will be trodden by man; but even in their account no mention is found of any mountain higher than Everest.

Among the few Bengali enthusiasts there is only one instance namely the late Rai Bahadur Sarat Chandra Das who made any real approach towards Everest. But from the account left by him many of the noted European explorers are inclined to believe that Sarat Chandra Das mistook another mountain peak for Everest and has left an account of that peak. When there is so much of doubt about his account of Everest there seems little chance that he even found any indica-

tion of any peak higher than Everest. Any indication from any other Indian on the point remains yet to be discovered.

With a view to get further information on the point I made a reference to Dr. Sven Hedin of Sweden ; he informed me in reply "There are certainly no mountains higher than Mt Everest". Dr. Hedin is of course a famous explorer and the explorations he made on the Himalayas are also extensive. But then even his view cannot be accepted as final so long as evidences of direct indication pointing to the subject cannot be repudiated. To get a still further and an authoritative information about it I made a reference to the Royal Geographical Society of London and the Geographical Society of America. From America they gave me the reply that to know anything with authority one must refer to the Royal Geographical Society of London who have made a special study of the Himalaya mountains. In reply to my reference to the Royal Geographical Society of London they gave me definitely to know that they have no reason at all to believe that there is any mountain in the world higher than Mount Everest. But it will be seen that even this authoritative declaration of the Royal Geographical Society of London does not repudiate the indications in the account of Graham or the evidences in the Topographical accounts of the Tibetans.

This is a matter which is primarily related to India ; but unfortunately, for us we are helpless in such affairs. In India there is no Geographical Society or any other Academy who have any responsibility to send an expedition for investigation on the point. Of course there are instances in other countries where expeditions of like nature were undertaken by individuals—instances may be enumerated from Columbus to Dr. Hedin who is a living example ; such endeavours have the credit of attracting considerable help and advancement from the country and the Government. In our country

leaving aside the question of expenses so long there was hardly the possibility of finding anybody who could undertake such programmes. But times have now changed and we now and then hear of enthusiasts undertaking various sorts of schemes. So, now the problem that is essential is probably money—if funds be found out there may not be wanting men who could be entrusted with a scheme.

But who is to organise such a programme ? In Bengal there is the Bangiya Sahitya Parishad (the Bengal Literary Academy) and the Asiatic Society of Bengal. I have no knowledge of the activities of the Asiatic Society of Bengal ; but the honour of having once proposed to the Bangiya Sahitya Parishad to form a Geographical Society of their own rests with my humble self. The Parishad acknowledged the importance of the subject and promised to take up the matter for their consideration but ultimately nothing practically materialised. Therefore, there is little hope that the Bangiya Sahitya Parishad would render any substantial help to advance the idea. Next remains the question of individual exertion. But the nature of the affair is of such a stupendous scale that hardly any one person would be found capable of undertaking such a gigantic programme. Though speaking of Bengal in particular, there is little to hope that any other province has any more to offer either in individual prowess or in Academic strength.

Explorations in the Himalayas, discovery of the Mount Everest, investigation of the source of the Indus, the Brahmaputra etc.—all these as well as the recent Everest expeditions have all been undertaken by the Europeans. If after all this the attempt to investigate and find out the highest mountain in the world is not made by us in right earnest now, then without doubt the glory of this also will be reserved for foreigners.

VICTORY

A million crosses stood on a hill,
A deadly wood against the sky ;
An open grave a wound to kill,
A million lads that would be still—
A million lovely lads that lie
Where they can die.

And who are you,
And who am I—
That we should walk about at will,
And a million other lads should lie
Under a hill beneath the sky ?

By KATHLEEN MILLAY

[Books in the following languages will be noticed Assamese, Bengali, English, French, German Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc., will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc., according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

How THE SOVIETS WORK. By H. N. Brailsford. Vanguard Press, New York. 169 pp. Price 60 cents postage paid.

This is another volume of the Vanguard Press series on Soviet Russia. It is a study of the Soviets at work, written in that light, charming style in which Brailsford excels. He has simplified the subject for his readers by taking first a single Soviet in a Moscow factory, and then a single Soviet in a Russian village, to show just how the Soviets work and what their duties and activities are. He has woven in his statistics very naturally and easily and he has shown what a great advance the Soviet system is upon the older system of administration that formerly existed. His study of the various nationalities and religious groupings within the Union is also excellent, and he has a chapter on the Communist Party, another on the Dictatorship, and a conclusion on 'Perspectives.'

The study of nationalities within the Union would especially interest Indian readers, for here we see how the Soviet system is such a natural expression of peoples, and that its application to Russian peasants is no more remarkable than its application in the Moslem Tartar districts or in the Mongolian districts of the east. Vast areas of Russia are inhabited by such peoples who are supposed to have nothing in common—not race, religion or culture. Still, we see these varied peoples welded together by the unbreakable bond of common economic interests with full opportunity for cultural development and advancement. We see the cement of this vast Soviet system—the Communist Party, with a rigid discipline and unwavering principles. The class basis of this party has abolished the political meaning of nationality or religion, while preserving the intimate associations that belong to language and culture. We see men and women who ten years ago were barbarous

tribesmen now studying for entrance to the Universities or Workers' Faculties, after which they will shoulder the duties of managing the Soviet Union. In ten years these tribes have leaped over a hundred years of culture, giving the lie to those who hold that the suppressed must have decades or centuries of training under the guidance of the upper classes before they are fit to manage their own affairs. Brailsford writes in this manner:

"But through what mental adventures must they be passing! Conceive the bewilderment of these girls in their early twenties, if anyone had told them, ten years ago, that their destiny is not the veil and subjection in a Tartar laborer's hut but a share in the learned work of the new rulers of Russia. That dark-skinned, comely girl with the great shock of black hair grew up in a nomad's tent, the inheritor of a mental world which had neither changed nor expanded for ten centuries. To-day she sits gazing at charts and pictures which illustrate the Darwinian theory, and dreams of her coming work as a doctor. The butchery her, who may have hoped to herd horses on the steppe, may take his degree in economics, and live to administer the industries of the Republic—Russia is snatching herself: she lives dangerously and she lives poorly, but it is the ambition for a splendid future which gives her the courage to endure. Within a generation she will have brought, not the picked few, but the broad masses of these neglected Eastern races within the circle of civilization—My ears are still haunted by the Tartar folk-songs which the pupils of the School of Music sang for me, and I left Kazan regretting that I had just missed the performance of the first Tartar opera."

Brailsford describes the Communist Party in a manner that is half-praise, half criticism. He says that there has been no such school for character since religious persecution ceased. The idle, the comfortable, the complacent, the sensual—these do not or did not join the Communist

Party. The Communist councils are not haunted by the careerists who see their opportunity even in the labor organizations of the West. The leaders of the Communist Party of Russia are graduates from the prisons of Czarism, and they carry that spirit of selfless devotion to the cause they serve that is above all individual or family obligations. The maximum salary that any member of the Party may draw—this is actual fact today—is 235 roubles a month in Moscow, 189 roubles in Vladimir. Almost all heads of all State departments are Party members, and they draw this salary and no more. A "Red Director" of a factory draws it, as does a director of a State Bank, or a State Commissar. The punishment for Party members who violate the ethical standards that a Communist is expected to have, has more than once been death.

This book by Brailsford has its good points, and it describes with clarity the ramifications of the Soviet system. But throughout one has a feeling that the author is not sincere. He has that superior air of an Englishman looking at and criticising the world. He excuses the system of elections and administration in Russia by remarking in a very lofty manner that the Russians, unlike Englishmen, have never known what free democratic institutions are; and so their methods must of necessity be different. Mr. Brailsford thereby exposes the fact that he comes from the well-fed classes of England. The "democracy" of which he speaks is only for his class, and when extended to the "lower" classes, it has been extended only because the ruling classes knew they could at all times poison the minds of the English workers through the schools, newspapers, and churches which they, the ruling class, control. Despite the "democracy" of England, the vast toiling masses live in a poverty as deep as most of the Russians. There are sections of London where the inhabitants are half-human: they are debased, ignorant, and poverty-stricken, and they do not even know how to play. The conditions in Russia were never worse than are conditions in some of the mining districts of the British Isles. Democracy is and always has been a reality only for the ruling classes.

In reading this book on the Soviets one is constantly irritated by the superior air, the feeling of insincerity and even of hypocrisy, and the lightness. It is the way a person writes when he lightly studies a thing; that other people have died a thousand deaths to achieve. Facts and figures and a description of the administration of a system do not cover up this underlying note of unreality and superficiality. Yet, despite this, is a book that one may read with profit—provided one holds in mental reserve its shortcomings.

THE GREAT AMERICAN BAND-WAGON: A study of Exaggerations. By Charles Merz. The John Day Company, Publishers, New York City; pp. 263. \$3.00.

When the circus comes to town in America, it announces its arrival by a parade, headed by the very high, gaudy wagon, on top of which sits a band blaring away as only a circus band can. In America also there is a folk saying that "Don't climb on the band-wagon if you can't foot a horn," meaning "don't make a big noise if you can live up to it."

Now, considering all of this, Charles Merz, one of the best essayists of the United States, has written a book of exaggerations which he calls "The Great American Band-Wagon." And one smiles from the beginning to the end. For this author, a trained classical essayist, such as a restricted group of Englishmen and Americans belong to, has made one of the most thorough studies of the band-wagon temperament and activities of America that one could dream of. He has undressed the country in a most elegant and gentlemanly manner. We see big business using bathing beauties and instituting beauty shows to boost their tooth paste or underwear; he shows us the secret lodges with all their infantile humbug; he introduces us to the tom-tom that is called American jazz and that, in Negro hands, is really capturing the earth; he has, with devastating matter-of-factness, exposed the vacuum in American middle and upper-class brains that has to be filled up by a radio running at full blast all hours of the day and night and in every room in the house; he has shown us how Americans booze over the soda-fountain counters. And, he has a chapter on "Bigger and Better Murders." Sport is covered, and his chapter on "Roll your own Diploma" (taken from the cigarette-tobacco advertisement "roll your own") educates us in the securities of the correspondent schools who confer degrees by the ton on those who pay so much per— "Think twice before you scoff at the next Ford touring car adorned from stem to stern with sixteen college pennants," he warns. We meet the American traveller who goes abroad to do missionary work for American breakfast foods and American bath-tubs, and finds all other countries barbarous. Then there is the moving pictures, the standardized thinking societies, the drives with the boosting "weeks" such as Go to Church Week, Smile Week, Clean up the Yard Week, Take-a-Bath Week, Fire Prevention Week, and Brush Your Teeth Week. There is a description of prize fighting, of national heroes, and God knows what. For America is one vast band-wagon.

It is almost impossible to believe that a nation like America could descend to such infantile tomfoolery that it does at times. Take its secret lodges, with all their unspeakable nonsense, hero desorbed. Everybody knows the Ku Klux Klan behind which lurks the most murderous reaction; but less dangerous and more funny in infantilism are Lodges called by grand names like "Supreme Tribe of Ben-Hur," "Order of Magian Masters," "Royal Order of Buffaloes," "Mystic Order of Granada," the "Ancient Arabic Order of Nobles of the Mystic Shrine," "Mystic Order of Veiled Prophets of the Enchanted Realm," "Illustrious and Exalted Order of Crusaders," and the "Illustrious Order of the Mystic and Exalted Cross." Then there is the "Order of Owls," "Order of Ancient Oaks," "Order of the Knights of Malta," and the "Odd Fellows," "Macabees, and the "Daughters of Rebekah," etc. The author says:

"All over America, six nights a week, from one to five million men and women are dressing themselves as Brahmics, Pharaohs, Vikings, Princes, furies, hermits, druids, Galahads, sorcerers, Maleses and Tibetans."

"To what purpose?"

"If I tell, swears the Woodman, 'may I be

dashed to pieces as I now dash this fragile vessel into fragments !

"If I tell, swears the Maccabee, 'may my left arm be cut off above the elbow !'

"If I tell, swears the Shriner, 'may my eyeballs be pierced to the center with a three-edged blade, my feet be flayed, and I be forced to walk the hot sands upon the sterile shores of the Red Sea until the flaming sun shall strike me with living plague, and may Allah, the god of Arab, Moslem and Mohammedan, the god of my fathers, support me to the entire fulfilment of the same, Amen, Amen Amen."

Now these be oaths. And what are the "secrets" these millions of Americans are supposed to keep in such a dramatic manner? well, you would have to join one of those lodges or orders to satisfy your curiosity. And the sort of people who will put up with such abject idiocy as these are not the sort of people one would want to spend an evening with learning "secrets."

Perhaps Americans do this sort of thing, not only because they are a young people with more energy and money than they know what to do with; not only because they have such vast vacuums in the cavity that passes for their brain; but because their lives are dreary and uninteresting. Yes, strange it is, dreary. American life and thought is standardized as American economic life is standardized. The most powerful of capitalism in the world forces the American population into one mould until their dress, their joys and dreams, as well as their intelligence are so standardized that they all seem to have been cut out with the same cookie cutter. If you are going to produce billions in wealth for a ruling class, you have to crush the vast masses into one manner of life and thought in order to do it. You can't have "idealists" running around talking about personality and originality when big business men know such things only lead to sedition! And this is the reason simple John Smith of Chicago, who sits in an office over a clerk's desk for eight or ten hours a day, doing the most deadly monotonous work, goes out in the evening, puts on the dress of an Arab and for half the night lives in a fairy land in which deadly oaths are taken, deadly secrets told, and deadly pass-words given.

Yet the author of this book is optimistic. This hand-wagon temperament of America, he says is because Americans are young, restless, adventurous, with a vast store of curiosity, an immense reserve of energy, and a tremendous will to go somewhere. They don't know where they are going, it is true, but just show them something new, they will be off after it. As the American saying is, "Well, I'm willin' to try anything once." And the things they try! This book tells all about them. Still when Americans begin to analyze their own absurdities—that is a good sign for any people.

AGNES SMEDLEY

HISTORY OF BURMA, FROM THE EARLIEST TIMES TO 10 MARCH 1824. THE BEGINNING OF THE ENGLISH CONQUEST: By G. E. Harvey. *Indian Civil Service with a preface by Sir Richard Carnac Temple Bt.* Longmans, Green and Co., 32, Paternoster Row, London C.C. 4. 1925. Pp. xxxii, 1-115.

Mr. Harvey's book is, decidedly, the best work on the Ancient and Mediaeval history of Burma that has appeared in print. Though Mr. Harvey belongs to the heaven-born service he still appears to retain the scholarship of a Fleet and the industry of a Smith, qualifications extremely rare among the members of that service at the present day. What is more, Mr. Harvey was sufficiently liberal-minded to accept and acknowledge the help of a foreigner in his work. M. Chas. Duroiselle is by far the most accurate and reliable authority on the history and the literature of the Burmese peoples at the present day. Mr. Harvey wrote this book according to the suggestions of M. Duroiselle and has followed his notes—"The accumulated notes of a life time"—and he acknowledges that the first half of his book is really M. Duroiselle's. Mr. Harvey worked with the help of a number of other scholars whose names he mentions in his introduction. It is extremely gratifying to find that he has not omitted to mention natives of Burma like Maung San Shwe Bo, Maung Mya, Maung Po Kye and natives of India like Mr. C. K. De in the same breath with natives of Great Britain of the type of Messrs. Furnivall, Searle, Stewart and Grant Brown of the Indian Civil Service. The book contains seven illustrations and five coloured maps.

The book is extremely interesting reading and the author has spared no pains to make it as attractive as possible. More valuable than the text of the work are the notes (pp. 307-63) and the genealogical tables (pp. 364-72) and the Bibliography (pp. 373-90). The work begins really in 1041 A.D. Before that date Burmese native authorities do not go. It has been proved beyond doubt by M. Duroiselle and corroborated by local histories that Burma received its present form of Buddhism from Ceylon in the 11th century. Before that date the inhabitants of Burma were the adherents of some form of Mahayana Buddhism, more probably the Tantric form prevalent in Bengal and Bihar. M. Duroiselle's description of the Ari, as the Tantric Buddhists of Burma are called in local histories, leaves no doubt about the fact that they were followers of the Mantrayana formerly prevalent in Gujarat and in Bengal. The Burmese chronicle, the *Hmannan*, thus describes the Buddhist and Vaisnava practice of the first fruits:—"Moreover kings and ministers, great and small, rich men and common people, whenever they celebrated the marriage of their children, had to send them to these teachers at nightfall, sending, as it was called, the flower of their virginity. Nor could they be married till they were set free early in the morning."-p. 18.

Tantric Buddhism was expelled from Burma by King Anawrahta by brute force. The most interesting part of the history of Burma, therefore, still remains to be written. Mr. Harvey's book contains only the later mediaeval portion of it consisting of the struggle between the Burmese and the Arakanese and ends with the final triumph of the Burmese with the foundation of the Alaungmya dynasty in 1752. In one particular point Mr. Harvey's book is inaccurate and biased. Most Englishmen cease to be critical scholars when it comes describing the enemies of Great Britain. The most level-headed Brit-

sher suddenly ceases to be a sober historian and chronicler and starts speaking of the 'enemy' as if he were writing an official report of events preceding an Assaye and Argaon or a Chillianwala and Gujrat. That part of Mr. Harvey's book which treats of the history of British traders and missions is as inaccurate and unscholarly, as Curzon's account of the "Black Hole."

THE ANNALS OF THE EARLY ENGLISH SETTLEMENT IN BIHAR: By N.N. RAYE, M.A., formerly Principal T.N. Jubile College, Bhagalpore, Principal Ripon College, Calcutta; Kamala Book Depot, Ltd., 15 College Square, Calcutta, pp 1-320, i-vi.

This volume is a new venture on the part of Prof. N.N. RAYE, who is better known in this part of the country as a professor of English literature. In fact by producing this book Prof. RAYE has taken the public agreeably by surprise like Prof. Jadu Nath Sarkar when he started writing on Mughal history more than twenty years ago. Prof. RAYE's book does not break virgin soil and portions of it have been dealt with by many of the earlier writers on the subject. The early history of the English settlement in Bihar is a very interesting study and Prof. RAYE has certainly done well by bringing all known materials together in this volume. The first five chapters are general in nature and lead to the first English settlement in Bihar. Prof. RAYE begins his subject in the sixth chapter entitled "The city of Patna and its governors." It is here that we notice the first defect of the book in the spelling of Musalman names. Shayista Khan I, son of Asaf Khan II. Shajahan is spelt not even Shaista but Saista. Similarly Sipih Shukoh is spelt Sipar Sheko but Mahabat Khan and Rustam Khan are spelt correctly. It is difficult to recognise *Kholis-i-Mukhlis* Mukhlis Khan in "Muchlis." The 7th, 8th, and 9th chapters deal with the subject proper but in the 10th Prof. RAYE returns to Bengal. The 11th chapter deals with the factory at Patna but the 12th and 13th are devoted to the general question of the restoration of the English East India Company in its trading stations after their foolish war with Aurangzeb and the formation of the new Company. In the 14th chapter the English East India Company are introduced in the role of Zamindars or revenue-farmers of the Mughal empire. The 15th, 16th and 17th chapters deal with the history of the Patna factory. From the 18th chapter onwards the material could have been very much improved if the author had incorporated the materials collected by the Keeper of the Imperial Records in India and incorporated in the Calendars of Persian Correspondence, four volumes of which have been published.

It is not possible to do much original research in the period and the subject which Mr. RAYE has selected. On the whole Mr. RAYE has collected together almost every fragment of material and reproduced it in a very nice manner. This style is lucid and his manner of presentation vigorous. The printing of the book is vile and does little credit to the publisher.

HARSHA, (Calcutta University Readership Lectures, 1925); By Radhakumud Mookerjee, M.A., Ph. D., Rihasa-Siromani, Professor and head of

Department of Indian History, Lucknow University, His Highness Sir Sayajirao Gaekwad Medalist, Pricemum and Lecturer 1925-30; Oxford University Press, London, 1926; pp 1-203. Price Rs 3-6.

This is the latest book of the Rulers of India Series and is written in the charming style for which Prof. Radhakumud Mookerji is noted. The book is divided into seven chapters and provided with a nice index. The principal defects of the book are due to the author's inability to deal directly with the original materials of Indian History and his consequent immense veneration for European writers. In following the absurd and obsolete theories of the late Dr. A. F. R. Hoernle the author has made himself extremely ridiculous in the eyes of scholars. I cannot resist the temptation of quoting some of them:

1. "Prabhakaravardhana (Maharajadhiraja) m. Yasomati (daughter of Emperor Yasodharman Vikramaditya of Malava)"-p. 10. Is there any proof in support of this statement that Yasomati was the daughter of Yasodharman and that the latter ever had the title of Vikramaditya, except the inaccurate statement of the Rajatarangini and the theories based on it by Hoernle?

2. "That the Maukharis were not rulers of Kanauj is also supposed from the fact that their inscriptions were all found far away from Kanauj, Mazadha (Bihar Province)"-p. 16, note 2.

What about the Harsha inscription of the Maukhari Isanavarma and the Jounpur Jumma Masjid inscription of Isvaravarma, even if we do not count the Asirgadh seal of Saravarma?

3. "According to an Arabic chronicle, in the 36th year of Khosru II of Persia, i.e., about A.D. 625, letters and presents were exchanged between him and the Indian Monarch; while a painting in one of the caves at Ajanta probably points to this fact in showing the presentation of a letter from a Persian to an Indian king."-P. 35. Prof. Mookerji is not yet aware of the fact that all scenes at Ajanta have been proved by M. Foucher to be Jataka scenes.

4. "The expansion of the Gurjara's southwards was, however, checked by Pulakesin II, whose suzerainty they accepted by about A.D. 631, as will appear from the Aihole inscriptions cited above."-P. 41.

Can prof. Mookerji prove that the statement in the Aihole inscription is sufficient to prove this subjugation of the Gurjara of Broach to the Chalukya of Badami?

5. "But as has already been stated, the Hindu political system did not favour much centralized control, but believed more in decentralization and local autonomy." P. 43

This is one of the favourite conundrums of writer of the class of Prof. Radhakumud Mookerji. Can he prove that in all centuries of Hindu history from 1500 B.C. to 1672 A.D., decentralization was favoured by Hindu kings? Such inaccurate statements may please the masses in India but they serve more to increase the ignorance of our students.

6. "Malwa, however, avenged this insult by the victory achieved by her next king, Mahasena-gupta, over the Maukhari king Sushitavarma, and the fame of the victory was sung as far as the banks of the Lohitya."-P. 55.

As I had to write a separate paper to prove that

Mahasenagupta cannot be a king of Malwa or Sasthitarvarman a Maukhari king in the Journal of the Bihar and Orissa Research Society for July 1923. I would request the readers of Prof. Mookherji's book to refer to it on this point.

I am obliged to quote some of Prof. Mookherji's more glaring inaccuracies:—

1. "Regarding now the Maukharia, if we may take the localities of their inscriptions as indications of the extent of their power it was the largest under Sarvavarman, who is called in No. 1 as simple the Maukhari as the most distinguished scion of his house, and in Nos. 4 and 5 is described to have held sway from Arrah to Barhanpur, where the two inscriptions were found." Pp. 56-57. No. 1 of Prof. Mookherji is the Doo-Banarak inscription of Jivtagupta II (No. 16 of Fleet's Gupta Inscriptions) and No. 5 is the Assirad copper seal of Sarvavarman. In none of these we can find the statement that Sarvavarman ruled from Arrah to Barhanpur. Seals of Harshavardhana and Bhaskaravarman were found in the same stratum at Nalanda. Will this prove that Bhaskaravarman of Assam was in possession of Nalanda at any time?

2. In the genealogical table on page 52 Prof. Mookherji makes Sasthitarvarman, the son of Sarvavarman, and the father of Avantivarman. Can he prove this from any reliable contemporary record?

3. "Nos. 6, described as king of Malwa by Bana,"—p. 63. No. 6 is Mahasenagupta according to the genealogical table on page 63. But Dr. Mookherji will be surprised to hear that a king named Mahasenagupta is not mentioned in the Harshavardhana of Bana.

4. On p. 64 Prof. Mookherji makes Budhagupta, the son of Kumara Gupta II and Bhrugugupta, the son of the latter. From the way he indicates the relationship between Harshavardhana II and Harshavardhana it seems that he implies succession and not descent, but is this the correct way of indicating succession?

The worst chapters of the book are those on administration (chapter 4) and religion and learning. The property of Dr. Mookherji's equipments in these respects will make him the butt of ridicule of all scholars. The chapter on administration begins with Harsha's camping arrangements and contains such statements as "Thus the sovereign himself was one of the best travelled men in his empire,"—p. 88. It contains a description of the Royal Palace and its zoological collection, the establishment etc. In the middle of the chapter Prof. Mookherji is compelled to admit that "We do not have much information regarding the actual system of administration,"—p. 94.

The most atrocious part of chapter 4 is the description of the royal officers. It shows that Prof. Mookherji has failed to understand the Gupta Bureaucratic system utterly. He says that "The provincial Governor appointed his subordinate officials, described as being *Tan-mukhatakas*. He appointed his Visayapati for the Divisional Commissioner) to whom the Damodarpur inscription apply the titles of *Kumaramatyas* (nt, the counsellor for a prince appointed as Governor as distinguished from the Rajamatyas)"—p. 106. A footnote on the same page intensifies the decree of Prof. Mookherji's non-acquaintance of the subject. "In the inscription on the Bishah seal appears the full title of the office, viz., *Yaturogadiyayakumara-*

matyadhikarana." It never occurred to the learned professor that the term *Adhikarana* means an office and the Bishah seals show that there were at least four classes of ranks of *Kumaramatyas*:—

1. *Kumaramatyas* equal in rank to the emperor himself *Paramabhaktarajapadaya-Kumaramatyas*.

2. Those equal in rank to heir-apparent-Yuzarajabhattarakapadaya-Kumaramatyas.

3. Those equal in rank to younger princes of the royal family-Yuzarajapadaya-Kumaramatyas.

4. Ordinary *Kumaramatyas* of the lowest rank—*Annual Report of the Archaeological Survey of India 1904-5* pp. 107-8.

In the next page we are told by Prof. Mookherji that the *Drangis* were "city magistrates." Fleet's Gupta inscriptions were published in 1883 but if Prof. Mookherji had taken the trouble of reading the English translation of the *Rajatantra* published since then he would have understood that in the Sanskrit language *drangis* means a boundary and in modern Sindhi, Lahnda and certain dialects of Kashmiri *dang* still means a boundary.

I shall confine myself only to that part of chapter V which deals with "The art of the Gupta age" pp. 159-61. I cannot understand what business Prof. Mookherji had to introduce this topic in a book on Harsha. In the first place he does not possess the necessary equipment to deal with the chronology of Gupta art and in the second place he is not even an art connoisseur of the type of Kramrisch or O. C. Ganguly. Consequently he has merely reproduced the common parrot-talk about Gupta art without understanding in the least any thing about the subject he deals with. He speaks of the Gupta period as the golden age "Not merely of Indian literature but also of Indian art," p. 159, but is not able to illustrate it. He includes Ashoka and Badami in the Bijapur district of the Bombay Presidency within the sphere of influence of Gupta art! He is not ashamed to speak of Ellora as "another noted centre of Gupta Brahminical art," p. 161. Prof. Mookherji obligingly informs students of Indian Iconography that "In the Gupta period were also developed what are called the *Mudras* which play such a prominent part in later Buddhist Iconography," p. 162. Prof. Mookherji is evidently not aware of the fact that *Mudras*, all six *Bhumisparas*, *Jnana*, *Dhyana*, *Dharmachakra*, *Ahimsa* and *Varada* are to be found in the earliest Gandhara sculptures. Up-to-date knowledge on the subject was evidently not considered necessary by the learned author of this book and therefore he does not know much of the recently discovered Gupta art of Nalanda and the North-Eastern Provinces. He is also not aware of the fact that Chalukyan art is quite distinct from the Gupta art and that Ajanta has no connection with it. If Prof. Radhakumud Mookherji had confined himself to writing a book on Harsha with materials with which he was familiar in his usual charming style and attractive mode of presentation instead of venturing into speculation in epigraphy and art then he would have done credit to his selection by the Oxford University Press.

R. D. BANERJEE.

SOME ASPECTS OF THE INDIAN CURRENCY PROBLEM :
H. L. Chablan. Published by the Oxford Book
and Stationery Co., Kashmere Gate, Delhi. Re. 1.
Pp. 57.

Sir Basil Blackett on Currency and Finance.
Full Text of His Evidence before the Royal
Commission. Pamphlet No. 17. Published by the
Indian Currency League, Bombay. Pp. 193.

Mr. Chablan's brochure consists of :—I.—The
Indian Currency Problem, II.—The Report of the
Indian Currency Commission, III.—The Gold
Bullion Standard and our Pre-war Currency System.
IV.—Contraction of Currency under the Gold
Bullion Standard, V.—The Question of a Gold
Currency, VI.—Some Aspects of the Ratio Con-
troversy. Almost all of these are reprints from
contribution to the press. Though the author's book,
an outcome of and a contribution to the currency
controversy, deals with issues which arose out
of the recommendations of the Royal Commission
on Currency and have no immediate practical
interest just now, it is still very interesting and
instructive as an academic study of the currency
question specially because it exposes some of
the popular fallacies on the subject.

Sir Basil Blackett's evidence before the Hilton-
young Commission was published by the inde-
fatigable currency League of Bombay in order to
expose the discrepancy of the views he expressed
therein and those which he afterwards preached,
when as Finance Member of the Government of
India, he sponsored the currency bill, embodying
the recommendation of the Commissioners. The
object of this publication was to help members of
the legislative bodies and the public at large to
fight this proposed legislation which is dubbed
'suicidal' by Mr. Jannadas Dwarakadas who con-
tributes the Foreword.

H. SANYAL

BENGALI

EUROPIYA SAMHYATAR ITIHAS: Translated by
Prof. Rabindranathan Ghose ; M. A. Published by
the Bananiya Sahitya, Pairashat, 213-1 Upper Circular
Road, Calcutta.

The celebrated work of the French savant
Guizot on the subject of the history of European
civilization is rendered into Bengali in an abridged
form. The reading public is indebted to Prof.
Benoykumar Sarkar who provided a fund of
Rs. 2,000 for the translation and publication of
this monumental work. Prof. Ghosh has presented
the work in a lucid style and it is calculated to
be an important addition to the historical literature
in Bengali.

JAIN-PADMAPURANA (abridged): By Mr. Chin-
talaran Chakravarty, Kavyatirtha, M. A. Published by
the Vanga-vihara Ahinsa Pairashat, Calcutta.

Perhaps the fact is not widely known that
the Jain version of the Ramayana-legend differs
from the traditional version of the Hindus as
embodied in the epic of Valmiki in many respects.
The study of the Ramayana cannot be deemed
complete without reference to and comparison with
the Buddhist and Jain versions. The author has
laid the Bengali-speaking public under a great
debt by publishing the story of Ram who is called

Pauma or Padma by the Jains, in this little work,
with notes and references to the Hindu epic.

RAMES BASU

SRADHUSI: A collection of Bengali songs :
By Sudhurchandra Kar. Published by Anok
Chatterji from the Prabasi Office, 91, Circular Road,
Cal Price Rs. 12.

In these days of artificiality and mere
jugglery in words, lyrics like these are like
welcome raindrops in an arid desert. The author
has not the slightest intention of taking the
literary world by surprise, but has merely attempt-
ed to express in chaste and elegant verses
thoughts which have flitted off and on across his
mental horizon. All these songs have a ring of
sincerity which cannot but appeal to anyone who
may go through them. Considering this to be his
first attempt at metrical expression, I am confident
that the author's future publications will attain an
excellence, a glimpse of which is already manifest
in this volume. I am sure this book of verses
will gain the appreciation that it deserves.

DINENDRANATH TAGORE

HINDI

NAVIN VIN YA NADIME DIN: By Lala Bha-
gan Din. Hindi-pustak-bhandar, Laheria Serai.

Lalaji is a well-known poet of the old school.
Forty-two of his poems, some being illustrated,
are collected in this book. Most of these are on
Puranic themes. There is a national anthem. The
poem called *motor-panchal* is a curiosity, and that
on the Taj Mahal is rather flat and shows the
poverty of Hindi literature even when the subject-
matter is prospective. This will be clear if we
compare this poem with those on the same theme
in Bengali.

UPAYOGITAVADA: By Mr. Umrao Singh Karu-
nik, B. A. Jnanprakash Mandir, Meerut.

Translation of J. S. Mill's *Utilitarianism*

GATHASTYA-SASTRA: By Lakshmidhas Bhagyei.
The Tarun-Bharata-Grihanthaval Office, Daraganj
Allahabad.

A work on domestic economy.

GRAHA KA PHER: By Mr. Shyamsundar
Devidi Saind. The Chand Office, Allahabad.

Translation of a Bengali novel by Mr. Yogen-
dranath Chaudhuri, M. A.

ENGLAND KA SANGATHANIK QANUN: By Mr.
Suparsadas Gupta, B. A. (Hons). A. Kumar &
Sons, Arrah

This book gives the summary of Dicey's *Law
of the Constitution*.

ASTIKTAVADA: By Pandit Gangaprasad Upa-
dhyaya, M. A. The Kala Kanyasala, Allahabad.

All the aspects of theism are ably discussed
in this work in the light of modern speculations
on the subject. The opinions of western thinkers
are quoted and discussed. This book will be
useful to those who are philosophically disposed
with a religious aim.

BHRAMARA-GITA-SARA : Edited by Pandit Ramechandra Sukla. *The Sahitya-seva-sadan, Banarala, Benares.*

The celebrated work of Suradasa called the *Sura-sagara* contains the songs given in this book. These 101 songs, called *bhramara-gita*, are gems of old Hindi poetry. The editor adds an introduction and gives the meanings of difficult words.

ANTARNADA: By Vayogi Hari. *The Gandhi Hindi-Pustak-Bhandar, Allahabad.*

The well got-up volume contains a number of prose-poems in Hindi. The pieces are charming and lyrical in spirit, while the style is simple and dignified.

BHARATIYA SASANA: By Mr. Bhagawandas Kela. *The Bharatiya Granthamala, Brindaban.*

This fifth edition of this text-book of Indian Administration shows its popularity. There is a glossary of the technical terms.

RAMES BOSH

SANSKRIT-BENGALI

KALITANTRAM: Edited by Pt. Satishchandra Siddhantabhusan. *Published by the Sanskrit Sahitya Parishat, Calcutta.*

Of the works dealing with the worship of the goddess Kali the present text is an important one and is cited in many second-hand collections of Tantra. The editor is to be congratulated for this useful edition of the text with notes and Bengali translation for the first time. Variants of the readings from the different MSS. collected are also given. There is a figure of the *Kalitantram*.

DURGAIJVA-VIVEM, etc: By Sulapani and others.

DURGAIJVA-TATTVA: By Raghunandan Bhattacharyya.

In a sense the worship of Durga is a national festival of the Hindus all over India. But unlike other provinces Bengal has developed some new features which are restricted to Eastern India only. This festival is rightly called the *asamedha* of the *Ara* age. We have in these two volumes the most important works about this festival in Bengal. The former contains the treatises of Sulapani, Jimutavahana, Vachaspati Misra and Srinathacharyasachudamani. The latter is the well-known work of Raghunandan. The learned editor discusses many points in connection with the MSS. and the festival and gives the variant readings. These will surely be of use to the orthodox community as well as to the scholars interested in the subject.

RAMES BASU

MARATHI.

SRI RAMAYANA SAMALOHANA—(or a study of the Ramayana): By 'a Mahashastriya.' Publishers Messrs G. V. Chipulunkar & Co., Poona. Price not mentioned.

This bulky volume of about 900 pages is divided into two parts. The first part consisting of seven chapters deals with several important questions regarding the Ramayana, such as the excellence of the epic, the ideal character of Rama, the social, political and industrial condition of India in those times, the nature and degree of civilisation of the Rikshasas and the Vanaras, the interpolations in the poem, etc. The fifth chapter in particular is very interesting, as the author has therein successfully exploded the several absurd traditions that have been handed down from generation to generation concerning Valmiki being a way-layer of the Koli caste, his being the originator of the metric composition *Ahalya* being turned into a slab of stone by her husband's curse, etc. The second part, consisting of eleven chapters contains learned discussions about the chronology of the Ramayana, determination of the geographical places mentioned in the poem, analysis of the important characters, and a critical review of some other versions of Rama's story such as those given in the several Puranas in Anand Ramayana, Adhatma Ramayana, Tulsiidas Ramayana, etc. In one of the Appendices the author has given a list of 90 Sanskrit Ramayanasa. This very fact, coupled with the eagerness shown by Buddhist and Jain writers to give their own versions of Rama's story, is a clear proof of the Ramayana being a singularly popular and revered poem among Indian people. The deep and critical study of the poem and the fair attitude of mind with which the author has approached and handled questions, which have hitherto appeared like so many riddles to many great scholars, reflects no small credit upon the author. One may not agree with all his conclusions based on texts of doubtful authenticity, but the open mind with which the author has approached several questions and the phalanx of arguments arrayed in support of his contention cannot but arrest the reader's attention. The Foreword to the volume by Mr. J. S. Karandikar, co-editor of the *Kisari*, is readable and gives in a nutshell the important features and conclusions of the questions discussed in the volume. It is a pity that the usefulness of such an excellent and laborious work should be marred by the lack of an exhaustive index. The publishers, Messrs. G. V. Chipulunkar & Co., have already to their credit several important publications. The present publication will surely add lustre to the praiseworthy attempts hitherto done by them in bringing the ancient rich lore of the Indian Kishis to the door of the Marathi readers.

HINDUPAD—PADSHAH:—a Marathi translation of Barrister Suarlar's English book of that name. Published by the Vyaya Press, Poona. Pages 210 price Rs. two.

The original English book aims at giving its readers a fair and clear idea of the gigantic attempt made by the Mahrattas to establish their Empire over the whole of India, the high and noble spirit of patriotism running in their veins which inspired it and of the secret of their wonderful achievements in an incredibly short space of time. Sentiment, rather than reason, looks to be predominant in the treatment of the subject. The language is high-flown and stirring. The book is such as cannot fail to appeal strongly

to the patriotic hearts of the Mahrattas. The Marathi rendering is faultless.

A TREATISE ON BIO-CHEMICAL REMEDIES:—By Dr. G. S. Palsule L. M. and S. (National), L. H. M. S. Published by the Shrikrishna Homeo Pharmacy, Poona. Pages 500. Price Rs. Two.

There are over half a dozen books on the subject in Marathi. But the one under review surpasses them all, in several respects. In the first place, the principle underlying this system of medicine is very clearly stated and explained. Secondly, the bio-chemic system is compared with other prevalent systems of medicine; technicalities have been avoided, so far as possible, so that even a layman can make himself acquainted with the principles underlying the system; under the description of each medicine there are given instructions as to when higher or lower potencies of the medicine are to be used. Since this system has chiefly to deal with symptoms, and exhaustive and detailed repertory of symptoms is appended, and this is the most important and useful feature of the book. With the help of this book a man with a little intelligence can easily become one's own physician and also be useful to others, in cases of common complaints.

V. G. AITE.

GUJARATI

PREMA SWARUP SHRI KRISHNA PART I: By Mohanlal V. Gandan, printed at the Aditya Printing Press, Ahmedabad, cloth bound, pp. 252 price Rs. 2-0-0 (1927).

"Shri Krishna, the Lord of Love," written by Baba Premanna and Bharti has attained great fame as a book explaining why Shrikrishna is held in such veneration by us, and the deeper truths underlying his worship. This book is a translation of the first part of that treatise and the Notes given at the end add to its usefulness. It is sure to interest all those who have a religious turn of mind.

THE HISTORY OF GONDAL AND LIFE OF MAHARAJA SHRI BHAGVAT SINGHJI: By Rajarajya Jiram Kalidas Shastri, Printed at the Raza Shala Printing Press, Gondal, with a photo of His Highness. Cloth bound. Pp. 1055. Price Rs. 15. (1927).

Gondal is one of the premier native states of Kathiawad and is ruled by an enlightened Ruler, who during his sojourn in England and Scotland unlike other Princes, utilised his time, instead of frittering it away, in studying medicine and obtaining the degrees of M. D., M. R.C.P.E. F.R.C.P.E., H. H. Sree Bhagavat Singhji has made Gondal an ideal State, and so far as administration is concerned he does not spare himself. The history of his State and his dynasty as set out in this bulky tome is complete in every detail from the times of Shri Krishna up-to-date. The incidents of his reign are also very fully described and they furnish eloquent proof of the different stages through which H. H. has developed the resources of his State so as to make it a model one. The author is a medical man by profession, still he has turned out a book which does him 'credit' in every way. Altogether the book fulfils a want so far as the State was concerned. It must find a permanent place amongst its valuable archives.

K. M. J.

THE GREEN-CLAD LADY OF THE MUFINY

(Translated from K. Hoja Hasan Nizami's *Tear drops*)

By SYED ISMAIL B. A.

THE following account has been gathered from the lips of two old men who were in the prime of their youth during the great Indian Mutiny of 1857.

At the time when the English forces had captured the Ridge and were bombarding Delhi from the direction of Kashmiri Gate, a Muslim woman clad in green used to walk daily along the bazars of the city crying aloud in a thundering voice "Come, Follow Me, God has Called You to Paradise." Hearing this call the citizens gathered round her in huge crowds, and she would lead them for an attack on the

Kashmiri Gate, and make this citizen army fight from morn till eve with extraordinary enthusiasm.

Eyewitnesses of this fighting have stated that this woman possessed wonderful courage; she had no fear of death, and in the thickest of the fight where bullets and cannon balls were actually raining, she would rush like a warrior of undaunted courage. Sometimes she was seen on foot, and sometimes she would lead her men seated on horseback. She carried in her hands a banner, a sword, and a rifle. She used to fire her gun with great precision; and one man who had

accompanied her in her wild charge up the Ridge ramparts" stated that she was also well-versed in the art of swordsmanship; and often would she rush forward and fiercely wield her sword in a hand to hand fight.

The heroism and fearlessness of this lady fired the enthusiasm of the populace who pressed forward with great courage. But on account of their ignorance of war, generally at the end they took to their heels. At such moment she endeavoured to prevent them from flying, but when invariably they ran away at last, she would return home for the day. But nobody knew where she retired, and whence she emerged again the next day.

At length one day at the head of her citizen army, fighting tooth and nail with sword and rifle, she reached the English ramparts, but just then she fell wounded from her horse and was captured by the enemy. Thereafter, no one knew what fate overtook her and where she was gone at last.

In the collection of letters written by English officers during the siege of Delhi, and recently published by the authorities of Delhi province, there is one interesting letter of Lt. W. S. R. Hudson dated 29th July 1857, Camp Delhi, and despatched to J. Gliss Forsyth, Deputy Commissioner, Ambala. This letter throws some light on the appearance of this wonderful old woman. It runs as follows :—

"My dear Forsyth, I am sending to you an old Mohammedan woman. She is a strange woman. Her business was to dress in green and to persuade the populace of the city to rebel, and herself, clad in arms and commanding the rebels, used to attack our defences daily.

"The sepoys who have had to deal with her, say that she repeatedly led stubborn and valiant attacks, and fought with great firmness, and that she possesses also the strength of five men.

"On the day she was captured, she was on horseback leading the rebels of the city in battle order. She carried a gun which she fired several times. The sepoys say that she herself, wielding her sword and rifle killed several of our men. But just as we hoped, her followers fled and she was caught, after being wounded.

"When she was taken before the General, she was ordered to be released on the score of being a woman. But I prevented him,

and told him, that if she was released, she would go back to the city and claim supernatural powers with whose aid she had escaped, and credulous men would believe it to be true; and it is quite probable that she might become a source of trouble to us like the famous Maid of Orleans of whom mention is made in the History of France.

"The General agreed with me, and decided upon imprisoning her. Therefore, I have sent her to you, and I hope you will make the necessary arrangements for her safe custody, for this witch is a dangerous woman—Hudson."

After hearing anecdotes from several sources in Delhi, and finding corroboration in this officer's letter, I tried hard to ascertain facts regarding this woman. But no reliable information could be gathered. Those who have known her can only give this much information that they had seen her inciting the populace, collecting them, and leading them to fight. More than that they do not know; who she was and whence she came, they cannot tell.

However, I have heard a story which seems to have some connection with this incident. It is quite probable that it is the same woman.

A resident of the Native State of Tonk told me that his father had been a disciple of Hazrat Haji Lal Mohammed, Chishti Nizami, who was the nominated successor of Hazrat Moulana Fakhruddin, Chishti Nizami, the famous saint of Delhi, whose tomb is situated in a marble enclosure just as we enter the eastern gate of the Mausoleum of Khaja Nizamuddin Awlia, at Delhi. It was at Ajmere that his father was initiated by Haji Lal Mohammed, and at that time, a crazy-looking woman was seated in the presence of the saint. She repeatedly requested him to pray to God that she might die a martyr. Her speech was all right, but her movements betrayed mental aberration.

For a long while, the saint did not reply but at length he exclaimed with the great fervour, "Fight a holy war with your self; there is no greater war than this."

The woman then inquired, "What, will self kill me? When I become a martyr, I shall kill the self, and get killed by the slaves of the self."

Then the saint smiled, and after sitting silent for some time rejoined, "The leaves of *hena* are green, but they keep red colour

hidden in them. Go, *be green and become red.*"

This figure of speech the audience could not understand, but the woman fell at the feet of the saint, and after kissing his feet she disappeared. It could be seen from her looks that she had understood the meaning of the master, and had found what she was in quest of.

Sometime later, my friend's father met the same woman at Delhi at the mosque of Khaja Nizamuddin Awlia. She was dressed in green and was seated near the tomb of Fakhruddin Awlia in deep meditations. After she finished her prayers, he went forward and asked her whether he had not seen her at Ajmere. She replied, "Yes, brother, I am the self same, and your sister of the same order."

The gentleman said, "Oh, I see, have you also become disciple of Haji Lal Mohammad?"

She said, "Yes, I am also one of his servants."

The gentleman then asked her, "Where do you reside, and how long is it since you entered orders, and became a *fakir*?"

Then she narrated her life history in the following manner: "My grand-father was a commander in the army of Ahmed Shah Abdali. He was present in the battle of Panipat fought against the Maharattas, and he was killed in the same action. My father also was in the service of Ahmed Shah Abdali, but he was then very young, and he stayed with his widowed mother for some time at Lahore. Then he migrated to Bhawalpore State where he made his living on a petty appointment. There he married. Two sons were born, but they did not survive. I was the third. My infancy was spent at Bhawalpur, but later moved on to Jaipur where my father secured a job. But he too died, and I married a Chopder in the service of the Maharajah.

"My husband fell ill, and I lost all hopes of his life. I sat at his bedside near his head praying to God to spare his life, when without any forethought the name of Khaja Moinuddin of Ajmir, the patron saint of India, came to my lips; and I prayed, O God, save my husband at least for *his* sake." Thus praying I fell asleep, and I dreamt a dream in which I saw a huge conflagration which a big crowd of people was trying to quench. But the water which they brought, strange to say, began to burn, flames from the pots. I was terrified at this

horrible sight, when presently I saw a holy man standing before me, and saying to me, "O woman, sacrifice your life and then will this fire be quenched."

I said, "How shall I sacrifice my life?"

"What, don't you know how to die a martyr's death?" replied the holy man, and then gave me a green mantle commanding me to cover myself with it.

"As soon as I donned it on, I began to fly in the air, and as I flew higher and higher, I heard voices shouting, 'This is a martyr, this is a martyr'!"

"Here I opened my eyes, and I saw my husband in the throes of death and soon after he gave up his ghost. It was a great shock to me, and for a time I lost my senses. I moved on to Ajmir and it is there that I had the good fortune to meet Haji Lal Mohammad, and to become his disciple.

I was alone, my parents having died already. But from that moment the idea has taken possession of my mind that the Patron Saint of India, Khaja Moinuddin of Ajmir has commanded me to die a martyr and that it is he whom I saw in my dream. Now I have come on a pilgrimage to visit the tombs of the Saints of Delhi. At the tomb of Dada Fakhruddin Awlia, I spend a greater portion of my time, and day before yesterday I saw him in a vision, and he said to me, 'You are the green-clad Martyr'."

The gentleman from Tonk returned home much amazed at the story of the woman, and just a few days later the Mutiny broke out at Delhi!

This account leads a man to think that it must be the same woman that led the rebels of Delhi, and that her illusions gave her the extraordinary powers to do it. If in fact, it is so then this incident should take its place as one of the marvels of History.

I wish that, if any one of my countrymen knows anything more of this Green-clad lady of the Mutiny he may apprise me of the same, so that I may make use of it in writing the History of the Mutiny which I (Khaja Hasan Nizami) have undertaken.

Every Indian I think, would surely like to keep green in his memory the spirit and heroism of this Green-clad Lady who commanded in person her citizen army in the field, and to gather some more facts about her, so that India might pride herself (of course, within proper limits) on the doings of her children.

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticising it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, *The Modern Review*.]

International relations in contemporary Europe

Apropos of the following sentence occurring in Prof. S.N. Dhar's article, 'International Relations in Contemporary Europe' (published in "The Modern Review" for July, 1928), permit me to say a few words:—

"She (Bolshevik Russia) has not given up any of the lines of aggressive foreign policy pursued by the Czars, viz.—peaceful penetration of Mongolia, a cautious policy in Manchuria."

Now, "peaceful penetration" is a phrase often used in International Law and politics but of which one might be excused for saying that "nobody knows anything and everybody knows next to nothing." Its use "for excellence" lies in the sphere of counter-imperialistic propaganda and like all other propaganda-terms, it is immeasurably vague. What, however, is the historical

fact about Bolshevik policy towards Mongolia? It is that Bolshevik Russia has, from the time of its inception up-to date, scrupulously adhered to the terms of the Khabta Agreement of 1910 (between Russia and China) whereby Russia had promised to forego territorial ambition in and round about Mongolia.

As to Manchuria, it might be safely asserted that that country had definitely scrapped its feather to Russia and is now following timidly in the wake of Japan Chang-Tao-Lin, who dominated the three provinces of Kirin, Feng-Tien and Heilung-Kiang was, so it is asserted, but the pay-servant of Lenin.

Prof. Dhar's reflections on the extreme vigilance of Bolshevik Russia on Constantinople and the Straits are thoroughly sound and he might have mentioned the Kars Convention of 1923 in support of them.

Nirmal Chandra Mehta

THE MAHABHARATA*

(A Review)

There are several editions of the *Mahābhārata* in the country, but none of them is critical. In order to remove this want which has strongly been felt for years, attempts were first made in Europe to bring out a new edition. But that scheme did not advance much and the Bhandarkar Oriental Research Institute came forward and undertook the work in right earnest. Since then it has been progressing steadily and quite satisfactorily: a fact evinced by the publication of a tentative edition of the *Virāṭparvan* under the

able editorship of Mr. N. B. Utgikar with whom the present reviewer had the pleasure in discussing readings and other details with regard to the edition, sitting for days together with Dr. M. Winternitz who was then in the *Viśvabhārata* as the Visiting Professor and teaching the students how to prepare a critical edition of a text from a number of MSS taking for that purpose those of the *Mahābhārata* itself. We are now really very glad to receive the first instalment of the great work in the form of the first fascicule containing first two *adhyāyas* of the *Adiparvan* as edited by Dr. Sukthankar with the co-operation of his colleagues. Our thanks are due to them all and through them to the Bhandarkar Oriental Research Institute. Indeed, it is extremely gratifying.

* The *Mahābhārata* for the first time critically edited by Vishnu S. Sukthankar, Ph. D. Bhandarkar Oriental Research Institute, Poona, 1927.

to see that the great Indian epic is now being critically edited by Indians themselves.

Only those who have acquaintance in any way with the nature of the work or the books on the textual criticism of the Bible can understand how difficult it is to constitute a text from such a heap of materials in "a bewildering profusion of versions," as well as in "an amazing mixture of versions." Dr. Sukthankar is, therefore, quite right when he observes: "It would, therefore, be well not to ignore entirely the possibility that a wholly satisfactory restoration of the text to its pristine form—even the late so-called *Saṁskṛta* form—may be a task now beyond the powers of criticism." We may, however, say with him that "Even though the problem be insoluble in the ideal plane, yet a practical solution of it is by no means impracticable and may with considerable gain be attempted." And it can be said that the first fascicule demonstrates that "a considerable portion of the inherited text can be incontestably proved to be authentic and unimpeachable, and that on the other hand, certain portions of the 'vulgate' can equally indisputably be shewn to be spurious." For instance, the episode of *Brāhmaṇa* and *Gaṇeśa* in the first *adhya*ya of the *Alipparvan* may be referred to here. It is spurious as it is not to be found in two independent versions, Bengali and Kashmirian (or North-Western).

The following points may, however, be noted on which I could not agree with Dr. Sukthankar.

Just after the salutatory *śloka* at the beginning, *Nṛāyaṇaḥ nṛmaśrīṣya* etc. we read the following in the constituted text (I.1.1-2):

लोमहर्षेण पुत्र उग्रययाः सतः पौराणिको नमिवावयये ।

शौनकाय कुतपतेर्होदशवारिकं सवे ॥ १ ॥

समासीनानभ्यगच्छद् मध्वर्षींश्शितव्रतान् ।

विनयावनतो भूत्वा कदाचित्पुनर्नन्दनः ॥ २ ॥

Here the question arises : Do the first two lines form the original text of the *Mahābhārata* ? They are found in all the different versions of which Mss. are collated for the present edition, though with some variant readings. But can we be satisfied only with this ground as to their being genuine ? It is to be noted that these two lines are in *prose* forming an incomplete sentence and are to be construed with the following verse which is complete in itself. No doubt, the prose lines add something very suitable to the following *śloka*. But is it so important that without it that *śloka* can in no way be introduced as the first *śloka* of the work ? It may be said that without these two lines the beginning of the work with the *śloka* would have been rather abrupt. It may be so to some degree. Yet, this ground does not seem to me to be strong enough when considered with the reasons advanced below. It does not necessarily establish that these two lines were put in writing. It may be that what we know from them was well-known to the rhapsodist and his audience alike. *Sūta*'s (or *Sauti*'s) appearance at the *sutra* of *Saṁskṛta* in the forest *Naimiṣa* and his recounting stories among the sages at those times (See *Dhīgarata Purāṇa* I.1.4) that it might not have needed special mention.

And the beginning of the work was with the *śloka*, *Saṁskṛta*. It may also be that the prose lines embody the substance of a *śloka* now lost.

Moreover, in the passage quoted above there are two nominatives, *Sūta* in the prose portion and *Sātanandana* 'the son of *Sūta*' in the *śloka*. This can in no case be reasonable. Nor can they be taken with the verb *agacchāt* unless they are identical. (The question of their identity I shall discuss presently.) Even in that case their use cannot rightly be defended. And one of them would have been sufficient.

The peculiar construction itself of the passage, partly in prose and partly in verse, suitable to drama, is quite out of keeping with what we should expect in a work of the time of the *Mahābhārata*. Therefore, it appears to me that the first two lines in prose are not originally of the *Mahābhārata* but added subsequently. This addition must have been very old.

That they are really interpolated, was known even to the Commentator, *Nilakaṇṭha* as is perfectly clear from the following sentence in his commentary :

ततो विप्रविनायकाग्रमन्त्र्य सुपासीनान् (for समासीनान् in our text) इति भा र ता र म्म श्लोकोपदिष्टं पू र य ति गेनेन लोमहर्षेणपुत्र इति ।

The second question here is with regard to the reading *Sūta* and *Sātanandana* (or *Sauti*) in the above and similar passages in the work. Which of them is genuine ? The Mss. read them both. In the present edition, too, so far as the first fascicule is concerned, both of them are adopted, reading sometimes *Sūta* (I.1. 20, 159 etc.) and sometimes *Sauti* (I.1.7. Cf. 101). Obviously *Sūta* cannot be called *Sauti* and *Sauti* *Sūta*. One must be either *Sūta* or *Sauti* and not both. It is therefore reasonable that one of them is to be used throughout for the same person. But in the present edition this has not been done. Now, which of them is to be preferred ? If we depend only on the evidence of the Mss. as Dr. Sukthankar seems to have done, the decision goes in favour of *Sūta* at least in one case, I.1.59, where all the collated Mss. of all the versions give the same reading. In all other cases, both are found. Here another question presents itself : How far can we rely on Mss. when they are confronted by strong internal evidence ? I think, in such cases Mss. have little value. Following this principle we should read *Sauti* and not *Sūta*. But what are the internal evidences here ? In I.2.d, 21b, and 13d all the Mss. of all the versions without a single exception read *Sātanandana* and as regards the sense it is the same as *Sūtaputra* (I.2.70c) which is also the one reading found in all the Mss. And it goes without saying that these three words, *Sātanandana*, *Sūtaputra* and *Sauti* give the same meaning, 'the son of *Sūta*.' It cannot therefore, be reasonable to adopt *Sūta* in these cases as the actual reading.

It is, however, to be noted that there is evidence for holding that the celebrated rhapsodist was *Sūta*, the son of *Roma* or *Roma-harṣaya*, as in the beginning prose line in our text. For instance, see the *Bhāgavata Purāṇa*, I.1.5,7,12,15,

But so far as the *Mahābhārata* itself is concerned and the Mss. utilized for the edition shown, he cannot be other than *Sauti* as said above.

The same question arises also in another place. In 1. 1.191 of the present edition the word *Sauti* is used with reference to *Sañjaya*. (Only four Mss. of the Gantha version has the reading *Suta*). But in 159c we have *Sūta* for the same person. *Sañjaya*, all the Mss. giving the same reading. But how can one be both *Sūta* and *Sauti* as we have in the present edition?

The word *Lomaharsani* (—*Lomaharsanoputra* 'Son of Lomaharsana' 1.1.1.1) is found in the first fascicule at least twice (1. 6d, 2.70d). But is there any strong ground for not reading *Laumaharsani* for *Lomā* with a large number of Mss. of the Northern Recension in which, as says Dr. Sukthankar, the archetype is included? "Solecism," he observes in the preface, p. vi, "when shewn to be original by a clear agreement on this point between (what appeared to be) independent versions have been allowed to stand uncorrected (cf. L. 1. 5 d, 190d)." Though this may be said with regard to the first case, it cannot be so with reference to the second (1. 2. 70 d) for clearly there is no agreement of independent versions on reading *Lomā*. Accordingly I incline to read *Laumā* also in the first case.

▲ The constituted text reads (1. 1. 188 c-d)

देव प्रशान्तिरेषेण को निनर्तिवुर्देति ॥

Here in d I should like to read *atavartum* for *niavartum* agreeing specially with K^o which, as the editor says, represents with K¹ "archetype K in a comparatively pure form."

We read in the *Parvasamgrahaparvan* (I. 2. 19):

अक्षीरिपयाः प्रसङ्गान् रथानां दिवजन्तनाः ।

सख्यं गणितस्त्वैः सहजगदेकविंशतिः ॥

Here *prasamkhyānām* in a is indicated by the editor as "less than certain." That originally the word must have been in its past participle form in the feminine gender *prasamkhyāṭā*, can easily be known from the fact that the nominative is put in the instrumental case (*samkhyāganitā-talvayānāḥ*). This is indicated also by some of the preceding verses. The variants, too, give us support. Otherwise the sentence remains incomplete the finite verb not having been used.

I should, therefore, like to read with K^o *-samkhyāṭā* having slightly modified the reading *samkhyāṭāḥ* found in a good many Mss. I am also inclined to read with K¹ and G^o *akṣuhinyām* for *akṣuhinyāḥ*. I think this modification is necessary. It clearly suggests how other readings have arisen here.

On p. in the number of the Visvabharati Library Ms. marked B¹ is 413 and not 415 as printed.

This edition of the *Mahābhārata* is illustrated by the Chief of Aundh, Shrimant Balasaheb Pant Pratimdh. B. A. The first fascicule contains an illustration depicting *Saṁti* or (*Suta*) relating the story to the R-*vs.* The present reviewer is neither an artist nor an art-critic yet he may be allowed to suggest that the editors could have availed themselves of a more artistic representation of the subject.

VIDYUSHEKHARA BHATTACHARYA

THE THEATRE IN REVOLUTIONARY RUSSIA

A Conversation with Madame Lunatscharsky

By AGNES SMEDLEY

MR. Bertrand Russell has said that Russia like China, is an artist nation. "When I speak of art as one of the things that have value on their own account," he adds, "I do not mean only the deliberate production of trained artists, though of course these, at their best, deserve the highest place. I mean also the almost unconscious effort after beauty which one finds among Russian peasants and Chinese coolies, the sort of impulse that creates folk-songs, that existed among ourselves before the time of Puritanism."

We who live in western Europe have always the opportunity to test the truth of these remarks. The Russian film, as well as

Russian music, the drama, literature, and the folk-dances, are almost constantly before our eyes. The classical Russian literature is known wherever men read and love beauty and majesty. To day the new writers of revolutionary Russia are pressing upon a world that wishes to pretend that art cannot be produced in freedom by workers and peasants. The Russian film has no rivals in Europe, Asia or America; in art it is unsurpassed. The "Potemkin" film still stands as the highest point reached in the field of film art, and the many efforts to equal it by Germans or Americans have fallen miserably flat. Gorki's "Mother" likewise remains un-

equalled in the pure beauty and genius of its production. Before these, there had been Tolstoi's "Polikushka" with its gripping beauty and tragedy; the historical film of Ivan the Terrible, which appeared last year under the title of "Slaves have no Wings," was colossal in its power; Indians, viewing it here in Berlin, were not only deeply moved, but frankly said that it was much like the debauched life of many of the ruling princes of India.

The sad strains of the Russian folk-songs and the haunting music of the balalaika orchestras further bear witness to Russell's words that the Russians are an artist nation. Those who have once heard the singing of

orchestra of twenty-five young Russian men and women students played for us. The wistful Russian folk melodies held our large audience spell-bound. The dancing ceased and applause induced the orchestra to play one selection after another. Later on, through the evening, when a lull settled over the hall, the dash of Russian folk-dance music was heard, and with a whirl four Russians—two young men and two girls—swung into the middle of the hall. Dressed in their own peasant costumes, and dancing with the dash and freshness and joy that is characteristic of them, they danced the Russian folk-dances while the audience took up the rhythm, beating time to their dashing feet.

Quite recently, the writer of these lines had the opportunity to talk further on these lines with Madame Lunatscharsky, a well-known actress on vacation in Berlin, from the Russian State Theatre in Moscow where she is permanently engaged. Madame Lunatscharsky is the wife of the Commissar of Education of the Soviet Union. She is a very charming, elegant and pleasant woman, pronouncedly Russian in type—a type that shows that Russia is the beginning of Asia. Her knowledge of literature and the theatre—the two are intimately connected—as well as of the entire cultural life amongst the Russian workers to-day, seems to be very fundamental. She is one of those Russians of the intelligentsia who, despite a high culture, have blended with the masses so completely that they speak as one of them, without any tone of condescension of a superior to an inferior. For, in Russia there are only comrades. During her vacation in Berlin she has been playing the leading role in a Russian film, "Vera Mirzeva", which will appear in the spring. In her conversations, she spoke particularly of the Cultural Sections of the Workers' Clubs which exist throughout Russia in all industries as well as in the distant villages. A part of the work of these Cultural Sections, she explained concern themselves with the theatre. This theatre section has three duties: (1) To purchase tickets for the professional theatres—30 of whose tickets must be sold at very low rates to labour organizations. This means also that they must buy tickets for good theatres only, that the workers may see the best productions. (2) They bring to the Club professional artists who play in the Club theatres—for instance, on holidays, such as on the 1st of May, the 7th of November,

Agnes Smedley

groups of Russian peasants and workers during a period of rest in their work, can never forget. We living in the Indian Colony in Berlin had only this week another opportunity to judge of Russian music and dancing for in our annual winter festival given by the Hindusthan Association, a balalaika

or other revolutionary holidays. (3) They produce plays of their own on the Club stage. This is, in fact, the chief part of its activities and calls into co-operation all the workers in the factory. There is a regisseur in charge of this theatre section; this regisseur must be half-pedagogue also, who has the ability not only to produce the plays with small means, but to train the workers in acting, and at the same time to study all the workers to find if a great talent amongst them can be found who might devote his or her entire time to this profession. Madame Lunatscharsky says that she herself has worked in such workers' clubs and found them really very interesting. "One sees how these people who work eight hours in the industry find time and strength to produce plays," she says. "These Clubs work very much and with great interest. In the large industries they are very active and form a very important centre of cultural work. There are also clubs of sales employees, but the best clubs I have seen, and the most interesting, are in the industries. During the past year I was in a club of a great textile industry on the outskirts of Moscow. It has a theatre that seats 2,500 persons. Since the revolution, the Workers' Club organized there has theatrical sport, science and other sections."

Speaking further, she said "For me, the most interesting is the new Workers Theatre, which is a section of the Club of Railway Workers on the outskirts of Moscow. This Club was founded 1½ years ago. It has a very large sanitary creche, built very much on American lines—its walls are of glass, through which the working mothers may look in to see how their children are getting along. The club is fairly rich—judged by our standards—and it provides the best in culture and convenience for its members. When noted orchestra directors—such as Klempner or Fried from Germany—come to Russia, this club invites them to play in the Theatre. It also invites noted Russian artists, and in this way the workers see the best acting and hear the finest music. Two other similar clubs were opened in Leningrad on November 7th at the time of our 10th Jubilee of the Soviet Union. These two theatres have the most up-to-date apparatus, such as lighting and modern stages."

Madame Lunatscharsky spoke of the great demand of the Russian workers and peasants for the drama and for other aspects of culture.

Cherviakoff, the Russian Actor, who plays the role of the great poet Pushkin in the tragedy-film "Poet and Czar"

Their clubs with their theatre sections, are multiplied throughout the Soviet Union. It is through these that not only the best in dramatic literature is brought to the peasant in distant villages, but that education is imparted. They are also organizations for combating illiteracy and for carrying social ideas of the revolution. The gigantic possibilities of such institutions cannot be over-emphasized. The revolution awoke the masses to their power and human rights, and the rapid spread of the theatre is a result of their demands. Since the revolution also, the social character of the theatre audiences has been completely changed. No longer is it the tired business-men with degenerate tastes who seek amusement in what is boldly known in the capitalist world as "leg shows," but it is the worker, the peasant, the soldier, in rough clothes, who speak to each other as comrades, who now stream to the theatre, thirsting for a dramatic treatment of the problems of their lives, of the revolution for which they fought and for which they still work. The demands of the masses become more and more urgent and place greater and greater pressure upon writers and at her artists.

In Russia, Madame Lunatscharsky says, there is a renaissance of realism on the stage and in literature. Abstract things are not of interest any more. Before the revolution, writers often found it more comfortable to remove their scenes from this earth to heavenly regions that exist only in their imaginations. But today, as even before the revolution for the revolutionary, this is not necessary. Gorki is the teacher and leader of this renaissance. Pre-revolution though he is, he comes from the soil of Russia, a worker who knows the life of the worker with all its darkness, and its hunger for light. It is not the orgies sought for by the degenerate bourgeois soul, that the worker longs for or is satisfied with, but it is the problems of the earth and of this life and the new world for which he fights, or for which the men of the past have fought. Out of this social foundation, the renaissance of realism has developed. In it, says Madame Lunatscharsky, both Russian and foreign realist writers find place. To mention a few successful plays of the past and the present season, there are plays by Upton Sinclair and Jack London; "Roaring China", a drama based on the Chinese Revolution; the "Decabrist Revolt", by Solotarev, and

"Stenka Rasia," by Triodins, a drama of the Volga peasant leader who, in the middle of the 17th Century, led the peasants against the Czar; both of these last two dramas were presented at the Great Academic Theatre.

Among the academic theatres, the little Academic Theatre has presented such dramas as "Ljubow Jarowaja", by Tronow, a drama in five acts of the Civil War in the Crimea from 1917 to 1920. The Moscow theatre, "Safonof", which is a branch of the State Theatre, has presented such historical-photographic plays as "The Death of Peter I", "The Arakhtchejev", and others. In both of these, Madame Lunatscharsky played during the present season. Other successful dramas based upon historical, realistic, revolutionary or factory themes, are "Armoured Train 1469", by Ivanoff; "The Revolt"—produced with great success by the Moscow Professional Union Theatre; "The 17th Year", likewise; "Growth", produced by the Revolutionary Theatre—a drama based upon the struggle to keep industry in the hands of the workers; "Buy Yourself a Revolver", by the Hungarian Communist, Bela Illish, dealing with emigrants and factory owners in Vienna. Further: the First Moscow Art Theatre, and the second Moscow Art Theatre, have presented many plays dealing with modern themes, the noted Stanislavski directing many of them, while the "Wachtangof" Theatre has presented Lavrianof's "Baltic Fleet", a revolutionary drama from 1905. The new Russian novel, "Cement", by the cement worker Gladkow, which has become so noted throughout Europe during the past few months, has been dramatized and presented in the Theatre of the Moscow Professional Union. This drama deals with the actual problems arising out of the life of a worker in modern-day Russia. The "Proletkult" theatre (an organization of Proletarian Culture) has produced some very excellent things, including satires, while the Trade Union Theatre of Moscow has sent throughout Russia and even to western Europe the noted "Blue Blouses", a troupe of acting workers. The Theatre of Meyerhold, which is so often spoken of in Europe, has presented many modern and historical things. All in all, the place of the theatre in the life of the Moscow worker, as of the worker throughout the country, is colossal. To-day there are some thirty

From the Russian Tragedy-film 'Poet and Czar' on the life of the great Russian poet Pushkin

professional theaters in Moscow—but this does not include all the theatres of the clubs.

In Leningrad a similar story could be told. One of the interesting new institutions in that city is the "Children's Theatre", which produces things that delight the hearts of children, such as legends adventurous thing such as Mark Twain's "Adventures of Tom Sawyer", and even an Indian fairytale. In various parts of the Union also the minority nationalities have developed their theatres remarkably: for instance, the Jewish Theatre in Moscow which brought some of its remarkable things to Europe and America during the past year; then, the Ukrainian Theatre Kurbas in Kiev, the White Russian Theatre Studio, the Georgian Opera, and the Tartar Theatre in Kasan. In fact, my conversations with Madam Lunatscharsky but showed me that I stood upon the outer edge of a vast world.

It is of interest to note that the Moscow Government Cultural Committee for Political Enlightenment, with which most of the Moscow Theatres stand in the closest relationship, has recently declared that the ideological and artistic niveau of the Moscow theatres must be still raised, the theatres were asked to come into closer contact with the working public, while a better organization in the entire film field was demanded. It also states that more workers should be drawn into the Art, Repertoire, and Management Commissions of the theatres, in order that the theatre should become more of an organic part of the cultural life of the masses. At the end of the past season, for instance, conferences of theatre-goers were held to discuss and judge the productions of the season as well as to suggest or decide what should be presented in the present season which is now in full swing.

ate capitalists, but for the enlightenment and advancement of millions of working men and women. They disprove the old statement of film producers that they turn out the trash they do because this is demanded by the public. This is absolutely untrue. The tawdry films and theatrical pieces so common in capitalist countries—including India—are produced without any regard for the opinions of the public, but are based entirely upon the unspeakably low, cheap tastes of the producers and financiers. The masses attend them only because there is nothing else to see. In Germany we have seen the crowds that try to secure tickets for every Russian film, or Russian play. Realizing that revolutionary Russia had called forth art of the highest kind—such as any revolution is bound to do—a German capitalist company tried to imitate the "Potemkin" film by presenting Hauptmann's "Weavers." It was a sad affair. The spirit, as well as the sincerity and understanding of the motives in a revolutionary outbreak, were absolutely lacking. The producers showed a thing which they imagined was an uprising of workers; it was, instead, a cheap, upper-class, salon or stage revolution. The idea and the technique fell flat, and the only saving grace was the music, actually taken from the songs of revolt of the Silesian weavers. The bourgeois idea of a revolu-

tionary drama or a revolutionary movement is the distilled essence of unmitigated rot. After the presentation of "The Weavers," the society regisseur appeared on the stage in a full dress evening suit, bowing in the best salon manner to an audience of silk-and-fur beclad males and females of the upper classes of west Berlin who, in a revolution would not have brains enough to last them over night. Capitalist countries will never present any fundamental or fresh art until it clears the stage of the parasites that bedeck it to day, and build their art upon the earth out of which all beauty grows. It has a world to learn from Russia the workers of the capitalist countries must one day teach them this lesson. This applies likewise to India. Many Indians, I know, have the idea that the Russian Revolution, and Communism, is nothing but a change to rush into a sex orgy. Perhaps nothing else can be expected of men who themselves have no inner discipline and to whom personal freedom leads to nothing but an orgy, instead of to a very high human and cultural development. But the working masses of Russia are today teaching the world what a Socialist society can produce in the field of art.

(Photos from the "Photo-kinó" Department of the Russian trade Bureau Lindenstrasse 20-25 Berlin, Germany. Any questions regarding the purchase or use of Russian films to be directed there)

LEGAL POSITION OF WOMEN IN INDIA*

By NIRMAL CHANDRA PAL, M. A., B. L.

Lecturer in Law, University of Dacca

IN ancient times a woman was regarded as man's property which he could buy and sell at his pleasure. The ancient Greeks often vendored their wives and daughters or lent them to their friends like articles of furniture. Even Socrates is said to have lent his wife Xanthippe to his young disciple and friend Alcibiades. The privilege of lending one's own or receiving another man's wife was esteemed very highly by the

Spartan citizen and its forfeiture was deemed a punishment reserved for serious delinquencies. Similar was the idea regarding women prevalent in those times among the Jews, the Babylonians and other civilised nations.

At an early stage of the Indian civilisation also, women could be bought and sold like ordinary moveable and immoveable properties. In chapter 12, verse 53 of the *Narada Dharmashastra* we read.

* A paper read before the Law Association of the University of Dacca on the 20th March, 1929.

The issue of those women who have been purchased for a price belongs to the begetter, but—

when, nothing has been paid for a woman, her offspring belongs to her legitimate husband.

The *Asura* form of marriage among the ancient Hindus was nothing but a sale of the daughter by the father.

Later on, during the Middle Ages women came to be recognised as human beings but fit only to act as servants of man. Apart from their usefulness to the other sex, nobody thought that they could have any other purpose in life. All the religions of the age regarded them as a necessary evil in the world. A congregation of the dignitaries of the Christian Church decided that there was no necessity of any religion for women as they had no soul. Our own Sankaracharya solemnly declared that woman was the veritable gate to hell and that she, like the Sudras, had no right to study the Vedas.

According to the laws of that age a woman was hardly considered to be a legal person and was, thus almost incapable of possessing any rights. She was treated as a perpetual minor over whom man was always entitled to exercise control. During maidenhood she was under the guardianship of her father, after marriage she was under the control of her husband and during widowhood she was under the care of her sons. She was never competent to act on her own behalf.

Fortunately, at the present time, the ideals of democracy have advanced so far that every civilised man recognises that all men and women ought to have the same rights and privileges before the law. Democratic ideas of the present day about women are no doubt of recent growth and most probably originated from the French Revolution of 1789 when the women of France petitioned the National Assembly to establish equality between men and women, to accord to the latter freedom of labour and occupation and to appoint them to posts for which they were qualified. The idea of 'liberty, equality and fraternity' engendered by the French Revolution spread all over Europe and political philosophers in every country began to plead for the amelioration of the condition of women. In England John Stuart Mill put forward a most vigorous plea for improving their lots in his admirable thesis on 'The Subjection of Women' and pointed out that the principle which regulated the social relation between the two sexes—the legal subordination of one sex to the other—was wrong in itself and one of the chief

hinderances to human progress; and urged that it ought to be replaced by a principle of perfect equality, admitting of no power or privilege on the one side or disability on the other. In spite of the pleadings of John Stuart Mill and the agitation carried on by the educated women of England there was hardly any improvement in their legal position till 1832 when the Married Women's Property Act was passed, which entitled them to possess separate properties of their own and also to enter into contracts independently of their husbands. Agitation for equality of treatment went on till the last Great War when the women of England got an opportunity of proving that in the performance of civic functions they were in no way inferior to men. And in recognition of their services to the State during the War, they got the right to vote in Parliamentary elections immediately after the conclusion of peace. As soon as they got the franchise, all obstacles in the way of equalising the position of men and women before the law disappeared and the very next year in 1919 the Removal of Sex Disqualification Act was passed by the Parliament, which declared that henceforward no one would suffer from any legal disability in England on the ground of sex. Since the passing of this act every branch of English law has been amended with the object of placing women on exactly the same legal footing as men and some amendments are still pending before the Parliament for removing certain minor disabilities which still exist.

It is now several years that women have been enfranchised in almost all the provinces of India and in certain provinces they have already become members of the legislatures, but upto now no improvement has been effected in their legal position so far as it is determined by the private law of this country.

Some of the disabilities imposed by our law upon our women are so reasonable and humiliating that they ought to be removed immediately. I desire to draw the attention of our educated men and women to some of these anomalies in our law and to request them to judge for themselves if they are not blots on the fair name of India.

At the present time all the civilised countries of the world recognise marriage as the voluntary union of one man with one woman to the exclusion of all others, as a result of which the husband and no other man is entitled, under law, to have consortium

with the wife, and the wife and no other woman is entitled to the consortium of the husband. But, owing to the recognition of polygamy by both the Hindu and the Mahomedan Law of India, while the husband is entitled to the exclusive company of the wife, the wife cannot, under law, claim the exclusive company of the husband. No doubt, under the stress of economic forces, polygamy is rapidly disappearing from this country, but until it is made illegal by legislation, a Hindu or a Mahomedan wife in India is bound to suffer from numerous legal disabilities I have not as yet met a single educated Indian who supports this institution from conviction, but I do not know of any serious attempt to change the law in regard to this matter in recent years Mr Ameer Ali, in his book entitled 'The Spirit of Islam', says that polygamy is as much opposed to the teachings of Muhammad as it is to the general progress of civilised society and true culture. Mustafa Kamal Pasha has already abolished this institution in Turkey and made marriages strictly monogamous in that country. So I do not see any reason why it cannot be abolished among the Indian Muhammadans. Nor do I find any justification for its recognition among the Hindus. If it is absolutely necessary for an orthodox Hindu to get a son, he may have recourse to adoption. What is the necessity for him to marry again for a son so long as the law recognises an adopted son who can confer the same spiritual benefit upon him and his ancestors as a natural-born son? It is often argued that Hindu marriage being indissoluble monogamy cannot be enforced without great hardship to the husband whose wife has become unfaithful to him and left his protection. When we put forward this argument we forget that our women have for thousands of years been suffering from the same disadvantage. If we should be supposed to encourage illicit sexual relations amongst men by prohibiting polygamy and enforcing monogamy, I am afraid we are doing the same thing now by not allowing our women to re-marry when they are deserted by their husbands. If we but once take into consideration the disabilities suffered by our women due to the recognition of polygamy by our law, we will find that they far outweigh the inconveniences which would be suffered by men if monogamy is enforced even without the introduction of the law of divorce. But there is abso-

lutely no reason why the Hindu marriage should even at the present day continue to be a sacrament and therefore indissoluble.

In India, a Mahomedan can marry three other wives during the life-time of one wife and a Hindu any number. But if a Hindu or a Mahomedan woman goes through the ceremony of marriage with a man during the life-time of her husband, though that husband may not care to take any notice of her, she is punishable for bigamy under section 494 of the Indian Penal Code with imprisonment which may extend to seven years and also with fine.

Besides allowing more than one wife to a man, Indian Law is most one-sided and unfair towards women regarding conjugal fidelity. While it requires no faithfulness from the husband to the wife and allows him to keep openly as many concubines as he likes without any detriment to his marital rights, the slightest unfaithfulness on the part of the wife is severely punished. A Mahomedan husband in British India incurs no legal penalty, civil or criminal, by failing to observe conjugal fidelity. But if a Mahomedan wife is disobedient or unfaithful to the husband she may be divorced or driven out and deprived of her right of maintenance. Under the Hindu Law also the faithfulness of the wife is strictly enjoined and for the slightest unfaithfulness she is deprived of all her conjugal rights, including her right of maintenance. But the husband need not be faithful to her, as he does not lose any of his legal rights over her by becoming unfaithful. Consequently, if the wife refuses to live with him on the ground of his infidelity, he may force her with the help of the court of law to come back and live with him. The text of Manu upon which the law regarding this matter is based runs as follows:—

'Though unobservant of approved usage or enamoured of another woman or devoid of good qualities, yet a husband must constantly be revered as a god by a virtuous wife.'

An eminent Hindu lawyer in justifying this precept has said,

'The feelings which it serves to engender often enable the wife calmly to bear her lot, however unhappy, and to try to propitiate a cruel husband, and often prevent those vain bickerings which can only embitter life.'

With due deference to the opinion of this learned lawyer it may be pointed out that one of the primary objects of law is to mete out

justice to all, and the law which ensures peace entirely at the expense of one party fails to fulfil one of its primary objects.

Even at the present day a Hindu marriage is recognised as a gift of the bride to the bridegroom by the father or any other relation of the bride, so the bride is not an active agent, but is merely the object of the gift by the legal guardian. While no marriage according to the Hindu law can be valid unless the bridegroom willingly accepts the bride, there is no provision for taking the consent of the girl at the time of the marriage and it is perfectly valid even if the girl is given in marriage against her wishes. Want of any provision for the consent of the bride might have had some justification when every girl used to be married during minority, but there is no justification for it at the present time when many Hindu girls are being married after the attainment of majority (A Hindu girl in Bengal attains majority for the purpose of marriage on completion of the fifteenth year). If the Hindu Law still continues to ignore the necessity of an expression of the bride's consent at the time of the marriage which creates a tie for her from which she can never free herself, it merely shows that the law has not ceased to look upon woman as a perpetual minor.

Of course, I do not for a moment want to suggest that all marriages among the Hindus are unhappy because there is no provision in law for ascertaining her opinion at the time of her marriage or because the legal position of the wife is inferior to that of the husband. The majority of the Hindu couples are as happy as any couple in any other nation or community, and an occasion may not arise in the lives of most of the Hindu wives when they may feel that their position is one of subordination to their husband. But that does not justify the disabilities which have been imposed by our law upon our women. One of the objects of law certainly, is to guard against the brute in man, and the husband may and does sometimes prove himself a brute. But the law has imposed so many disabilities upon our women that she can hardly get any relief from a court of law when she may want to save herself from the oppressions of an inhuman husband.

It has been pointed out already that Hindu Law does not recognise divorce. Non-recognition of divorce would have meant

equal convenience or inconvenience both to the husband and the wife if Hindu marriage had been monogamous. But the husband being free to marry any number of wives, it has placed the wife in a position relatively of the greatest disadvantage. I know of a recent case in Dacca which would illustrate my point clearly. A girl belonging to a respectable family in this town was married to an educated young man well placed in life. Within a very short time of the marriage, the young man, somehow, became alienated from his wife, sent her away to her father's place and married again. While the husband could feel no inconvenience for what he had done and could get on in life as if nothing untoward had happened, the law is so one-sided and faulty that the wife must spend her days alone and in misery, and yet in subjection to a legal bond from which she cannot release herself unless she is prepared to abandon her society and religion. So long as she remains a Hindu she must suffer because the law regards her marriage as a sacrament and therefore, indissoluble. But if she becomes a convert to another religion, she becomes entitled to a dissolution of marriage and may marry again, provided her husband refuses to live with her. So long as Hindu Law does not recognise dissolution of marriage even in such exceptional cases, it merely puts a premium upon apostasy on the part of such victims of that law and faith.

Mahomedan law in India recognises divorce, but the rules are one-sided. They appear to have been enacted solely for the benefit of the husband who may divorce his wife at his mere will and pleasure without assigning any reason, while the wife can never divorce herself from her husband without his consent. Neither cruelty nor conjugal infidelity on the husband's part nor neglect or inability to afford proper maintenance to the wife, will enable her to claim a divorce. This is placing the wife entirely at the mercy of the husband. He may at any time get rid of her, while she cannot get a divorce even for a just cause.

Among Christians conjugal infidelity on the part of the wife is always a ground of divorce in India, but the same offence on the part of the husband would not authorise divorce unless it is coupled with some aggravating circumstances like cruelty or desertion. Morally the offence is the same by whichever party it is committed, so the

English Matrimonial Causes Act of 1923, has given equal facility to the husband as well as the wife to get a divorce if one of them proves unfaithful. Let us, in the next place, discuss the proprietary rights of the husband and the wife in each other's property. In England marriage formerly operated as a conveyance to the husband of all the property which the wife possessed at the time of marriage and whatever she subsequently acquired. The wife had no corresponding right or advantage. Marriage in England at this time, converted the husband and the wife into one person in the eye of law and that person the husband. The Married Woman's Property Act of 1882 wrought a considerable change in the relations of husband and wife by allowing her to retain all her property and by giving her absolute control over it. The Administration of Estates Act of 1925 has gone a step further and equalised the positions of the husband and the wife regarding the properties of each other at the termination of coverture. After payment of funeral expense and debts, the surviving husband or wife of the intestate takes, according to the provision of this act, the personal chattel and a net sum of £1000. If there is any residuary estate left after this, then, in the case where the deceased leaves issues behind him, half of the residue and where the deceased leaves no issues behind him, the whole of the residue goes to the surviving husband or the wife for life. So that in England at the present time, whether during coverture or the end of it, the husband and the wife stand on exactly the same footing regarding rights in each other's property.

Both the Hindu Law and the Mahomedan Law in India have always recognised the proprietary rights of women and were, thus, in this regard in advance of the English Law as it was before 1882. But while our law in India has remained exactly what it was several centuries ago, the laws of England have changed within the last 50 years to the great advantage of the woman.

The Hindu Law, however, recognises merely a limited proprietary right of a woman except in certain special kinds of property technically known as her own peculium or *stridhan*. Among the Hindus, whenever a woman is found to be the owner of a property, the presumption is that she is entitled merely to enjoy the income of such property during her lifetime and after her death it

is to go to the heirs of the last male owner. Normally a Hindu woman does not possess the power of selling, mortgaging or making a gift of any of her properties excepting her *stridhan*. But during coverture she cannot transfer even her own peculium without her husband's consent, excepting properties received by her as gifts of affection from relations, known as her *Saudayika stridhan*. Even the property which she may buy with her own earnings, she cannot sell or make a gift of or bequeath by will without the consent of her husband. On the other hand, the husband, when in need, is allowed by Hindu Law to appropriate the *stridhan* of the wife without her consent and even against her wishes. The law is worse regarding the earnings of a married woman. While the wife cannot spend her own earnings without the consent of her husband, the latter is entitled to take away such earnings from the possession of the wife even without any necessity and spend them in any way he likes. This and, indeed, most of the disabilities, legal and social, of the Hindu woman of to-day, are relics of a past, when women of all castes were considered to be no better than Sudras. The enfranchisement of the wife and mother has failed to keep pace with the progressive enfranchisement even of the slave. It is high time for us to realise that the union of husband and wife does not mean domination of the husband over the wife and complete effacement of the wife's individuality.

The Mahomedan Law, so far as the proprietary right of the wife is concerned, is more liberal. Her property belongs to her in her own right, to deal with it as she likes; if she is a wage earner, her earnings belong to her absolutely without any power on the part of the husband to intermeddle, or appropriate them.

On the death of the husband the widow, according to Hindu Law, is entitled to inherit his properties in the absence of any issues, provided she was faithful to him at the time of his death. The husband also is entitled to inherit the *Stridhan* of the wife on a similar contingency but the law does not enforce the condition of fidelity upon him. Moreover, owing to the general incapacity of women in Hindu Law, the wife gets a limited interest in the property which she inherits, while the husband takes the property absolutely. Among the Mahomedans, while the husband inherits one-fourth

of the wife's property on her death, the wife inherits only one-eighth of the husband's property.

Next we come to the legal position of a mother. In an Indian family, the father's claims upon the children are always considered to be superior to those of the mother. Both according to the Hindu and the Mahomedan Law the father is the natural guardian of the person as well as the property of the minor children and so long as he is alive, the mother is not entitled to exercise any control over them or their properties. If the father and the mother are living apart, the father, as a matter of right, has the custody of the children, however young they may be. In the matter of educating the children or in the matter of giving the daughter in marriage, the father's voice is always to prevail in preference to that of the mother. Even in the case where a Hindu father becomes a convert to another religion, he retains his rights over his children. But if a mother changes her religion, the Court may at the intervention of any relation, remove the child from the custody of the mother and place it under any person who may profess the religion of the father. Normally, the mother becomes the guardian of the children after the death of the father, but a Hindu father may, by word of mouth or by writing, nominate a guardian for his children after his death, so as to exclude even the mother from the guardianship. According to Hindu Law, the mother's right of giving a daughter in marriage is postponed not only to that of the father, but to that of all the paternal relations of the daughter. The position has no doubt been to some extent ameliorated by statutory enactments and by the assumption of power by the Court to modify the operation of the personal law of the parties in the matter of appointment of guardians in the interest of the children, but the general character of the law remains as outlined above. The right of taking a son in adoption according to Hindu Law belongs to the father only and not to the mother. The father may adopt a son not only without the consent of the mother but even against her wishes and the mother is bound to recognise him as her own son, and the son thus adopted shall inherit even the *Stridhan* of the mother after her death. But the law does not allow a mother to take a son in adoption without express authority from the father. Indian

children, in short, belong to the father and after his death to his nominee and not to the mother.

The English Law regarding the custody and the guardianship of children, it should be observed, was not dissimilar to the Indian Law in material respects up to 1925, when the Guardianship of Infants Act was passed. This Act recites that Parliament by the Sex Disqualification (Removal) Act of 1919 and various other enactments has sought to establish equality in law between the sexes and that it is expedient that this principle should obtain with respect to the guardianship of infants and the rights and responsibilities conferred thereby; and enacts, that where in any proceeding before any Court, the custody or upbringing of an infant or the administration of any property of the infant or the application of the income thereof is in question, the Court in deciding that dispute shall regard the welfare of the infant as the first and paramount consideration whether the claim of the father is superior to that of the mother or the claim of the mother is superior to that of the father. The mother is to have a right equal to that of the father to apply to the Court in respect of any matter affecting the infant. A daughter in a Hindu family, whether married or unmarried, has no right to inherit the property of the father so long as a son is in existence. The son, however well placed in life, inherits the whole property of the father to the entire exclusion of the daughter, however helpless or poor she may be. The distinction, on the score of sex, is nowhere so prominent in Hindu Law as between sons and daughters in the matter of inheritance. There is no other system of law which ignores the daughter in such a way. English Law does not, at the present time, make any distinction between sons and daughters for the purpose of inheritance of the properties of the father and the mother. The Mahomedan Law gives to a daughter half the share of a son. The Indian Succession Act, which is applicable to the non-Hindu and the non-Mahomedan inhabitants of India, speaks of lineal descendants who should inherit, without making any distinction between sons and daughters. The grave domestic problems which attend the procuring of marriages of maidens in Hindu families, would, it seems to me, be brought materially nearer solution if the law were to recognise the right of the

daughter to share in the inheritance with the son.

According to the Hindu Law prevailing in Bengal the relationship with a sister is not recognised at all for the purpose of inheritance. When a Hindu brother dies leaving behind him no other relation excepting a sister, his property, on his death, is escheated to the crown because the sister is not an heir. But if an unmarried sister dies leaving *stridhan*, the brother succeeds to all her properties to the exclusion of all other relations.

I hope, I have been able to show that the legal position of a woman in India is decidedly inferior to that of man. Whether as a wife or as a mother or as a daughter or as a sister, she always occupies a subordinate legal position in the family. Of course, I do not even for a moment want to suggest that we yield to any nation in our respect for women because of their inferior legal position. On the contrary, they are the real mistresses of our household and respect for women has been one of the chief characteristics of the people of Aryavarta from very ancient times. "Where women are honoured", says Manu, "there the deities are pleased, but where they are dishonoured there all religious rites become useless." "Strike not even with a blossom", says another sage, "a woman guilty of a hundred faults". But however deep our respect for women may be, we are not

justified in keeping them in legal subordination to men, because it is the peculiar function of law to step in to protect an individual, just when the purely social forces fail him or her. A person suffers from legal disabilities when he is a lunatic or an idiot or an infant—that is to say, when he is less than a normal human being either in intellect or in maturity. No man at the present time would contend that a woman as such is inferior to man in intellect or in any other respect. Individual for individual, many women are immeasurably superior to many men in these respects. Why then is this legal inferiority of women to men in India? All the civilised nations of the world are giving equal rights to them. Indians only are lagging behind. We are the only people on the face of the earth who are still content with laws which were suitable for men who flourished during the Middle Ages.

So long as we do not give equal legal status to our women within the family, the people outside India will continue to look down upon us and our claim for recognition as the equals of other civilised nations of the world will remain unjustifiable. We have a long leeway to make up in this matter, and now that the women of India have been enfranchised, it rests entirely with them to pool their forces together and compel the legislatures to give them equal rights with men.

"COUNCIL WITHIN COUNCIL" WHICH RULES THE LEAGUE OF NATIONS*

By JYOTI SWARUP GUPTA

FOR sometime past the idea has been gaining ground that the League does not stand for the ideals which were advertised to actuate its promoters when it was brought into existence. It is not a democratic body—such as it professes to be—in which every number, big and small, has an equal voice and an equal control but it is a gathering, international only in name, in which a group of four or five big powers, who have formed a clique within themselves,

rule and dominate mostly to their advantage and to the detriment of small powers. This view of the working of the League has been often discussed in the press, the public platform and possibly at many a private conversation, but it was only at the last session of the League that these feelings were for the first time openly expressed by a delegate on the floor of the house itself. A Renter's message from Geneva dated September 8, 1927 says:

"Vocaliferous applause punctuated the vigorous speech of Mr Hambro (Norway) who frequently glaring in Sir Austen Chamberlain's direction,

* The quotations in this article are from *The Leader of Allahabad*.

criticised the work of the Council and spoke of the secret activity of the "Council within Council" discussing an important agenda before the latter submitted by the General Council. Mr. Hambro finally asked why the under-Secretaries of the League belonged only to the great powers and said that Norway admired the work of the Secretariat but it would do even more if the powers that were still outside were brought inside.

The delegates rose and patted Mr. Hambro on his back as he returned to his seat.

Big men when they sit in big assemblies generally indulge in high sounding platitudes and complimentary epithets and one need not always put much importance on such expressions. But when a small member stands on his legs in a sedate international gathering of diplomats and statesmen and musters courage to openly make a grievance to the face of the stalwart members that their conduct has not been proper, it may safely be presumed that there must have been a considerable volume and intensity of feeling on that point. The vociferous applause which punctuated Mr. Hambro's speech and the unusual mark of approbation and commendation which prompted the delegates to pat Mr. Hambro on his back under the very nose of the big members whose conduct was so directly and seriously impeached show that his feelings were fully shared by the delegates of many small states, and that they felt very strongly on this point.

The detailed accounts published lately of the speech of Mr. Hambro may be summarised very briefly thus:

"The attack was delivered by Mr. Hambro, the representative of the Norwegian Government, who declared that an impression had been gaining ground during the last two years that there was within the Council of the League a sort of supreme council meeting at the same time, but in private to discuss problems with which the Council itself was to deal at a latter stage, that regular agenda had been circulated for such meetings and that questions had been decided before they were submitted for consideration to the Council, as a whole. Every non-permanent member of the Council, he said, was justified in watching with jealousy the semi-private deliberations at Geneva. He emphasised that the number of active diplomats among the delegates had been increasing and drew attention to the feeling that the traditions of the diplomatic career were not in favour of publicity and openness and even in the council the diplomatic element was very strong. He expressed the view that it would give greater political weight

to the council if its members were not too closely connected with the diplomatic centres of the great powers."

Rasping criticism indeed! And yet how true and direct! and the beauty of it seems to be that it created such a profound impression that no delegate would even cry out "Question".

The members of the "Council within Council" seem to have realised the significance of Mr. Hambro's speech; for after two days both M. Briand and Sir Austin Chamberlain tried to meet the charge levelled against them. Reuter's message dated Geneva, September 11, says:

"In the course of the Assembly debate M. Briand replying to Mr. Hambro's insinuations gave *an assurance that the statesmen of the Great Powers in conversing outside the League, while here, never desired to impose any decision on the Assembly because all were working for the Universality of the League.*

Sir Austin Chamberlain followed and contended that the work done in conversations helped instead of impeding council's work."

Whatever little satisfaction M. Briand and Sir Austin may have derived by giving this explanation, the cumulative effect of Mr. Hambro's attack and the defence of the big powers cannot be lost upon the world. Mr. Hambro's complaint was direct and concise. He enumerated his grievances, cited documentary evidence (viz. the circulation of regular agenda) and suggested radical cure for this unhappy development.

The reply came a little too late, at least so late as to allow it to be said that the "Council within Council" met in another conclave and briefed its two stalwarts who tried to meet the charges by laboured speeches. They were neither precise nor direct. They neither categorically denied the charges nor laid the evidence, which was doubtless in their possession, but instead tried to convince by arguments. They could have said that there is no "Council within Council" and that whenever the delegates of the big powers meet at Geneva they do not discuss beforehand the agenda of the next meeting of the League Council. In support of their case they could have laid on the table of the house full copies of the agenda and minutes of their own meeting of which Mr. Hambro had made direct reference. They could have promised to appoint Under-Secretaries of other Nationalities and thus set at rest the doubts and fears of Mr. Hambro and of those who applauded and patted him. But

* The small states are represented by a fewer number of delegates and unless many of them came, it would have been impossible to punctuate Mr. Hambro's speech with vociferous applause.

they chose none of those ways! Both of them admitted by implication the existence of these secret meetings. What they did was really to ask the delegates to believe in their good-faith and to take it from them that their aim was in consonance with the high ideals of the League. This can hardly be said to be the right way of appealing to those who directly impeach your honesty and good-faith. A thief in the dock might as well say that the complainant must believe in his good-faith and that he removed the complainant's things in a spirit of brotherhood. Whatever it may be, it is an affront of the greatest magnitude to the League Assembly and League Council that the delegates of the big powers who are better organised and have permanent seats on the League should settle between themselves their future course of conduct in the regular Council meetings and register their previously-planned decrees by the superior force of their name and vote.

It is not only Mr Hambro and the delegates who applauded him who make a grievance of the big powers ruling and dominating over every activity and decision of the League, but that is a general feeling and has been freely expressed in numerous papers and periodicals. The *Round Table* for September says.—

"A few weeks ago a well-known delegate to past Assemblies was asked whether he would, as in previous years, be found representing his country at Geneva in September. He replied that he thought not; that it no longer seemed worth while coming; that the smaller states were completely powerless; and that, as representative of one of them, he might as well stay at home. That view of the general situation at Geneva may be justified or not, but that it has for the last three or four years been steadily growing, till it has become a real danger to the League, is undeniable. Unless the tendency of great and small states at Geneva to drift apart can be quickly arrested, and some new demonstration of real solidarity provided, the effect not on the League itself, but on the whole evolution of international relations will be serious. This at any rate is the considered opinion of many of the most sober and experienced observers of the working of the League in the last seven and a half years of its existence.

The London correspondent of the *Leader* wrote.

"There seems to be no doubt that the smaller nations are getting tired of the domination of the affairs of the League hitherto by the Foreign powers of the Locarno powers. They do not dislike secret diplomacy so much as they dislike to think that decisions are taken over their heads and that they are thereafter required to register decrees upon those decisions.

The direction in which the League is moving should be clear to every one who cares to look ahead. *The Leader* has correctly diagnosed the position of the small powers and given a timely warning to the big powers, when it wrote.

"In a number of important cases affecting small states the big powers concerned disposed them of in private conference behind the back of the League Council. If this state of affairs continues the smaller states may cut off their connection with the League which will not be able to survive this defection. If in actual practice the League is merely the instrument for recording the decisions of the big powers, the small states would naturally be unwilling to associate themselves with an organisation which only subserves the interests and ambitions of the great powers and hides its real character behind a high sounding name. The signs of restiveness they have shown should serve as a warning to the big powers who have been treating the small states as if they were pariahs."

It is clear that if the small powers want to remain in the League, not only as silent and dummy members only to give the League a high sounding and sanctified name, but are determined to make their presence felt and to make the League a truly democratic body, such as it professes to be, then it is their paramount duty to organise themselves so that they might mould the future in accordance with its declared objects and not remain content by contributing annually to its funds and attending its meetings regularly only to let the big powers run the whole show in their name.

They must see to it that the power within the Secretariat is not monopolised by the big powers, but is evenly distributed between all the states, big and small alike. The important posts in the Secretariat must be so distributed that the Nationals of all the states occupy an almost equal position with respect to salary, position, power and influence over the Secretariat work of the League. If necessary and feasible, some of the posts might be made tenable for a fixed term and may be given by rotation to different nationalities.

The permanent seats within the council must be immediately abolished. It is incongruous to all principles applying to democratic institutions that any set of members should have permanent and irremovable seats within its executive. Such members are sure to become organised and consequently in a position to rule the institution. Thus all the seats in the council must be thrown open to election. T

election of one-third of [the total number of seats should take place every year and the elected members must continue for three years, and after having served their term they must be ineligible to stand again for a definite number of years so that every member may get a uniform chance of serving on the Council. Thus and thus alone will every member, big and small, command the respect and meet the treatment of equality which is due to every member of a democratic body.

Mr. Hambro rightly complained that the diplomatic element within the League and its council is very strong. Diplomats are bound to think in lines of their respective countries. They are sure to stand for and try for greater power and concessions for their own countries without regard to the fairness of their claims. It is impossible for them to think internationally or to work for

international weal. As the disputants to a litigation cannot form themselves into a committee and honestly and fairly adjudicate upon their rights and liabilities, so diplomats, with narrow nationalistic outlooks, cannot sit properly in an international body. Therefore, either a dual-chamber of persons with an international frame of mind, should be formed to sit above the Nationalist Chamber (i. e. the present League) to inspire, guide, direct and correct the Nationalistic leanings of that body, or the League should consist of a mixed element of delegates who are diplomats, viz, engaged in the governance of their countries and of persons who will take an international view of the problems which come up for discussion. Their presence is sure to exercise a sobering effect on the nationalists and perhaps the work of the League will then progress more smoothly and to the greater good of the world.

A SONG OF SPEED

*Ever adown the ages,
However far we go,
We learn, from history's pages,
The swift despise the slow.
And ever less apt in conceiving
The twentieth-century's drift
Is the ancient Preacher's saying,
"The race is not to the swift."*

In days when people walked or rode,
On highways unpatrolled, unchalked,
The few who drove or who bestrode
A horse looked down on those who walked
From arrogance (or ignorance) unable
To appreciate the hare-and-tortoise fable.

But when the populace began
To push the universal bike
Both rider and pedestrian
Viewed the intruder with dislike,
Exclaiming their unmitigated loathing
For his peculiar posture and his clothing.

Next came the crucial moment when
Combustion's dread internal force
Bestowed the motor-car on men
And from the high way drove the horse,
Trebled the swiftness of the cycling million
And placed the flapper on the deadly pillion.

The cost of living has come down :
But, as we gather from the Press,
Alike in country and in town
The cost of dying's growing less,
For Speed, the modern traffic-leaper, checks it,
Affording us a swift uncostly exit.

Yet walkers, though a dwindling crowd,
By statisticians quite unawed,
Erect, undaunted and unbowed
Still take their perilous walks abroad,
Until the day when, legally forbidden,
The mare of Shanks no longer may be ridden.
From Punch.

The Poet on Unity

In "Indian Unity"—a small, beautiful poem, in *The Indian* (Singapore)—Rabindranath Tagore gives one more illuminating sign of the high mission which inspires his poetic soul

When fate at your door is a miser, the world
becomes blank like a bankrupt,
When the smile that o'er brimmed the sweet
mouth, fades in a corner of the lips,
When friends close their hearts to your face,
and hours pass in long lonely nights,
When the time comes to pay your debts, but
your debtors are one and all absent,
Then is the season, my poet, to shut your doors
tight with bolts and bars,
And weave only words with words and rhymes
with rhymes,
When sudden you wake up one morning to find
your fate kind to you again;
When the dry river-bed of your fortune fills up
in unhopèd-for showers,
Friends are lavishly loving and the enemies
make truce for the moment,
Ruddy lips blossom in smile, black eyes pass
stolen glances,
This is the season, my poet, to make a bonfire
of your verses,
And weave only heart with heart and hand
with hand.

Mr. Andrews on Buddhism

It cannot fail to interest one, and elevate one as well,—to know in what light a truly Christian soul of our days views Buddha and Buddhism. And this is what is done by C. F. Andrews, a true lover of Christ, in his lecture at Colombo Y. M. B. A. (reproduced by *"The Maha-Bodhi"*)

Mr. C. F. Andrews said that Buddhism was never destructive as far as he could see. In every country where the movement had spread, whether in Siam, Burma, Ceylon, China, Japan, Java or elsewhere it had always accepted the tradition—it had modified the tradition but it had built upon it its own beautiful structure of love and compassion. What seemed to him to be the three pre-eminent truths which had sunk into humanity through the early Buddhist teachings were: firstly, the supreme teaching which might be summed up in the word *Ahimsa*—harmlessness to all creatures. For the first time humanity saw with clear eyes that merely to go on retaliating and striking back

was to be utterly stagnant; hopelessly stationary. That was one of humanity's greatest steps forward that was ever known in all human history. The second great feature could only be summed up in the word which Buddhism seemed to have peculiarly made its own—compassion, universal compassion. Out of that returning love for hatred, out of that refusal to do violence came something even wider. That compassion embracing not humanity but all the timid creatures of the world came the third and possibly in some ways the greatest of the new conception of life which came from Buddha. That was what he would call religious tolerance—the ceasing of religious wars, the savage, barbaric wars of one religion against another which had disgraced mankind and defamed humanity. The pages of human history before the birth of Buddha were drenched with the blood of religious wars of extermination and annihilation. Even in India quite recently they had had those feuds of religion and so in Europe. But here from the very first Gautama, by the miracle of his personality, of his compassion, by his perfect, all-embracing charity, was able to keep away from his followers anything that at all entrenched upon what they called intolerance. They never got anything of bigotry. That is my interpretation of your great treasure."

Religion and the People

The people were the object of Buddha and the early Buddhists, thinks Mr. T. S. Vidyarthi in *The D. A. V. College Union Magazine*, who finds Zoroastrianism to be otherwise:

Let us take the case of Buddhism. Its founder was a prince and if he wished he could spread his religion in that position more easily than he could do otherwise, but he knew that the princely power was not the proper power for the propagation of his faith. He renounced the world and became a *Sanyasi*. He did not look for help to the Kings and Rajahs but he went amongst the peasants, the village folk, the poor and the lowly. The result was that thousands and ten thousands came in the fold of Buddhism in a very short time. The Buddhist religion flourished and became a state religion. It was at its height in the days of Asoka. But soon after the Bhikshus became very ease-loving and a burden upon the people and when Buddhism ceased to be a state religion it began to decline.

These two instances are sufficient to show that the rich people and the Rajahs are not to be depended upon for the propagation of any re-

interest by us all when the question of juvenile marriages is uppermost in our mind.

The reception by the English Home Secretary of women's deputation urging the raising of the statutory minimum ages for marriage has focussed public attention on the fact that in this matter the United Kingdom is still among the backward nations. It is not generally realised that, as the law stands, a girl can marry at the age of 12 and a boy at 14. These minima are survivals of the age of puberty as defined by Roman law, which remains the basis of the Common Law of the United Kingdom, and thus of many of the Overseas Dominions and of several of the States of the U. S. A. Juvenile unions are, however, infrequent in this country, and occasionally we find as happened recently at Wellington a magistrate exercising his discretion and prohibiting the marriage; but it is only in special circumstances, e.g. when parental consent cannot be secured—that a magistrate has jurisdiction.

It is said that Richard, Duke of York—who with his brother the boy King Edward V, was murdered in the Tower of London by their uncle Richard III—was married at the age of 6 to Lady Anne Mowbray, a child of about the same age. Such an example of child marriage is rare—though by no means unique—in English history, but the law does not recognise such infantile unions.

In the United States, where a vast and complex population intensifies most social problems, the number of married children is of substantial proportions. The Russell Sage Foundation, which conducted an enquiry into the matter, announced in 1925 that there were then approximately 343,000 women and girls living in the United States who had begun their married lives as child brides within the previous 35 years. Of 240 child marriages which were made the subject of special enquiry, over 23 per cent were celebrated when one of the parents was under 14 and in a few cases as young as 11.

India inevitably comes to mind when the question of juvenile marriages is under consideration. In many cases (in India) the so-called marriage is really in the nature of a betrothal, and under the Children's Protection Bill introduced by Sir Hari Singh Gour, immature children would be protected against cohabitation even though legally married.

The League of Nations Advisory Commission for the Protection of Children and Young People has been conducting an enquiry into the state of the law in various countries, and an attempt may be made to bring about some uniformity with a minimum age beyond the limits of childhood.

Indian thought has moved before the League; but, it remains to be seen how Dr Gour's and Mr. Sarda's Bills are received by the officials—mostly of the United Kingdom as they are.

Religion and Politics

The significant speech of Pandit Jawahar Lal Nehru at Bombay in which, not unjustifi-

ably, he made pointed attacks on the much vaunted claims of a section of Indian political leaders that it is the God-ordained mission of India to save the world, provokes the thoughtful editor of the *Prabuddha Bharata* to make the following instructive comments on the thoughts of the new-school in Indian politics, of whom Jawahar Lal is the spokesman.

One of the items of their programme is that India should be freed from the grip of religion. When they say that politics should be separated from religion, they are intelligible as meaning that politics should not be guided by religious opinions, by theology. In this sense, it is quite true that not only politics but also economics, social customs and rules, etc. should be freed from their theological bias and made absolutely scientific.

Instructive and illuminating is the line of distinction the writer draws between theology and religion in this connection:

It is extremely desirable that politics, etc. should be separated from theology. But they must never be separated from real religion. Real religion must permeate every sphere of life as far as possible and practicable. Of course, religion should be conceived in its most rational and universal form. The aim should not be an attack against religion, but the emancipation and proper development of the so-called secular aspects of life. In their enthusiasm for the separation of 'religion' and politics, they forget this true aim and inveigh against religion itself. Politics, etc. may be separated from so-called religion and yet religion may fulfil all these and occupy the highest place in the scheme of national life, if only we conceive religion in its true impersonal and universal form. Such a religion can never impede the progress of men, on the other hand, advances it. But it must never be understood that religion is to endure through sufferance. Even if religion were to impede the material progress of the country, we would insist on its occupying the paramount position in the national aspirations and activities, for India must bear witness, as it has ever done in the past, to the fact that the spirit is the real man and its realisation the highest and only end of life.

Place of Jainism in Indian Culture

Dr. Walther Schubring's speech, extracts of which are supplied by *The Jaina Gazette*, points to the position of Jaina literature in Indian linguistic and cultural research.

In order to show how deeply the Western Indological world is obliged to Jain religion and literature, I would like to proceed on a way similar to that of Leumann, who started from Jain legend and fiction. The order in which he proceeded might be called influenced by Western mentality, had not Leumann previously proved himself as an authority in both religion and philosophy. For the European manner of becoming

acquainted with a foreign literature is to study first the works of dramatists and poets from which a good deal of the mentality of the people may immediately be gathered. So the beginner in Sanskrit who wants to read an easier text, meets at once with stories from the important Jain versions of the famous *Panchatantra*. When he has become capable of reading *kavya*, he will, when interpreting Kalidasa's *Meghaduta*, be referred by his teacher to the *Parshvabhyudaya* of Jinasena and the *Nemiduta* of Vikrama, which seem to come so near to the poet's original work. These two works are as is well-known typical for the art of using the verses of another poet as a supplement to each stanza of one's own composition. Further examples of master work appear in the numerous other *kavyas* and *mahakavyas* which all do honour to the Tirthankaras and many other holy persons as well as in the *stotras*. I shall refer later on to their value as concerns language and metre; here it may be said that their style can hardly be surpassed. For the noble purpose of praising the Perfect and Holy Ones unites the highest artificiality with the pious enthusiasm of the poet. To name the one or other of them would be equal to drawing water from the ocean by means of a bucket; I must content myself by keeping to the types. And so I may briefly say that in those forms Jainism not only seeks and finds its adequate religious expression, but also has, in its *charitras* and *prabandhas*, developed typical features which variously enrich the many sides of Indian literature.

The Ruins of Hampi

To 'The Ruins of Hampi,' K. Raghavacharyulu invites the attention of all in an interesting article in *The Quarterly Journal of the Andhra Historical Research Society*.

One peculiar feature as regards the geographical position of the ancient city is its impregnability in the North. The double row of mountains on either side of the narrow and rapid Tungabhadra formed a natural barrier repelling aggression from the North. Another feature in the ruins is the close interposition of the various temples belonging to different religious sects, Jain, Saivite and Vaishnavite. The numerous Jain temples illustrate the toleration of different religious faiths by the Vijayanagar Kings. In fact, the Jain temples seem to date many centuries before Krishna Raya and we hear of Bukka in the middle of the fourteenth century squaring up quarrels between Jains and Vaishnavites. Besides, the visitor finds various Nagakals used for serpent worship among the ruins which show that kind of worship was also in vogue in those days. Many of the temples are in ruins and if greater care is not taken the wonderful monuments of ancient culture will disappear leaving behind only a mass of stones.

One other feature is the fine sculpture found in almost all the temples and specially as has been referred to above, in the Vittala and Hara Rama Temples. The monolithic statues of Viri Narasimha, Nandi and Ganesha and the Stone Jangas are superb in their wild grandeur. But one burns with indignation to find all the figures in sculpture mutilated to an enormous extent by the

invaders and their preservation in the present form is the least that can be ardently desired by us now.

The wonderful irrigation system and engineering skill has been spoken to by the chroniclers Polo and Nuniz. The remains of a stone aqueduct used to supply water to the baths in the citadel can still be seen near the throne platform. I cannot bring this short description of the ruins to a close without observing that they are a marvellous sight for the gods to see and that the sacred place ought to be a place of Pilgrimage for every patriotic Indian as being the only remain of a vast Hindu Empire during the medieval period.

Dharanidasa, a Hindi Poet

Mr. Anathnath Bose of Viswabharati, who is a keen student of the songs and poems of the mediaeval mystics of India, notes the following characteristics in 'Dharanidasa, a Hindi poet of the seventeenth century,' in the *Journal of the Bihar and Orissa Research Society*.

Like Kabir Dharanidasa did not believe in idolatry. Says he—

ब्रह्मक पूजे धरि न जल, प्रतिमा पूजे नगर ।

धरनी ऐस को कहे, की ठाकुर बिने नगर ॥

Very often we come across such sentiments in his writings. But with a strange irony of fate an image of Krishna is to-day worshipped in the *matha* which goes by the name of Dharanidasa. The present incumbent of the *gadi*, Mahant Harinandandas while asserting the non-idolatrous character of Dharani's teachings tried to explain away the presence of the image but to the present writer his reasons did not seem to be very convincing. But this is not a solitary instance of such a phenomenon; the religious history of India beginning from the days of Buddhism is replete with such instances.

Dharanidasa did not distinguish between the Hindus and the Muhammadans; to him they were all equal, and their methods of worship, though apparently conflicting, led but to the same final goal, it does not matter by what name you designate it, by Rama or Rahim.

हिन्दुक राम बड़ाह तुदके बहुषि करत बजान ।

हुँके संगन एक जहाँ तहाँ मेरो मन माना ॥

And Dharanidasa was not the solitary soul in this track of mystical contemplation in that age.

Truth in Literature

J. C. Molony's remarks in 'Truth in Art and Life' in *The Indian Review* are, it must be admitted, neither too early for Indian

litterateurs of the day nor too wide of the mark for them.

Old Dumas, if he wrote shamelessly, at any rate made no pretence of writing otherwise: he did not suggest that by his decidedly "warm" passages, he wished to convey a moral lesson. The sensuality or sexuality of the modern novel masquerades as a desire to speak naked truth, but is quite palpably used as a bait to attract the prurient buyer. A modern book will scarcely sell unless it toys with the intimate relations of the sexes; and sex is either plastered over the picture, or thrust into passages wherewith it has no logical or artistic concern. India has recently been perturbed by an attack on Indian morality. I do not assert that Indian morality is perfect or unattackable but the underlying motive of this attack was summed up for me by a critic cynically, and I fancy not untruthfully, by the words, "it is for the delectation of the American virgin."

So much is criticism of Art by others and by myself. In my opinion the critic no less than the creative artist, must work with an abiding recognition of a Law without him. He must give reasons impersonal as well as personal for his praise or blame, such reasons will not necessarily convince any particular man, but they should be intelligible to the majority of men. The critic, who through a cloud of verbiage merely conveys the fact that a thing pleases or displeases him personally, is a critic "bolted", run to intellectual seed. Wholly to substitute subjective for objective standards is to establish tyranny or anarchy. Tyranny and anarchy are stupid things, things not worth the trouble of establishing.

A Message to the Young

The high note of idealistic dedication of oneself for the highest cause is sounded by T. L. Vaswani in *The Scholar* in his 'Message to the Young.'

Be creative, not imitative.

The paths of achievement are not the easy paths of imitation.

Look not to Russia nor Italy nor England for the needed to make India new.

Learn of the experiences of every nation; follow none;

Be not copies! Be yourselves!

Each nation must obey the law of evolution immanent in its own genius and ideals.

Imitation is self-suppression. Freedom is self-realization.

India must be herself. Her own self.

No Russian socialism, no British industrialism, no Western cult of aggressiveness or exploitation will give India what she is seeking through her deep unrest.

She has a world mission!

Therefore, I ask you to listen to the voices of your prophets and rishis!

And in the strength at once of the ancient wisdom and modern science, rebuild India into a nation of the strong, a nation of the Free!

Will our Youth Movement heroes hearken?

Milk as a Drink

Drink more milk, is one of the useful pieces of advice from *Prohibition*, which says:

The Ministry of Agriculture in Great Britain are launching a 'drink more milk' campaign. It is sufficiently supported as much as £100,000 may be spent to secure permanent results. The people of England, it has been found, drink less milk than those of other countries. While in America the children are given a pint per head per day and the average is not much less in Norway, Sweden, Denmark and Switzerland, British children get barely a third of a pint per day. Tests have proved that those brought up on an extra pint of milk a day have gained nearly 7 lbs. and grown nearly 2½ inches in the year, while those without milk only gained 3½ lbs and grew only 1½ inches. Not only do health giving and sustaining qualities recommend to 'drink more milk' campaign but for the benefit of home industries, the farmer and his cows and heifers and the increasing difficulties created by foreign competition all suggest the wisdom of the new campaign. Britain will soon follow India in the true appreciation of "Mother cow".

It may be added that the devoted sons of 'mother cow' in India seldom get pure milk or sufficient milk to drink.

Mental Life of the Europeans in India

H C Menkel, M D. thus begins his article on 'Mental Hygiene among Europeans in India' in *The Oriental Watchman*:

During the recent session of the Far Eastern Association of Tropical Medicine, held in Calcutta, a paper was read by Colonel Berkeley-Hill of Ranchi, dealing with the above subject.

Colonel Berkeley-Hill drew attention to the fact that Europeans residing in tropical countries frequently develop a variety of mental abnormalities. Among those particularly noticeable are irritability manifested over slightest occasions; uncontrollable temper, lowered moral consciousness; anxiety, stressed religious sentiments on certain points, strong mental sex urge; and a variety of other mental aberrations. It requires only a casual observer to recognize the extent of these mental phases among Europeans residing in India.

Baroda's Annual Progress

British India may note the following instructive review of Baroda's Dewan regarding 'Baroda's Progress in Education' (produced in *The Feudatory and Zemindari India*), and may consult its own record for the year for purpose of comparison:

Considering the number of villages and towns in the State, it can be said that on an average there is one institution per every town and village.

Approximately fixing 15 per cent. of the male population as the average number of boys of school-going age the number of boys on the roll gives a percentage of 89.4 as against 88.5 of the last year. Taking 12 per cent as the average number of girls of school-going age, the percentage of girls at school comes to 56.6 as against 55.1 of the previous year.

There were 229 schools for the Antyajias (untouchables), of which four were for girls. These were attended by 9,520 students. Besides these, 4763 Antyaji children attended the ordinary Gujarati schools. Untouchability is losing its hold as is evinced by the fact that high class Hindus are coming forward to work as teachers and inspectors for the Antyaji schools. There were four Antyaji boarding houses at Baroda, Amreli, Patan and Navsari giving shelter and education to 137 students.

There were 45 town and district libraries and 655 village libraries and 144 reading rooms during the year under report. The various branches of the Library Department such as Travelling Libraries, Children's Library, Ladies' Library and Visual Instruction Branch appear to have carried their work satisfactorily.

An Indian Iron Works

Sir P. C. Ray blesses the Mysore Iron Works (in the *Mysore Economic Journal*)—an Indian enterprise out and out in one of the Indian States. The Works truly deserves his blessing, as the following will show.

The Mysore Iron Works is in many respects unique of its kind in India. Apart from the production of pig-iron which is the main product it incidentally turns out large quantities of wood distillation products, viz., wood alcohol (methyl alcohol), methyl acetone, acetates, creosotes and pitch. For the recovery of these products, it has the biggest and most up-to-date plants. In a pioneering industry of this nature, it would be idle to look for immediate profits. Take the history of Bengal Iron Works or the Tata Iron Works. Both of these had to contend with immense and insuperable difficulties in the initial stages and even now the latter has been getting large bounties from the State directly or indirectly.

It is gratifying to note that the staff has been Indianised from top to bottom. The saying goes:—'The hour makes the man.' I feel confident that the heads of the several departments who have been entrusted with the responsibilities will give a good account of themselves.

Rates and Development of Indian Railways

Mr. S. C. Ghose, with his long-standing and thorough knowledge of Indian Railways, puts forth in *The Calcutta Review* some hard sound reasoning on the Rates and

Development of the Indian Railways with the following observations to support him.

The fact that the Capital at charge of the East Indian Railway amounts to nearly 134½ crores of rupees and that the net earnings vary between 7 and 8 crores of rupees (which makes this Railway the greatest contributor both to the Railway revenues, and thus partly also to the General revenues of the Government) may afford an impression that the Railway is at the height of its development and that nothing further could be done to stimulate its traffic and earnings, but the mere fact that the dividend paid by the East Indian Railway went down by 1 p. c. in 1926-27 and that the Capital expenditure went up by 5½ crores of rupees in one year (partly on new constructions) would alone tend to correct such an impression.

Moreover, when it is remembered that the Railway passes through fertile lands, traverses areas which are populous, touches important towns and places of pilgrimage in Northern India, and that in spite of these facts and comparatively low working expenses the percentage of net return on Capital outlay over the East Indian Railway amounted to less than 6 p. c. against 7 p. c. in the case of the Bombay, Baroda and Central India Railway, there can no longer remain any doubt as to the ability of the East Indian Railway to progress further with the development of its traffic.

Land Situation in India

The Linlithgow report is before the public and agrarian questions are more or less arresting the attention of all. In the following contribution Dr. Radhakamal Mukerjee reviews the general land situation in India under the caption 'Agrarian Unsettlement' in the *Indian Journal of Economics*.

As in all agricultural countries, so in India the problems of the land are the most significant of national questions. The standard of living of the Indian peasant cannot rise until a change in the land system supplies the essential economic basis of more efficient peasant farming. Neither scientific agriculture nor co-operation can make much headway unless we reform the land system, now so serious a handicap to the prosperity of the small farmers. In many parts of India the peasant is unable under existing land settlement to make his occupation profitable. Indebtedness weighs him down to an extent difficult for him to overcome at prevailing rates of interest with his limited holding and uncertain tenure; while the rate at which holdings are being transferred to the non-agricultural classes is indicative of a difficult situation. The inefficient system of agriculture that prevails, indeed, is connected less with tillage practice than with forms of tenure now overshadowing the ancient peasant proprietorship which formerly enjoyed the protection of the village communities.

The disruption of the village communities everywhere has spelled agricultural decline. The disuse of equitable regulations as regards meadows,

pasturegrounds, tanks, and irrigation-channels, and the dispersion of the supply of free labour for common agricultural tasks which formerly was facilitated by the associated life of the village communities, has weakened the rural economy to an extent which neither new habits inculcated by education nor the conventional measures of the Government can cure. But peasant proprietorship has been weakened not merely by the loss of the traditions of social and agricultural co-operation; it also has been working its own decay by minute fragmentation where there exists no check of a collective coparcenary community.

Settlers in Malaya

Malayan Miscellany has from *Pro Patria* an analysis of the causes which contribute to the flourishing of the Chinese settlers in Malaya while Jaffnese fail there.

Let us compare a typical Chinese and a Jaffnese youth starting in life in Malaya under almost identical conditions, and perhaps we may gain some insight into the mental outlook of each and in some measure understand the cause of our total failure compared to the Chinese. As soon as the Jaffnese youth gets a salaried appointment he starts saving with a feverish haste and remits home the major portion of his monthly pittance—not, mind you for the support of his old and decrepit parents or for the education of his near kindred (for in these things there is bound to be a limit) but with the object of building in time a palatial (?) house that is of no earthly use to anybody, and buying extensive areas of unprofitable land at uneconomic prices and incidentally by forcing up land values turn worthy farmers in his poor village into landless vagabonds. He spends a small fortune on his wedding celebrations, and finally when the time comes for retirement he hastens back home to bury himself in his village, amply content to be the "lion" among the "Jackals" of his humble village! The Chinese youth has a supreme contempt of all clerical work. Government service with all its petty restrictions is anathema to him and if he takes to it, it is because owing to poverty and consequent lack of capital he has no choice in the matter. He however quickly saves up sufficient to make him independent of Government employment and when he thinks he has enough capital he regains and starts a small commercial undertaking or joins his friends or relations in a planting or business venture, puts his money into anything, in fact, that will bring him a quicker and handsome return on his hard-earned capital—and almost as a matter of course he succeeds. In a few years more he is a towkay, a power in the land of his adoption. Or us let suppose that he is more cautious and works on till he is due for pension: by that time he would find the judicious investments out of his monthly earnings bringing in a decent income. Abstaining from all useless ostentation he carefully husbands his resources and lays the foundations of a sound and profitable undertaking for his sons to take over and expand instead of their having to become, in their turn, despised

quill-drivers or briefless barristers or similar burdens on society.

The lesson should not be lost on Indian settlers who leave India for other lands.

Exclusion of Orientals From Western Lands

The National Christian Council Review reports the following.

At the Kansas Methodist Conference, on the motion of Dr. E. Stanley Jones (who, we observe, has decided that he shall not become a Bishop, but shall continue to travel by the Indian Road with those whose hearts are seeking Christ, a resolution was passed approving restricted immigration but demanding the application of this policy to all nations on a quota basis. The resolution describes the exclusion of Orientals as 'invidious, un-American and un-Christian,' and the acquiescence of Christians in such treatment as 'a negation of the spirit of Christ and the claims of universal brotherhood, to proclaim which missionaries of our Church are sent to these countries.' Another injustice to Orientals is denounced in a resolution passed by the Administrative Committee of the Federal Council of Churches of America. This resolution endorses an appeal, made by a number of American missionaries in India, against the injustice done to naturalised American citizens of East Indian ancestry who have been deprived of their citizenship. This action, as well as the present immigration law, the appeal declares, 'is an outstanding national wrong which has done incalculable injury to America's moral influence in India and the East.'

A Brave Postman

Labour, the mouth-piece of the postal employees, recounts the following brave account of a brave postman.

"At about 2.30 A. M. on the 23rd May, 1923, a daring case of mail robbery took place on the platform of the Bhabda Railway station in the district of Murshidabad. The dacoits, four in number, were following the postman Rajballabh Hazra of the Bhabda Post Office while he was coming with two mailbags on his shoulder, received from the E-3 out section, towards the passenger shed to deposit them in the mail-chest. The Assistant Station Master who was present on the spot took them for passengers and demanded tickets from them who bluntly refused to produce tickets and one of them, all on a sudden, snatched one of the two mailbags from the postman. The brave and loyal postman without any loss of time, firmly caught hold of the dacoit and felled him down on the ground and tried to recover the robbed mailbags but another man came to the rescue of his associate and began to mercilessly beat the postman with a bamboo lathi and transferred the robbed mailbag to the

other two men of the gang. The postman fought courageously with his assailants for full 20 minutes and cried aloud for help all the time. The railway staff were apparently too much rano-struck to come to the rescue of the postman. The dacoit finding it too difficult to disengage himself from the deadly grip of the postman, threw off the cloth which he was wearing and fled in state of nudity. The postman saved the other bag and snatched the cloth and lathi of the dacoit. He was profusely bleeding on the head while the station staff came to him. He was immediately removed to the Berhampore Sudder Hospital where he is progressing well. The postman has, indeed, maintained the glorious tradition of the loyalty of the subordinate postal employees and fought alone against heavy odds at the risk of his own dear life.

Admission in the Medical Colleges

The following observations by *The Calcutta Medical Gazette* containing valuable suggestions for the University authorities on the above now when thousands of students knock at the College-doors (most of them come back in despair) will be read with interest and attention:

A large number of students who have passed the Intermediate in Science Examination will seek admission in either of the two Medical Colleges in Bengal. There are admission Committees in both the Colleges and their task is very difficult. Mere success in the I.Sc. Examination is not the only criterion to go by. Personal interview enable the Committees to reject easily the physically unfit candidates. General knowledge, smartness, intelligence, power to grasp questions and ability to talk in good English are seen to. Yet it cannot say that the method of selection is above criticism. The Committees of the two Colleges have tried every possible means to arrive at the correct solution and they have not yet succeeded.

In some of the Indian Universities the course of Medical studies extends over five years only. The Calcutta University in its great wisdom, would not accept the five years course. Although the Calcutta University followed the advice of the General Medical Council in many other matters, they did not see their way to allow medical students to finish their scientific studies before entering into their medical studies. What newer Universities in India found possible and practicable, the Calcutta University did not, namely, to have an Intermediate Examination in Physics, Chemistry and Biology. The argument put forward by some, was that there are no facilities in any college affiliated to the Calcutta University for the teaching of Zoology, up to the I.Sc. standard. Had the regulation of the Calcutta University been such that the scientific subjects must be

passed before a student enters into a medical college, classes in Zoology would surely have been started and the University would have as a consequential measure, had an Intermediate in Science Medical Examination started.

The objection raised to having an Intermediate in Science Medical Examination is that the subjects of Physics and Chemistry could not be taught in a Science College by professors who will not necessarily know the needs of medical students. Curiously enough with the knowledge and permission of the Calcutta University only the professor of Chemistry in the Medical College, Bengal, is a medical man, the Professor of Physics in that College and the Professor of Physics and Chemistry in the Carmichael Medical College are all laymen. How can these three professors know the needs of medical students? If there is to be an innovation, imaginary difficulties are raised.

To revert to our original point, namely, the difficulty of selection of candidates for admission into the Medical Colleges, we are strongly of opinion that if this Intermediate in Science Medical Examination were started by the Calcutta University, practically the whole difficulty would have been solved. After the examination of the physically unfit by personal interview the candidates could be admitted on the results of this examination.

There is yet time for the Calcutta University to think over this difficulty and by altering its regulation reduce the course of medical studies by one year.

Vernaculars and Universities

Mr. Gopal Halder in pleading in the weekly *Welfare* for an early introduction of the vernacular as medium of instruction concludes with this well-reasoned suggestion which we invite our Senators and Syndics to take note of:

We do not want to abolish English altogether from our schools or colleges. As matters stand, we believe it has to be retained for some time at least, if not for all time, as a compulsory subject in which a competent knowledge should be demanded of all who go in for secondary education. But, all the same, we want and pray for a quicker life in our vernaculars which alone we should make it a point to serve while we should make English serve us in affiliating ourselves with the world of thought outside. And, in every Indian University a competent knowledge of the particular vernacular of the province should be demanded of all its scholars without exception who are permanent or habitual residents of the province. Thus Calcutta University should make Bengalis, non-Bengali Indians, Anglo-Indians and Europeans all sit for an examination in Bengali. This can be relaxed only in the case of those foreign scholars from abroad who come for research work.

Religion As Inner Experience

In an intensely sincere article of Mr. Doremus Scudder on 'A Quest of Human Brothers' in *The World Tomorrow*, we find the elevating and illuminating thoughts that the writer gleaned from Rabindranath Tagore's rich and sacred storehouse of experience.

An afternoon with Dr. Tagore at his Ashram gave opportunity for rare interchange of experience. "We Indians meet God in nature as Love and Joy rather than as law. We have something in our Indian mentality which I may call a Universe consciousness or cosmic feeling. If we have not a feeling of kinship with nature we lose something very vital. The Universe, this earth, sky, star, all come from One, Central Creative Personality and this same creative will has its manifestation in our own consciousness; hence there issues this sense of relationship between the inner self and the outer world. I believe that Jesus reached brotherhood through fatherhood and that this has done great good and has begotten humanitarianism. Yet we find men who do not get to God though they may be great lovers of men. Religion cannot be taught. Teaching about religion is not teaching religion. Religion must be imparted from Spirit to Spirit." With reference to the barring of religious teaching from schools by Russia, Turkey and Mexico, Dr. Tagore added "I believe in this course myself. We teach no creed or faith in our school. The danger in so-called religious teaching lies in its effect upon those who follow the majority. As religion is an inner experience each must find his religion for himself and give no particular name to his find. As each one chooses his own line of development, so each man has power to grow himself into his own peculiar personality. I do not believe in the herding spirit in religion." I have given this conversation somewhat at length and without the questions which drew it out because it is so full of the modern spirit.

India, the writer noticed, responded to the idea of brotherhood, but distrusted Christianity.

Six Gateways to Happiness

Bhikku Dhammaloka counts in a sermon reproduced in the *British Buddhist* these six

gateways to the City of Success where and where alone we can find Happiness.

1. The first of these is health.
2. Having entered through the first gateway, we next come across the second, which presents itself in the form of good and pleasant manners. To know how to conduct oneself in society is really a great advantage in life.
3. The third gate-way that we have to cross is the responsiveness to good advice.
4. Learning is the forth gate-way to Success.
5. The fifth portal which leads to Success is righteous life.
6. Strenuous endeavour, unyielding effort, is the sixth gate-way to Success.

Chinese Situation affects Christianity in China

The deep distrust of Christianity all through India, which pained a writer in the *World Tomorrow* is reflected everywhere in the East, more so in China, where the Christianity of 'Christian Generals' make them bitter enemies of the Christian Powers F. H. Hawkins thus notes in *The International Review of Missions* the discouraging conditions in the working of the Christian ministry there

The factor in the present situation which has depressed me most is the serious dearth of students in the theological colleges, and the short supply of candidates for the Christian ministry. This state of affairs seems to be almost universal and to affect the work of all the missions and Churches. In Yenching University there were four candidates only for the full theological course, with about double that number of professors to teach them. It is true that there was an elementary 'short-cut' course for candidates for the position of preacher, but the theological faculty of the University does not exist to give this type of training. Even sadder is the fact that of the theological students at Yenching who have recently graduated scarcely one is in the ministry of the Church. Many of the graduates are diverted to better paid secretarial posts in the Y. M. C. A. and other national organizations. In the theological school of the Shantung Christian University at Tsinan there were four students, the same number as

during the previous year. In the Union Theological College in Canton there was a considerable falling off in the number of students.

Outside the theological colleges the problem was even more acute. A bishop of a large diocese told me that after he had ordained a deacon as priest a few weeks later he did not see in the whole of his diocese a single Chinese who seemed suitable for the priesthood. He deplored the fact that the supply of potential Chinese bishops in the Anglican Church in China was almost non-existent, and said that after the consecration of a Chinese assistant bishop which was shortly to take place, he had no idea where the next Chinese bishop was coming from. This depressing prognosis was confirmed by other bishops, and the outlook in the matter of finding candidates for Orders in the Church of England is indeed gloomy.

Morning At Gandhi's Asram

Morning is heralded in at Gandhi's Asrama—writes Krishna Das in *Unity*—amid ringing of bells and deep notes of music calling the inmates to this prayer:

"This morning I worship the great being who is beyond the reach of Mind and speech, by whose favor the Eternal sound receives its primal energy, to whom the Vedas point by the words, 'Not this; not this': who is the great Lord whom all guards bow this in reverence: who is the self-existent (uncreate) Immutate and primal being."

Then follow songs of praise in salutation to the Earth, to Saraswati, to the Gurn, to Vishnu, and to Siva. Then, the devotee places at the Lotus feet of his Lord the yearnings of his heart in the following terms: "I yearn not for earth, nor heaven nor even freedom from rebirth, but my heart's yearning is to relieve the woes of suffering humanity. May the peoples be happy! May the rulers of the earth following the path of righteousness protect their peoples! May god ever attend the Cows and the Brahman! May the whole world be happy!"

Youths' Coming of Age

'Youths' Coming of Age', an article in the same journal, may supply our Youth Movement enthusiasts with abiding thoughts.

The Youth Movement is the independent self-assertion of youth in the actual life of today. It is youthful life claiming its own. It is youth's coming of age. No longer contented with a shadow existence it was reduced to, youth steps into life with an emphasis of its own.

What is the part youth can play in "real" life? Just study the activities of the various Youth Movement groups. In China, they carry on the crusade for the education of the masses, and for the development of a united and free nation. In Europe they make their experiments in individual, sexual and social living. They bring about international

rapprochement and work with movements for economic and social regeneration. As manifold as life are their activities.

This is what we want life to be like (they say) More sincerity, less evasion; more naturalness, less sophistry; more childlikeness less cynicism; more group action, less particularism; more justice, less self-interest.

A Communist Schoolboy

Robert Littoll in the 'Diary of a Communist Schoolboy' in *The New Republic* (June 20) brings home to all the thoughts and ideas that work within the mind of the future generations of Russia:

He (Kostya) wants to change his name to Vladlen—the first syllables of Lenin's names. He doesn't dance—"if one did, where would our ideology come in"—and he believes that "proletarian consciousness" forbids being too friendly with the girls, but does not act on his belief. There are midnight hooch and petting parties, where dreadful things happen, and sex, often in a crude form, is always in the background. One of the teachers tells him that in the old schools "the use of obscene language was a form of protest," but that "you, on the other hand, have nothing to protest against." Anonymous newspapers are constantly appearing, and posted on the walls of the school, with satirical articles or long discussions of "the purpose of life" or "can girls and boys be friends?" Other newspapers, full of smut, circulate secretly. At a meeting of the committee of the factory in which Kostya will probably work when he leaves school, a girl asks that funds be given her for an abortion. After a long argument, this demand is turned down.

One boy insists that the election of a chairman at meetings is a "bourgeois prejudice." Kostya thinks that suicide and sitting next to girls is "intellectualism." The meetings of the Communist Unit are "so dull that no one outside the party ever attends them." When the school performs "Hamlet," Kostya, who would have preferred "something with barricades and revolutionary fights," remarks that "Hamlet isn't a brainless fellow, in spite of his bourgeois origin."

Egypt and Britain

Unhappy Egypt attracts considerable attention in the pages of the same journal (May 30) when Dr. H. N. Brailsford takes a survey of her position arising from the rejection of the British treaty offered by Chamberlain.

By one of those pathetic tricks with words in which only diplomatists indulge, the draft treaty declared that the presence of a British garrison on Egyptian soil is not to have the character of an occupation. But the blunt demand

was continued that Great Britain shall "have the right to maintain on Egyptian territory such armed forces as the British government considers necessary for the protection of the lines of communication of the British Empire."

The events which have followed the rejection of the treaty are hardly calculated to reconcile the Egyptians to the occupation. On the plea that certain measures recently before the Assembly endangered foreign residents, the British Resident was instructed to impose his veto. One of them extended the very limited right of public meeting which prevails at present. Another substitutes elected for nominated persons as headmen of villages. The Egyptians, as they witness this cynical mockery of their nominal independence, may indeed reflect that it is inconvenient to incur the displeasure of Downing Street. But they will also draw the moral that, while a foreign garrison remains in Cairo, they will always be subject to such attentions.

To crown all *Independent Egypt* has now lost her own Parliament by an autocratic fiat of her ruler.

Average Man no Devotee of the War God

Peace relies on the average man—The Main Street, who, as the speakers said in American Peace Society's Centenary—does not know its grim meaning as yet. *Literary Digest*, June 2 quotes some such opinions.

"If it can be proved to a man that if his country goes to war for any issue short of its absolute liberty of action at home, and in defense of that liberty, he will in future stand a very good chance of being bombed in his home; if we can show him that even tho his country may be victorious, he will certainly have his taxes increased by 200, 300, 100 or 500 per cent; if we can make it clear to him that for the sake of some issue to which he is probably an entire stranger he risks having to give up that new Ford next month, or even worse that he may very probably be thrown out of work, as has been the fate of millions in Europe after the last war; then perhaps he may find war less pleasantly dramatic and may bestir himself to see that as a means of settling disputes between nations, it is better abandoned."

"It is Main Street which in last analysis controls the making or the preventing of wars nowadays, and war is gradually becoming the subject of Main Street's most bitter hatred. It is this changing feeling of Main Street toward war, a feeling which is express in the whispers to which ambassador Claudel refers, which gives us ground for hope that not all the efforts which are being made to outlaw war, to make it less bloody and of less frequent occurrence, will be in vain. As Main Streets go to day, so go the governments of the nations in which they are situated. And Main Street, it is impossible to doubt, is going against war as it never has gone before."

Why the Sea is Salt

The old but interesting question is answered thus in *Current Science*, (reproduced by *The Literary Digest*, June 9) by Dr. E. G. Zies.

"He attributed some of the chlorine content of the oceans to the outpourings of hydrochloric acid gases from fumarolic areas, such as the Valley of Ten Thousand Smokes in Alaska. The hydrochloric acid gases change to salt in contact with sodium mineral content of the rocks and water, just as the acid contents of the stomach produce salt when they come in contact with soda or baking-powder. These minor volcanoes and other eruptions also belch forth considerable quantities of hydrofluoric acid gas. This is the acid that will etch glass. To it is due fluorine content of the sea. Recently the sea was discovered to be a veritable mine of fluorine, and a floating chemical from the seawater Dr. Zies declared that so much fluorine is sent down to the sea that some unknown chemical mechanism must be at work to precipitate most of it to the submarine rock floor."

Where Science Ends

The voice of Alfred Noyes rises into the musical chant of a mystic as he turns from science with gas and gunpowder to visions he has caught, which science must fail to define (quoted in *The Literary Digest*, June 16, from *London Spectator*).

The highest that we know here—indeed, the only reality of which we have immediate knowledge—is that of personality. Science claims that human personality is more and more controlling nature. Supreme personality, we may therefore suppose, would have supreme control in every detail. The Highest Reality of all, in which all the explanations reside, if the human intellect were capable of discovering them, cannot be less than personal. We cannot identify God with a universe in which nothing is self-sufficient, or its own explanation. Behind all these contingent shadow-shows we are driven at last by inexorable logic to that which is its own explanation, and is sufficient to itself and all that it has produced. When we ask what the attributes of that thing must be, we are forced to believe that they are above reason and beyond nature as it is known to science. What is this, after all, but the supernatural Maker of heaven and the earth, and of all things visible and invisible, of whom the Nicene Creed tells us, and whom St. Augustine found, not in the discourses of the Platonists, but in the voice of the Supreme Personality, infinite in perfection, speaking to what was highest in his own personality, and saying, 'Come unto me'?

"It is when science turns her face in this ascending direction that she wears the impassioned expression which is poetry, reflects in her face the glory of the divine center of the universe, and cries, with Pasteur, 'O salutaris hostia.'"

A New Industry Emerges

In the *Pacific World Commerce* we learn of a new industry—airplane industry—emerging in which the New World will have the greatest share.

The airplane industry has specially emerged from the experimental period into an era of big and rapidly growing business. The day is gone when the main question was whether the machine would fly, or whether it was safe, once it got off the ground. Nowadays, big business is asking questions about cost of operation, cost of maintenance, carrying capacity and various other items as to just how and when they can fit this new and better mode of transportation in with other existing facilities, and they are surprised at the ease with which they can make use of the airplane and the airplane service to speed up business.

As the industry stands now, it is not a question of getting more orders, but to fill the orders now on hand, for survey of the situation shows that all airplane factories are working at full capacity, but are still unable to deliver orders.

In the world's market India has had little share in any industry, new or old, except as a buyer of cheap commodities.

Haeckel's Contribution

Evolution devotes most fittingly its place of honour to 'Ernst Haeckel and Ontogenetic Law,' which begins thus:

If Darwin was the father of evolution, Huxley was its war horse, but, Haeckel the great German Darwinian, was its knight in shining armor. Haeckel's greatest contribution to evolutionary theory was probably his 'fundamental ontogenetic law' which stated that ontogeny recapitulates phylogeny. This meant that every organism in its pre-natal embryonic development recapitulates the stages through which the species of organism had passed in their phylogenetic succession.

which a harmonious life is impossible. All that is necessary in order to bring "saving health" to the nations is that this knowledge should be more widely known and accepted. We cannot imagine that the Voronoff theory of rejuvenation will make the slightest appeal to those who know the secret of a healthy, well-ordered life; and the best help we can render to those who are already doubtful as to its efficacy is to point out that true youthfulness of spirit cannot be artificially restored when the laws of God and man which safeguard it have been violated.

Politics and Temperance

Political preoccupations are forcing some urgent problems into the background, say some people. *Abkari* joins issue with them here:

The position during the past twelve months has been complicated by the absorption of all parties and classes in political questions, and there are not so many definite marks of progress to be recorded as in some previous Reports. It has always been the aim of this Association to stand aloof from the political and communal controversies which must necessarily divide a great country like India. Moreover, it may be justly claimed for the Temperance movement, quite apart from other considerations, that it has provided a common platform upon which all races, creeds, parties and castes have been able to unite for the promotion of an essential social reform. There have been frequent indications of this fact during the year under review. It has to be recognised, however, that there is a tendency in some quarters to grow impatient at the slowness with which such reforms are achieved under the present system of government, and there are those who maintain that little effective progress can be made towards the abolition of drink until India obtains control of her own affairs. But let those who take this view remember that intemperance is all the while claiming its victims and that the free India of the future will be less free if the drink octopus is permitted in the meantime to fasten its tentacles upon large sections of the people.

Mr. Gandhi's emergence into politics, it may be remembered, was reflected in this line as also in many other spheres of our activity. And though 'prohibition' is not a plank in our political platform, cannot it be made a live issue and not a mere 'lip issue' as it is now with our politicians?

Outdoor Recreations For Labour

The spare time of Labour, as shown by the Bureau of Labour Statistics in the *Monthly Labour Review*, is sought to be employed, quite profitably for themselves in-

directly, by many industrial plants which are providing for athletic fields, country clubs, etc., for their workers :

The general movement for shortening the hours of labour which gained momentum following the war, both in European countries and in the United States has brought with it the question of the use to be made by the workers of the leisure time secured through the shorter workday. Investigations have been made in many of these countries of the way in which the workers' spare hours are or may be occupied, with a view to providing the educational and recreational facilities needed to secure the most benefit from the added leisure.

In this country many organizations and individuals are concerned with the provision of suitable occupations for leisure hours, and the importance of outdoor recreation to the well-being of the people has been particularly emphasized by the President of the United States in the call for a general conference on outdoor recreation, issued in the spring of 1924, in which the need for bringing the chance for out-of-door pleasure within the reach of all was pointed out. At this conference the many agencies concerned with this question, such as the Federal Government through the administration of national parks and forests, wild-life preserves, and unreserved domain; the governments of the different States; municipalities, and many civilian organizations were represented. Topics were dealt with by the conference, such as the encouragement of outdoor recreation as a Federal function, the bearing of outdoor recreation on mental, physical, social, and moral developments, outdoor recreation as an influence on child welfare and major possibilities of national cooperation in promotion of recreation. Under this last topic was included a proposal for a general survey and classification of recreational resources, and a special committee on the value of outdoor recreation to industrial workers therefore included in its plan for the furtherance of an industrial establishments as a guide in the development of this phase of the subject.

The Bureau of Labor Statistics was accordingly designated to carry on a study showing as far as possible what is being done to provide recreation for industrial workers, the response made by employees to attempt to furnish them with facilities for recreation, and the particular lines along which such work may be developed. This subject was therefore included as part of a general study by the bureau of the various personnel activities carried on in industrial establishments.

Handicrafts not Dying Yet

That the remarkable expansion of large-scale industry has in certain cases encouraged instead of eliminating the development of handicrafts under new conditions is shown by Hermine Rabinowitch in *International Labour Review*, passages from which are reproduced below :

Not only is the number of workers now engaged

in handicrafts still considerable, but it does not seem to have decreased either absolutely or even relatively, i.e. in relation to the increased population. There is no doubt that handicraft production has been hit much less severely than is generally thought by the progress of industrialist concentration, and that it has even followed the development of large-scale industry—if not at the same rate, at least in the same direction.

The writer takes up hand-weaving as an example to the point

Hand-weaving by the handicraftsman can alone make possible the creation of unceasing succession of novelties. It may be said that all the difficulties of weaving are overcome by the hand-loom the handicraftsman has an admirable role in the process : conscious of this role, he likes to be confronted with difficulties in order to overcome them by his patience, his technical knowledge, and his love of weaving (Karl Bucher). Not only, has large-scale industry not entrenched upon the principal handicraft industries not only, as already mentioned, have handicrafts developed side by side with large-scale industry, but it will also be found that in many ways the growth of the latter has actually been beneficial to the former. Large-scale industry has in fact, provided certain old trades—handicrafts in the narrow sense, or home industries—with the means of keeping alive and even of expanding, e.g., the sewing machine, and more recently the knitting machine, the use of which is fast spreading in France, Italy, and especially Switzerland.

Not only have large-scale industry and handicrafts, each a part to play in production as a whole, but the co-existence of these two methods of production, and their parallel—or even joint—development, are to some extent dependent upon the very nature of industrialism—at least, as it is to day. Other very varied circumstances which concern the handicraftsman himself, are favourable to the development of handicrafts. Here we shall deal with two kinds only. Firstly, there is the growing reaction against certain drawbacks of industrial concentration, and more especially of the concentration of labour. Secondly, there are a whole series of possibilities or new conditions which are being opened up to industrial production.

Indeed, 'new inventions point to its transformation under new conditions' and to further expansion in some other directions, as will be evidenced by the following :

Is electricity destined to restore to the handicraftsman what steam has taken from him—or even more? To this query direct observers and specialist writers reply unhesitatingly in the affirmative. The following is the opinion of Mr. Schleifer. Electricity more than anything else has lent new strength to the handicraftsman even in rural districts. The small electric motor will certainly be the technical factor that will afford the greatest encouragement to the creation and development of small handicraft workshops as foci of this decentralized production which is so desirable both from the economic and from the social points of view.

The writer makes a general inquiry into

the problems of the handicrafts and their possible solutions.

The Virtues of Tea

Our last generation made a crusade against tea because of the Tea Garden Labour horrors. We, however, think that the new generations do not require the following from *The Japan Magazine* (May) to recommend to them the 'world's drink'. All the same, it would amuse some and interest many to know its historic attraction from the remote past as shown here:

In China, where the habit of tea drinking is the oldest in the world, the original reason for its drinking is given as a result of her people's experience of the fresh water there being bad and its drinking being detrimental to health. In Japan, the people in the early part of the Heian Era, when tea drinking was temporarily in vogue, seem to have had two ideas about tea, a medicinal idea and a taste idea, undoubtedly after the Chinese thought. Besides, tea was taken in Japan by Buddhist priests in the study of the Zen 'doctrine' or the practice of its cult, as it is effective for keeping one awake. The first theoretical explanation of the medicinal idea of tea was given in the famous *Kidô Yojoki* (a book of tea drinking for her preservation of health) by the Zen priest Yei-sei. A professor of the University of California published a study of Japanese tea, in which he stated that it contains, in addition to vitamins, those which are efficacious three hundred times as much as vitamins, and promotes energy, good health, and longevity. Its everyday drinking by the Japanese perhaps responsible for their high birthrate and their comparative energy in old age. Dr. U. Suzuki and Dr. M. Miura have found upon their study of fine tea, plenty of vitamin C in it, which has proved of great virtue for scurvy, being far better than milk in the treatment of it. Such medicinal value of tea was mentioned by Priest Yei-sei 800 years ago in his great book, and he evidently possessed wonderful insight.

Heliolatry

The June issue of the same organ from the Land of the Rising Sun presents us with K. Tsuda's article on 'Heliolatry and Religious Ideas', which cannot fail to interest India. Sums up Mr. Tsuda:

Summing up it may be considered that as a religious idea given by the Sun, its light, power and mercy were worshipped directly at first and then some living and invisible power was personified and worshipped. As civilization advanced it produced in the world some very complicated power, which was superhuman

and mystic, and God was the divinization of this mystic power. Amitabha is a God so divinized and the Sun-light became simply a mark showing his body and features. When this religious idea advances further, such figurative manifestation will be considered unnecessary and the existence of gods will become conscious to the people purely spiritually; in fact, it seems that there is already that tendency existing at present.

A Chinese God

Arthur Da C. Sowerby of *The China Journal* who seems to have been making a good collection of the grotesque but beautiful Chinese gods says this of the Chinese God of Wealth:

The writer has obtained about fifty specimens of the various wealth gods used in different parts of the country. Their titles vary either according to the tradition behind them or the imagination of the priests and printers.

The pictures of the god of wealth, as of many others, are usually printed from wooden blocks onto cheap coarse paper of the flimsy quality. A few have a better grade of workmanship and colouring, some even being hand-painted. They are made simply to be burned after the ceremony although in Chang, al An, Chekiang sheets of red cardboard are used, which can be preserved in a yellow cloth bag and used from year to year. Beside the common combination of the civil and military gods of wealth another may be found in a frequent combination of the wealth with the kitchen god. In Hunan the farmers worship a 'Water Wealth God,' apparently controlling rain irrigation, and fertility of crops. The best probable explanation for 'Wu Lu Tsai Shen' or the 'Five Roads God of Wealth' is offered by Hutson as referring to the principal ways of earning a livelihood, scholar, soldier, artisan, plus hills and and rivers—suggesting the occupations of mining and fishing as also fruitful of wealth. There may also be an indication of the five chief classes of society, scholar, farmer, artisan, merchants and soldier, as the five ways to wealth.

Mazzini on Rights and Duties

In a well-written paper on Mazzini and Dante in *Political Science Quarterly* Sydney M. Brown writes as follows about Mazzini.

Mazzini, during his impressionable years, had steeped himself in the philosophy and literature of the French Revolution: reading much and thinking more, probably brooding often on that entrancing subject during those long nocturnal walks which escaped the comprehension, and aroused the suspicions, of the Genoese government. As he turned the subject over in his mind, there came to him almost as a revelation, the remarkably sane conviction that the French Revolution had failed because it was one-sided. He had been impressed by the insistence with which the Revolution had held fast to the doctrine of the Rights of Man. He was more impressed by its failure to insist on the equally essential doctrine of the Duties of Man. The Revolutionists, he felt, had

not realized that rights cannot exist without duties—that rights, all-important and undeniably necessary that may be, are none the less, conditioned upon carrying out of duties; that rights emanate from duties, which are antecedent and superior. To insist upon the Rights of Man was laudable; to insist upon such rights without proclaiming the existence of duties was futile.

The French Revolution failed because it appealed to the weaker side of man's nature; it urged him to get rather than to give; it encouraged acquisitiveness rather than sacrifice. "A Declaration of Rights furnished no basis for idealism, provided no imperative, binding law for man, it established no guide for conduct, bestowed no definition for happiness. It neglected the strongest impulses to right action, enthusiasm, love, and a sense of Duty." "You cannot," declares Mazzini, "by any theory of Rights make men unselfish. You can at best drive them like Faust to seek happiness or life's Elixir in the Witches' Kitchen."

Right is the faith of the individual. Duty is the common collective faith. Right can but organize resistance; it may destroy, it cannot found. Duty builds up associates, and unites; it is derived from a general law, whereas Right is derived only from human law. There is nothing to forbid a struggle against Right. Any individual may rebel against the Right of any other individual which is injurious to him and the sole judge between the adversaries is Force. And such in fact has frequently been the answer which societies based upon Rights have given to their opponents. Societies based upon Duty would not be compelled to have recourse to force. Duty, once admitted as the rule, excludes the possibility of a struggle, and by rendering the individual subject to the general aim, it cuts at the very root of those evils which Right is unable to prevent. The Doctrine of Rights puts an end to sacrifice and cancels martyrdom from the World."

Here, one is inclined to agree with Professor Rose, is the bed-rock of Mazzinian doctrine

Culture and Technique

In his lucid style, typical of French intelligence at its best, Gaston Rageot in *L' Illustration* (reproduced in *Living Age*) thus brings out the contrast between culture and technique—a contrast between the Old and the Young, in other words, between Europe and America, the Old World and the New,—

The old people, having only learned how to think, do not know how to act, and the young people, who only know how to act, hardly occupy themselves with thinking at all.

The former possess culture, the latter technique.

Undoubtedly the inhabitants of the Old Continent resemble our erudite men of fifty, while the inhabitants of the New Continent resemble our young mechanics. Thus all the momentary disorder, both within each nation and between the

different nations, may be explained by a conflict between culture and technique.

Let us first define our terms.

Culture may belong to individuals or to groups. It is a function of time, and increases in value the longer it lasts. Nations who possess culture have a history, and individuals, who have attained it possess experience. It does not illuminate the world in flashes, nor does it proceed by leaps and bounds. It is continuous and slow. One must participate in it one's self to recognize it in others. It implies no particular ability, but rather a general capacity. Although it comes from the past, it is above all a potentiality, and its merit lies in the future that it envelops. It is more a method than a science, it is more an attitude than a bag of tricks.

The way one thinks is more important than what one thinks, and thought for thought's sake can be recognized either in an individual or in a nation through a smiling skepticism that presupposes neither discouragement nor renunciation, but merely equilibrium and wisdom. Seen in this way, culture is entirely turned upon itself,—upon the subject, as the philosophers say,—and whoever acquires it is transformed. It serves no purpose except living.

Technique, on the other hand, is turned outward toward the object. It modifies things, surroundings, the material elements of existence. It increases the productivity, but not the value, of individuals and peoples.

The Western peoples possess long-standing traditions, and France in particular enjoys the prestige of guarding this culture—or, to be more exact, France possesses the capital city of culture. Paris remains unique. What we breathe along its gracious river, its historic avenues and quays, is an atmosphere charged with human experience and harmonious life. It includes all the most precious, delicate inheritances that humanity has retained through the slow course of the ages,—Greek beauty and Roman justice, sombre feudal faith and royal luxury, everything that could be saved from decadence and revolutions,—and all this has been left in tangible form where the Seine flows between the Louvre and the Institut.

New York is to Paris what the artisan is to the artist, or, to be more exact, the engineer to the architect. The most salient characteristic of America, and the one that probably includes all others, is the unequal development of different lines of human conduct.

The older cultural nations are adapting themselves to technique, and the young technical nations are improvising a culture. America is searching for a past, Europe for a present.

Aud, his conclusions on the basis are :

At the moment all tendencies point in one direction. The engineer, the artisan, and the builder are dominating everywhere, and the intellectual, the artist, and the poet are losing their prestige.

We are living in an epoch of transition—that is all.

May Europe and France preserve their mission and renew their task. The problem is clear and their duty obvious. Modern technique has not

Barisal (where arrangements were made for the teaching of girl-students), and stood third in order of merit. At the last B. A. examination she stood first not only in Mathematics, but among all the Honours graduates of the year and has therefore been awarded the Eshan Scholarship for the year. She is the first girl-student to obtain this scholarship since its foundation.

Princess Ikkavu Thamburan

We understand that she will continue her studies for the M. A. degree in the Presidency College, and will study mixed Mathematics.

Mrs. ANNA CHANDI, M. A. (Hons.) wife of Mr. P. C. Chandi, B. A., D. L. Inspector of Police, Trivandrum, has passed the F. L. Examination with distinction. She

is the first lady in Travancore State to pass the law examination.

At the recent Convocation of the Indian Women's University, Poona, nine girl-students received their degrees (G. A.). Miss BALUBHAI KHARE received the degree of P. A. for her thesis on "Alankaras".

PRINCESS IKKAVU THAMBURAN of the Cochin Royal Family passed the last B. A. (Hons.) examination of the Madras University.

Mrs. Kamala Bai Lakshman Rao

Mrs. K. K. KURUVILLA B. A. (Hons.) has been nominated as a member of the Travancore Legislative Council and Mrs. NARASINGHA RAO PURNIAH, Jagirdarini of Yelandur, has been nominated as a member of the Bangalore District Board.

Mrs. KAMALA BAI LAKSHMAN RAO has lately been appointed Honorary Magistrate, Tinnevely. She is the first Maharashtra lady to attain this distinction in South India.

SRIMATI RAGINI DEVI sends us the following account about the achievements of two Indian girl-students in America.

ANANDIBAI JOSHI of Bombay has completed Training in Social Welfare. ANANDIBAI JOSHI is the first Hindu girl to graduate from Vassar College, one of the oldest women's colleges in the United States. After

graduating in 1927, she received a scholarship for graduate work in social welfare at Simmons College.

She has been living at Dennison House in Boston, Mass., a welfare centre, where she is able to get practical experience among women and children.

ANANDIBAI came to America from India to train herself for educational work in India. It was not her first visit to America. She had been here once before—but then she was too young to remember that occasion.

Her father, Professor S. L. Joshi, often teases her by recalling that really she was born in America and, had her mother not taken her back to India in infancy, she most surely would have grown up to be an American lady. ANANDIBAI is very glad that she grew up to be a Hindu lady, for she dearly loves India.

Her name, and her ambition to serve India, go back nearly forty years before her existence, to an occasion when a certain Brahman lady in India had a great longing for a college education in America. Her name too was ANANDIBAI JOSHI but she was no relation to the ANANDIBAI JOSHI of our story.

Mrs. Narasinga Rao Purniah

Graduates of the Indian Women's University, Poona,
Miss Balubhai Khare sitting in the centre

Mrs. Anna Chandi, M. A., F. L.

The ANANDIBAI JOSHI of forty years ago was the first Brahman lady to come to America for an education in medicine.

In 1902 there arrived in New York

harbor a family from Bombay. S. L. Joshi had come to America with his wife and two sons in anticipation of an appointment to teach Indian languages to missionaries training for service in India. Unfortunately,

rendered necessary the disappearance of old-fashioned culture, but its transformation. All Greco-Latin civilization was based on experience; all modern civilization is based on science. Technique is therefore sovereign in its own domain, and its reign is absolute. The culture of the future will resemble ancient culture, but instead of opposing technique it will embrace it, harmonize it, and get beyond it. Our French defect, our weakness, lies in being Greco-Latin and not doing enough in our system of national education to develop the scientific spirit. We must make ourselves more modern. In other words, while still striving to develop the humanity that is latent in each human being, we shall pursue it by different methods and shall attain culture by the intelligent practice of technique.

What the writer wishes for France we wish for India, which has no less legacy of culture.

Gor'kii

Of Gor'kii a communist admirer in the same journal writes :

INDIAN ARCHITECTURE *

(A REVIEW)

This is the third volume in Mr. Gangoly's series of "Little Book on Asiatic Art" which has already as a matter of course, captivated the heart of all lovers of Indian and Asiatic art. With only 15 pages of text, 75 illustrations and 15 diagrams the author has managed to trace the evolution of Indian architecture in a style at once convincing and inspiring. Starting from the *pajna vedis* (Fire altars) and *pajna salas* (sacrificial halls) of dim Vedic antiquity, he comes down to the 17th century Nayakka Architectural discussing actual architectural documents of over two thousand years. In his masterly summary we read not only the progressive development and transformation of the primary architectural motifs but also their correlation with the regional factors; which at once intimated and controlled those architectonic evolutions. While sticking substantially to the hitherto accepted "Northern" and "Southern" "Aryan" and "Dravidian" theories, Mr. Gangoly with the true instinct of a historian is ever ready to discover the *trait d'union* and the cross currents modifying the exclusive character and rigidity of "schools" and "orders." Underlying the apparently bewildering diversity of forms there is a fundamental unity of spiritual urge and of aesthetic inspiration that go to build the manifold *vastu* melodies of India into a vast architectural symphony, which some future Indian Beethoven will probably interpret to us with its mystic nuances in differences. Says Mr. Gangoly, "though employed by adherents of

What differentiates Gor'kii from all the other people who try to describe the lower classes, and what makes him so different from any middleclass writer who attempts to depict the life of the proletariat, is his own relation with these people and their lives. He does not stand above them, he does not judge them from a higher court and wring the wuthers of a bourgeois public at the fate of his creations. Gor'kii identifies himself utterly and completely with the people he describes, and he always discerns behind a layer of filth, apathy, evil or indifference the instinct to rebel against the unworthy, inhuman surroundings in which these people live out their life of misery.

Our *litterateurs* may note that suffering made Gor'kii and not middleclass sympathy for the suffering.

The essence of Maxim Gor'kii's being is expressed most clearly in these words of his:—

I would that everyone who wears a human countenance were really worthy to be called a man. All this life is senseless, tragic, and hateful in which the endless slaving labors of one man constantly go out to supply another with more bread and more spiritual substance than he can use."

different creeds it cannot be definitely asserted that any particular form has derived its origin from any particular religious sect. Thus it is a misnomer to designate any type of Indian architecture as specifically Buddhist, Jain or Brahmanical. It is Indian Architecture for the time being in the service of one or other religion prevailing at a particular place or time. Thus the archaic Vedic mounds came to be adopted by the Buddhists for their dagobas relic shrines or stupas. Similarly, the northern Indian *nagara* tower shrines not only serve as Siva and Vishnu temples but also as image-houses for many Jaina temples at Khajuraho. The spials of *nagara* Sikharas are equally adopted in many Buddhist shrines in Burma. The forms of the Chalukyan or the later Rayasala order are indiscriminately used for a Hindu or a Jaina shrine. The barrel-shaped *Vesara* temples of the early Buddhist uses, have been adopted in toto for Brahmanical shrines."

Such subtle analysis apart Mr. Gangoly gives every possible help to the general reader by way of neat diagrams, apt illustrations, and precise dates that go to make the "little book" an invaluable manual on Indian architecture. He proposes to publish separate volumes on "Southern Indian Architecture" and "Indian Islamic Architecture." The public we assure, will respond warmly to this noble attempt of popularising Indian art. The plates illustrating the theme reflect great credit both on the author for their selection and on the printer for the execution. The letter-press seems to have been hurriedly printed with inevitable faults here and there (e.g., pp. 9 and 11 last lines.)

KALIDAS NAG

* By O. C. Gangoly, Editor, "Rupam". 6 Old Post Office Street—Calcutta.

INDIAN Womanhood

Women candidates fared exceedingly well at the last B. A. examination of the Calcutta University. Of the six candidates who secured first-class honours in English three were lady-students. SRIMATI LILA RAY (daughter of Rai Sahab Pramadarajan Ray) stood first, the other two being SRIMATI LILY SEN (fifth) and SRIMATI KOUKA (sixth). Eight women students have secured second-class honours in English.

she competed at the Intermediate Examination in Arts from the Brojomohan College.

MISS RAY stood second among the successful candidates at the Intermediate examination in 1926, securing the highest marks in Botany. Both in the Matriculation and Intermediate examinations she stood first in English.

In Sanskrit SRIMATI SURAMA Mitter of the Bethune College has stood first-class first.

Special mention must be made in this connection about the brilliant success of SRIMATI SANTISUDHA GHOSH of the Brojomohan College, Barisal who stood first in class first in Mathematics and has been awarded the Eshan Scholarship. SRIMATI SANTISUDHA GHOSH is the third daughter of Professor Kshetranath Ghosh M. A. (retired Professor of English, Brojomohan College, Barisal), and sister of Prof. Devaprasad Ghosh. She competed at the Matriculation Examination in 1924, from the Barisal Sadar Girls' School, and stood sixth in order of merit. In 1926,

Miss Lila Ray

the college where Mr. Joshi was to teach had undergone a change in management, and so he was left without a position and with very little money in his pocket. Mr. Joshi finally arranged for the care of his family and devoted his time to giving lectures on India. He then managed to enter Columbia University for graduate work.

After getting his A.M. degree, he went to an ocean resort for a rest, and there a strange girl came up to him and enquired if he were from India. He assured her he was—and she suggested that he must meet a Mrs. Carpenter, whose address she gave him.

He wrote immediately to Mrs. Carpenter, met her, and at her urgent request, removed his family to her home. There they remained for a long time, for good Mrs. Carpenter

Mr. K. K. Kuruvilla, M. L. C.

would not let them leave. Thus their financial difficulties were made easier.

Mr. Joshi's struggle had been a hard one. Had it not been for the financial aid of a fine-spirited American who sent him a monthly cheque, his financial straits would have brought disaster upon his family, and his education would have been impossible. It was Seth Low, the president of Columbia University, and former Mayor of New York

City who made it possible for Mr. Joshi to remain in America.

Now generous Mrs. Carpenter took the whole family under her wing, and in her house, ANANDIBAI JOSHI the second was born. Because the now arrival was born in the very same room which the first ANANDIBAI had occupied, and in her memory, the new babe was named ANANDIBAI. Although ANANDIBAI went to India in infancy, she came back to America as a young woman to finish her education.

Her father had been appointed as Professor of English Literature at Baroda College to succeed Aurobinda Ghose. Then he returned to America in 1922 as exchange professor under the Carnegie Foundation—and later sent for ANANDIBAI and her brother to come to the United States for their college education.

Because of her charm, dignity and amiable disposition, ANANDIBAI has become to her classmates a symbol of Hindu womanhood loved and respected by all of them.

When she left Vassar they raised a purse of 500 rupees for training a girl in Bombay for social welfare work. She will make a brief tour of Europe and then go to Bombay where she will take up her work in October.

Her father, who is Professor of Comparative Religion and Hindu Philosophy at Dartmouth College, Hanover, New Hampshire, will leave her in Europe and return to the United States, where his teaching and lecturing tours demand his full attention. Professor Joshi's appointment to the Chair of Comparative Religion at Dartmouth College is unique in that Dartmouth is the first College in the United States to create a Chair for teaching world religions, and Professor Joshi's qualifications in this subject brought him to the notice of the College as the most eligible scholar in the subject.

MISS PRANJNAM THAKOR, Graduate of Teachers' College of Columbia University, will take up Educational Work in India. Mrs. PRANJNAM THAKOR of Ahmedabad, India received her B. S. degree from Teachers' College, Columbia University, some time ago, and will shortly get her M.A. in education.

Miss THAKOR was educated in India, and then went to London in 1919. She took the Montessori training course for teachers under Dr. Montessori herself, from whom she got her diploma at the end of 1919. Miss THAKOR then joined the

Miss Anandi Bai Joshi

Miss Pranujam Thakor

University of London and there received her B.A. and certificate of Journalism. In June 1926, she left London to travel through Europe, visiting schools and studying teaching methods. She then came to America and joined Teachers' College of Columbia University in September of the same year, gaining the scholarship of the International Institute. By continuous hard work she has received her B.S. and will soon get her M.A. She plans to leave for India by the end of August, so that she may take up her work there without delay.

MISS THAKOR is a very intelligent and clear-thinking young woman, intensely devoted to her motherland, and determined to do as much as she can to advance education in India. MISS THAKOR is known as an outspoken defender of India at Columbia, where she has spoken on India on several occasions before her professors and classmates, reliably tracing the remarkable

educational and political advancement of Hindu women in recent years.

She does not by any means deny the great need for social and educational reforms in India. Her vision of just what can be done to advance education in India, has brought praise and appreciation from her professors. MISS THAKOR has distinguished herself by fine scholarship and initiative in approaching educational problems, which has earned for her not only the goodwill of her professors, but also many voluntary letters of high recommendation.

MISS THAKOR is very much interested in India's rural education and hopes to carry on her work in village areas, through village schools. The task of such pioneer young women of India will be much harder than that of their successors, for it is the pioneers that must break the ground, endure the hardships of organization and bear the burdensome responsibilities of the new o-

CAREERS FOR CARROTS

[Sir J. C. Bose FRS, the eminent Indian *scientist*, long known for his remarkable and sensational researches into plant life, observes, in his new book *Plant Autographs*, that, while "as regards sensitiveness in ordinary plants we can not imagine anything more stolid and undemonstrative than a carrot, it is a revelation to find how excitable it is and how vigorous and uniform are its successive responses."]

The carrot long has languished as a servile synonym for stolid impassivity, for sloth of mind or limb. And crude associations, prejudicial and unfair, have linked it with an unbecoming tint of human hair. And yet the carrot, as revealed by the research of

Bose, is neither undemonstrative in manner nor morose, flat on the contrary, a most vivacious little cuss. And readily responsive to electric stimulus. The H. B. C., it seems to me, now that these facts are known,

Are simply bound to send them round the world by microphone, And add, as special features of the nightly "Children's Hour" "Talks" with good Uncle Salsify or Aunt Cauliflower.

And yet, O Bose, the vista your researches open out Fills me with grave misgivings and with dietetic doubt: For the hungry vegetarian, in the light of modern lore, Can hardly be distinguished from the savage carnivore. What fare is left on which humane consumers may subsist When flesh, fowl, fish, when roots and fruits are banished from the list. And when at any moment the tidings may arrive That the minerals are sensitive, responsive and alive?

From "Punch"

A GREAT SITE OF MAHAYANA BUDDHISM IN ORISSA

By HARAN CHANDRA CHAKRADAR M.A.

Lecturer, Calcutta University

A group of three little known hills in the Cuttack district in Orissa—Lalitagiri, Udayagiri and Ratnagiri—have preserved magnificent monuments of Buddhist religion and art, ruins of stupas, shrines and

sculptures that can very well vie, not only in their size and number, but also in artistic beauty and grandeur with those at any other site in India. The marvellous sculptures on these hills that deserve to be recognised as

some of the finest art-treasures of India have remained scattered in obscure and neglected ruins never adequately described or illustrated. On Lalitagiri there is a colossal statue of Buddha that in the expression of divine grandeur on its face has but few rivals even

in India. On Udayagiri again there is a colossal Buddha that in the dignity of its pose, in its lion-like body broad at the shoulders, deep in the chest and slim at the waist, bears comparison with any other representation of the Great Master of the same

size and dimensions. On Ratnagiri there are images of Tara that can claim in their ineffably sweet and gracious expression of the face an equality with the best of the kind known to us. On the same hill there are remnants of colossal figures of Buddha—huge heads rising about four feet from the shoulder to the top of the *urna*; the statues when in full height were perhaps not exceeded in stature anywhere outside of Ceylon. Bodhisattva images executed in the best style of Nalanda abound on all the three hills and votive stupas are as plentiful as at Mahabodhi.

The ravages of time and the depredations of treasure-seekers and curio-hunters have been denuding these hills of their art-treasures. Only a year ago the magnificent Buddha statue on Lalitagiri, worth many times its weight in gold, was sold by the local Zemindar for the paltry sum of one hundred rupees; but fortunately the purchaser found it beyond his means to carry the colossal figure away and he thanked his stars when with great difficulty he succeeded in getting back the purchase money from the reluctant owner of the hill.

and besides, of a gateway on the former and the remains of a temple on the latter. These sketches by Beames did not do any justice to these great objects of Orissan art, and it is hardly to be wondered at that they excited little admiration and failed to attract the serious attention of scholars or lovers of art. Reproductions of Beames' drawings by Raja Rajendralal Mitra in his *Antiquities of Orissa* (Vol. II) did hardly improve matters. How much we wish that the Raja had been sufficiently stimulated to visit these hills himself! Mr. Birendra Nath Ray, Secretary, Orissa Historical Association, visited these places last year (October 1927), and at his request myself with Mr. Roy and Mr. Nirmal Kumar Bose of Puri formed a party to explore these sites.

These hills can be reached from Dhanmandal station on the Bengal Nagpur Railway (232 miles from Calcutta and 22 miles from Cuttack). Bullock carts or *palkis* are available at Dhanmandal and there is a Dak-bungalow at Borchana, two miles by the Trunk Road from Dhanmandal. A journey of about eight miles takes one to Balichandrapur on the river Virupa where the roads divide. From this village, Lalitagiri Nalitigiri on the map is about three miles to the South and Udayagiri about four miles and a half towards the east. Travelling four miles along the road by the side of the irrigation canal from Balichandrapur, one reaches the Dak-bungalow at Gopalpur or Kharagpur as it is called by the people of the locality. From Gopalpur bungalow the Udayagiri hill is about half a mile to the north and Ratnagiri about three miles to the east, so that both of these places are within an easy reach from here and Udayagiri occupies a central position from which both the other hills are visible and we shall begin our account with it.

Udayagiri forms the eastern extremity of a small range of hills (marked *Asia* on the maps) in the centre of the Cuttack district. It occupies an ideal site for building places of worship: from the central peak which rises about a thousand feet from the surrounding plains, are sent out two spurs on the two sides of the hill, thus enclosing a horse-shoe shaped area, open in the east, but closed on the other three sides. Forming a moat, as it were, in front of this great semi-circle flowed the river Kalia only 200 yards from the foot of the hill, when fifty

years ago Mr. Chandrasekhar Banerji visited the place, and ran into the Virupa close by, but now it has been almost entirely silted up leaving swamps and marshes that still mark its bed.

As one stands at the base of the huge amphitheatre, facing the terrace above, the eye is caught by a large standing image of Bodhisattva Padmapani cut in high relief on a slab of laterite, now much weathered and covered with moss and lichen. The broken nose and arms take away from its beauty, but the grace and superb dignity of its pose are still remarkable. The well-known Buddhist formula *ye dharma hetu-prabhava* etc., is incised on the proper right side of the head, and a little below at the side of the broken right arm is another inscription telling us that the statue is the gift of Kesava Gupta (*Deyadharmoyam Kesava-guptasya*). From this spot for some distance we can trace a pavement of laterite rising up the slope and here Mr. Chandrasekhar Banerji found "the place spread with the ruins of ancient edifices, the ground plans of which might still be traced," but the ground plans are hardly visible now except at a few places and even parts of the laterite pavement have been removed, perhaps for erecting the sanctuary built recently by certain members of the *Mahamauranjani* sect, evidently a remnant of the Buddhist people of old. It stands by the side of an ancient well which for its size and depth is almost unrivalled in this part of India. It is 23 feet square and is formed by cutting the laterite rock 28 feet from the top to the water-level to which a flight of 31 steps lead from the terrace above. The terrace is entered through a gate flanked by two monolithic pillars. The water of the well is still very good for drinking. On the laterite wall flanking the steps and also on the face of the arch above the lowest step is incised in letters of considerable size that the well (*tapi*) is a gift of Rsnaka Sri Vajranaga (*Ranaka Sri Vajranagasya Tapi*). Nothing is known about the history of this Vajranaga, but he was evidently a local chief as his title *Ranaka* shows, and his proper name *Vajranaga* suggests that most probably he was a follower of the Vajrayana cult, a development of Mahayana Buddhism.

We next march up the hill along a path at present flanked on both sides by innumerable broken pieces of sculpture, the debris of shrines and statues, of walls and stupas

until we reach another platform where Mr. Banerji found that "numbers of gods and goddesses engraven on slabs of different shapes were scattered around." But these have now been removed except a group that have been lodged inside a temple recently constructed by the *Babaji* at present in charge of the *Mahima-Niranjani math* mentioned above, and that are worshipped by the Savara people living in the neighbourhood. Some of the gods have been daubed with vermilion, turmeric and lime beyond recognition and it would be sacrilege to remove this paint that lies thick over them.

A little way from this modern Temple we came upon the ruins of a shrine hidden in thick jungle and almost blocked up by brambles. Here in a cell measuring about 9 feet square we came upon a colossal seated

Colossal Buddha on Udayagiri

statue of Buddha buried up to the breast in earth, but the superb head and the broad shoulders standing well out of the mud. We employed a number of men to excavate the image fully out and took photographs. I

stone masons still living in the village, on the southern slope of the hill and we learnt that some of them in recent times were locked upon as of the first rank among the temple-builders of Orissa, and they have among them many works on the *Silpasastra* relating to the building of temples. But many of these stone masons do not find sufficient work at present to earn a living wage as respectable artisans and are fast degenerating into mere drudges whose services are utilised in metalling roads.

Before leaving this hill I should mention that we found on it a railing pillar-piece

to the top of the *urna* and 29 inches from the chin to the base of the hair-knots. The circumference round the forehead from ear to ear measured about 70 inches, leaving the back of the head which is not carved. There is a slightly larger head executed in a better style used in making up a step on the side of the hill. It should be rescued from this position and properly protected. Heads, a little smaller than these two, were also seen lying near an old temple which here still stands erect and contains an image that is even now worshipped as Mahakala. A Brahmin family that claim to

A Pillar on Lalitagiri

Tara on Ratnagiri

with one full central socket and two half-sockets, one at each end and besides, we discovered a headless image possessing characteristic Jaina feature.

Coming to Ratnagiri, the most prominent objects here are the exquisitely charming images of the goddess Tara and the huge heads that must have belonged to colossal statues of Buddha that had no rivals on the other two hills. One of these head-measured above 16 inches from the shoulder

have come from Bengal and settled here are entrusted with the worship of the deity.

A remarkable figure on this hill is an image of the goddess Tara round which on three sides are represented in separate panels various perils under which a worshipper would seek the protection of the goddess. There is another image of the goddess in the same style though a little inferior to it in the perfection of its tech-

Bhairava on Ratnagiri

Goddess on Lahtagiri

nique. But the former image is a perfect work of art. Here also there are some Bodhisattva images executed in a good style; some of them are lying in ditches and unless recovered soon are in danger of being destroyed. An excellent statue of Tara has only recently lost its head as the freshness of the scar on the neck, showed, and the finely modelled torso that now remains speaks of its great artistic value. There is a dancing Bhairava that seems to be the prototype of the Nataraja and a very beautiful Buddha with a crown on the head. Innumerable votive stupas lie scattered about on the top of the ridge and many have been utilised for planting the sacred *Tulasi* in the village now standing on the slope of the hill. There are many other statues of gods and goddesses, some of them still standing whole, but many in various stages of destruction. Besides, valu-

able images have, we were told, been recently sold away by the local Zemindar.

On all these hills or round about them, there must be now many ancient works of art, buried in the earth, or hidden in the jungle, and they may rival, or even surpass those that have been described above. They loudly call upon us of the present generation to bring them out of their obscurity and give them the place which they so rightly deserve. Those that are above the earth at present, are in danger of being lost, of being transferred to foreign countries or private residences. The Archaeological department must therefore, without the loss of time, take up the work of thoroughly exploring these hills that form one of the major sites of Buddhist art in India and of protecting these great monuments, which not only Orissa, but the whole of India will take pride in when it knows them.

appears to have been so buried when Mr. J. Beames drew a sketch of it in 1875.

It represents the Enlightened One seated in the *Phumiparsa mudra* with the fingers of the right hand touching the earth and the left palm resting on the lap. The stone seat is not ornamented. It is about six feet high from the seat below to the head; the face itself measures 18 by 17 inches and the chest is 3 feet 6 inches broad. The whole figure appears to have been made up in several pieces cut out of bluish laterite; the joints are now visible, but they are reported to have been not perceptible in 1867 when Mr. Banerjee first visited it. The nose has been mutilated and the arms have got broken owing to the whole shrine with the image gradually sinking in the earth, and it is high time that proper care was taken to save this great souvenir of a glorious period of Indian art. The mud and dirt carried down into the cell by the rains will no doubt undo the clearing work done by us. The stone walls of the cell as well as the floor are lined with bricks of large size as found at Sarnath and it was apparently covered by a roof standing on pillars that Mr. Banerjee found standing at the door of the cell, but which now lie prostrate, broken and almost wholly buried in the earth blocking the entrance to the cell. There was a magnificent gateway made up of three rectangular blocks of stone richly sculptured as we find from the drawing of Beames who removed it from the site and now an ugly ditch marks the spot where it stood in front of the shrine. Both Mr. Banerji and Mr. Temple stopped here and could not carry their explorations further owing to the denseness of the jungle.

Going a little higher up the hill we meet with a standing Bodhisattva image on the back of which is incised a fairly large inscription of twenty-five lines containing the usual *ye dharma* formula and stating with many invocations on Tara, Padma-sambhava and other gods of the Mahayana pantheon that a *Tathagatatadhiṣṭhita dhatu-paribha stupa*, that is a stupa with a relic inside and dwelt in by the Tathagata or Buddha was set up on the spot. The ruins of a stupa are visible not far from the shrine of the colossal Buddha.

The ruins of one other stupa also are seen not far from this one; at one of its corners a Bodhisattva statue lies prostrate on the earth and to his left is observed an early form of the well-known Orissan

decorative figure of what is called the Gajasimha—a man on a full-size lion standing on an elephant. At another corner of the same stupa there is an image of a Dhyani-Buddha in *Bhumisparsa-mudra*. Evidently there was an image at each of the other two corners of the stupa also. Perhaps they lie buried in the earth or have been removed.

The site of a third stupa in another part of the hill is marked by two Bodhisattva images on two sides, one of them sunk up to almost the neck in the earth and the other yet standing above it, but both of them covered by thick brambles. There was visible the site of yet a fourth stupa round which we found a trench, dug as we learnt, by the former Zeminder who removed several statues from there and other parts of the hill to his house at Kendrapada.

We also laid bare the pedestal of a Buddha statue in what is known as the *Ardharyanka-asana* by removing the earth in which it was sunk. On the pedestal are carved various figures and symbols. There must be many other images lying hidden in the dense jungle which must be removed in order that the whole hill might be explored. The jungle is not quite safe, as we found in one part of it the skeleton of a recently-killed cow which the local people told us, a tiger had made a feast of only two weeks before our visit to the hill.

Ascending the hill still higher we found on the other side of the hill facing the west, on a ledge near the top overlooking the river Virupa and the plains above it, a group of five figures sculptured in relief on the living rock by the side of a cave and with a votive stupa standing in front. On the extreme left a large Bodhisattva image is cut in relief with the *ye dharma* formula inscribed on its immediate left and on its right the statement that it was a gift of one Simpaka or Simyaka (*Deyadarmoyanr Simpakasya* or *Simyakasya*). To its right is a Dhyani-Buddha figure and next is cut in very low relief a representation of a stupa that is dimly perceptible. Beside it is a goddess and next comes again a Bodhisattva image followed by a god surrounded by fourteen figures. All these images have been painted with vermilion and in some cases a ridge has been formed on the forehead with, it seemed, a mixture of lime and vermilion so that it looks like the prominent superciliary ridge of the Neanderthal man of the pale-

ontologists. I was removing some of these excrescences when the Oriya cooly who accompanied us protested against the sacrilege, so that I had to desist. The face of the highly interesting image surrounded by a group of gods that we have referred to above is entirely hidden from view. The images however, are not at present worshipped by the Hindus of the locality who are apathetic towards them, but by the aboriginal Savaras who have given fanciful names to almost all the images on the hill and connected them with their own legends. This would be an interesting study by itself, but it would be out of place here.

Seven miles from Udayagiri is Lalitagiri, in local parlance called Nahitigiri which name it bears on the survey maps. Here is a large number of finely executed Bodhisattva images and other gods and goddesses, but the most commanding figure is the magnificent colossal statue of seated Buddha we have already referred to. It measures 6 feet 3 inches from the waist to the top of the *urna* on the top of the head, the breadth across the shoulders being 3 feet 3 inches and the breadth across the knees 5 feet 5½ inches. The height of the head from the shoulder to the top of the *urna* is 2 feet 2 inches. Notwithstanding this great size, the limbs show beautiful proportions and the face as we have already said, is shining with divine splendour and beauty. Like the Udayagiri Buddha, this one also shows the *Bhumisparsa mudra*. On this hill also the monks of the Mahima-Niranjani sect have established their monastery and they have done some good work by building a shade over the Buddha statue and protecting many other images of Bodhisattvas and other deities by placing them in niches in the walls of a temple that they have recently constructed out of the old materials that lie scattered on the hill. The door with its beautifully carved jambs have fine panels at the base and the whole has been bodily transferred from the ruins of an old shrine. It will be observed in the photographs of some of the images that they stand under Saracenic arches; these are quite modern and have nothing to do with the old temples beyond the fact that the stones are taken from them. The Bodhisattva figures on this hill have a soft beauty which distinguishes them from those on Udayagiri where all the images including the colossal Buddha are characterised by an austere

grandeur and sublimity as compared with the former. We find here an image of Kuber the god of wealth, sitting with his foot on jars of gold. Of another Buddha statue only the feet remain with the pedestal which is decorated with a very beautifully carved lotus scroll. A little below the terrace where stands the colossal Buddha statue, there is a temple which also is built on the ruins of an older shrine and is reported to contain the goddess Basuli. Several large Bodhisattva images lie scattered about this temple. We observed some smaller

Colossal Buddha on Lalitagiri

images in the village lower down the hill, near a temple of Siva. Votive stupas, we found, are being used everywhere in the village as *Tilasi-manchas*. Some of the images have the formula *Ye Dharma* etc., engraved on them in the same character as in the inscriptions on the Udayagiri hill.

One noticeable feature about Lalitagiri is that the images appear to have been mostly carved out of the local stone--the Atgarh sandstone as it is called by the Indian geologists, and there are quarries on the hills worked even at the present time. Moreover, there are about fifty fr

BANARSIDAS CHATURVEDI

**South African Native College
At Fort Hare**

Mr. V. S. C. Pather—Vice President, Natal
Indian Congress, Writes:—

One of the advantages of the Capetown Agreement is that the Union Government has agreed to consider the question of improving facilities for higher Education for Indian students at Fort Hare. This has brought a storm of protest from the die-hards of the Indian Community in South Africa. But curiously enough such protests have created a mixed feeling in India as to the feasibility or

for the students and it will give the reader an idea of the food provided by the institution:—

Breakfast:

All days.

Mealie meal porridge with sugar.

Brown Bread (8 oz.)

Tea.

Midday Meal: Monday, Wednesday, Friday:

Beans, samp or maize or rice (White).

Gravy with vegetables when possible.

Amasi (sour milk) $\frac{3}{4}$ pint per head.

Tuesday and Thursday:

Mutton ($\frac{1}{2}$ lb. per head), samp, rice, potatoes, gravy.

Saturday and Sunday:

Beef, samp, rice, beans.

Supper:

Bread (8 oz.) with fat instead of butter.

Jam, twice monthly.

When possible, fruit occasionally in season.

Both the Principal and the Warden are prepared to meet the wishes of the Indian Students as regards their food provided a sufficient number of them join the institution. In fact they have asked us to send them a bag of rice and some Indian recipes so that they may give it a trial. The main objection of our friends is not directed against the institution or its food and dormitory arrangements, but against co-education with the Native. They further maintain that because the Native is not treated by the authorities as he ought to be, co-education with him means simply subjecting the Indian to all the indignities to which the Native is put to.

regard for the institution and would resent anything being said against this educational centre."

Indian Education and Arya Samaj in Fiji

Shriyut Amichand Vidyalkar, teacher Gurukula Nasova, Fiji Islands writes in one of his articles:—

"There is a general want of education among our people here in Fiji Islands. The Fijians are much better placed in this respect. They have their schools in almost every village and more than 75 per cent of them are literate. The reasons of illiteracy in the Indian population are not difficult to find. It was only eight years ago that the Indians were freed from indenture slavery, which had a considerable demoralising effect upon their life and character. Fortunately things are changing now and it is a change for the better. It is remarkable that the Indian population of Fiji possesses general knowledge of Hindi, Madras and Punjabis, Hindus and Muslims, love Hindi and it has become their common language in Fiji. In the Indian schools it is a compulsory subject. There is only one Government school for Indians in Fiji, the rest are aided or private institutions. The Government school contains 70 students and it is doing its work satisfactorily. Andrews' school at Nadi is making rapid progress under the able guidance of Dr. Dersagayam and Mr. Dukh Haran. Good educational work is being done by the Mahasangam of Mr. Naidu. The schools conducted by this Sangam have an arrangement for teaching Hindi also.

I must mention here with gratitude the educational work done by the Christian Missionaries. It was they who opened schools for Indian boys when there was no arrangement for it. Most of our educated people of the present day were educated in these mission schools. These schools are still continuing their useful work and it is to be hoped that they will play an important part in the great educational work lying before us.

It is a happy sign of the times that the problem of education is receiving considerable attention in Fiji. Indians in Fiji are now determined to educate their children and they are prepared to spend money for it. Bhashitha Muni—a Sadhu—started several schools here. They are being conducted satisfactorily and new schools are being opened.

The work done by the Arya Samaj for

the education of Indian children in Fiji deserves every praise at the hands of those who are sincerely desirous to see our people in these islands educated. The Arya Samaj is conducting many schools, the Gurukula at Nasova being important among them. Mr. Gopendra Narayan, who has now returned to India, worked for this institution for nearly three years and under his able guidance the Gurukula made considerable progress. He was also able to persuade some Fiji people to send their children to India for education. About fifty boys and girls have already gone from these islands to India for this purpose. A Gurukula for the girls is also to be opened at Suva and Shrimati

Fort Hare College The Dinning Hall

Dayavati, wife of Thakur Sardar Singh, has agreed to conduct it.

"The Gurukula at Nasova has 127 boys on its roll and there are twenty one Fijian boys also receiving education along with the Indians. In fact, one of the Fijian boys was anxious to proceed to India for education but the Fiji Government did not give him the required permission. Physical culture is not neglected and there are two foot ball teams one consisting of the Indian boys and the other of the Fijians. Every effort is being made to teach the boys self-reliance and self-control. There are only two servants for kitchen work etc, while most of the other work is being done by the boys themselves."

We must congratulate the Atyasamajists of Fiji for the useful work that they have been doing for the education of Indian children in Fiji and we hope there will be perfect co-operation and a healthy spirit of comradeship between different societies working for this cause in those Islands.

At a time when some of our countrymen in South Africa consider it below their

dignity to get their children educated at Fort Hare College—an institution for the Africans—it is really inspiring to learn that as many as twenty one Fijian boys are being educated at the Aryasamaj Gurukula in Fiji. We must stand for international fellowship and they are really the greatest enemies of Indians abroad who advocate any colour prejudice against the *native races of the colonies*.

Racial Segregation in Mombasa

The abandonment of racial segregation was perhaps the only redeeming feature of the White Paper of 1923, which betrayed Indian interests in Kenya in many ways. Now the decision of the Kenya Government to sell by auction certain plots of land in Mombasa town and to restrict the right of purchase and occupation to Europeans only

Foot-ball teams of Indian and Fijian boys

Farewell to the girls going to India for education

Gurukula boys doing agricultural Work

Boys and teachers of Gurakula at Nasova (Fij)

means that the Kenya Government is following a policy of racial segregation in complete disregard of even the White Paper of 1923. It is to be noted that the average of Indians per head. These estimates must be taken with great caution, because, says Mr. Vakil, in addition to the inadequacy of the statistical data on which they are based, the method employed in each case is different. These estimates are given below

| Year | Average income per head in British India | Author |
|------|---|---------------------|
| 1871 | Rs. 20 | Dadabhai Naoroji |
| 1881 | " 27 | Sir David Barbour |
| 1901 | " 50 | Lord Curzon |
| 1911 | " 50 | Mr. Fendley Sherras |
| 1921 | " 71 | Mr. K. J. Khambatta |

Mr. Vakil's comments on this table are as follows:—

The increase in the per head income as seen in this table is, however, not real. What we want is to ascertain the growth, if any, in the real wealth of the people, as measured in consumable commodities. In order to convert the nominal money income into real income, we must have resort to the index numbers of the general price level in the country during these years, which will tell us the purchasing power of the rupee at each of these different dates and thus enable us to make a proper comparison of these figures.

The index numbers of prices in India are given

has always been kept up by our countrymen in these parts. The community therefore, ought to resist, with all the power at their command, any attempt from outside to break that ideal. To those who are not satisfied with the official figures, we therefore take it as the basis of comparison we shall be erring on the safe side. On the basis we find that the money income increased from Rs. 27 in 1881 to Rs. 71 in 1921 or in the proportion of 100 to 274. During the same period rupee prices have increased from 100 to 373. This means that in order to have the same real income in 1921 as in 1881 we must have Rs. 373 in 1921 as against Rs. 100 in 1881. We find, however, that we have only Rs. 274 in 1921 as against the required sum of Rs. 373, which shows that the average Indian is poorer to-day to the extent of 1-274373 or nearly 27% or we are poorer to-day than 40 or 50 years ago.

"The Alleged Land grabbing Propensities of the European Powers"

The Bengal Administration Report for 1924-1927 has the following on Babu Sarat Chandra Chatterjee.

The most popular novelist, Babu Sarat Chandra Chatterjee found a new vent for his morbid sentimentalism in a bitterly virulent attack on the alleged land-grabbing propensities of the European powers and the suspected political aims of the various Christian Missions in Asia.

India must not belong to the class of political Brahmins of Europe and America.

Deshbandhu Memorial

Mr. Sris Chandra Chatterjee's design of the marble memorial of Deshbandhu C. R. Das, to be erected at the Hindu cremation ground at Kalighat, has met with general appreciation. Prof. Amulya Charan Vidya-bhushan thus concludes his article on it in the *Calcutta Municipal Gazette* :—

The new and admirable type of architecture introduced by the architect-artist Sris Chandra depends for the element of stability largely on the co-operation of the public in imparting to it a basis that it demands. We are grateful to him for this brilliant production, which is an important contribution to modern Indian Architecture. The architect has practically proved by his inspiration and actual demonstration that mere theorizing will not improve the art of the country. Demonstration is absolutely imperative. The Baroda and Rajputana Schools of Arts have become successful in their attempts after strenuous efforts. According as they thrive, the other arts and crafts revive, live and develop to the needs of the nation and the country. Such has been and is in practice in those countries. But poor Bengal lags behind. Unless and until our people will aspire and endeavour for the development of indigenous architecture, the revival of other allied arts like sculpture and painting cannot be expected.

Indian Influences in Asiatic Art

The *London Times* wrote some time ago —

Lieutenant-Colonel Sir Francis Younghusband presided at the annual meeting of the India Society, at 21, Cromwell-road and announced plans for the coming year for a considerable extension of scope, without, however, the society losing its original character. He pointed out that, as a natural result of their researches into the connexions between the art of India and the surrounding countries, as exemplified by the survey entitled "Influences of India Art" the society would now include in its curriculum of lectures and publications studies of the art and literature of Java, Siam, Indo-China, Afghanistan, Persia, and the Middle East. Arrangements were now being completed to supply through the society's journal, *Indian Art and Letters*, information on art and on archaeological research in those countries as well as in India. It had been decided not to change the name of the society, specially as Indian culture was in fact the centre from which there radiated the influence which affected profoundly the surrounding countries, which in turn exercised no small influence on India.

The High Commissioner for India the Persian Minister, Professor Paul Pelliot, Dr. Ananda Coomaraswamy, and Dr. Denman W. Rose were

elected vice-presidents. After the annual meeting Mrs. Francis Ayscough gave an illustrated lecture on "Indian Links with Chinese Painting."

Noguchi's Discovery of Germ of Trachoma

Dr. Hideyo Noguchi, the distinguished Japanese investigator of the Rockefeller Institute for Medical Research recently had discovered the germ which causes trachoma an infectious disease of the eyelids in American Indians.

"Whether or not the parasite is related to forms of trachoma other than that occurring in American Indians remains of course to be determined by isolation of the microorganism from cases in other localities, and possibly also by serologic examinations," he says.

The discovery of this parasite is considered in medical circles to be one of the outstanding contributions to scientific medicine in 1927, and adds another to the list of Dr. Noguchi's achievements which include the discovery of the cause of general paralysis or softening of the brain. He is famed also for his yellow fever researches and research work on other subjects.

The investigator checked up on his trachoma work by the experimental production of a trachoma like condition in monkeys by means of a microorganism which he had isolated from American Indian trachoma.

Why Ibn Saud Must Not Have Mesopotamia

An American paper writes.—

For at least 6,000 years the tribesmen of Arabia's arid center have looked down covetously on the green fields of Mesopotamia.

That fertile land of the two rivers is safest when she is most desolate. For seven centuries before the present one she had little worth stealing. Now the Irak government of King Faisal and his British adviser has brought back a measure of prosperity. As was already ancient history when Abraham lived at Ur, this prosperity has not passed unnoticed in the tents of the Arabs. It is doubtful if any potentate of Arabia even one far stronger than Ibn Saud, could have held back his hungry tribesmen from visible loot. Among desert peoples green is all too surely the color of jealousy, for it is that of the coveted fields.

If Irak stood alone she might be grievously in danger. Cities train few warriors like the graduates of desert schools and the rich merchants of Babylon have lost everything many times before. But Irak is no longer alone and what saves her is her air. Whatever Great Britain might be inclined to do for other reasons, there is one novelty of the modern world which affects profoundly the position of Mesopotamia. A glance at a map makes it clear. The broad plains of Irak are an essential way station on the air route from Europe to the East. The defeat of the tribesmen of Ibn Saud is to be managed, it appears, by aircraft. It is also aircraft that make it necessary. Perhaps Western civilization might let Ibn Saud and his desert

Universities should encourage study of foreign languages in addition to English.

An American View of British Protectorate on Egypt

At times American papers, through inspired articles and editorials, present excellent and authentic views on British world policies. The following editorial, from one of the foremost American dailies of New York, throws an interesting light on the Egyptian situation :—

A deadlock is on again in Egypt between native and British interests. These are extremely hard to reconcile, because both the Egyptians and the British authorities are contending for things on which there is little possibility of immediate compromise. Great Britain will continue to guard her rights in the Suez Canal and her vital communication with India, and the Far East and Australia. The Egyptians are set on obtaining fuller recognition of their nationality and sovereignty. Besides they shrink from surrendering control of the Nile by yielding their claim on the Sudan. The Nile is Egypt. The prosperity of the country depends on continued enjoyment of the Nile's fertilizing floods.

Before the great war Egypt was nominally a Turkish dependency. Great Britain exercised control in Cairo through an adviser to the Khedive. A protectorate was in force during the war. Egypt was released from Turkish suzerainty. After the peace a native Kingdom was proclaimed, with a special relationship to Great Britain under a scheme of alliance. The governmental settings have altered, but actual control remains about the same. Since the rejection of the new draft of a treaty of alliance the British government has gone back to the Declaration of February 28, 1922, as the chart of policy in Egypt—which means, perhaps, that negotiations for permanent terms of alliance will be begun again as present irritations die away.

Britain as a protector or Britain as an ally is in Egypt to stay. The canal and the Sudan problem have to be worked out. Egypt is a sovereign state, and yet not a sovereign state, depending on definitions. But its progress will doubtless continue under any form which political association with Great Britain may assume. The situation is not new. It is one of yesterday and also one of to-morrow. The new deadlock leaves things very little changed.

New Aim of the Christian Missionary Work

The International Missionary Council, (in which the Roman Catholics, Greek Orthodox, the Armenian and other Oriental Churches, did not participate) held its

recent sessions at Jerusalem. The Bishop of Manchester presented "the Christian Message Report." This report is considered to be the most important pronouncement of the gathering, "expressing the whole central aim of Christian missionary work at the present time." It says :—

"Our Gospel stands against all exploitation of man by man so that we cannot tolerate any desire, conscious or unconscious, to use this movement for the purpose of fastening bondage, economic, political or social, on any people. We would repudiate any symptoms of religious imperialism that would desire to impose beliefs and practices for the purpose of managing souls in their supposed interests. We have no desire to fix on others the ecclesiastical traditions of the western Church, but wish to place at the disposal of the younger Churches our collective historic experience. We also ardently desire that the younger Churches express the Gospel through their own genius and through forms suitable to their national heritage. We believe in a Christ-like world. We know nothing better and are content with nothing less. We do not go to non-Christian nations because they are the worst or alone in need, but because they are part of the world and share with us in the same human need."

The Conference passed resolutions appealing for the renunciation of war as an instrument of international policy and the avoidance of those attitudes and practices which constitute the roots of war.

But a Jerusalem despatch of recent date states that the Arabs regarded the activities of the International Missionary Council and the Christian missionary movement as anti-Islamic, and adopted the slogan of "Down with the missionaries."

We hope that the Christian missionaries would cease to act as "agents of Imperialists" and give up the practice of religious Imperialism.

No Lynching in America

A New York despatch to the *Morning Post* (London) states :—

The first four months of 1923 passed without a single lynching being reported from anywhere in the United States.

This announcement was made to-day by the Secretary of the National Association for the Advancement of Coloured People. He added that it was the first time that this had been the case for the last forty years.—Reuter

The Negroes in the United States to-day number more than ten million people, forming about one-tenth of the population of the country. They are yet regarded as the "niggers" of the United States.

However, during the last few years, very remarkable progress has been made by the Negroes of the United States. There are thousands of Negro women, not to speak of men, who are now studying in American Universities; and every year scores of Negro scholars are taking higher degrees from the best of American educational institutions.

The National Association for the Advancement of Coloured People is mainly officered by the new Negro; and it receives support primarily from Negroes (although a few Americans show genuine interest in its activities). This organization, among other things, has been advocating that the United States Congress pass an "anti-lynching law." American statesmen, so far, have refused to pass such a measure. The Negroes of the United States, specially their leaders, are to be congratulated on keeping up the agitation against the practice of lynching, which, during the last forty years, has taken a toll of the lives of numerous Negroes.

The lot of the Negroes in the United States is not much better than that of the untouchables of India, although the New Negro is much more alert and active to better the lot of his race, than the average people of India who may belong to the so-called higher castes. More than seventy percent of the Negroes of the United States can read and write to-day. In India more than ninety percent of the inhabitants cannot read and write. A little over sixty years ago, the Negroes of the United States were not only chattel-slaves, but they were not allowed, by law, to be taught to read and write. What a tremendous progress! Furthermore, the Negroes in the United States are thinking internationally, and they not only believe in education for themselves, but they feel that the future of Africa and the Negroes of the world depends upon education, which will change the outlook of life for the oppressed and the downtrodden.

T. D.

ing Canada, during the British Empire Parliamentary Union meeting. It seems so silly and childish. Indian leaders should go abroad to establish international contacts.

"When Ireland was fighting the hardest against the British, the best Irish representatives were carrying on international work. Jaghul Pasha wanted to be in Paris for the development of international relations of Egypt, while asking his followers to carry on the nationalist work."

"I can give hundreds of instances of the importance of the leaders visiting foreign countries. If India is so poor in leadership that because three leaders are going to be out of India for a few months, the nationalist movement may collapse, then there is something wrong with the programme and method of working of the Indian nationalists."

Our opinion has always been that Indians should not live in mental or geographical isolation. Not only for Indians but for all other peoples of the world as well, intellectual and other kinds of contact and intercourse with the peoples of the earth are necessary.

When Pandit Motilal Nehru and two other nationalists allowed themselves to be elected delegates to Canada, we wrote in favour of their visiting that country—unless, of course, there were work in India for all or any of them which no other Indians could do quite satisfactorily. We do not think there was any such work. We do not know why the Pandit has resigned his office of delegate. Perhaps because he is most likely to be elected to preside over the next session of the Indian National Congress. But while his perfect fitness for that office cannot in the least be questioned, can it either be asserted that there are not other leaders in the country who can worthily fill the presidential chair of the Congress?

If possible the ablest Indians should be sent for representing India abroad.

Pan Indian and Provincial Patriotism

There is no necessary conflict between pan-Indian and provincial patriotism. Rather is it true that the man who cannot deeply and strongly love the region where he was born or where he is settled can scarcely have any profound love for a wider unit. In India if a man fights against the unjust treatment or neglect of his province, he is likely to be looked down upon as parochial and anti-national in views. But in our opinion, so long as a man does not seek to injure any other province and so long as he does not work against Indian unity but rather for

it, he should not be required to agree to provincial 'self-effacement.' He must be allowed and expected to stand up for his province if need be.

Germany is a much smaller country with a much smaller population than India. German is the language of all the German states and the cultural difference between state and state there is not pronounced, which is not the case in India. Yet in Germany protests are heard against centralization and Berlinization. Take, for instance, the following description of a Bavarian manifesto, published in *The New York Times* :—

Munich.—A manifesto protesting against the "Berlinization" of Germany and signed by numerous prominent Bavarians, was issued to-day in the Bavarian capital. Among the signatories best known outside of this country is Siegfried Wagner, son of the world-renowned composer, Richard Wagner. Others include Professor von Müller, director of the Munich University and Baron von Cramer-Klett, President of the Munich Academy of Music.

Special significance attaches to the manifesto because it appears on the eve of the next week's meeting here of the heads of various local governments to discuss plans for the further centralization of the German administrative machinery.

Bavaria has always been the main stronghold of anti-centralistic feeling in Germany, and the appearance of this protest, signed by many distinguished Bavarians, just before the meeting of local authorities is proof of a widespread fear in Bavaria that a triumph for the centralization champions next week will mean placing more power in the hands of Prussia and its capital, Berlin with a corresponding weakening of the rest of Germany.

The Bavarians only too evidently foresee that such a result will simply mean a continuance of the work of Bismarck, who, when he formed the German Empire in 1871, created a uniform Germany by depriving the lesser of the German states of most of their local autonomy, while at the same time enormously increasing the power and importance of Prussia and her capital, Berlin.

Today's manifesto shows Bavarian restiveness at what Bavarians deem to be the undue favour shown to Prussia by the present German Government. The complaint is made, for instance, that Bavaria, which has always been a cultural centre, is handicapped in its cultural development because of funds which should be spent on the furtherance of Bavarian science, music art and business. Berlin University, it is pointed out, is superior to Munich University because the latter is unable to employ a sufficient number of professors and instructors.

Another complaint is that recently the German Government at Berlin issued a guidebook for the purpose of attracting foreign tourists to Germany without even mentioning Bavaria and other South German regions, including Württemberg, Bavaria's next door neighbour.

In business also the manifesto declares, all sorts of favors are shown to Prussia and Berlin to

the detriment of South Germany and especially Bavaria. Banking and general business is becoming constantly more centralized in Berlin, it is alleged, owing to a growing Prussian bias by the present German Government and the same is declared to be true of all governmental administration. In conclusion, the manifesto says :

We Bavarians wish to be citizens of a state within the German Union and not of a province controlled by the Berlin centralistic government. Only through such a conception of the idea of a German unitary state can there be genuine German solidarity and national unity.

In India there is no risk of "Delhi-ization" of the provinces, nor of the over-development of the culture and business of Delhi at the expense of those of the other provinces. But the total revenues of India are so divided between the Central Government and the different provinces that some provinces receive too little money for their cultural, industrial and agricultural development and for their medical and sanitary requirements. For this and other reasons, it is necessary for the provinces to fight against the greed and extravagance of the Central Government.

Handling of Labour Conflicts in other Countries

India is passing through labour conflicts in many provinces. While labour has undoubtedly many grievances, it would be wrong to assume that in every such dispute labour has been right and capital wrong. Each case should be considered on its merits. Government generally allows things to drift, which is not right. Such a policy not only entails great suffering on the workers and involves the employers in pecuniary loss, but also endangers public safety, as the diabolical acts of sabotage in various places show.

According to an article in the *Sunday Times* of London by Sir John Foster Fraser, in Italy neither strikes nor lock-outs are allowed.

economic salvation there must be increased production. Whether we approve his methods or not, Italy has turned its face towards prosperity since Mussolini took charge. In a population of forty millions there are fewer than 100,000 out of work.

How has this been brought about?

Councils have been established of workers and employers and an independent nominee of the Government to consider trade differences. Private enterprise is encouraged as a necessary incentive, but in disputes all cards must be on the table so the men may exactly know the economic situation.

The two sides must meet in conference; there can be no lightning strikes, no downing of tools, no threat that if one side does not have its desire trade will be disorganised and other workers, to give a helping hand in discommoding the public, become idle as a sign of sympathy. When a collective agreement has been made, the law is to descend with a heavy fist on the party which breaks the contract.

According to Sir John Foster Fraser, in Italy syndicalism means something different from what it does elsewhere.

Syndicalism outside Italy has meant the conquering of economic interests by the proletariat. Inside Italy it means that the classes representing capital, intellectual labour and manual labour shall be one indissoluble body, meaning the State. No class must usurp power to dictate. Everybody has to get it not only into the mind, but into the heart, that the moral and material welfare of the country is one and the same thing.

The Syndical Law which was placed on the statute book on March 11, 1926, is in operation. I learn that already nearly four million people—employers and employed, manufacturers and artisans, bankers and clerks, lawyers, peasants, journalists, architects, farmers, teachers, high and low, representing all sections of industry—have formed themselves into syndicates.

All categories of people, whether professional men, municipal employees, post office, telegraph, tramway workers, all grades on the railways, are speedily being organised. Within the next few months it is not likely that any man, professional manufacturer, or simple workman, will be outside the syndicate that deals with his position in life.

But disputes between capital and labour cannot be entirely prevented—they are inevitable.

So special courts are established, called the "Magistracy of Labour," consisting of three Judges of the Court of Appeal with two expert advisers, specialists on the particular or industry matter in dispute. These courts are commanded, when arriving at their decision, not to consider the interests of the syndicate or syndicates first, but to keep in the forefront of their thought the benefit to the nation collectively.

This Magistracy of Labour is the final court of arbitration. There is no appeal from its decision. During a dispute there must be continuity of production. Lock-outs or strikes are crime, and, whilst the penalties are graded, they are especially severe if the strike is in any public service or

services of utility. Further, no employer can give notice of reduction of wages without consent of the employed and approval of the syndicate. Thus the law, the State, is greater than any section of the community, and, through the syndicates, all workers are part of the State. That is the new syndicalism.

In Norway there is compulsory arbitration in labour conflicts. The Norwegian Act concerning compulsory arbitration procedure in labour conflicts has," says *The Guardian*, "given rise to a conflict which is perhaps not very widespread, but has taken on a somewhat singular form." What has happened is thus described in the same paper.

According to the new Act, the authorities may, if they consider that it is necessary in the public interests, submit any and every dispute to arbitration for settlement. The renewal of the collective agreements which expired this spring was referred to an arbitration court, and the award pronounced for a wage reduction of 12 per cent, although the fall in the cost of living figures only warranted a cut of 8 per cent. The award therefore aroused great indignation among the workers, and the building workers of several large towns, numbering about 3,000 in all, decided not to recognise this award, and downed tools at the end of May. Later, about a thousand printing operatives and book-binders joined them.

Under the Act, however, every labour conflict which aims at establishing working conditions other than those fixed in the Award is illegal and an offence against the law. In order that they might not be sentenced to pay damages or to undergo imprisonment both the national centre and the unions in question were compelled to warn their members not to take part in the strike. They themselves were also forced to refrain from participation in it. The conflict was, therefore, managed by a Committee of Action appointed by the strikers. It is also an offence against the law to aid the strikers in any way. This has made it impossible for the trade unions to grant any money for this purpose, so that an attempt was made to collect money for this purpose by voluntary collections from Norwegian workers. But no individual may legally give to such collections. Many of the leading comrades, therefore, have been fined from 50 to 700 Kronen by the magistrates.

The whole of the machinery of Government has thus been mobilised against the workers, so that their struggle is by no means an easy one.

It is not suggested that the methods adopted in any other country to deal with strikes and lock-outs should be bodily transferred to India. What is suggested is that the policy of drift at present in vogue should be given up by the Government and the people.

It will not do to keep in view only increased production and big dividends. Every effort must also be made to provide work, adequate wages and wholesome living

conditions for all skilled and unskilled workers.

Bardoli Satyagraha

Gandhiji has said that, if Government wants to do justice at all, and if a compromise should be arrived at, the following should be its minimum terms :—

(1) All Satyagrahis sent to jail from Bardoli should be immediately released.

(2) All confiscated lands, sold or unsold, should be returned to the original owners.

(3) Buffaloes, utensils, etc., which have been sold for a song should be compensated for in kind at the market value.

(4) All Patels and Talatis who have either resigned or been dismissed should be taken on in service.

(5) All other sentences imposed on account of Satyagraha should be remitted.

These terms are all reasonable. It is also reasonable to ask that the fresh enquiry demanded by the Bardoli cultivators should be a judicial one, not one conducted by revenue officials, because it is against the settlement made by the latter that the Bardoli people are struggling to obtain justice.

The condition laid down by the Bombay Government that, before an enquiry can be started, either the Bardoli men or some one on their behalf must deposit the amount realizable from them according to the revised settlement, does not do credit to either the head or the heart of the persons who constitute that Government. The Bardoli people have been undergoing untold sufferings, privations and insults in their effort to remain true to their plighted word. It is foolish to assume that, should the award of a committee of enquiry, by which such persons had promised to abide, go against them, they would prove false to their promise. But supposing such an unlikely thing happened, a Government which can feel itself strong enough to threaten to crush the Satyagrahis, would surely be strong enough to recoup the loss caused by non-payment of rent.

In the opinion of Sir Leslie Wilson, the Bardoli Satyagraha is a case of civil disobedience and is a lawless movement. In our opinion it is not exactly civil disobedience, as the Bardoli men are perfectly law-abiding except in the single matter of paying the increased assessment. Moreover, they do not say that they would not pay enhanced rent under any circumstance. They would be perfectly willing to pay enhanced rent, should

the decision of the committee of enquiry asked for by them *and to be appointed by the Government itself* result in such increase. This Satyagraha is perfectly constitutional. Civil disobedience is also constitutional.

In the House of Commons, replying to questions, Earl Winterton said, "If the conditions mentioned by Sir Leslie Wilson in the Bombay Legislative Council to-day as regards Bardoli, are not satisfied, the Bombay Government have the full support of the Government of India and His Majesty's Government in enforcing compliance with the law and crushing the movement, which would clearly then be exposed as one directed to coercing the Government and not representing reasonable grievances."

Mr Wellock asked whether, in view of the fact that in this area, as well as in a greater part of India, peasants were going more and more under the control of the money-lenders, the request to pay the old assessment until the Committee of Enquiry had been established was a reasonable one.

Earl Winterton replied that he did not think anything of the sort. He said whenever any resettlement of a District was made, if people were to refuse to pay taxes on the ground that the resettlement was not a proper one, all constitutional Government would end.

It cannot be that Earl Winterton or his chief, Lord Birkenhead, are unaware of the lessons of history. History furnishes numerous instances of popular movements based on right and justice triumphing over the obstinacy of autocracy. But like many other men in power who have gone before them, the British rulers of India think more of their own prestige than of the need for convincing those under their charge that they are being justly dealt with. These men in power also appear to think that the failure of some previous attempts to crush popular movements in foreign countries was due to the comparative strength of the people and the comparative weakness of the rulers concerned, but that the British Government is very much stronger and the Indian people very much weaker than the parties concerned in other similar struggles abroad recorded in history. Such overestimation of one's own strength and underestimation of the opponents' strength, is, however, no new thing in history. Earl Winterton and those who think with him may, therefore, rest assured that even in India no popular movement based on justice can be finally crushed.

People do not refuse to pay taxes lightly, for the fun of the thing. Such refusal always means much misery and may mean ruin. Therefore, the vision, conjured up

by him, of people refusing to pay taxes when-
ever any resettlement of a district was made,
on the ground that the resettlement was not a
proper one, was a figment, pure and simple,
of Lord Winterton's imagination. But should
no-tax campaigns cease to be rare, that would
mean that the rulers of the people had
become utterly careless or lost to all sense of
justice, and in that case what would end would
not be "all constitutional government," but *all*
despotic government.

Babu Jagat Narain Lal's Conviction

The appeal made by Babu Jagat Narain Lal to the Patna High Court against his conviction by a magistrate under section 124-A of the Indian Penal Code has been rejected and the subordinate court's sentence has been upheld. We have not read the article which has led to his imprisonment and mulcting in the sum of Rs 1000. Lala Lajpat Rai writes in the *People* that he has. The gist of the article, says he, was that the Government's attitude towards Hindus was not one of impartiality and fairness. We have also read somewhere that the article contains statements or suggestions to the effect that the Government follows the policy of "Divide and Rule." Now, allegations like these have become quite hackneyed by repetition in the Indian press, both Hindu and Mussalman. Similar statements have been made by British authors and speakers also. What is the use then of singling out a particular Indian journalist for punishment for such statements?

One object of punishment is to convince the man punished and others of his class that what the accused did was wrong. It would be a hard task to discover the Indian journalist who sincerely thought that Babu Jagat Narain Lal published statements which were false. Perhaps it would be safe to say that the task would be equally difficult if the whole class of educated men and women were to be searched for such a really sincere believer in the impartiality and fairness of the bureaucracy. The ovation which the Bihar publicist received before going to jail shows that thousands upon thousands in Patna think that the statements for which he has been punished are quite true; and there are reasons to think that larger numbers of his countrymen, who are not residents of that

city, think so, too. One object of punishment has, therefore, failed.

Another object is said to be deterrent. We do not think this, either, will be gained, so far as the "prisoner" and large members of his countrymen are concerned.

Punishment is not the way to put a stop to the impugnement of Government's impartiality and fairness. The impugners are open to conviction. If they be wrong, Government should try to convince them by unmistakable proofs of its unimpeachability.

Music Within Mosque

A special committee of the University of Stamboul has recommended some radical reforms to the ecclesiastical authorities of Angora. Some of the reforms proposed are:

Better provision for the upkeep of mosques.
Installation of seats and cloak-rooms.
Sermons and prayers to be in Turkish.
Music to be introduced in mosques.

Many unexpected things have happened in Turkey. So music may be introduced in mosques there. It would be a far harder task, though not an impossible one, to introduce the innovation in India. Some of the greatest musicians in India, living and dead, have been Muslims, and some of them have been famous for their devotional songs. There can be no harm in songs being sung in mosques. But even if we do not have music in Indian mosques, let us hope Turkey's example will soften the Indian Moslem's objection to music outside mosques on public roads and in the private houses of Hindus.

Muslim League Famine Relief Fund

It is a pleasure to find that this fund, raised to relieve distress in the famine-stricken districts of Bengal, now amounts to about Rs. 1,500. Now that the Muhammadans have awakened to the needs of their fellow-believers, it is hoped that in the not distant future their charity will disregard creed. *The Mussalman* writes:

We are glad to say that contributions to the Muslim League Famine Relief Fund are coming every day, though so far the amount contributed and collected is negligible. We hope more will be forthcoming within a short time if the public realise the urgency of relief work. The Delhi

merchants of Colootola (Calcutta) were, as the reader may remember, approached by members of the Famjee Relief Committee and they promised help. A few days ago some of these merchants themselves went to Balurghat, visited some of the affected areas and distributed Rs. 3000 (three thousand) among the sufferers.

Pacifism and Justice

We are not lovers of war. We are pacifists by inclination—and some by compulsion, too, we must confess. As lovers of peace we would welcome the Kellogg proposals for the prevention of war.

But while the prevention of war may meet the requirements of independent and free peoples, people who are not independent and free and are politically downtrodden and economically exploited, require something more than pacifism. They want justice, they want freedom. If they cannot have it by peaceful methods, they should have the option to win freedom by fighting, if they like and can. Prevention of war would not be quite a blessing in their case. The United States of America started the present pacifist proposals, and the British "Home" Government, Dominions and Indian Government have shown their readiness to accept the modified form of the multilateral pact for the prevention of war. But the question is, will the U. S. A. government allow the Filipinos to be free without fighting? Will the British Government, the Dominion Governments and the Government of India agree to India becoming free without fighting?

Though a free man himself, Mr. H. N. Brailsford must have felt for the disinherited peoples of the earth when he wrote in the *New Republic* of America:

What is to happen if a power announces that a dispute in which it is concerned is not suitable for settlement by any of the usual means which the other party may propose? If the power in question holds the stake in the controversy, war cannot occur, but will the world see justice? That may not seem a serious objection to citizens of satisfied powers. The world is very well as we find it. Our lot could hardly be better even by a victorious war. No inquisitive frontier calls us; no conqueror is engaged in crushing the national consciousness of our kinsmen; we sigh for no wide changes in the structure of a world which has brought in wealth, power and opportunity. Cradled in good fortune, one may readily suppose that the whole problem is to avoid war.

"But to peoples who lived in the shadow, it may seem that change is the first essential. War is the last resort of an ambitious or downtrodden people which, by long brooding over its unheeded

cry for change, or redress or opportunity, has convinced itself that it will stifle if it does not strike. To the people in that case, Mr. Kellogg's treaty forbids war, but there is no positive promise of redress by peaceful means, nor is any organisation created which can bring about salutary changes in the world when changes are due.

Muslim Nationalism and Pan-Islamism

Sardar Ikbal Ali Shah, "the well-known writer and traveller," author of *Afghanistan and the Afghans*, has given his impressions of the new political outlook of the Islamic world in an article in *Foreign Affairs*, London, reproduced in the *People*. Here are the concluding passages.—

The clergy, even in such important Shiad centres as Ispahan and Qom, have awakened to the truth that all Moslems are brothers—Shiads, Sunnis, black, brown or white—and that nationalism does not take precedence of Pan-Islamism.

Throughout the entire belt of the Islamic East there is, nevertheless, a distinct feeling of nationalism, but nationalism is defined in a particularly Eastern way. Every man is proud of his nationality but he does not necessarily divorce Islam as the great binding factor between all the Islamic countries. The Revivalists of the present-day Islam are endeavouring to prove that healthy nationalism in place of being, contrary to the teaching of Islam, is the very essence of it. But their attitude towards nationalism as understood in Europe is quite different.

In the East nationalism is a means to an end, the end being the unity of all Islam. It is argued that this conception is better than the Western conception of nationalism, for the reason that the further the nationalistic impulse develops the greater the fear of war, and the larger the breach in international goodwill. In Aleppo, whilst talking to some friends, I was fascinated by an old son of the Syrian desert. He had never been in a town before, and his first visit to Aleppo failed to thrill him; and yet he knew all about the world politics. His views of the League of Nations will, perhaps, illustrate what I mean more than anything else. "They have a League now," he said, "but we in Islam have had it for 1300 years, the only difference being that we subordinate our nationalism to one great aim of Islamic unity, while they find it impossible to remain intensely nationalist and yet think internationally." Essentially the solidarity of Islam is not shaken. All that has happened is that the domination of the clergy is receiving a legitimate set-back, and Europeans, having got used to seeing Moslems in the grip of the priests, seem amazed at the turn Moslem Asia has taken; whereas the truth is that the Moslems are now, more than at any time in the past, striving to achieve the real purpose of Islam, which is the union of all Islamic countries into one federation of nations.

New Constitution for Ceylon

At the census of 1921 the population of Ceylon was 4,197,851—less than that of the Bengal district of Mymensingh. According to the new constitution proposed to be given to the island there are to be ten ministers! This appears to be a rather top-heavy arrangement. Is it meant thereby to stop the mouths of aspiring Ceylonese politicians? It is to be a sort of dyarchy, though somewhat better than the Indian variety, because the ministers are to be responsible to the council.

What is most commendable in the report of the special commission on constitution for Ceylon is its finding that communal representation is wholly pernicious in its effect on the social structure of the island. It creates, the report says, an ever-widening gulf between the communities and tends to obscure national interests in the clash of rival races and religions. Accordingly the commission has recommended that the system of communal representation should be abolished.

It should be abolished in India also.

It is satisfactory to find that, in view of the large powers which are now to be transferred to the elected representatives of the people, the commission thinks a substantial extension of the franchise is necessary. The commissioners recommend manhood suffrage and also consider that women's right to vote should be admitted. But in view of the necessity for keeping the number of votes within reasonable limits the extension of the franchise should in their opinion at present be confined to women over 30 years of age. Are men of 21 maturer in their judgment than women of 21 or of 29? Applicants for votes should be required to show that they had resided in the island for 5 years.

We dislike the increasing and strengthening of the reserve powers of the Governor, as indicated in the following paragraph in Reuter's summary of the commission's report:—

The Commission assign supervisory rather than executive role to the Governor, but recommend that as his executive powers have been diminished, his reserve powers should be strengthened. In all executive as in legislative matters, the Governor's formal ratification of the Council's decisions should be required before any action can be taken on them and he should be charged by Royal instructions to refuse or reserve assent to all measures infringing certain clearly defined principles.

"How Ruling India Injures England"

An article recently contributed by Dr. Sunderland to *The Modern Review* shows how ruling India injures England. He quotes many distinguished British writers and authorities to show that England's rule in India has had a disastrous moral effect on Britishers in India and at "home". The article cannot possibly be pleasant reading to any average native of Great Britain. So at the last Indian Civil Service dinner in London Lord Ronaldsday, ex-Governor of Bengal, said in the course of his speech that, "because of the criticism to which British dominion in India is subjected at the present moment," he repeated that the Indian Civil Service "is always of incalculable value to Great Britain and India." He added:—

A typical example is to be seen in the May issue of the *Modern Review*, an important Indian periodical published in Calcutta, which has wide circulation, not only in India, but beyond its borders. The article is written by a Dr. Sunderland, whoever he may be, and his argument is that British rule in India is a source of grave moral injury not only to India herself but to Great Britain also. We are familiar enough with the argument that British rule in India is an injustice to India, but the argument that it is also an injustice to Great Britain is a somewhat novel one.—(Lughaer). The gist of his argument is that as soon as Englishmen are placed in a position of authority in India they lose all their finer feelings, becoming selfish, despotic and morally callous.

The argument might have been "novel" to Lord Ronaldsday and his audience, but the fact is indisputable and was not unknown to many distinguished Englishmen of the last and present centuries, as Dr. Sunderland's article itself partly shows. In addition to the many testimonies quoted by Dr. Sunderland, many times more proofs of the same damaging character may be adduced. A very recent one, quoted by the *Indian Daily Mail*, is subjoined. Miss Evelyn M. Bunting contributes her "Surface Impressions of India" to the current number of the *Contemporary Review*. Her impressions are not limited to Indian life. She has something to say about Europeans also.

Miss Bunting notes with regret the prevalence of the caste-system among her countrymen in India. "In an Indian city where there are few English in proportion to the vast population of natives, it seems strange that two women belonging to the same town and educated in the same High School in England cannot meet out there because one is the wife of an Indian civil servant and the other is only a teacher!" She was

shocked to see the way in which the English spoke to and of their Indian servants. They dare not treat servants in England as they do in this country. Miss Bunting satisfies herself by saying that this unhealthy practice has come down from the Moghuls; it is, she says in italics, not English! She tells an interesting story of a little English boy whose parents were criticised by their neighbours for allowing him to play with a little Indian boy. "You never know," they said, "What they'll pick up." One of these same neighbours passing one day, called Kenneth to her. "Kenneth, does that little boy talk English?" "No, he does'n't," was the reply, "except a few bad words—and those are what I taught him."

Social Reform in Afghanistan

In addition to the blow struck at purdah by the Queen of Afghanistan dining in her own country with men not related to her without veiling herself, other steps are being taken to introduce social reform in that country.

According to the "Aman-i-Afghan", the newspaper of Kabul, King Amanullah announced at a gathering of officials that a Jirga of the representatives of the nation would be held shortly. It will not be attended by Government servants who, if they are elected representatives, should resign the service. The King further said that polygamy was one of the chief causes of corruption, and in future any government servant taking a second wife should tender his resignation. With regard to people already having more than one wife, an announcement will be made after the Jirga. His Majesty advised his officials and subjects not to copy such bad customs and habits as drinking, and dwell on the necessity of sports for good health.

Sir J. C. Bose at Vienna

As cabled by Reuter, the recent scientific mission of Sir J. C. Bose to Vienna was a great success. What greatly contributed to that result was the fact, mentioned in a private letter written by an Indian gentleman who was at Vienna at the time of Professor Bose's visit, that the scientist explained the parts and construction of his apparatus and instruments. It is to be hoped that in Vienna at any rate scientists would henceforth cease to have a suspicion that Dr. Bose is a magician of some sort!

As Vienna is one of the most important centres of medical research in the West, Dr. Bose's success there has a special significance of its own.

Brahmo Samaj Centenary and the Muslims

In view of the Brahmo Samaj Centenary celebrations which begin this month, a Muhammadan gentleman has written us the following letter from Asansol :—

"In view of the ensuing Brahmo Samaj Centenary celebration, I, as one who believes in the unity of God in the Islamic sense of the word,—as one who respects others religious teachers and their shrines,—and as one who treats others with toleration and human feelings, as the Holy Quran requires of a Muslim, beg to request my co-religionists—especially the English educated ones, through your journal to participate in the above celebration, and for the following reasons

"A careful reader of the history of India since the British occupation must admit that modern India owes much to the Brahmo Samaj founded by Raja Ram Mohun Roy in 1829. Truly speaking, the real founder of modern India is Raja Ram Mohun Roy. He was the forerunner of the leaders of the present-day socio religious movements, such as the removal of untouchability and caste distinction, female education, and national unity between the different communities, etc. So the Brahmo Samaj Centenary, associated with the sacred memory of Raja Ram Mohun Roy, should be celebrated in a fitting manner by his countrymen, irrespective of caste, creed and religion, when it completes its hundredth year in next August. Be it noted here that the Brahmo Samaj is a nearer approach to Islam than any other religion. There are no idolatrous practices or rites in the Brahmo Samaj. It is not aggressive in its attitude towards Islam like the Arya Samaj.

"His Highness the Maharaja Gaekwad of Baroda in the course of his presidential address at the last Philosophical Congress held at Bombay, said :—'An actual study of the sources reveals how Islam and Christianity had a share in leading to the type of thought found in the Brahmo Samaj.' A great thinker of Bengal, Mr. Bepin Chandra Pal, admits in the course of an article in the "Englishman" that: '... Ram Mohun really was the last product of the contact of the Hindu mind with the virile culture of Islam. The Brahmo Samaj in its earliest phase was more the product of this union than of English education.' Therefore, the Indian Muslims should make it a point to join the

celebration of the Brahma Samaj, which is purely monotheistic in its aspect, and thus show their catholicity towards a sister community. Further, remember what Prof. Jadunath Sarkar, C. I. E., has written in his "History of Aurangzeb":—"A Muslim missionary cannot be indifferent to the welfare of his neighbour's soul."

"In the end, I venture to make one suggestion to the Secretary of the Centenary Committee to invite the following Muslim thinkers to the celebration, such as Khwaja Kamalud-Din of Woking fame, Maulana Mohammed Ali, M.A., LL.B., of Lahore, Moulvi Yakub Hasan of Madras and Maulana Md. Akram Khan, the celebrated author of *Mustafa Charit*, and to ask them to read papers on comparative Islam and mutual toleration, which in a way will remove the misconceptions prevailing among non-Moslems about Islam."

Asansol.

Md. Azhar.

Agitation against Child-marriage

One of the chief causes of the intellectual and physical degeneration of the Indian people, of both sexes, is child-marriage, with its consequence, in most cases, of premature maternity. Both men and women have suffered from it, but women more, and more directly. It is only natural, therefore, that those Indian women who can think for themselves and who do not observe purdah should join in the agitation against this injurious custom and in favour of Mr. Sarda's Bill as amended by the select committee of the Legislative Assembly. Even in Bengal, where the other day Babu Syamsundar Chakrabarti played the role of quick-change artist at the Albert Hall meeting in support of child-marriage and some hired and un-hired goondas assaulted its opponents, some Indian ladies have held a meeting in support of Mr. Sarda's Bill.

According to an Associated Press report, a largely attended meeting was held last month at Simla under the auspices of the Child-Marriage Prohibition League which gave a warm support to Rai Sahab Har Bilas Sarda's Bill, as amended by the Select Committee of the Legislative Assembly. The meeting was held at the premises of the Indian Association, Phagli (Simla), and was attended among others by several lady doctors and European and Indian ladies. A lively debate ensued

on the speeches of the two principal spokesmen in favour of the Bill. The Rani Sahiba of Mandi, one of the states, where child-marriage has been prohibited, and the President of the League, who was to have initiated the debate, were unavoidably absent. Mrs. P. Rama Rao, starting the discussion, put in a vigorous plea for a whole-hearted support to the measure, which she described as very essential, if the country was to be rid of the evils of child-marriage, such as the appallingly large number of widows, physically defective mothers and puny and weak children. She declared that there was nothing in the Vedas or Puranas to support the argument that the Bill was an interference with the religious practices or was an assault on the sacred marriage system of the Hindus, and pointed out that in the Vedic and Puranic ages girls got married after arriving at maturity. Moreover, questions connected with health precautions, child mortality and maternity welfare were fast getting out of the scope of religion from day to day. Continuing she said: "If ever India was to be a physically strong nation, no time should be lost in placing on the Statute Book a measure which was an effective weapon for preventing the existing evil. Raising the Age of Consent was only a flank attack on the evil, but the Bill before the Assembly was a direct attack, and was brought forward none too soon for British India, when it was remembered that Indian States like Kashmir, Baroda, Bharatpur, Mysore and Rajkot had already made definite progress in that direction. Mrs. Rama Rao also appealed to Government to place restrictions on the youth of the country by refusing admission into colleges and schools of married boys and by refusing clerkships to those married, say, before twenty. The enormity of the evil, she added, could be realised from the fact that, according to the collected statistics, there were in 1921 in British India no less than 612 widows under 12 months, 493 between one and two years of age, 1280 between two and three, 2,863 between three and four, and 6,758 between four and five, that is, a total of 12,011 under five years. The number of widows between five and ten was 88,580 and those between ten and fifteen was 233,533.

Sir Moropant Joshi, Chairman of the Age of Consent Committee, explained the present law and the proposed legislation and pointed out that orthodox opinion was slowly veering

round in favour of raising the marriageable age of boys and girls. He pointed out that legislation was the only remedy, and not propaganda, as was suggested in some quarters. Did not the King of Japan order one night the removal of the tuft of hair from the head of his subjects? The next morning Japanese were tuftless. Did not the British Government abolish the cruel system of Sati with a single stroke of the pen? Now cases of Sati were practically unknown. If the orthodox opposition was going to endanger the passage of the Sarda Bill through the Assembly, then he was inclined to suggest the adoption of Satyagraha.

We do not know whether the speaker explained how Satyagraha was to be adopted. So it is not possible to comment on his suggestion. But no one can fail to be impressed with his earnestness.

The Simla meeting carried unanimously a resolution in support of the Sarda Bill with an appeal to the Governor-General to nominate ladies to the Central Legislature when the bill comes up for consideration.

A Grievance of the Hindu Community in Bhopal

We have received a memorial addressed to "His Gracious Highness the Ruler of Bhopal State," signed by Siva Narayan Vaidya, Secretary, Brahmin Sabha, Bhopal. Some extracts from this petition are printed below.

Sire, for a very long time the Sabha has been painfully realising and noticing the incessant exodus of innumerable young Hindu females and young Hindu children from their society, who, leaving their kinsmen and relations, their caste and creed and without having any knowledge either of their own religion or of Islam, are being misled to get their names registered in the office of the Qazi Sahib and are thus for ever alienated and cut off from their families and their kith and kin, and in after years, even if they discover their mistake and foolishness or are freed from the compulsion or threat which caused them to abandon their ancestral religion, the existing Apostasy Law of Bhopal holds them back from affirming boldly that their former nominal conversion was due to seduction, worldly allurements, and temptations, threat or want of sound judgment, and the woeful tale of the presence of the ever-increasing number of the new-Muslim female beggars found over-crowding the streets of the Bhopal town and districts sadly reveals their plight and degradedness.

Sire, on the one side we read Khalifas and other Muslim personages of old flouting, even to death, not only ordinary culprits but even their friends and relations found guilty of committing the crime

of adultery, while on the other, we see Muslim Gundas professing to be the followers of that world-renowned faith (Islam) seducing from their hearth and home, young and inexperienced Hindu females by temptations and allurements, threats and physical force and seeking shelter under the Qazi's register to escape the penalty of their crime. It is indeed hard to reconcile the two.

Just as by issuing ordinances for the prohibition of wine for the Muslims. Your Highness has tried too keep up the purity of the principles of Islam amongst its followers, in the same way we trust that by enacting necessary laws for penalising illegal conversions of the type mentioned above Your Highness will on the one hand reduce adultery to a minimum and on the other save our hearth and home from utter ruin and destruction.

The Sabha further begs to request that a complete liberty of conscience be allowed to all of your Highness subjects with the reservation that all conversion cases be dealt with by a special bench consisting of Muslim and non-Muslim, official and non-official members, which should satisfy itself that the change of religion is not due to any compulsion or threat, or for any worldly gain or temptations but only for the spiritual uplift of the person concerned and that he or she has got sufficient knowledge of the relative religions to enable him or her to discriminate between them.

Increase of Outrages on Muslim Women in Bengal

We have no recent statistics before us, but the impression produced on our mind by the perusal of Bengali newspapers is that, while cases of outrage on and abduction of Hindu girls and women have not decreased in number, cases of outrage on and abduction of Muslim girls and women by Muslim men have of late multiplied. Have Muslim publicists noticed this fact? If so, how do they explain the phenomenon?

Harindranath Chattopadhyaya

The Inquirer OF LONDON writes:—

Mr. Chattopadhyaya, the young Indian poet, a volume of whose 'Poems and Plays' has just been published in England, is a brother of Mrs. Sarojini Naidu, the Indian poet and politician, formerly President of the Indian National Congress. Mr. Laurence Binyon has described him as one of the race of true poets, with a singularly rich vein of inspiration, a gift for music, and a feeling for the value of English words, while Mr. C. F. Andrews regards him as 'the rising dawn of a new vision of India' just as the golden sun of Rabindranath Tagore is setting.

The appearance of new luminaries in the poetic firmament of India should undoubtedly be welcomed.

As for Rabindranath Tagore, though in years he has passed the meridian of life, his genius continues to shine with ever new effulgence. So we are not yet thinking of his sun setting, though set it must some day in the physical plane.

The Anti-purdah Movement in Bihar

What augurs well for the success of the anti-purdah movement in Bihar, with its repercussions in other purdah-ridden provinces, is not so much the fact that many leading Bihar men have taken part in it as the fact that many orthodox Hindu women have given *practical* support to it by tearing down the purdah as well as by speaking against it. According to Mahatma Gandhi, writing in *Young India*, a reasoned appeal signed by many most influential people of Bihar and almost an equal number of ladies of that province, advising the total abolition of the purdah, has been issued in Bihar. It is worthy of note says Mr. Gandhi, that the ladies, numbering more than fifty, who have signed the appeal are not of the anglicised type but are orthodox Hindus. It definitely states:

"We want that the women of our province should be as free to move about and take their legitimate part in the life of the community in all particulars as their sisters in Karnatak, Maharashtra and Madras in essentially Indian ways, avoiding all attempts at Europeanisation; for while we hold that change from enforced seclusion to a complete anglicization would be like dropping from the frying pan into the fire, we feel that *purdah* must go, if we want our women to develop along Indian ideals. If we want them to add grace and beauty to our social life and raise its moral tone, if we want them to be excellent managers at home, helpful companions of their husbands and useful members of the community, then the *purdah* as it now exists must go. In fact no serious steps for their welfare can be taken unless the veil is torn down and it is our conviction that if once the energy of half of our population that has been imprisoned artificially is released it will create a force which, if properly guided, will be of immeasurable good to our Province."

The movement, says Mahatma Gandhi, has a curious origin.

Babu Ramanandan Mishra, a Khadi worker, was desirous of rescuing his wife from the oppression of the *purdah*. As his people would not let the girl come to the Ashram, he took two girls from the Ashram to be companions to his wife. One of them, Radhabehn, Maganlal Gandhi's daughter, was to be the tutor. She was accompanied by the late Bahabhadur Giri's daughter Prasad. The parents of the girl who resented the attempt of the Ashram girls to win young Mr.

Mishra from the *purdah*. The girls braved all difficulties. Meanwhile, Maganlal Gandhi went to see his daughter and steel her against all odds and persist in her efforts. He took ill in the village where Radhabehn was doing her work and died at Patna. The Bihar friends, therefore, made it a point of honour to wage war against the *purdah*. Radhabehn brought her charge to the Ashram. Her coming to the Ashram created additional stir and obliged the husband, who was already prepared for it, to throw himself in the struggle with greater zeal. Thus the movement having a personal touch promises to be carried on with energy. At its head is that seasoned soldier of Bihar, the hero of many battles, Babu Brijkishor Prasad. I do not remember his having headed a movement that has been allowed to die.

Prof. Molisch and the Bose Institute

As a result of Sir J. C. Bose's visit to Vienna, Professor Molisch, the eminent plant-physiologist and pro-Rector of the Vienna University, will join the Bose Institute, Calcutta, in the middle of November next in order to become acquainted with new methods in biological science.

Festival of the Rains at Visva-bharati

Season festivals are a special feature of Visva-bharati. They are not dead ceremonials of a formal and conventional character, but are instinct with the joy and inspiration of the particular seasons they celebrate. In the open uplands of Santiniketan there is a distinct feel in the air, a play of colours in the sky, a combination of sights and sounds, characteristic of each season. These are caught and transformed by Rabindranath Tagore's genius in his songs, poems and dramatic pieces.

July witnessed the celebration of the festival of the rainy season at Santiniketan and Sriniketan. On the first day, just as evening was about to set in, the poet performed the ceremony of tree-planting. A pavilion had been erected for the purpose in front of the little boys' hostel. The girl students of Santiniketan came to the spot from their hostel in procession, wearing beautiful costumes appropriate to the occasion, singing songs. With them came two young men carrying in a 'flower-palaequin' the sapling to be planted. On reaching the pavilion, where the poet was seated, they stood in two rows on two sides. First some appropriate Sanskrit verses were recited. There were then recitations of poems by

the poet, followed by the girls, who appeared to impersonate the Earth, Water, Energy (in the form of light and heat), Wind and Sky. The young tree was then lowered into the pit dug for it. In conclusion the poet recited an 'auspicious' (*mangalika*) prayer in verse for the sapling.

The gathering now moved on to a tent nearby, where the poet read a short story which he had composed for the occasion. The sorrows of a boy, a tree-lover, who instinctively sympathised with plant life, formed its motif. As the poet said afterwards, the boy was no other than himself when he was young in years. The reading of the story over, many songs suited to the rainy season, composed by the poet, were sung to the accompaniment of appropriate instrumental music.

The 'next day, there was the festival of tilling the soil at Sriniketan, the Institute for Rural Reconstruction at Surul Pandit Vidhusekhar Sastri, who officiated as priest on the occasion, said that this was known in ancient times as *Sita-Yajna* or the Plough Sacrifice. Under a beautiful canopy a small plot of land had been cleared of grass and decorated with *alpana* (ceremonial drawings) in many simple colours. In front of it sat the Pandit. He recited the Vedic mantras proper to the occasion. Three pairs of well-fed bullocks, which had been decked with garlands, sandal-paste on the forehead, and circular spots of ochre colour all over the body, were then given luscious food, which they enjoyed. They were then yoked to a decorated plough. The poet now literally put his hand to the plough and started ploughing the painted soil. The ploughing was finished by Mr. Santosh Bihari Basu, the agricultural expert of the Institute. This was followed then by singing in chorus of the song in *Achalayatan*, "In joy we till the soil," by the boys of the school. There was also another song. In the beginning of the ceremony, a song was sung by the poet himself. At the close the poet delivered an impromptu speech, in which he, among other things, dwelt on the necessity and value of going back to the soil, not merely for material sustenance and wealth but for being in touch with nature and the enrichment of our inner life. He spoke not only of taking from the earth what it can give us but also of giving to it what man

can give it with his science, and of investing it with the poetry of his soul.

Vidyasagar Memorial Columns

To-day (July 30) many villages and towns will celebrate the anniversary of the death of Pandit Iswar Chandra Vidyasagar, the illustrious educationist, litterateur, and philanthropist who, in modern times, started the movement for the marriage of widows. The memorial columns erected in his honour by his Hindu countrymen are reproduced below—one for Bengal, where he was born, lived and worked, and another for the whole of India

CENSUS OF INDIA, 1921.

Number of Hindu Widows at Different Ages

| Bengal | | India. | |
|--------|---------|--------|---------|
| Age. | Number. | Age | Number. |
| 0-1 | 45 | 0-1 | 597 |
| 1-2 | 25 | 1-2 | 494 |
| 2-3 | 120 | 2-3 | 1257 |
| 3-4 | 319 | 3-4 | 2337 |

Prof. Raman Honoured

New India reports that under the presidency of Dewan Bahadur T. Rangachariar, the Indian Cultural Association presented at the Y. M. C. A. Auditorium a purse and an address to Professor C. V. Raman, Palit Professor of Physics in the Calcutta University, who delivered a series of three lectures last week, under the auspices of the Association.

In the course of his preliminary remarks Mr. Rangachariar referred to the great services rendered by Professor Raman in the realm of science. Professor Raman, he said, had brought credit not only to himself but also to the province to which he belonged. Therefore, the credit earned by him all over the world belonged also to the province of his birth. Madras had reason to be distinctly proud of him.

Mr. T. Rangachariar, in the course of his concluding remarks, said that Prof. Raman had sacrificed for the cause of science a career in a service which held out

the poet, followed by the girls, who appeared to impersonate the Earth, Water, Energy (in the form of light and heat), Wind and Sky. The young tree was then lowered into the pit dug for it. In conclusion the poet recited an 'auspicious' (*mangalika*) prayer in verse for the sapling.

The gathering now moved on to a tent nearby, where the poet read a short story which he had composed for the occasion. The sorrows of a boy, a tree-lover, who instinctively sympathised with plant life, formed its motif. As the poet said afterwards, the boy was no other than himself when he was young in years. The reading of the story over, many songs suited to the rainy season, composed by the poet, were sung to the accompaniment of appropriate instrumental music.

The 'next day, there was the festival of tilling the soil at Sriniketan, the Institute for Rural Reconstruction at Surul. Pandit Vidhusekhar Sastri, who officiated as priest on the occasion, said that this was known in ancient times as *Sita-Yajna* or the Plough Sacrifice. Under a beautiful canopy a small plot of land had been cleared of grass and decorated with *alpana* (ceremonial drawings) in many simple colours. In front of it sat the Pandit. He recited the Vedic mantras proper to the occasion. Three pairs of well-fed bullocks, which had been decked with garlands, sandal-paste on the forehead, and circular spots of ochre colour all over the body, were then given luscious food, which they enjoyed. They were then yoked to a decorated plough. The poet now literally put his hand to the plough and started ploughing the painted soil. The ploughing was finished by Mr. Santosh Bihari Basu, the agricultural expert of the Institute. This was followed then by singing in chorus of the song in *Achalayatan*, "In joy we till the soil," by the boys of the school. There was also another song. In the beginning of the ceremony, a song was sung by the poet himself. At the close the poet delivered an impromptu speech, in which he, among other things, dwelt on the necessity and value of going back to the soil, not merely for material sustenance and wealth but for being in touch with nature and the enrichment of our inner life. He spoke not only of taking from the earth what it can give us but also of giving to it what man

can give it with his science, and of investing it with the poetry of his soul.

Vidyasagar Memorial Columns

To-day (July 30) many villages and towns will celebrate the anniversary of the death of Pandit Iswar Chandra Vidyasagar, the illustrious educationist, litterateur, and philanthropist who, in modern times, started the movement for the marriage of widows. The memorial columns erected in his honour by his Hindu countrymen are reproduced below—one for Bengal, where he was born, lived and worked, and another for the whole of India

CENSUS OF INDIA, 1921.

Professor Raman, he said, had brought credit not only to himself but also to the province to which he belonged. Therefore, the credit earned by him all over the world belonged also to the province of his birth. Madras had reason to be distinctly proud of him.

Mr. T. Rangachariar, in the course of his concluding remarks, said that Prof. " had sacrificed for the cause of " career in a branch of service which "

high prospects. He was glad of the results already achieved by Mr. Raman in his department of work and they showed that more was in store for him. On behalf of the citizens of Madras and of the Presidency, he wished Mr. Raman a very bright future.

A Recommendation of the Agricultural Commission

Of the recommendations of the Royal Agricultural Commission the most important is that in which the Commissioners prescribe education for all—young and old, of both sexes. If Government carries out this recommendation at once without imposing an additional burden of taxation on the people, the Commission will not have sat entirely in vain.

Ramsay MacDonald's Prophecy

Mr. Ramsay MacDonald has prophesied that within a few months India will attain Dominion status. Performance according to Labour's promise was within his and Labour's power to attempt when he was premier. They made no such attempt then. Now he utters a prophecy for others to fulfil! What hope?

"The Best Child's Book for 1927"

Gayneck, a beautiful story of a domesticated pigeon, by Dhan Gopal Mukerji, has won the John Newbury Medal from the American Library Association as the best child's book for 1927.

A Head Twister

Police Tricks That Subdue Unruly Prisoners

Massachusetts state police have won wide recognition for their ability to subdue unruly prisoners, and much of their success is due to their skill in executing special locks and holds on their adversaries. Many of these tricks are known to other police organisations and some can be mastered by the layman, after the practice, for his own defense.

A head hold is useful in forcing a man into a cell. The policeman places one of his arms back of the prisoner's head, the other, under the jaw. A twist will usually subdue the most unruly victim.

A School that Goes to the Children

The U.S.A. department of education has evolved a plan which will take educational facilities to the children throughout Northern Ontario. To meet the peculiar requirements of these communities, traveling schools have been introduced.

"Both the Canadian National and Canadian Pacific Railways were requested to co-operate in

the chemical service laid down an almost impenetrable smoke screen during recent manoeuvres, to demonstrate how a protective blanket of fumes could be drawn over the vital sections of the canal in case of an assault by enemy planes.

The School House on Wheels

making the plan a success and they gladly and promptly did so. Under the direction of the Railways two coaches were converted into a school-room and living quarters for the teachers combined, and the department supplied all equipment and the teachers. In all his experience, said Dr. McDougall, Chief-inspector of education of the department, he had never seen such attentive and willing classes.

WHY INDIA REJECTED THE "REFORMS" OF 1919 (DYARCHY)

By J. T. SUNDERLAND

[All rights reserved]

SOON after the close of the Great War in Europe, the British gave to India a "Government Reform Scheme" (called "Dyarchy"), which was proclaimed to the world as a great boon to the Indian people, as something which advanced them far on the road toward freedom and self-rule, and withal, as something which showed the great generosity of the British toward India, and their constant solicitude for her welfare and progress.

Did the Indian people receive the Schema as a great boon, and were they profoundly thankful for it, as Britain declared they ought to be? No, and for reasons which they thought were of the weightiest possible character.

Of course, in a sense they accepted the Dyarchy plan, they had to, it was forced upon them without their consent. A few thought that it was perhaps better than nothing, and so they said: "Let us make the most of it until we can get something more satisfactory." But it is not an overstatement to affirm that all India was deeply disappointed and hurt by it. Absolutely all parties, the most moderate and conservative as well as the most advanced, united in declaring that it was not what they desired or

expected or deserved, and that it was not worthy of England.

Why were practically all the important leaders of India disappointed, grieved and pained? The reason which immediately presented itself and which would not down, was: The Scheme seemed to them little or nothing but a "smoke-screen" to hide Britain's real mind and purpose. With the most careful and eager examination of it that they could make, they were unable to discover in it even the slightest evidence that their British masters intended to give them real freedom or real self rule then or ever. It made a great show, a great pretense of advancing them far on the road to full attainment of both. But as a matter of fact, it gave them no advancement and no new freedom that amounted to anything; and it really promised nothing. All it did was to grant them a few new offices (some of them it is true with quite flattering salaries) and some new or enlarged legislatures, both national and provincial, in which they might talk and talk, discuss and discuss, and even vote and vote but only upon such questions and subjects as the British graciously permitted them to vote or speak upon: in no case were they granted any real power: they were allowed

to control nothing ; "(Mock Parliaments" was the name given to the legislatures by an eminent Englishman). The real objects of the scheme seemed to be two, namely, to quiet the growing unrest of the Indian people by making them think they were getting something important (when they were not), and to produce a favourable impression upon the public opinion of the world by spreading the idea that the British were generous to India and were leading her as fast as seemed wise toward her desired goal of freedom and self-rule.

It is important to know the facts connected with the origin of the Reform Scheme.

When the great war of 1914 broke out in Europe, England found herself in a serious plight. In order to do her part in withstanding the German attack on France, she was compelled to send for almost her entire Indian army, which was the first foreign contingent to arrive on the field of conflict, and without whose invaluable help the German advance could not have been checked and Paris would undoubtedly have fallen.

This sudden withdrawal from India of the military forces which were maintained there to hold her in subjection, naturally suggested to the Indian people that now was a favorable time to throw off the foreign yoke which was so galling to them, and to gain their freedom and independence. And why not? Would any other nation in the world, held in bondage for more than a century and a half, have refrained from taking advantage of such an opportunity?

It is easy to see how great, how tremendous, was the temptation. How did the Indian people meet it? Did they say: "Now is the auspicious time; let us rise and be free?" On the contrary, the vast majority of them said: "England is in sore distress; she is fighting virtually for life. To take advantage of her helplessness, to strike her when she is down, would be dishonorable, cowardly. We shall not do it. Although she has robbed us of our nationhood, we will not turn on her in her time of peril. Until her danger is past, we will stand by her, we will be loyal—pay, we will even help her in her struggle." And they did. With insignificant exceptions they were absolutely loyal throughout the war. Largely they laid aside for the time being the political agitation for freedom which they had been carrying on for many

years. India rendered to Great Britain great and invaluable aid both in men and money. It was amazing. It was almost incredible that a subject people longing for freedom should take such a course. It was unselfish, chivalrous, noble beyond words. I am not able to recall in all history a national act, a national course of conduct, so magnanimous or so noble.

The Indian people believed and I think all the world believed, that when the war was over and England was safe, she would show appreciation of their marvellous loyalty and magnanimity, by treating them far better than she had done in the past, by righting their wrongs and, if not by granting them at once full and complete home-rule like that of Canada, which was India's desire, at least by setting them far on the way toward it, and by giving them a definite promise of its complete realization in the very near future.

Did England do this? No! Unbelievable as it seems, instead of meeting the magnanimity of the Indian people with a like magnanimity, instead of showing appreciation of their astonishing loyalty and their invaluable aid in her time of distress, instead of being even just to them, she proceeded to treat them with a degree of suspicion, oppression and cruelty beyond anything in the past, culminating in the Punjab atrocities and the infamous Rowlatt Act, which virtually deprived India of even the protection of civil law. Of course, this was a terrible shock to the Indian people. It was a disappointment about as great as it is possible for any nation to experience.

But did Great Britain offer to the Indian people no return of any kind for what they had done? Yes, she offered them this so-called "Reform Scheme" (or Dyarchy) for government. This and only this was England's reward for India's amazing service and devotion.

Let us examine the Scheme a little more fully, so as to see exactly what were some of the more important reasons for India's dissatisfaction with it.

(1) The first disappointment, injustice, hardly less than insult, that India saw in the scheme, was Britain's spirit of high-handedness and arrogance, in claiming for herself all rights in the matter, and allowing India none; in setting out from the first to make the Scheme not what the Indian people had a right to and

wanted, or what would have been just and acceptable to all parties concerned ; but solely what she (Britain) wanted, and then thrusting it upon India.

The Scheme, to have been just, to have been anything that India could honorably accept, should have been mutual, something framed by India and Great Britain together, each recognising the other's rights. But it was nothing of the kind. It was something designed to be a compact between two parties, but framed by one party alone and imposed upon the other. There was nothing mutual about it. It was a dictation ; it was a command ; it was the voice of a master to slaves. Britain, standing above, handed it down to the Indian people below. They must receive it on their knees. She owned India. She would manage it as she chose. She owned the Indian people. They must obey her.

Is it any wonder that a scheme framed and offered in such a spirit and with such aims, was not welcome to the Indian people ? Is it any wonder that they found in it nothing to right their wrongs, nothing to set their feet upon a path leading to self-government ?

Let me not be misunderstood when I speak of the Scheme as formed by Great Britain alone. I am quite aware that Mr. Montagu, the British Secretary of State for India, before formulating his plan went to India and consulted—candidly and honestly, I have no doubt—the various interested parties there ;—on the one hand, the Indian leaders and on the other, the British rulers. That was fair so far as it went, but what a little way it went ! What followed was that Mr. Montagu and other representatives of Great Britain proceeded themselves alone to draw up a plan for India's government, without associating with themselves in this great and serious task any representatives chosen by India ; that is, without giving India any real part or power in the matter. That was unfair ; that was dishonorable. Such a one-sided body of men could not possibly produce a scheme that would be just to India or that India could accept. What ought to have been done was the creation of a Joint Commission with an equal number of British and Indian members, the Indian members being elected by the Indian people and therefore empowered really to represent them ; and this Joint Commission should have been instructed to draw

up, and should have drawn up, such a scheme as seemed just and wise in their united judgment. That would have been fair both to England and India. And to a scheme thus created, the Indian people would gladly have given their assent.

(2) The second thing to be said about this so-called Reform Scheme is that, in its very nature, it was self-contradictory, and therefore impossible.

The Scheme was given the very unusual name of "Diarchy," which properly means the joint rule of two monarchs, as William and Mary in England. But in the present case it was supposed to signify the joint rule of the British and the Indians through an arrangement by which some matters connected with the Government were "transferred" or committed (under severe limitations) to Indian management, while others were "reserved" or kept wholly under British control. Exactly described, it was a plan which put side by side two radically different, two antagonistic forms of government ; one, self-rule, the other, arbitrary rule from the outside ; one, democracy, the other, absolute autocracy or absolute monarchy (in the form of an alien bureaucracy) ; and expected them to work in harmony. It was an attempt to mix oil and water ; or to ride two horses going in opposite directions. Abraham Lincoln said : "A nation cannot endure half free and half slave." The British ought to have known that neither can a nation be successfully ruled by means of governmental machinery, half formed for ends of freedom and half for ends of oppression. That is exactly what this scheme was and is.

What Great Britain ought to have done, instead of concocting such an impossible, misshapen, mongrel plan, is clear. She should have listened to India's just demands, and given her a government framed distinctly and honestly for ends of self-rule ; a government responsible, at least in all home matters, to the Indian people ; a real democracy essentially like that of Canada or South Africa, but of course adapted to the special needs and conditions of India. That would have been sane. It would have been straightforward and honest. It would have been practicable and to the infinite advantage of all concerned. On the one hand, it would have made India content, and on the other, it would have removed all cause for anxiety or alarm on the part of Great Britain. It would have resulted in India's becoming

as loyal a part of the Empire (or Commonwealth) as South Africa or Canada or Australia. That the very opposite state of things now exists, is the result of Britain's blind and arbitrary refusal to give to the Indian people what they so earnestly asked for, and what was their right; and thrusting on them, instead, this impossible, self-contradictory, vicious plan of "Dyarchy."

(3) A fundamental defect of the Reform Scheme or Dyarchy was the startling fact that it contained no Bill of Rights, no constitutional guaranty of any kind securing the Indian people against possible future injustices and tyrannies on the part of the Government. In view of the many wrongs that they had suffered in the past, this defect was fatal, something which alone, as they believed, was sufficient reason for rejecting the Scheme. They realized that without a bill of rights, or a constitutional guaranty of justice, they could not have sure protection, they would be at the mercy of their foreign rulers, liable at any time to have wrongs and cruelties inflicted upon them as great as any they had ever suffered. The British at home, in England, would on no consideration give up the protection which for hundreds of years they have received from their *Magna Charta*, which has shielded them by its great words: "No freeman shall be arrested or detained in prison... or in any way molested... unless by the lawful judgment of his peers and by the law of the land."

No Americans could not possibly be induced to surrender the guaranteed protection which we possess in our Declaration of Independence, and especially in our National Constitution, which declares:

"Congress shall make no law abridging the freedom of speech or of the press, or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

"The right of the people to be secure in their persons, houses, papers and effects against unreasonable searches and seizures, shall not be violated."

"Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted."

"No State or province within the nation shall deprive any person of life, liberty or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

Such charters of rights, such guarantees of protection, are regarded by Englishmen, by Americans, and by all other free peoples, as absolutely indispensable in their own

cases. Why did not Great Britain grant such protection to India?

What are the facts bearing on the case? They are startling enough. Within the last few years reports have come from the most trustworthy sources, of brutalities committed by British officials against the Indian people, which have shocked the world—houses searched without proper warrant; men seized and imprisoned without trial; men and women peacefully working in the field bombed from the sky; all the inhabitants in a certain street in a city forbidden to go along the street even to get water or buy food except by their crawling on their hands and knees; a great peaceful gathering assembled in a public garden on a religious festival day, fired on without warning, by troops, and the firing continued until the ammunition of the soldiers was exhausted, and 379 dead and 1,200 wounded men, women and children lay heaped on the bloody ground;* prisoners confined in a luggage van without ventilation, and in spite of their frantic cries for air kept there until more than 70 were dead; and many other brutalities and crimes almost as shocking.

If the new Government Scheme for India was to be of any value at all, ought it not to have guaranteed the people against such outrages in the future? Yet incredible, almost monstrous, as the fact seems, it did not.

The fact alone that the military forces of the country and the police were both wholly under British control—neither being responsible in any degree to the Indian people—made the recurrence of injustices and atrocities as bad as any of these, possible at any future time. The Scheme gave no guaranty whatever against the coming at any time of other Governor O'Dwyers, and General Dyers, and Jallianwala Baghs, and Moplah suffocations, and the rest. It

* The Hunter Committee appointed to investigate the Punjab atrocities reported the number killed in the Amritsar (Jallianwala Bagh) massacre as 379, and the number wounded as about three times as many. These numbers, however, are very much the lowest given by any authority. The investigation Commission appointed by the authorities of the Indian National Congress, whose researches were far more thorough, reported that they found unimpeachable evidence that the number shot to death was approximately 1,200 and the number wounded approximately 3,600.

provided protection for the British rulers of the land, but for nobody else. It did not guarantee to the Indian people public protection, or military protection, or civil protection; it did not insure to them freedom of speech, or of the press; or the right of trial in open court; or the privilege of *habeas corpus* or any other of the essential rights and privileges which are the foundations and indispensable guarantees of liberty, justice and law. Is it any wonder that India rejected the Scheme? Is it not amazing that any nation calling itself civilized and Christian, in this age of the world, could have proposed such a Scheme?

(4) In the so-called "Reform Plan" offered to India in 1919, the British kept in their own hands not only all other kinds of power, but also all real legislative power. India was allowed no effective voice whatever in legislation. This statement applies to legislation in the Provinces, and it applies still more fully and seriously to national legislation. It is true that the Scheme gave to India both national legislative bodies and provincial legislative bodies, which looked like real parliaments, endowed with power to enact real laws. But on looking deeper, it was soon seen that this appearance was deceptive. They were not real parliaments or real legislatures at all as these words are understood in Europe and America. They were all under external control. Whatever they did could be overthrown.

In the national government, the Reform Scheme allowed Indians to hold a few more places than they formerly did. For example, in the National Legislative Assembly there were an increased number of Indians, enough to guard India's rights if they had possessed any real power. But they did not. As has been said, they were allowed to vote on some things, but not on all; on some they were not permitted even to speak. Matters were so arranged that in no case could they disturb the plans of the Government. Whatever legislation the British rulers desired, they enacted, whether the Indians favored it or not.

In the Provinces, the situation was similar. Each Provincial Legislative Assembly contained a majority of Indians, but here again they could legislate only upon such matters as the British rulers permitted; and even regarding these they had no final power; whatever laws they enacted could be overthrown by the Governor in Council, or by

the Governor-General in Council, or both. Even if a legislature voted unanimously for a measure, the Government might disallow it.

Is it said that even in democratic America the enactments of State Legislatures may be vetoed by Governors, and those of the National Congress, by Presidents? Yes, but these vetoes are not final. An American State Legislature can pass anything it desires over the Governor's veto, and the American National Congress can pass anything it pleases over the veto of the President. In India nothing of this kind is possible. There, all final legislative authority, all real legislative power, whether national or provincial, is in the hands of the executive. Notwithstanding the increased number of so-called legislators under the new Government Scheme, the British are still, just as before, the supreme, and really the sole, law-makers.

Of course, the fact that the dyarchal plan granted to members of legislatures considerable liberty of discussion, was not without value. It gave to the British overlords a better knowledge than they would otherwise have had of the feelings and wants of the people, and thus to some extent it may have influenced legislation for the better. And yet, one cannot help wondering how much. A prominent member of the British Indian Government said to an American: "Oh yes! we listen to these Indian fellows, these natives, in our legislatures—to their talk, their discussions, their pleas for this and that, their demands for what they call their 'rights'—for 'home-rule' and the rest—we listen to them, they like it, and then—we do as we damned please!"

This is a cynical declaration; but it describes exactly the amount of power possessed by the people of India under Dyarchy as regards enacting legislation on all subjects of highest importance, and in shaping all the really vital affairs of their own nation.*

* It may be claimed that the Dyarchal Scheme placed some vital matters, for example, education and public sanitation in the hands of Indians, and hence, if any failures were found there the responsibility was with them. The claim is superficial. The truth is the public revenue of the nation remained under dyarchy where it had always been, in the sole control of the British, who always use first of all as much of it as they want for their own military and imperialistic purposes and for other British interests

The fact is, the Government of India continued just as autocratic and absolute after the introduction of the new plan of things as it was before. The power of "Certification" given to the Viceroy made him virtually an absolute monarch, and placed all the Indian legislatures and all India virtually under his feet. It enabled him to defeat any legislation that he did not like by "certifying" that it was against the safety or interests of India (meaning the British Empire), and to enact any law desired by him by "certifying" that it was necessary for the interests or safety of India (the British Empire). As for the apparent check placed upon his 'certifications' by the provision that they must lie two months before the British Parliament, before becoming operative, everybody knew from the beginning that that was meant only as a form.

The helplessness of the Indian legislatures under Dyarchy has been described in emphatic words by an eminent Englishman. In the winter of 1925-26, Dr. V. H. Rutherford, a member of Parliament and a prominent leader in the Labour Party, made an extended visit to India for the purpose of examining on the ground the working of the "Reforms."

The *Amrita Bazar Patrika* of Calcutta, in its issue of February 2nd, 1926, published an interview with Dr. Rutherford, who is reported to have said :

* * *

"At Madras, Lahore and elsewhere in the Provinces, I have seen in action the Legislative Councils and Assemblies created by the Reform Scheme. My disappointment on account of the feeble powers which Great Britain has conferred upon them is boundless, as also is my indignation. My greatest disappointment and indignation, however, have been reserved for Delhi, the Capital, and the National Government there. The National Legislature is supposed to be the crowning piece of the anatomy of the Montagu-Chelmsford Reforms; and on close inspection I have found it to be a mere make-believe, a mere pretence, mockery. A legislative body in name but without power to form a government, or to displace a government in which it has no confidence, without power to appoint or dismiss ministers; without power of purse; without power to shift

a nail or screw in the "steel frame" of bureaucratic control set up by the British; without the least shred or iota of control over the Viceroy, who can defy and damn at his pleasure all the representatives of the people, and who has, in fact, defied them again and again, 'certifying' the Finance Bill over their heads, locking up thousands of them in prison in disregard of all law, and doing whatever else he liked. Never in the history of the world was such a hoax perpetrated upon a great people as England perpetrated upon India, when in return for India's invaluable service during the war, she gave to the Indian nation such a discreditable, disgraceful, undemocratic, tyrannical constitution. No political party in Great Britain would tolerate these iniquitous semblances of parliamentary institutions for a single week."

Let it be borne in mind that these strong words were not spoken by an Indian, but by a Member of the British Parliament. In the light of such statements coming from such a source, is it any wonder that India indignantly rejects the so-called "boon" of Dyarchy, as worthless and worse than worthless, and demands instead something incomparably better?

(5) A very prominent and evil feature of the Dyarchy Scheme which should not go unmentioned, is the fact that its whole spirit was one of negations, negations. From first to last, its constant aim was to forbid, to forbid. Its most outstanding characteristic was its careful, specific and multiplied specifications and descriptions of privileges, rights, liberties and powers which the Indian people *were not permitted to have*. At every point where the Indian people came upon anything of first class importance, anything that would give any real power to India, there at once they were met with "reservations," "reservations." And the reservations were always in the interest of *England, never of India*. Even the "transferred" subjects "had strings to them." The great thing that the scheme constantly guarded against, was not India's danger, the danger that India might fail to get her rights, but the imagined danger that at some point or other England might suffer some loss of prestige, or privilege, or power. The scheme gave no evidence of being something prompted in any degree by a desire to right India's age-long and terrible wrongs; indeed, it contained no real recognition of the existence, then or in the past, of any such wrongs. Everything in it and about it showed that it was simply an effort on the part of Great Britain to *retain her grip on India at a trying time*. The scheme was an unintentional but clear acknowledgment

(paying the high salaries and pensions of British officials, etc.), and Indian interests, however vital, whether education and sanitation or others, have to put up with what they can get from the small remainder. This is the prime reason why education makes so little progress and public sanitation and hygiene are so neglected.

that a great new spirit of freedom and independence had come into the world, and that India was feeling it mightily. This alarmed England. She saw that the Indian people were thinking, were rising from their knees to their feet, were becoming indignant at being held in subjection, were feeling humiliated and outraged beyond measure by the fact that they, who for so many centuries had been a great nation among the nations of the world, were now not thought of as a nation at all, but were regarded as a mere appendage, a mere possession of a nation six or seven thousand miles away.

It was distinctly with this in view, and because of this, that the new Government Scheme was offered to India. The Scheme was England's attempt to counteract all this, to quiet the unrest of the Indian people, to allay their humiliation, to soothe their wounded pride, to administer to them an opiate, to induce them to lay aside their dangerous ambition and be willing to continue loyal still to Great Britain, by offering them something which they were told was a great boon, something which England assured them meant increasing freedom, more and more privileges, more and more participation in the Government, an advance, with more and more advances to follow, on the road leading toward self-rule.

But alas! these promises, when examined, when really looked into, when probed to the bottom, when tested, were seen to mean nothing of value to India. Their real purpose was not at all India's advancement, but her pacification, and England's security. They offered India no boon whatever. They merely promised her a pot of gold at the end of a rainbow.

(6) This brings me to a final indictment which remains to be made against Great Britain's new Government Scheme for India. The Scheme fixed no time. It left everything uncertain. Whatever promises it made, or was supposed to make, of new rights or privileges, or of advances toward self-rule, were only to be fulfilled "some time," in an unknown future, and at the option of the British rulers.

This was fatal. It made the promises absolutely worthless. It is well-understood in law that if I give a man a note promising to pay him a sum of money, but without mentioning any time, my note is of no value. Nobody can collect anything on it. Or if I make my note payable at such a time in

the future as I may then elect, still it is valueless. My promise to pay must state when the payment is due, in order to be of any worth. It is exactly the same with the supposed promise made in this Reform Scheme of future self-government to India. There was no date fixed. The fulfilment could be put off and put off until the end of time. It was no promise at all.

The fact is not to be escaped, that Great Britain did not in her so-called Reform Scheme, pledge to the Indian people anything whatever except that if they would cease their (to her) disagreeable agitations for reforms, freedom, self-government, and be dumb and docile, and do what she commanded (like good children, or rather, like slaves) and caused her no trouble, she would be kind and motherly to them, and at such time or times in the future as, in her superior wisdom, she might see fit, she might perhaps condescend graciously to grant them such hunted new liberties as she might then consider safe, and such gradual advances towards some very far-off goal of self-government (Dominion status or some other) as she might then deem it best for them to receive.

To put the case in a word, this Scheme which has been heralded abroad and praised as offering so much to India, and as setting her feet securely on the road to self rule, particularly to Dominion status like that of Canada, as a matter of fact gave her no assurance of being granted such a status, or any form of self-determination in a thousand years.

Can a great nation, with a proud history of three or four milleniums, be satisfied with such mockery? Said the great and honored American, Patrick Henry, "Give me liberty, or give me death." Said the great and honored Indian, Raja Ram Mohun Roy, "I want to be free, or "I do not want to be at all."

In conclusion what are the lessons that Great Britain should learn from India's rejection of Dyarchy? There are two which are clear as the light, if she will open her eyes to them.

One is that India refuses longer to accept stones for bread. She is fast waking up. All her leaders are awake now, and her people are fast following. She sees the world becoming free; she sees Asia becoming free. Under such conditions she can no more be held in bondage than the rising tide of the ocean can be stayed.

The other reason is that if Britain persists in further treatment of India in the high-handed spirit of the dyarchy Scheme, if she attempts to force upon the Indian people another constitution as autocratic, as tyrannical, as defiant of their wishes and rights as the dyarchy Scheme was, she must be prepared for disaster,—the result certainly will be, acute, growing and probably permanent bitterness and resentment toward Britain on the part of India, and alienation between the two nations so deep that it probably cannot be healed. Why does not Great Britain recognize all this?

Indeed, why was she not wise enough, brave enough, and noble enough at the close of the Great War in Europe, even if not earlier than that, to extend to India the same warm, strong hand of friendship, confidence, trust, comradeship, co-operation and real partnership in the Empire, which at the end of the Boer War she extended to South Africa? That would have saved everything in India, as it did in South Africa.

Will she do it yet? Will she do it before it is too late?

A SONG OF FIDELITY

By SAROJINI NAIDU

I

Love o'er the rose-white alleys
That flower in dim desert sands,
Love thro' the rose-red valleys
That burgeon in soft south lands,
In cities aglow with pleasure
On the edge of a foam-kiss'd cline,
Or mountains whose still caves treasure
The temples of moon-crowned time,

On errands of joy of duty.
Wherever the ways, you tread,
A carpet of ageless beauty,
Is my heart for your feet out-spread

II

Love whether Life betray you
And the malice of black-winged Fate
Strive in blind wrath to slay you
With talons of fear and hate,
Or whether yours the story
Of triumph and loneliest fame,
And the stars inscribe your glory
In lyric and legend of flame,

By the chance winds that break or bless you
Unchallenged, my soul doth shine,
O King, who dare dispossess you
Of your fortress and throne and shrine. ?

THE GARDEN CREEPER

By SAMYUKTA DEVI

(3)

THERE was a garden, behind Shiveswar's house in Bhowanipore. The gold-mohur trees in it were in flower, and presented a blaze of colour to the beholders' eyes. The Oriya gardener was busy plucking the red bunches with the help of a bamboo, and placing them in a basket. A little girl of about seven or eight was swinging, with evident enjoyment, in a swing suspended from a mango-tree. Her anklets tinkled and the end of her striped *saree*, floated behind her like a veil. Her mop of unruly hair was giving her much trouble. Her two hands were engaged with the ropes of the swing. If she let go, she would fall, but the hair lashing across her eyes made her highly nervous. Suddenly, a bright idea seemed to strike her and she cried out excitedly, "Mali *, oh Mali, please give me the strings in your basket."

The Oriya flung down the bamboo, and baring his reddish teeth, asked with a laugh, "What do you want it for, little miss ?"

The small lady took offence, and cried out sharply : "First bring them. I have no time to listen to your babblings."

The man made a pretence of being highly dismayed and brought two pieces of string. "Tie me to the swing with one," directed his little mistress, "and with the second one, tie up my hair in a tight knot."

The Oriya was bursting with silent laughter. "But won't grandmother scold me ?" he managed to ask ; "why do you say such things ?"

The little woman tried to be very grave and stern. "Do what I say," she said. "If grandma is angry, she will scold me, not you. So you need not be afraid."

The gardener had to obey perforce. He made fast the small lady to the swing with the first string, and with the second one, tied up her unruly curly hair in a tight and cruel knot. She was highly pleased, "I will give you sweets," she declared to

her obedient servant ; "now give me a good swing."

The man obeyed with alacrity and gave the swing a mighty push. It shot up like a rocket and touched the topmost branch of the tree. The mango-blossoms fell in a shower on and about the child and the small branches struck her like so many whips. Her face paled with fear and she sobbed out aloud in alarm, "Oh dear, oh dear, this rascal of a Mali is killing me."

The man was alarmed, lest the cry should reach the real mistress and catching hold of the swing, he made it stop and took down the child from it.

But he was just a bit too late. A widowed lady, of about fifty years of age, rushed out of the house and called out sternly, "Mukta, you naughty thing ! So you are out in this blazing sun ! What a tom-boy you are, to be sure. Did not any other time suit you ? You must come out in the full noon. Come here, at once. And Mali, what sort of a man are you ? She is a child and thoughtless. But you are not in your dotage yet. Why did you put her in a swing, in this terrible heat ? And why did she get frightened ? If she falls ill of fright ?"

The Oriya gave some sort of a lame excuse, and escaped. Mukti came and stood by her grand-mother, with a sullen expression. The state of her hair made the old lady nearly faint.

"You naughty girl," she cried again, "you make me run nearly a mile every day, before I can touch your hair and comb it. And now what have you been doing to it ? Does it not look like a crow's nest ? And you have put on a tiara of coir string ? What a beauty ! The Governor is coming down to take you away, as his son's bride ! Throw the string away, at once. I never saw the like of it ! It will take me the rest of the day to put you to rights again."

Mokshada Devi, Shiveswar's mother, had to come out of her retirement, when her daughter-in-law died, leaving her baby girl behind. Mokshada gave up her

* Gardener.

country house and her worship of the family-god and came over to Calcutta to look after her son's household and his baby. Though he was a heretic, still he was her own son. She could not leave his child to the tender mercies of the be-skirted Ayah. Her son had already become an ascetic at this age. So there was small chance of his bringing a second wife home. Even a step-mother, if she happened to be of good family, would not have neglected such a sweet baby. But who can withstand fate? So Mukti's grandmother had to take the place of her mother. Mukti called her "mother" generally and "grandma" very rarely.

Mukti was quite up-to-date regarding the prevailing female fashions. So she had a good laugh at her grand-mother's antiquated ideas and sat down to put her in the right. She pushed away the old lady's hand from her head and said, "You don't know anything, mother. Girls now-a-days don't tie up their hair in braided coils. And neither do they put oil in their hair. They tie up their hair with strings, as I did. Haven't you seen? Bela came day before yesterday. How nice her hair looked, tied with a red string! You don't give me any nice things; so I have to use these ugly strings."

"All right, all right, you wise old woman," her grandmother said. "I own that I don't know anything and you know everything. So you have taken a fancy to Bela and her Christian manners? Your father has spoilt you completely. I don't see why girls should wear red ribbons, bows and belts, like the *durcans* of the Judge Sahib. These are now-fangled ideas. In our times, girls put oil in their hair and put them up decently. But if I want to do that for her, she will rend the very heavens with her shrieks. And now look at the state of her hair! It is worse than that of a *Bharali*!"*

The old lady jerked the strings off her grand-daughter's hair and dress. Mukti gave her an angry push and sat down to sulk in a corner of the room.

She was a spoilt child, and her sulks used to last a long time as well as her crying spells. So her grandmother made haste to negotiate for peace. She took up the child in her arms, wiped her eyes and said, "Don't cry, there's a darling. Let us go and dress up. We shall go to Kartik Babu's house to see the new bride. I have put out

many Benarasi *sarees* and ornaments. You choose whatever you like to wear. Hurry up, as we shall be late."

Mukti rubbed off her tears with the back of her doubled up fists and broke into a smile, even before her tears had dried.

The house, which stood behind the garden, was in festive attire to-day. From the morning, the sounds of an Indian band had been proclaiming to the neighbourhood the advent of a bride in it. All the children of the quarter had congregated there to listen to this music and to stare at the puffed out cheeks of the flute-players. The small folks were richly dressed, some in sailor suits and gold-braided caps, some in frocks of velvet and loud tinkling anklets. Some also had befeathered caps stuck on their coils of braided hair. They had given up all thoughts of food and drink, in their enthusiasm for the music. Some babies also were present in total or partial undress, whom their elders had dragged off to the place of entertainment, even before they had finished their toilette.

Mukti had hitherto paid scant attention to the music, being too much engrossed in the flowers of the gold-mohur and the suring. But as her grandmother reminded her of it, her mind felt the call of the music; and like a most obedient little girl, she washed her face and sat down to make her choice of the gaudy *sarees* and glittering jewellery, her grand-mother had borrowed for her.

Shiveswar did not want his child to dress in the orthodox fashion or to wear antiquated ornaments. He thought jewellery ridiculous for small children. But Mukti sided with her grandmother in this matter. As she had no jewellery of her own, her grandmother had to borrow from the neighbours, whenever an occasion presented itself.

Mukti took the jewel case in her lap and selected two heavy anklets, a huge gold necklace, which hung in seven rows, a tiara and too large bracelets. Mokshada had pierced Mukti's ears, in secret, because her son hated all these barbarous practices, as he called them. But Mukti was too wild to allow the secret to be kept. Her ears soon became swollen and red and brought down the attention of Shiveswar upon them. The result was an angry dispute, which made mother and son go without food the whole day. But Mukti had forgotten the deep insult, received on the occasion, and chose a pair of

* Female *dhurabi*.

ear-rings as well, for her small ears. A jacket made of green velvet and profusely decorated with black lace, and a red Benarasi saree, which Mukti's mother had worn as a bride, completed her outfit.

Mokshada set herself to the ponderous task of decorating her grand-daughter. She brought a bottle of scented hair oil, two or three combs, hair-pins of various colour, make and design, some false hair and even some nails. Mukti did not object to anything now. She had already put on the gold necklace, and was busily scanning her face in the round mirror, which used to stand on her father's dressing table. Her head was pulled back frequently, as her grandmother *strove to comb her knotted hair smooth*, and she held up the mirror higher and higher in order to have an uninterrupted view of her face. She had fallen in love with it, like Narcissus of old.

Mukti's grandmother oiled her curly hair profusely and combed them straight. Then she plaited them into separate braids, with the help of the false hair and constructed a huge affair on the back of Mukti's small head. It looked like a large pancake, and was so made fast to her head with innumerable hair-pins and nails that it would not have come down even if her head had. It was the first time within the year, that Mukti had sat so docile, under her grandmother's hand, while the old lady did her hair. But the matter did not give the small lady unmixed satisfaction. She bore it somehow, being too eager to put on the tiara and ear-rings.

After finishing with her hair, the old lady sent for a maid-servant. She came up and cried out, enchanted at the sight of Mukti's hair. "Oh dear, has not little miss done her hair in grand style! How beautiful she looks! Girls do not look well, when their hair looks like crow's nests."

But the old lady cut her short. "Go, go, wash her neck and face properly. We don't want your gassing now."

Mukti went willingly enough with the maid. Mokshada sat, cleaning the combs and thinking, when suddenly her son entered.

"What are you thinking of, mother?" he asked. "About Mukti, I suppose. She is getting quite big. Don't you think it high time to engage a private tutor for her?"

Mokshada agreed to her son's proposal and said, "Yes, she is getting big. We must

think about her now. If you want to engage a private tutor, do so. I don't know much about these matters. I was thinking of another matter. Do you remember, I spoke to you about a daughter of Nidhu Bhattacharya? The girl is quite grown-up now. She must be quite fourteen by this month. She had been married to Bishnu, Kartik Babu's son. A very fine girl! Only a fortunate man gets such a jewel of a wife. But you never listened to me. Now see. Bishnu is no younger than you, he is considerably older. He was six years of age and got admitted into school, and you were not even born then. He has already got four sons, too. Now, if he could marry the girl, why could not you? You thought *yourself extremely old and unsuitable, being the father of one child*. You said, you could not marry a cry-baby. Now go and see, whether she is crying or not. She is more likely to take over complete charge of her household from to-day, and pension off her old mother-in-law."

Shiveswar was rather taken aback, at this sudden attack. "But what is the use of talking about that now," he said; "you won't get her now, even if I agree to marry again."

"Why don't you say so?" cried out his mother, even before he had finished. "I promise to get a bride for you, who would be twice as beautiful and quite grown-up. Just say the word and leave the rest to me. Bishnu's bride won't be fit to hold a candle to her."

Shiveswar jumped up in alarm, saying, "No, no, I did not mean that. I am not pining away for marriage. I want to know, what you are thinking about Mukti."

His mother sighed and said, "Then why did you hold out false hopes to your old mother? It was foolish of me to believe you at all. Don't I know quite well, that you are not one to obey your mother and to marry according to her wishes?"

Shiveswar was in a fix. "Good lord," he cried, "there you go again. I want to talk about Mukti. What do you think would be best for her?"

His mother flared up at once, "I don't know and I don't care," she said angrily. "Do whatever you like." Then, as suddenly, she calmed down.

"You have heard, have not you, that Kartik Babu is celebrating the home-coming of the bride. Many people are invited. They are arranging a good feast. Bishnu's

eldest son, by his first wife, is an extremely intelligent boy. He is only fifteen, but has nearly completed his school course. Only a month ago, he was sent up into a new class. Two years hence, he is going to appear at a great examination and join a college. The boy is good-looking, too. So what I say is this. Let me take Mukti to the feast. She may find favour in their eyes; she is pretty enough. Then we shall be sure of a very good match."

Shiveswar lost his temper completely. He jumped up from his seat, crying, "Certainly not I won't allow my daughter to go about like a sample of merchandise. Good match indeed! The boy is already fifteen and still at school! And it is going to take two more years for him to get into college. Very brilliant! Many such boys would fall at the feet of my daughter yet. Mukti is but a baby now. Don't put such horrid ideas into her head now, or you will spoil her future completely. It would be very hard to educate her then."

"Oh indeed!" said his mother. "The girl has passed eight already. Now you want to educate her, leaving the all important question shelved. Then when she has become an old maid and completely Anglicised, you will think about her marriage. But no good orthodox Brahmin boy would touch such a girl then."

"Much I care," said Shiveswar, still in a temper, "Even if they solicit me on their bended knees, I won't give my daughter to a Brahmin boy."

"What frightful nonsense are you talking?" cried out his mother in alarm.

Just at this moment Mukti entered, accompanied by the maid-servant. She was dressed in her rainbow-coloured garments and completely covered with heavy jewelry. These glittered and tinkled as the child walked. Her dress could have accommodated two other girls like her very easily.

The sight of Mukti, enraged her father still more. He got up from the bed on which he had been sitting and cried out, "What have you been doing, mother? Shame, shame, just look at the child's appearance! A good training she is getting. Even a maid-servant would have done better by her. What have you been doing with her hair? They seem about to be rooted

up, off her head. And what's the use of exposing her forehead like this?"

His mother was almost in tears by this time. "I know, I know," she said, "even the low caste Ayahs are better to you than your mother. You are flesh of my flesh, that's why I keep on hanging to you, leaving my own hearth and home. But I shall go home this very day. Engage one of those skirt-wearing brazen females, you are so fond of."

Shiveswar scented danger ahead. So he climbed down a bit and said, "You know, mother, how my temper runs away with me. You need not take my ravings to be gospel truth. The child would certainly have died, unless you had taken care of her. Who else could have managed a baby, barely a week old? But to tell you the truth, mother, she will get completely spoilt if she remains at home, and you indulge all her absurd whims. Even a private tutor would not help much. I shall put her into a boarding school. To-morrow is Monday, I shall take her then."

This sentence of banishment was too much for Mukti. She flung herself down, dressed as she was, on her grandmother's lap, and began to sob loudly. She would not stop, but went on crying and shrieking "I won't go to school, I won't. I won't leave mother, I shall stay with her."

Tears ran down her face, and stained her silk clothes. "What can I do, my dear?" said her grandmother, trying to comfort her. "Your father thinks I am ruining your future. You won't get a proper training, if you stay here. He wants you to become a Mem Sahib I am an old-fashioned, ignorant woman, I know none of the modern ways and manners." Mokshada took up Mukti in her arms and her jewels fell down in a shower at her feet. But the child was too much upset to care about these. She buried her face in her grandmother's shoulder and went on sobbing.

Tears started even to Shiveswar's eyes. Poor little, motherless child! She knew no other mother than this one; how could he tear her away from these loving arms?

But all the while he felt that he was right. If he left the child with his mother much longer, she would get quite impossible. He would not be able to train her and educate her as he wanted to. So he must put her away, though

it would be a fearful wrench for himself, too.

Shiveswar went out of the room and called his bearer, Krishna. "Call a *gharri* at once," he said. "I am going to the New Market. My carriage has not been brought home from the workshop yet. Look up those people and tell them to hurry. To-morrow I am going to take little miss to school, and I want the carriage for that."

His mother heard every word from her room where she was sitting with Mukti. Tears began to drop from her eyes and fall on Mukti's head, but she wiped them away in a hurry, lest evil befall her granddaughter. But she could not reconcile herself in any way to the fact that Mukti, the baby, whom she had reared up from almost the time of her birth, was to be taken away from her. When her husband died, she had given up the world in her grief and taken the stone image of her god to be her all. But a child had drawn her away from the god and cast such a net round her heart, that she found it impossible to liberate herself.

Mukti had thrown off her silk dress, her jewels, her hair pins and flowers in anger and had now sobbed herself to sleep in her grandmother's arms. The music from the house, next door, sounded louder and louder. The sound of laughter and talking could be heard from here. But the inmates of this house were too heavy of heart to pay any attention to these sounds. Mokshada had forgotten all about Bisnu's beautiful bride and his over-intelligent son. She could only think of Mukti's banishment. Poor little motherless thing! Perhaps she will make herself sick with crying, falling into the clutches of those horrible masculine schoolmistresses.

Mukti was dreaming then. She thought, she saw her father watching away her jewels and she ran off to her grandmother.

All this time, Shiveswar was going the round of the New Market shops, with a coolie following close behind. From every shop, shouts greeted him as he passed, "Come on, sir, very good essence." "Here you are sir, fine silk stockings." "We sell the finest stuff, come in and see for yourself."

Shiveswar was in no mood to listen to them. Any other day, he would have accepted the offers of many of them and would have purchased a lot of unnecessary things. But to-day he went on towards his favourite shop, disregarding all these

greetings and calls. One of the disappointed shopmen, laughed derisively, saying, "Is not he a big Sahib? I don't think he is worth more than three pice and dines off shrimp cutlets. He could not afford to come into our shop."

The coolie, who followed Shiveswar, soon had his huge basket filled to overflowing. Shiveswar had finished for the day, and drove off with his numerous purchases, all wrapt in brown paper. These bundles contained ready-made silk frocks, lace, stockings, embroidered handkerchiefs, many-coloured ribbons, white and pink toilette powder, high-heeled boots and beelless slippers, pinafores, school bags, biscuits, chocolates and many other dainty edibles which small ladies favour. The sobbing of his child still rang in his ears. How should he live without her? She was the single tie which bound him to the world. If she were gone, the house would become quite desolate. Still duty was duty.

Shiveswar got down from his carriage and entered his mother's room. She was lying down, with Mukti by her side. The servants came and went before her door, but went away without receiving any orders; they dared not ask her anything. As Shiveswar came in, his mother sat up, putting down the sleeping child, whom she had kept in her arms all this while.

"I bought all these for Mukti," Shiveswar said. "I shall take her to school to-morrow. I shall bring her home every Friday for the week end. So you need not be too sad about it."

Mokshada did not say anything. After all, Mukti was his child, and he had a perfect right to do whatever he wished with her. Who was she to interfere? Shiveswar saw that she was in no mood for a talk, so he left her room and retired for the night.

All the three members of the family slept badly that night. They dreamed all night of separation and started in their sleep. Festive sounds from next door broke in again and again upon their sleep.

(4)

Shiveswar woke up even before the rosy light of the dawn had entered his room through the window. His sense of duty was weighing on his heart like a load of stone, and he could not shake off this feeling of

oppression. The memory of the day his wife died came continually to his mind. The week-old baby had been his only solace then, she had saved him from complete hopelessness. He could not weep then, because of the baby. But now that he was sending her away, his eyes filled again and again with tears. If Hemnalini had been alive, her child would not have been banished like this.

Both Mukti and her grandmother had got up very early too. The old lady was still in a temper with her son and determined to have nothing to do with his child. So she had entered the store room as soon as she had got up and refused to come out of it on any pretext. She had not even given Mukti her breakfast of a large bowl of milk but had ordered the cook to do it for her. Mukti had as much objection to taking her milk as she had to having her hair combed. She would not come before her grandmother in the morning if she could help it. She knew that there was very little chance of her escaping grandma's clutches, without taking that huge bowlful of milk. The old lady would coax, cajole and scold, she would tell entrancing fairy stories, and Mukti would suddenly find that she had swallowed the milk, together with the tale.

But to-day Mukti did not feel any of the joys of deliverance, from this cruel oppression of her grandmother. Grandma had left her in the bed without calling her. Mukti had lain awake for a long time. She resolved that she would not answer at all, when her grandmother came to call her. She would remain with eyes closed, no matter how much grandmother called her. But the sun rose higher and higher in the heavens, the room filled with light, still no grandma. Instead of her one of the maid-servants came and told her to get up. Mukti threw a pillow at her, and turned round with a bolster clasped tightly in her arms.

the air, and began to lap up the milk with evident satisfaction. But Mukti's grandma had steeled her heart to-day. The sound of the bowl falling and the entrance of the cook with loud complaints failed to move her at all. She went on cutting up vegetables with the same stern face. The maid-servant, Moti, ran to her a bit officiously, and asked, "Shall I go and buy some sweet-meats for the little miss?"

"Go and ask your master," replied the old lady.

This seemed such an awful innovation to the maid-servant, that she went away, silenced very effectively.

But Mukti's loud grief was not a complete failure. Shiveswar was probably coming this way; the uproar in Mukti's room brought him all the sooner. Mukti was still sobbing. Shiveswar came up to the bed and took her up in his arms. "What has happened to my little mother?" he asked.

It was a difficult question, and Mukti had no answer ready. So she remained silent, with her face buried in her father's shoulder. Shiveswar understood well enough what the matter was. "Let us go and see the things, I bought for you yesterday," he said. Mukti's head came out of its cover at once.

The things were still reposing in their brown paper covers in Shiveswar's room. But as soon as their small owner appeared, they were dragged down, their wrappings torn off, and scattered all over the floor. Good heavens, what an amazing heap of treasures! The little woman forgot all her sorrows and complaints in an instant. What beautiful frocks of various colours, what wonderful little shoes! The ribbon took her fancy most of all. What a beautiful string! It was better and brighter than the string Bela had. She wound it round her head at once, in the shape of a turban. Her father took it off, hastily, saying, "Not that way, darling. First wash and comb your hair clean, then tie them with it. If you put it on now, the oil in your hair will spoil it."

Mukti was ready to wash her hair there and then. She did not want any delay, she wanted to get dressed at once in her new things. The bearer went and called the maid-servant, who acted as lady's maid to the small lady. With her mouth full of chocolates Mukti went to her bath. She felt very independent of her grandma now. She did not care if grandma did not

give her her bath. She would bathe herself, she would. She would not show grandma any of her new things.

After she had been bathed and dried, Mukti ran to her father's room again. She found him sitting silent amidst all the finery that strewed the floor. A servant was busy, picking and folding those wonderful garments and putting them inside a very big box. Their carriage was waiting outside, it had just come from the workshop.

Mukti frisked inside, like a gust of the playful south wind, and asked, "Where are we going father? Shall we go in the carriage? But we won't take mother, she is very naughty."

"I shall take you to the school, darling," replied her father.

That dreadful name again! All at once, her eyes filled with tears, her red lips pouted and a sob was about to break out. Shiveswar took her up in her arms and said, "Don't, there's a darling. You will learn to read and write there. Did not you see that day, how nicely Bela read from an English book and you could not do it? If you go to school, you will learn to read more nicely than Bela. I shall go to see you everyday, and bring you home every Friday, for the week end. If you are good, I shall buy you lots of dolls and toys and everything you ask for."

Mukti had perforce to take comfort. The bribe offered was too great. So she sat down to superintend the packing.

It was time to go. According to her father's request, Mukti went and had her breakfast. Then began the onerous task of dressing herself. Father and daughter were in a fix now. Their combined efforts at last achieved something, which could by no means be called artistic. But Mukti was quite satisfied, she had got the much-coveted red ribbon in her hair.

"Come darling," said Shiveswar, "and say good-bye to grandma."

Both went inside the store-room, and found Mokshada still busy with her duties there. Mukti threw herself upon her, crying, "Mother, I am going to see a school!"

Grandma pushed her off hastily, saying "Goodness, so you must come and throw yourself upon me, with your shoes and stockings on?"

Shiveswar's face grew stern. He drew away Mukti and strode out of the room. As they went out, the old lady ran into her

room and locked the door. Then she threw herself down on the floor and began to weep.

The carriage containing Mukti and father, drove out. The carriage went on and on and Mukti poked her father every now and then, asking, "How far is the school yet, father?"

"We are quite close to it," Shiveswar would answer.

At last, when Mukti had already begun to nod with drowsiness, the carriage drove up in front of a big building, with very big round pillars, and came to a standstill. Shiveswar got out and took down Mukti. A *durwan* came and showed them into a small room Mukti was a bit surprised and asked, "Why father, where are the other little girls?"

Before her father could answer, a lady drew aside the curtain and entered. Mukti felt her heart sinking as she gazed with dismay at the enormous lady and her spectacled face. The lady saluted her father courteously and sat down in the chair facing him. They began to talk. Mukti stared at them with open mouth. What kind of a talk was this? She could not understand a word of it.

Suddenly the lady looked at her and asked, "What's your name, baby?"

Mukti edged closer to her father and answered timidly, "Mukti".

They all stood up and Shiveswar walked out of the room Mukti ran to him and clasped one of his hands, saying, "Father, let's go home."

"You won't go home now, darling," Shiveswar said, "you will live here. After four or five days, I shall take you home. I am going now, you go and play with the other little girls."

Shiveswar advanced towards his carriage and the teacher drew Mukti towards herself. Mukti had not felt up to now the awfulness of her banishment. But as soon as she saw her father getting into his carriage, she cried out loudly, "Take me with you, father, I won't stay here."

"Drive, quick," ordered Shiveswar to the coachman. Tears were trickling down his face. The coachman whipped up his horses and the carriage was out of sight in a moment.

Mukti was still sobbing. She had not noticed that a large bell had just rung. Suddenly, she saw a crowd of girls coming out of the rooms on all sides. There were

quite big girls, girls only a bit older than herself and girls, as small as herself; some were wearing saris, some were wearing frocks. Some wore lots of ornaments, some had no other finery on than a ribbon in the hair. But most of them avoided these two extremes, and tried a middle course. They had rings in their ears and noses, which were quite orthodox, but had paid a tribute to modernism in adopting stockings and shoes and even ribbons, which looked incongruous on their well-oiled locks.

Some of the girls had tiffin boxes of aluminium in their hands and some carried round boxes of tin, in which they had stuffed their food. These girls took shelter under the stairs, or behind the large folding door and began to eat. Those who took no tiffin, began playing and shouting in the large quadrangular space, which occupied the middle of the building.

Two girls took hold of a big rope by its two ends and began whirling it round and round swiftly. Four or five girls jumped to and fro over the rope, keeping up a sort of rhythm. What sort of a play was this? Mukti's tears dried up in amusement. In the meanwhile, the teacher, who had received Mukti, called a dark and slender girl, and handed over Mukti to her.

"Keep her with you now, Molina," she said. "But after the tiffin hour is over, go and put her in the gallery class. Tell Miss Nag that I sent her." Molina took Mukti by the hand, and led her around. Mukti began to feel more at ease, with this gentlemanly girl. She seemed like one's own people. She clasped Molina's hand confidently and walked along by her side.

"Will you play with these girls?" asked Molina. Mukti shook her small head vigorously.

She was walking in the garden with Molina and picking flowers, when another bell rang. All the girls left off playing and eating and ran inside the class rooms. Molina took Mukti inside one of these rooms. This room contained something like a huge wooden staircase, and many girls were sitting on the stairs. A big woman sat in a chair, in front of the staircase.

Molina whispered something to this lady, and left after placing Mukti on one of those stairs. The little girls around her giggled and whispered. Mukti felt like crying again. She did not understand why Molina had left her with these cruel little girls.

How long she sat there, she had no idea. At last a bell rang loudly and all the little girls ran out, taking their books and slates with them. Molina came up to Mukti, and took her away.

Long carriages stood in the drive in front of the building. The girls began to get into these carriages. Mukti did not know how many girls got into each carriage. She had never seen so many girls together. She tried but failed to count them. Molina took her away from the place after a time.

They came inside a big, long room. It contained huge wardrobes, and big mirrors mounted on chests of drawers. Mukti found here her own trunk, too. Molina opened it and took a new frock. She washed Mukti's face carefully, brushed her hair, then took her to another room. Many girls sat there in front of large tables, and ate from plates. Mukti was placed on a high stool, with her feet dangling in the air. She managed to finish her dinner in that position.

Then came playtime. Molina took Mukti to a large green lawn and said, "Now, play with the little girls." Mukti shook her head in violent dissent, saying, "No, I won't. They are naughty. They laughed at me. I shall stay with you. But what shall I call you?"

The big girl laughed and said, "Call me Molina-di."

Many girls had crowded around. A girl of about seventeen or eighteen suddenly picked up Mukti in her arms and said, "What a doll! We shall call you Dolly."

Mukti stared at her in amazement and said, "No, my name is Mukti."

The girl was very beautiful. She was extremely fair, had big eyes, blue as pieces of sapphire and pink cheeks. Mukti continued staring at her and asked at last, "How did you make your cheeks, so red?"

The girl laughed outright, saying, "Don't you know? Every night before going to bed, I put red ink on my cheeks. So they look red in the morning. I shall put red ink on your cheeks, too, to-night, and you will get lovely red cheeks in the morning."

Mukti was very much surprised. Molina slapped the other girl on the back, saying, "Go on, Susie. Don't tease the little thing like this."

Two or three smaller girls had also ventured near. They seemed eager to make friends with Mukti. One of them approached

* "di" is short for "didi", elder sister.

close to Mukti and whispered, "I have got a big waxen doll. Would you like to see it? It has a real silk dress on"

Mukti could not refrain from making friends now. After a while, Molina looked around to find them engrossed completely in the silk-clad doll. Mukti was talking now, quite glibly. Nobody would have believed now, that this very little girl had nearly rent the skies with her shrieks only two hours ago, when taken away from her father.

Shiveswar did not come to see Mukti that day. Perhaps the Lady Principal had forbidden him to do so. After a day or two he called. As soon as he had taken his seat in the small visitor's room, Mukti rushed in upon him like a little tornado. She threw herself into his arms and babbled on. The amazed Shiveswar found most of it incomprehensible, but understood so far that his daughter had got friends, Aparna, Sushila, Bimala and Krishnadasi by name, and most of them possessed wonderful treasures. One had a very beautiful ribbon, another had gold bracelets, some one else had got a superb dress of pure silk. Mukti wanted all these things—she must have them. Besides these things, she wanted a very big doll, dressed in real red silk.

Shiveswar had expected and feared Mukti to be pining away in her exile at the boarding-school. It was hard to tell whether he was relieved or disappointed at the real state of affairs. He ought to have been glad at her being so cheerful, but, strange to say, he felt a bit hurt at this.

He came again on Friday and took Mukti home. She sent grandma nearly wild with her description of the little girls at the boarding school, their beauty, their accomplishments and the wonderful treasures they possessed. She could hardly wait to get down from the carriage, but shouted at her, "Grandma," from the carriage, "do you know, Ma, Susie-di at the boarding-school, is far better-looking than Bela."

Next Monday, she had to return to the boarding-school. She made another row then. But Shiveswar had learnt diplomacy. He went and bought her all the things she coveted in her fellow boarders. Mukti got reconciled to her lot. What would be her life worth, if she could not show these treasures to Aparna, Bimala and others? So she clasped the brown paper parcels in her arms and got into the carriage which was to take her to the school.

(To be continued)

CAUSES OF THE SECOND AFGHAN WAR

By MAJOR B. D. BASU, I. M. S. (Retd)

III

IT was because the Russians fully believed in the feasibility of the programme, that the Governor-General of Russian Turkestan tried to contract an alliance with the Ameer of Afghanistan.

Nor can we blame the Ameer for receiving the Russian Mission. He was likened to "the earthen pipkin between two iron pots." One iron pot desired to crush him, the other iron pot had not as yet declared its intention one way or the other. Was it any wonder that the earthen pipkin should be anxious to know the intention of the Russian iron pot towards him? The English had

deserted the Ameer, had withdrawn their Agent from his Court. What else was he to do but try and see if Russia was willing to stretch the hand of friendship and protection to him? The esteem in which the Russians were held by the people of Afghanistan was not the same in which the English were. In Sher Ali's time no Englishman's life would have been worth a month's purchase in Cabul. The English had ravaged Afghanistan with fire and sword within the memory of the living generation. Many a man was still living who remembered how the English soldiers had brought desolation and r

his country. "Revenge is sweet" is an English saw; similarly the Italian proverb says, "Vengeance sleeps long but never dies." The Afghan code of honor demands blood for blood and an eye for an eye. Amongst the Afghans, one would be looked upon as lacking in manliness, if he did not avenge the murder or disgrace of any one of his relations or friends. Hence blood feuds are so common in Afghanistan. What the European newspapers report as "Ghazi outrages" is another name for and synonymous with blood feuds. The writer has travelled in Afghanistan and he has been assured by intelligent and well-informed Afghans that the victims of the Ghazi outrages are always and invariably English people. There are many Hindus living in the villages of Afghanistan, but they are never victims of fanatic Gazis. The Hindus are worse infidels in the eyes of devout Mahomedans than the English, who, as Christians, are one of the peoples of their Book, i.e., the Koran. Some relation or friend of the perpetrator of a Ghazi outrage must have been killed in action in one of the Afghan wars or frontier expeditions, by some English officer or soldier. Hence he has taken the vow of depriving some Englishman of his life and become a Ghazi. The administration of the Frontier Law is also accountable for the existence of many Gazis. Under that law many a Pathan has been hanged or transported or disgraced for life, without sufficient evidence. The assassination of Lord Mayo illustrates the mischievous effects of the administration of the Frontier Law and bringing into existence a number of Gazis.

While the people of Afghanistan were certainly hostile to the English, as admitted by Lord Northbrook, whose opinion on the subject of the despatch of an English Resident to the Court of Kabul has already been quoted, they had no reason to harbor hostile feelings against the Russians. Hence the members of the Russian Mission met with hospitality in every part of Afghanistan they passed through.

The Ameer did not invite the Russians to send any mission to him. But when the Governor-General of Russian Turkestan proposed the despatch of the Mission and asked his permission, he was thrown into great perplexity. Had Lord Lytton maintained the native agent at his court, the

Ameer would have consulted the Government of India before permitting the Russian Mission to enter his territory. Besides, he had pledged himself to hold no intercourse with Russia.

In the understanding between England and Russia, it was the latter who agreed to consider Afghanistan as lying beyond the sphere of her influence. Russia agreed not to meddle in Afghan politics.

From the parliamentary papers it appears that the Ameer consulted all the leading chiefs of Afghanistan before permitting the Russian Mission to enter his dominion. It further appears that after consultation with the leading chiefs, the Ameer declined to enter into a treaty of amity with Russia.

When the rumor of the arrival of the Russian Mission in Kabul reached Lord Lytton, he telegraphed to the Secretary of State for India for instructions. By this time the Marquis of Salisbury had been succeeded in the office of Secretary of State for India by Lord Cranbrook. Lord Lytton wished to know whether the Russian Mission would be treated by Her Majesty's Government as an Imperial question, or as a matter between the Ameer and the Government of India. In the latter case he proposed, with the approval of the Home Government, to insist on the immediate reception of a European British Mission. Lord Lytton concluded the telegram by saying:

"The alternative would be continued policy of complete inaction, difficult to maintain, and very injurious to our position in India."

Lord Cranbrook telegraphed to Lord Lytton to make certain of the facts before insisting on the reception of a British envoy. But the Viceroy of India, instead of making certain of facts, telegraphed again, urging immediate action.

It appears to us that the question should have been treated as an Imperial one between England and Russia. The Congress of Berlin held on the 13th June 1878, although it was a piece of pompous and empty ceremonial, gave to Russia all she wanted. The despatch of the Mission to Kabul by Russia came to the knowledge of the Viceroy of India and the Home Government in England a few weeks after the Treaty of Berlin had been ratified. If Russia wanted to violate the treaty, the matter should have been dealt with by the Imperial Government, for Russia had no business to

interfere with Afghanistan, which was recognised to be under the British sphere of influence.

Lord Cranbrook, while considering the question to be an Imperial one, unfortunately was persuaded by Lord Lytton to approve of the Viceroy's policy in peremptorily demanding the Ameer to receive a European British Mission at Kabul. At the same time remonstrances were addressed to Russia by the foreign office in England. The Foreign Minister of Russia informed the British Ambassador at St. Petersburg, on the 14th August 1878, that Russia claimed the right to take both military and diplomatic precautions against the importation of Indian troops, by England, to Malta, and that 'the political as well as military precautions had been stopped.'

On September 8, 1878, the Russian Foreign Minister again wrote to the British, ambassador that the mission to Kabul, which had been avowedly sent in prospect of a war with England, was now, in consequence of the pacific result of the Congress at Berlin, 'of a provisional nature and one of simple courtesy.' It was also asserted on the part of the Czar

'that the Emperor could never forego his right of sending complimentary missions to any foreign sovereigns or neighbouring princes.'

Even Lord Beaconsfield, the then Prime Minister of England, declared in his speech in the House of Lords on the 10th December, 1878, that Russia was justified under the circumstances in all that she had done.

The Secretary of State for India, Lord Cranbrook, approved of Lord Lytton's plan of peremptorily demanding the Ameer to receive a British Mission in Cabul. The Viceroy did not consider it proper to inquire of the Ameer if such a mission would be acceptable to him. Lord Lytton thought it beneath his dignity to show any courtesy to the "earthen pipkin." Sir Neville Chamberlain, the then Commander-in-Chief of the Madras Army, was appointed envoy to Cabul. He was provided with an escort which was so numerous as to look like an army. A native Agent, not Ata Mahomed, but his predecessor in office, named Nawab Ghulam Hussain Khan, was sent on ahead with Lord Lytton's letter to announce the coming of the Embassy to the Ameer. No worse selection for this important post could have been made. Nawab Ghulam Hussain Khan, while British agent at Cabul, had made himself obnoxious to

the Ameer. The letter which the Nawab carried to the Ameer was written by the Viceroy at Simla, on the 14th August, 1878. In this letter Lord Lytton wrote:—

It is asked that your Highness may be pleased to issue commands to your Sardars and to all other authorities in Afghanistan upon the route between Peshawar and Cabul, that they shall make without any delay whatever arrangements are necessary and proper, for effectively securing to my envoy, the representative of a friendly power, due safe conduct and suitable accommodations according to his dignity, while passing with his retinue through the dominions of your Highness."

At the same time attempts of the most hostile nature were made by Lord Lytton's orders to tamper with several of the Governors of the Afghan outposts.

Misfortunes seldom come single. While Sher Ali was being badgered and bullied by the British 'roo pot' in India, he was at the same time stricken with grief at the death of his favorite son Abdullah Jan, whom Sher Ali had designated as his heir, died on the 17th August, 1878. It was during the period that the Ameer was still in mourning, for forty days had not yet passed since the death of his son, that Nawab Ghulam Hussain, whose very sight was hateful to the Ameer, had a private interview with him and presented the letters from the Viceroy. On 8th September Lord Lytton reports that he had ordered the Ameer's officers to be informed that Sir N. Chamberlain's Mission would leave Peshawar about the 16th, 'that its objects are friendly but that a refusal of free passage and safe-conduct will be considered an act of open hostility.'

On September 17, Sir N. Chamberlain, being then at Peshawar, communicated to the Viceroy a report of Ghulam Hussain's operations. He wrote:—

"Ameer was very much displeased, objected to the harsh words, and said: 'It is as if they were come by force. I do not agree to the Mission coming in this manner, and until my officers have received orders from me, how can the Mission come? It is as if they wish to disgrace me; it is not proper to use pressure in this way; it will tend to a complete rupture and breach of friendship. I am a friend as before and entertain no ill-will. The Russian Envoy has come, and has come with my permission. I am still afflicted with grief at the loss of my son, and have had no time to think over the matter. If I get time, whatever I consider advisable will be acted upon. Under these circumstances, they can do as they like."

But the British Viceroy was not overflowing with the milk of human sympathy and kindness for the grief-stricken father on

the death of his favorite son. He must have been glad in his heart of hearts that the long wished-for hour had come. The grief-stricken father asked for time, but the British Viceroy considered the 'earthen pipkin' had insulted the might and majesty of the power of which he was the representative by declaring that the Russian Mission had come into Afghanistan with his permission. Lord Lytton was bent on bringing things to a head. From Colonel Hanna's book we learn that Lord Lytton disregarded the advice of his Commander-in-Chief but leant for advice and guidance on three officers, named Colonel Colley, Major Roberts and Major Cavagnari. On their advice and guidance Lord Lytton ordered, on the 19th September 1878, Sir N. Chamberlain to leave Peshawar for Kabul. On the 21st Sir N. Chamberlain went from Peshawar to Jumrood; Major Cavagnari with a small escort went forward as far as Ali Musjid. But he was not allowed to proceed further by the Ameer's Commandant of troops there. The Commandant in a most courteous manner told Cavagnari that he should await the Ameer's orders, which were expected. This repulse precipitated matters; war now became inevitable. Lord Lytton was drunk with the sight of power and so were his British colleagues. He approved of a treacherous *coup de main* on Ali Musjid which Cavagnari had projected. It was said that this should impress the tribesmen. But the secret leaked out and therefore this was abandoned. An immediate concentration of troops on the Frontier was ordered. Intrigues were set afoot amongst the Afridis and other tribesmen of the Khyber Pass and they were bribed, intimidated and seduced from their allegiance to the Ameer. Lord Lytton and his advisers had trapped their game and were careful to prevent it from escaping. Their chief fear was that the Amir might yet apologise. The Viceroy's Private Secretary, Colonel Colley, wrote:—

"Our principal anxiety now is lest the Ameer should send in an apology and the Home Government interfere."

On resuming business after forty days' mourning, the Ameer Sher Ali, on the 6th October 1878, replied to Lord Lytton's letters. The Ameer's reply is so important that it should be given in full. He tried all the time to amicably settle the matter, for he being the 'earthen pipkin' was afraid of coming

into collision with the British 'iron pot' on his Indian Frontier. The Ameer wrote:—

"Be it known to your Excellency (*Janab*) that your Excellency's friendly letter, which was sent by the hands of the highly-honoured Nawab Ghulam Hussain Khan, and which contained the news of the deputation of a friendly Mission, namely, Mission from the British Government, has been perused by me, and on perusal I have fully informed myself of its contents. But the above-named Nawab had not yet been honoured with an interview, and your Excellency's friendly letter had not yet been seen by me, when a letter addressed by Major Waterfield, Commissioner of Peshawar, to Mirza Habibulla Khan, an official of this God-granted Government, having arrived here, was perused by this supplicant before the throne of God. And great surprise and astonishment was caused by the writing of the officer above mentioned—that is the Commissioner. What can be the result, meaning and advantage of such a vehement * communication to an ally and friend, and of advancing by force a friendly Mission in this manner?

"Subsequently three more letters from the same officer, in the same tone and style, to the address of the officials of this God-granted Government, were seen. These were not free from harsh and rough words and expressions, which are inconsistent with the forms of courtesy and civility and contrary to the mode of friendship and sympathy.

"In consequence of the attack of grief and affliction which has befallen me by the decree of God, great distraction has seized the mind of this supplicant at God's threshold. The trusted officers of the British Government, therefore, ought to have observed patience, and to have stayed, at such a time, and this would have been the most commendable and appropriate course. Your Excellency should be pleased to have regard to *mulhara farmayand*, this harsh (style) of address and provocation, as well as to the altercation with such anger with my officials. How inconsistent is this with the sublime way of friendship and alliance! In any case, the officials of this God-granted Government, notwithstanding the threatening communications of the officials of the British Government, which communications are still in the possession of the officers of this Government, will not evince any hostility or opposition to the British Government. Moreover, they do not entertain any hostile or antagonistic feelings toward any Government whatever. But should any Government entertain without cause any hostile and inimical feelings towards this God-granted Government, I commit all my affairs to the merciful God upon whose will and intention all matters depends. He alone suffices for us, and he is the best to be trusted. †

"The highly honoured Nawab Gholam Hussain Khan, who is the bearer of this friendly letter, has in accordance with the instructions received from the officers of the British Government, asked leave to return and the requisite permission has been granted."

* 'Literally, 'blustering' or 'full of noise.'

† Literally, 'the best Vakeel.'

There was nothing offensive or improper in the tone of the Ameer's letter. But the British Viceroy thought otherwise. He communicated with the Home Government. Disraeli *alias* Lord Beaconsfield was glad that the long prayed-for contingency to absorb Afghanistan had arisen. On 31st October 1878, Lord Lytton sent an ultimatum to the Ameer. He wrote —

"I despatched by a trusted messenger a letter informing you that the Mission accredited to you was of a friendly character, that its business was urgent, and that it must proceed without delay.

"Nevertheless, you, having received my letter, did not hesitate to instruct your authorities on the frontier to repel the Mission by force. For this act of enmity and indignity to the Empress of India in the person of her envoy, your letter affords no explanation or apology, nor does it contain any answer to my proposal for full and frank understanding between our two Governments.

"In consequence of this hostile action on your part I have assembled Her Majesty's forces on your frontier, but I desire to give you a last opportunity of averting the calamities of war.

"For this it is necessary that a full and suitable apology be offered by you in writing, and tendered on British territory by an officer of sufficient rank.

"Furthermore, as it has been found impossible to maintain satisfactory relations between the two states unless the British Government is adequately represented in Afghanistan, it will be necessary that you should consent to receive a permanent British Mission within your territory.

"It is further essential that you should undertake that no injury shall be done by you to the tribes who acted as guides to my mission and that reparation shall be made for any damage they have suffered from you; and if any injury be done by you to them, the British Government will at once take steps to protect them.

"Unless these conditions are accepted fully and plainly by you, and your acceptance received

by me not later than November 20, I shall be compelled to consider your intentions as hostile and to treat you as a declared enemy of the British Government."

This letter from the British Viceroy was treated by the Ameer with that contempt which it fully merited. The 20th November arrived but Lord Lytton did not receive any reply. This circumstance gladdened the hearts of Lord Lytton and his advisers, whose principal anxiety was lest the Ameer should send in an apology. The 'earthen pipkin' knew that he was no match for the enraged British 'iron pot'. But we must give him credit for not accepting the disgraceful terms of the British Viceroy. The Ameer acted up to the principle of death before dishonor.

The die was now cast. On November 21, 1878, war was formally declared by Lord Lytton. Soldiers led by British officers were poured into the Ameer's dominion. The British Government was found guilty of 'breach of faith', for the Afghan people had been assured that so long as they were not excited by their Ruler or others to acts of aggression upon the territories or friends of the British Government, no British soldier would ever be permitted to enter Afghanistan. But what did the Afghan people see? They were not guilty of any acts of aggression. They did not invite any British soldier to Afghanistan. They saw British officers and men invade their country, slay their countrymen and wantonly destroy their property. No British historian has ever been able to justify this war of aggression and ambition.

THE CASE FOR AN INDIAN MERCANTILE MARINE;

By J. M. GANGULI, M.Sc., LL.B.

ONE of the saddest things in modern Indian history has been the decline of the Indian Marine, which may be said to have set in after the first quarter of the last century and which ended in the virtual extinction of the Indian Marine not long after the assumption of the Government of

the land by the British Crown. And yet Indian shipping has had a great and a glorious past. Even leaving the Vedic period, when also mention of vessels and of merchants going out on voyage for trade is found, evidences, direct and indirect, are available which show that as far back as

by "a particular non-Indian line of steamers" and of the several powerful British traders in India, to maintain the *status quo*. Any Indian enterprise that may venture to come in their way is strangled to death by the operation of the most pernicious system of the deferred rebates and by the initiation of a most unscrupulous rates-war. Describing his personal experience, the late Mr. T. V. Seshagiri Ayyar once said :

"When I was a young vakil, a company was formed to run ships between Tuticorin and Colombo. As soon as the company started business the British India Steam Navigation Company lowered their rates for passengers from Rs. 12 to Rs. 9. The new company tried to keep pace with this. The British India Steam Navigation Company reduced the rate to Rs. 6 and from Rs. 6 to Rs. 3. My friend Mr. Cotehngam, who is sitting at the other end of the table, says that they even carried passengers free. After having done this, after finding that the new company was not able to compete with them in this rate-war and after having effectively killed the new venture, they again returned to the old rates. It did not affect them very seriously, because for years they had accumulated capital and they could fall back upon that capital. But the poor new concern came to grief. It is to prevent a repetition of this that I want a minimum rate to be fixed."

The system of the deferred rebates also operates most seriously against new companies. According to this a percentage of the freight paid by a shipper is returned to him after twelve months if during that period he continued to ship his goods by the same company and not by any other. Thus the shippers are held in perpetual bondage, and the new companies cannot consequently secure business. This system has been declared illegal in America, Australia and South Africa and also in some respects in Germany, France and Austria. If the system was found dangerous in those self-governing countries with national governments, how very ruinous it must be in a politically dependent country like India? Within the last thirty years about twenty shipping companies have been formed with an aggregate capital of about ten crores of rupees, but most of them have met with untimely death, being as they were, as Mr. Haji has pointed out,

"unaided by Government, directly or indirectly, sometimes even positively hampered by various Government agencies, without the moral support of legislative enactments and in face of colossal opposition organised solely with a view to destroy."

The two or three that have survived and persisted are not yet in a convincing position of security and stability. But to add insult to injury, in spite of this most daring spirit

of enterprise shown by the Indian capitalists and businessmen in entering and investing in this business against all heavy odds, even the mildest protest against the existing conditions calls forth from the established foreign concerns the angry retort that Indian capital is shy and so if they were to withdraw from their welfare work in this country its industrial interests would suffer. How India's interests are being furthered now may be understood from the fact that over fifty crores of rupees are year after year drained away from the country on account of the shipping trade being in the hands of the foreigners. It may be added in passing, that in spite of their huge profits the foreign shipping companies had been till lately left outside the operation of the income-tax laws of India. Even now the assessment of the income-tax is very difficult on account of these companies being registered abroad.

Another way in which India has been suffering through an absence of a national mercantile marine is that an important field of work has been closed to her nationals. As subordinate sea-men and lashkars, of course, Indians have in large numbers found employment on account of their docility and low wages in the British companies, but the high and responsible posts are not for them. Indians have thus remained excluded from a field where, as the romance of sea-voyages shows, there is a great scope for adventure, enterprise and courage, all of which redound to the credit of a nation. The absence of an Indian marine has also led to the neglect or rather the omission of marine, which is a most useful and fascinating subject of study, by the Indian Universities from their courses of study.

Such are the conditions to-day, and so they are likely to remain unless a spirited and a determined effort is made to improve them.

Following an agitation which has at last been started to some extent in the country over the question, the Government of India appointed a few years back a committee called the Indian Mercantile Marine Committee to recommend how to develop an Indian mercantile marine. The Committee submitted its report in 1924, making some very important recommendations, which have however remained very conveniently ignored by the Government. Among other things in recommending the repeal of the Indian

about 1,000 B. C. India had developed trade relations with countries far and near, like Arabia, Egypt, Palestine, Assyria, Rome, Greece, Turkey and later on with Holland, England, Portugal and other countries. Her culture and civilisation, her fine arts, her skill in handicrafts, her vast resources, and her variety of products, both raw and finished, had attracted the interest and attention of peoples of different lands with which she had sea-borne trade and communication. Even much later on in the modern times after the advent of the English in India, the Indians had not lost their former skill in the art of ship-building. In 1811 a French traveller, F. Baltzar Soloyns, wrote that,

"in ancient times the Indians excelled in the art of constructing vessels, and the present Hindus can in this still offer models to Europe—so much so that the English, attentive to everything which relates to naval architecture have borrowed from the Hindus many improvements which they have adopted with success to their own shipping."

Under the British also the head builders in the Bombay Government Dockyard were all Indians from 1736 up to 1837.

"In 1802 the Admiralty ordered men-of-war for the King's Navy to be constructed at this spot (the Bombay Dockyard). They intended to have sent out an European builder, but the merits of Jamshetjee being made known to their lordships, they ordered him to continue as master-builder."

This is all past history which reads like romance to-day. How the change came or as brought about, how interests clashed between England and India leading to the furtherance of the one and the dying out of the other—are known to every close reader of modern history and have also been at times referred to and dwelt upon by several speakers and writers in recent years. We can, therefore, at once come to the conditions existing to-day.

Mr. Sarabhai N. Haji, M.L.A., of Bombay, to whom the gratitude of the country is due for having zealously devoted himself to the cause of Indian shipping, has rightly said of India,

"A country set like a pendant among the vast continents of the Old World, with a coast line of four thousand miles and with a productiveness of numerous articles of great use, unsurpassed elsewhere, is by nature meant to be a sea-faring country."

But that is not the case to-day.

Mr. Haji continues :

"If you look at the map of India", "it will show

that long railway journeys are, in some cases, necessary to travel between two points which could be more easily reached within a few hours by means of water transport."

But this water transport is lacking, nor are the ports necessary for the purpose developed. Though this has been, to the serious disadvantage of India, whose commercial and industrial prosperity has suffered, the relegating of the numerous smaller Indian ports to the destructive effects of Nature has been of much benefit to non-Indian interests. It is easy to see how the absence of water transport has been profitable to the Indian Railways, which are either British-owned or controlled by the Indian Government, which is a subordinate branch of the British Government. It has helped the Indian Railways to monopolise the carrying trade, to be immune from the danger of competition in the matter of the fixing of rates, and, as has been so often complained by the Indian traders and industrialists, to be free, by preferential treatment, to further the interests of British business and to correspondingly hamper those of Indian business. The possibility of indigenous competition in the event of the development of smaller ports has also induced the foreign shipping companies to be "content to make large profits by catering for big ports and to leave the small ports to the mercies of natural forces". These foreign companies also materially help their respective nationals in the exploitation of the country by facilitating the export of raw materials and the import of finished products. Besides, as was pointed out by Lala Harkishan Lal in his evidence before the Fiscal Commission, these steamship companies by giving preferential treatment to foreign exporting houses as against the Indian ones dissuade the latter from this important branch of business. How Indian industries have suffered can be seen from the following single example given by Mr. Haji—

"Cement from Porbander was allowed to be sent to Madras and Calcutta only after transhipment at Bombay, thus adding about Rs. 6 to the price of cement per ton."

If Britannia rules the waves, the British shipping companies rule the large seaboard of India. And strongly consolidated in their position as they are, they are determined, under the connivance of the Government and with the patronage of some of the Indian railways, which "grant low or preferential rates on condition that the goods are shipped

by a particular non-Indian line of steamers" and of the several powerful British traders in India, to maintain the *status quo*. Any Indian enterprise that may venture to come in their way is strangled to death by the operation of the most pernicious system of the deferred rebates and by the initiation of a most unscrupulous rates-war. Describing his personal experience, the late Mr. T. V. Seshagiri Ayyar once said :

"When I was a young vakil, a company was formed to run ships between Tutuicorn and Colombo. As soon as the company started business the British India Steam Navigation Company lowered their rates for passengers from Rs. 12 to Rs. 9. The new company tried to keep pace with this. The British India Steam Navigation Company reduced the rate to Rs. 6 and from Rs. 6 to Rs. 3. My friend Mr. Cotelangam, who is sitting at the other end of the table, says that they even carried passengers free. After having done this, after finding that the new company was not able to compete with them in this rate-war and after having effectively killed the new venture, they again returned to the old rates. It did not affect them very seriously, because for years they had accumulated capital and they could fall back upon that capital. But the poor new concern came to grief. It is to prevent a repetition of this that I want a minimum rate to be fixed."

The system of the deferred rebates also operates most seriously against new companies. According to this a percentage of the freight paid by a shipper is returned to him after twelve months if during that period he continued to ship his goods by the same company and not by any other. Thus the shippers are held in perpetual bondage, and the new companies cannot consequently secure business. This system has been declared illegal in America, Australia and South Africa and also in some respects in Germany, France and Austria. If the system was found dangerous in those self-governing countries with national governments, how very ruinous it must be in a politically dependent country like India? Within the last thirty years about twenty shipping companies have been formed with an aggregate capital of about ten crores of rupees, but most of them have met with untimely death, being as they were, as Mr. Haji has pointed out,

"unaided by Government, directly or indirectly, sometimes even positively hampered by various Government agencies, without the moral support of legislative enactments and in face of colossal opposition organised solely with a view to destroy."

The two or three that have survived and persisted are not yet in a convincing position of security and stability. But to add insult to injury, in spite of this most daring spirit

of enterprise shown by the Indian capitalists and businessmen in entering and investing in this business against all heavy odds, even the mildest protest against the existing conditions calls forth from the established foreign concerns the angry retort that Indian capital is shy and so if they were to withdraw from their welfare work in this country its industrial interests would suffer. How India's interests are being furthered now may be understood from the fact that over fifty crores of rupees are year after year drained away from the country on account of the shipping trade being in the hands of the foreigners. It may be added in passing, that in spite of their huge profits the foreign shipping companies had been till lately left outside the operation of the income-tax laws of India. Even now the assessment of the income-tax is very difficult on account of these companies being registered abroad.

Another way in which India has been suffering through an absence of a national mercantile marine is that an important field of work has been closed to her nationals. As subordinate sea-men and lashkars, of course, Indians have in large numbers found employment on account of their docility and low wages in the British companies, but the high and responsible posts are not for them. Indians have thus remained excluded from a field where, as the romance of sea-voyages shows, there is a great scope for adventure, enterprise and courage, all of which redound to the credit of a nation. The absence of an Indian marine has also led to the neglect or rather the omission of marine, which is a most useful and fascinating subject of study, by the Indian Universities from their courses of study.

Such are the conditions to-day, and so they are likely to remain unless a spirited and a determined effort is made to improve them.

Following an agitation which has at last been started to some extent in the country over the question, the Government of India appointed a few years back a committee called the Indian Mercantile Marine Committee to recommend how to develop an Indian mercantile marine. The Committee submitted its report in 1924, making some very important recommendations, which have however remained very conveniently ignored by the Government. Among other things in recommending the repeal of the Indian

Coasting Trade Act of 1850 this committee, which was presided over by Capt. E. J. Headlam, C.M.G., D.S.O., A.D.C., R.N., Director, Royal Indian Marine, and which had as a member Sir John Biles, K.C.I.E., L.D., D.S.O., Consulting Naval Architect to the India office, observed :

"We are of opinion that in the interests of the growth of an Indian Mercantile Marine it is necessary to close the coasting trade of this country to ships belonging to the subjects of foreign nations."

Many of those who are interested in the continuance of the present state of affairs urged before the Committee that Indian officers and engineers were not available for the Indian Marine and so all that was wanted were facilities for their training. But to this often-repeated suggestion for an unending period of training and apprenticeship the firm answer of the Committee is :

"It is our considered opinion that the provision of facilities for the training of Indian officers and engineers alone is not sufficient to meet the requirements of the case and that some further steps are required to achieve the object in view. These further steps, we recommend, should be in the form of the eventual reservation of the Indian coasting trade for ships the ownership and controlling interests in which are predominantly Indian."

The Committee added that for the fulfillment of those conditions a ship should conform to the following conditions:

- (1) registered in India
- (2) owned and managed by an individual Indian or by a Joint Stock Company (public or private) which is registered in India with rupee capital, with a majority of Indians on the Directorate and with a majority of its shares held by Indians.
- (3) management of such company is predominantly in the hand of Indians.

The Committee observed :

"It is not possible at present to provide that the officers and crews should be completely Indian, because it will take some time under our training scheme to produce the requisite number of Indian officers and engineers, but in our coastal trade regulations which follow provision has been made for the compulsory Indianisation of the personnel. Nor is it possible at present to provide that the ships applying for licenses should have been built in India, because no ship-building yards capable of constructing ocean-going steam vessels exist in the country, but we hope that in course of time it will be found practicable to add both these desiderata to the conditions of the license."

It is significant to note here that the recommendations of the committee were unanimous but for the feeble, dissentient voice

of Sir Arthur Froom, a member of the Committee and a partner of Messrs Mackinnon Mackenzie & Co.—a British shipping company which would be vitally affected by the policy of coastal reservation. Sir Arthur felt the unconvincing nature of his assertion that "reservation will lead to an inefficient service and also high freights due to the absence of any fear of competition," and appealed imploringly at the end "that the carriage of the trade should be left free at any rate to all British-owned ships, with which I include Indian-owned, flying the British flag."

In order to give effect to the policy of reservation Mr. Sarabhai, N. Haji, M. L. A., has recently put forward a proposal in the form of a Bill, which will shortly come before the Legislative Assembly and which, though modest, is a very practical and comprehensive one. The Bill says that for a company to get the license for coastal trade a proportion of not less than 20 per cent of the tonnage licensed for the first year, not less than 40 per cent of the tonnage licensed for the second year, not less than 60 per cent of the tonnage licensed for the third year, not less than 80 per cent of the tonnage for the fourth year, and all the tonnage licensed for the fifth and subsequent years shall have the controlling interest therein vested in British Indian subjects.

As could have been expected, the Bill has raised a storm of angry outbursts from the vested interests and it has indeed stirred up waters in the European commercial circles to an unprecedented extent. Arguments like— it is a measure aimed at expropriation; it will be a breach of international agreements to which India (of course, official India) is a signatory; it will bring unrestricted competition or will result in a shipping ring with exorbitant rates; it will mean loss of foreign tonnage to India; it will be uneconomical in operation; and the like, have been brought forward one after the other in one breath. Even Government officers have forgotten their position in excitement and joined in the uproar. Mr. D. H. Boulton, I.C.S., indeed felt no hesitation in presiding over a meeting of the Tuticorin Port Trust in which the Bill was criticised and denounced.

Yet it is the Indian Mercantile Marine Committee itself which has emphatically observed that "the coastal trade of a country is regarded universally as a domestic trade in which foreign flags cannot engage as a

matter of right but to which they may be admitted as an act of grace." It may be added that, even leaving aside the several other countries where the policy of reservation has been adopted, so far as the British Dominions themselves are concerned the important principle has been admitted that the policy regarding their coasting trade was only to be guided by local interests, and that Australia has not been slow to take advantage of this recognised principle in resorting to reservation, even thereby violating the spirit of the British Merchant Shipping Act. Even Great Britain herself, before she had attained her present supremacy, had to resort to a similar policy by enacting her well-known Navigation Laws. Other countries like America, France, Italy, Japan and Turkey have enforced this principle of reservation in their coastal trade.

Apart from the question of principle, none of the criticisms advanced against the Bill is seen to hold water on unprejudiced examination. Sir George Rainy, the Commerce Member of the Government of India, having nothing better to say, took pains to show that by including the French and Portuguese ports in the Indian coastline the proposed measure would involve a breach of the international convention of maritime ports to which India is a signatory and that in the alternative their exclusion from the act would lead to a diversion of trade to those foreign ports. But as has been pointed out by the Bengal National Chamber of Commerce,

"In the first place, the Maritime Ports Convention does not apply to the question tackled by the Bill. Even if it be otherwise, the French and the Portuguese have no rival interests to be affected by the passage of the Bill. They have themselves reserved their coastal trade for their own vessels, and it should not be difficult for the Government on the above grounds to come to a working arrangement with them. If, however, they prove to be recalcitrant, it is open to the Government of India to retaliate with a land customs cordon raised round their possessions in British India. Even if we are obliged to drop the French and the Portuguese ports out of the scope of the Bill, the diversion of trade is only an imaginary danger, as there is no reason to apprehend that reservation would lead to monopoly and such rise in freight as to make it more than profitable to send goods through their ports."

It may be further submitted in this connection that the international convention referred to relates merely to the access and use of the facilities provided by ports, and then again it provides exceptions in the case of reciprocity and coastal reservation.

Mr. Haji has indeed torn to pieces each and all of the howling criticisms hurled against the proposal, but the most painful thing to notice is that India should be told by a set of selfish and interested people, who owe in fact all their wealth, power and position to the ungrudging hospitality and generosity of this land, that she should be careful to begin by getting a few of her nationals trained at a time year after year, of course under the kind patronage and with the sympathetic goodwill of the present traders, and then, after thus having at command an army of officers sufficient to man the entire mercantile fleet necessary for the Indian coastal trade, to think ambitiously of having a mercantile marine of her own. And all this she is told barefacedly on her merely making a modest proposal—modest, because she asks for nothing else—for the progressive, not immediate, enforcement of a policy of reservation in her coastal trade, a policy which has the sanction of international history and usage. Other countries have, however, not considered the reservation of coastal trade sufficient for the purposes of developing a national mercantile marine. France, for instance, which has a much smaller sea-board than India, pays over rupees fifty lacs to her national shipping in subventions and subsidies in the form of construction bounties, navigation bounties, equipment bounties, fishing bounties, mail subventions, payment of Suez Canal dues, construction loans, and preferential railway rates. By means of a liberal grant of constructive bounties, navigation bounties, mail subventions and the like, in addition to the policy of reservation of the coastal trade, the Japanese Government have not only succeeded in making Japan the third naval power in the world as recognised by the recent Washington Agreement, but have also helped the development of the mercantile marine from a fleet strength of hardly two scores of steamships owned and run by two companies struggling for existence about the year 1870 to a fleet strength of 3561 steamships with a gross tonnage of 4,010,351 tons and of 14,902 sailing vessels of 899,233 tons in the year of grace 1927 in the course of about half a century. And what about Great Britain herself? Till not very long ago her Navigation Act of 1651—which was repealed in 1854 after she had attained an undisputed supremacy in the sea had kept

her coastal trade reserved. And besides, British Shipping has received and still receives state-aid in various forms, like—appropriation of Naval Reserves, Admiralty subventions, Government loans at low rates of interest, Mail subventions, Colonial subventions, Indian subventions, etc. Thus in different forms state-aid amounts to over a million pounds in the year, to which the Indian exchequer has also to contribute.

As a last stroke of inspiration it has been pointed out to the obstinate Indian agitators that considering the small profit available in the shipping business Indian capitalists would not take to it. To this again the obstinate agitators would say that already crores of rupees of Indian capital have been invested and lost in securing a footing in this business which is in the firm grip of some powerful monopolistic foreign concerns. And besides it would seem that the British shipping companies engaged in the Indian coastal trade have been doing pretty well for themselves. The British India Steam Navigation Company have been paying for the last 25 years on the average a dividend of 9 per cent per

annum, besides absorbing another 9 per cent in reserves.

But then India is India and what other countries may have done or may be doing she need not necessarily do—is the angry retort; and the Indian agitators are bluntly reminded that "the brutal truth is that, on such an issue, Argument is subordinate to Power. The Legislative Assembly may pass Mr. Haji's Bill. The Council of State, almost certainly, will throw it out." Why not add that the Government of India in any case under the thumping domination of the Imperial Government must necessarily reject it?

But poor Mr. Haji would still persist in reminding his countrymen that

"At this very moment there is going on along the Indian coasts, a tragic drama in which rates are cut, hindrances organised, agencies withdrawn and intimidation employed, all with a view to reach immediately the climax in the final extinction of the Indian competitor. To prevent the tragedy being played to its very end it is absolutely essential that, in view of the indifference of the Government of India, the Indian Legislature should come forward to succour the weak who are their kith and kin."

RAJA RAM MOHUN ROY AT RANGPUR

By JYOTIRMOY DAS GUPTA

RAJA Ram Mohun Roy spent some part of his life at Rangpur. But unfortunately even up to this time nothing is known in detail about his sojourn there. In fact, in spite of the continued efforts of the Brahmo Samaj, the early life history of the Raja is not known in any detail, and some of the facts which are known are still uncertain for want of sufficient proofs. It is only after he settled in Calcutta that the life history of this great reformer is, known with sufficient accuracy. It is a well-known fact that Raja Ram Mohun Roy took service under the East India Company, who were the rulers of the country at that time. But in what capacity he began to serve the Company and how long he was in their service, is still unknown. Every one interested in his life knows that he took service under Mr. Digby

who served as collector in Rangpur and in other places as well, but nothing is known about his first appointment in the Company's service and nothing particular is known about this period of his life. In more than one book I have found that Raja Ram Mohun Roy was at Rangpur for about ten years, but there is no proof of that statement. There is also a tradition that many documents can be found among the old records of the Rangpur Collectorate which may contain important information about the Raja's life. A few months ago, at the request of the Brahmo Samaj, I searched the record room of the Rangpur Collectorate to see whether any document can be found which may unveil a chapter of his life. Here I cannot lose the opportunity of thanking Mr. S. N. Gupta, I. C. S., Magistrate, for having granted me

permission to search the record room. I was fortunate enough to gather some letters which are published below. From these letters, as well as from other facts, I could gather that Raja Ram Mohun Roy served the East India Company at Rangpur for nearly two years. His name could not be found in the officers' list of Rangpur Fouzdari Court, which was sent to the higher authorities on the 1st May, 1809. So it is certain that he came to Rangpur after that date. It is highly probable that he arrived there at the beginning of September that year. Mr. Digby stated in his letter (*vide* letter No. 2) that Ram Mohun Roy served as *Sheristadar* for a period of three months and we know that he was promoted to the post of Dewan on the 3rd December, 1809 (*vide* letter No. 1). So it is certain that he came to Rangpur at the beginning of September and served as *Sheristadar* till 3rd December—a period of three months. Whence he came to Rangpur is not known yet. Mr. Digby came to Rangpur from Bhagalpur. The truth of this statement can be established from a travelling bill found among the old records searched. He took charge of the Rangpur Collectorate on the 1st August, 1809 and Ram Mohun Roy soon after joined him there. It is known that Raja Ram Mohun Roy served under Mr. Digby alone. If it be so, then it may be that he too came to Rangpur from Bhagalpur. But there is no mention of the Raja's service at Bhagalpur by Mr. Digby in the letters No. 2 and 4, where he mentioned the name of Jessore only. Here I quote a passage from "The Life and Letters of Raja Ram Mohun Roy", edited by the late Sophia Dobson Collett.

"Now it is at Rangpur that popular tradition chiefly connects the name of Ram Mohun Roy with Mr. Digby : but as Mr. Digby was previously at Rangpur (1805 to 1808) and Bhagalpur (1808 to 1809) and Ram Mohun mentions in his evidence in the Burdwan lawsuit having resided at Rangpur, Bhagalpur, and Rangpur, it is highly probable that he was working under Mr. Digby in the two former localities before he went to Rangpur : although we have no details as to the successive posts which he then occupied."

So we find that this passage is also in favour of his coming to Rangpur from Bhagalpur. If it be a fact, then it is difficult to understand why there is no mention of the Raja's service at Rangpur and Bhagalpur by Mr. Digby in the letters No. 2 and 4, whereas the service of Ram Mohun Roy as a private *Munshi* in the Jessore Collectorate has been

mentioned. So conclusive proof on this point is still lacking. At Rangpur the Raja's name first appears in a letter dated 30th September, 1809 (letter No. 8), which is also published below. His name is found in the officers' list of Rangpur Collectorate on the 30th April, 1810, as Dewan of the court, but in the list of the next year his name could not be found. This fact is a decisive proof of his short sojourn at Rangpur as the Company's servant. He joined his office here in the capacity of a *Sheristadar* but he also served as a *Munshi* under Mr. Digby in the Jessore Collectorate and most probably in this capacity he entered the Company's service. But for this the records of Jessore Collectorate require to be searched. Where he first entered Government service is still unknown.

Perhaps here the readers will be interested to know that the pay of *Sheristadar* was forty sicca rupees a month, while that of a *Munshi* was fourteen sicca rupees. I doubt whether at Rangpur Raja Ram Mohun Roy as *Sheristadar* filled any permanent vacancy, for before his arrival as well as after his promotion to the post of Dewan, the name of Pertab Narain Ghose is mentioned as *Sheristadar* in several years' officers' lists. Also in letter No. 3 he was mentioned as "*acting Sheristadar*" by the Board of Revenue. However, leaving apart that question we find that Ram Mohun Roy served as *Sheristadar* at Rangpur for a space of only three months, namely, September, October and November (1809). Meanwhile Golam Shaw, who was acting as Dewan, submitted his resignation and Mr. Digby appointed Ram Mohun Roy in his post subject to confirmation by the Board of Revenue. Mr. Digby wrote to Mr. R. Thackeray, Secretary to the Board of Revenue, for his confirmation, but the Board did not consider him fit for the post! Mr. Digby wrote again and in one letter (No. 4) used rather strong language, for which the Board went so far as to censure him. These letters are published below, and I hope that my readers will be much interested to read them. The controversy went on till 16th March, 1810, when the Board sent its final decision to Mr. Digby and ordered him to find some other person fit for the post of Dewan. But on 30th April next Ram Mohun Roy is found to act as Dewan of the Court. About a year later, on the 28th March, 1811, Moonshy Hemachandh was recommended to the post of

Dewan by Mr. Digby and this time the Board confirmed him. However, the office of Dewan was permanently abolished and the new system came into force in the year 1811. From all these facts we know that Raja Ram Mohun Roy served in the post of Dewan from 3rd December, 1809, to 28th March, 1811—and as *Sheristadar* from the beginning of September to 3rd December, 1809. The office of Dewan was the highest post that an Indian could then secure and the pay of the post was a hundred and fifty sicca ruppees per month.

Some authors state that the Raja settled at Calcutta from Rangpur in the year 1814. If this be true, then I believe that Raja Ram Mohun Roy, having given up his office of Dewan, continued to live there as a private citizen. It is also known that it was at Rangpur that he began to preach his views with enthusiasm. At Rangpur he built a house near Mahiganj at Tamphat about 4 miles off from the Court; but unfortunately it cannot be traced now. Raja Ram Mohun Roy became well known within a short space of time for his religious views. His talents and religious views soon brought him friends and foes alike. At Rangpur Ram Mohun Roy spent money for public good also. A tradition is still current that the big tank near the Court was dug at his cost. It is a well-known fact that he was a great Persian scholar and at Rangpur he became known as a great Maulvi.*

These are the facts which can be gathered at present about the Raja's sojourn at Rangpur and his service under the East India Company. Though his sojourn at Rangpur was only for a short time, yet he became one of the most prominent citizens of that place.

Letter No. 1.

To
R. Thackeray, Esqr.,
Secretary to the Board of Revenue,
Fort William.

Sir,
Having in conformity to the order conveyed in your letter of the 23rd ultimo accepted the resignation of Golam Shaw, late Dewan of this office, I beg leave to acquaint you for the information of the Board that I have appointed Ram Mohun Roy to his room, a man of very respectable family and excellent education, fully competent to discharge the duties

of such an office and from a long acquaintance with him I have reason to suppose that he will acquit himself in the capacity of Dewan with industry, integrity and ability and hope to be favoured with the Board's sanction of this appointment.

Rangpur.
Collector's Office.
The 3rd December, 1809. I have the honour to be,
Sir,
Your most obedient servant,
(signed) J. Digby,
Collector.

Letter No. 2.

To
R. Thackeray, Esqr.,
Secretary to the Board of Revenue,
Fort William.

Sir,
In reply to your letter of the 11th inst. I have the honour to acquaint you for the information of the Board that Ram Mohun Roy, the man whom I have recommended to be appointed a Dewan of the office, acted under me in the capacity of *Sheristadar* of the Foudary Court for the space of three months whilst I officiated as magistrate of the Zilla of Rangpur and from what I saw of his knowledge of the regulations, accounts, etc., during that time and during the term of my acting as Collector of Jessore, as well as from the opinion I have formed of his probity and general qualifications in a five years' acquaintance with him, I am convinced that he is well adapted for the situation of Dewan of a Collector's office.

I have also to inform you that Jainarain Sain, the Zamindar of Chochoah, paying an annual revenue to the amount of Rs. 20935-4-6-2 *karas* and Mirza Abbas Ally, an heir of the late Mirza Mohammad Tuckey, Zamindar of Coolaghant, etc., paying a revenue of Rs. 917-13-3, have come forward as his sureties to the amount of 5000 Rs. A copy of their security I beg leave to transmit enclosed.

Rangpur.
Collector's Office.
The 30th Dec., 1809. I have the honour to be,
Sir,
Your most obedient servant,
J. Digby,
Collector

Letter No. 3.

To
J. Digby, Esq.

Sir,
I am directed by the Board of Revenue to acknowledge the receipt of your letter of the 30th December last and to acquaint you that it appears to them essentially necessary that any person appointed to the responsible office of Dewan should have been for some time in the practice of transacting revenue details and also well acquainted with the regulations and the general system adopted for the collection of the revenue.

The Board, therefore, do not consider themselves authorised to confirm the person nominated by you. They observe that the service performed by Ram Mohun Roy as acting *Sheristadar* of a Foudary Court cannot be considered by them as rendering him in any degree competent to perform the more important duties of a Dewan, which are in their nature so totally different.

The Board under these circumstances desire that you will nominate some person from whose

* Ram Mohun Roy presented two books written by him (in Persian) to a prominent citizen of Rangpur at that time—the grandfather of the present Naib Nazir of the Dewani Court, but unfortunately they cannot be traced now.

general knowledge in the revenue department, responsibility and other qualifications the duties vested in him may be expected to be performed with accuracy.

The Board are further of opinion that the security of Dewan should not, if it can be avoided, be persons holding lands in the District of which he is Dewan, as they possibly might practise an undue influence in the District.

Rev. Board,
The 15th January, 1810

I am
Sir,
etc.,
R. Thackeray.

Letter No. 4.
To R. Thackeray, Esq.,
Secretary to the Board of Revenue,
Fort William.

Sir,
I have to acknowledge the receipt of your letter of the 15th instant. I am sorry to observe that the Board pay so little deference to my recommendation as to object to my appointing Ram Mohun Roy Dewan of this office after having given him so favourable a character and relating the very superior qualifications he possessed.

It appears by the first paragraph of your letter that the Board assert as a reason for refusing to confirm Ram Mohun Roy in the appointment proposed that in consequence of his inexperience in the transaction of the business attached to the office of Dewan they consider him incompetent to discharge the duties of it. But I imagined that such objection would have been sufficiently obviated by what I mentioned in my letter of the 30th ultimo as to the knowledge he received of the regulations and of the general system to be adopted for the collection of the revenue when with me in the capacity of a private Moonshee during the term of my acting as Collector of the District of Jessore. Moreover, I cannot refrain from observing that in many instances Dewans of Collectors have been confirmed by the Board who had never been employed in any public office.

I beg leave to refer the Board to the principal officer of Sadar Dewany and of the College of Fort William for the character and qualifications of the man I have proposed.

Being thoroughly acquainted with the merits and abilities of Ram Mohun Roy, it would be very repugnant to my feelings to be compelled so far to disgrace him in the eyes of the natives as to remove him from his present employment, in which I have continued him as officiating in the hope that the character which will be given of him by the natives to whom the Board are referred will induce them to confirm him in the appointment of Dewan of my office, for which, I am confident, he is perfectly well qualified.

With respect to securities, I beg leave to inform the Board that he can procure them from other Districts to any amount that may be required.

I have the honour to be,

Rangpur,
Collector's Office,
31st January, 1810.
etc.,
I. Digby,
Collector.

Letter No 5.

To
J. Digby, Esq.,

Sir,
I am directed to acknowledge the receipt of your letter of the 31st ultimo and to acquaint

you that, as the Board do not perceive any ground contained in it to induce them to alter their former decision respecting the nomination of Ram Mohun Roy to be Dewan of your Zilla, they desire that you will proceed to select some other person for that office conformably to their order of the 15th ultimo.

The Board further desires me to inform you that they greatly disapprove of the style in which you have addressed them upon the present occasion and that, although it would be with much reluctance, the Board would certainly feel themselves compelled to take very serious notice of any repetition of similar disrespect towards them.

The 8th Feb, 1810

I am,
Sir,
Your most obedient servant,
R. Thackeray

Letter No. 6

To
R Thackeray, Esq.,
Secretary to the Board of Revenue,
Fort William.

Sir,
I have the honour to acknowledge the receipt of your letter of the 8th ultimo on the subject of the proposition submitted by me to nominate Ram Mohun Roy to the situation of Dewan of the Zillah and expressing the displeasure of the Board of Revenue at the style of my address of the 31st of January last

If under the strong conviction which I felt of the supreme talents, judgment and character of the person whom I recommended to the Board and if under the disappointment I experienced in the rejection by the Board of that person so eminently qualified by talent, knowledge and respectability of character to promote the public interests connected with my office, I have been betrayed into the adoption of a warmth of expression which could bear the construction of disrespect, I sincerely regret the inadvertency and beg you will assure the Board that, far from entertaining any deliberate intention of disrespect, I meant merely to express in a respectful manner my surprise at the rejection of so intelligent a person and to remind the Board of the existence of precedents which would authorise the appointing of persons less entitled to it on the ground of disqualification adverted to by the Board than Ram Mohun Roy.

As the object in the contemplation of the Board is to recommend the appointment of an able Dewan, which is essentially in accordance with my own wishes, but at the same time as the Board object to the person I have nominated on the ground of his supposed ignorance of the general system adopted for the collection of the revenue, enforced from his want of practice in the transaction of revenue details, I beg you will do me the honour to submit to the Board the expression of my earnest hope that they will allow me to authorise Ram Mohun Roy to act as Dewan for a few months longer, by which means the Board will be enabled to judge of his real qualifications and of the propriety or impropriety of confirming him in the office of Dewan, though I presume to hope that by adverting to the Tonjes and adreports of the months of Pous and Magh, in which there was

only a balance of a few rupees, the Board will already be induced to entertain a favourable opinion of his talents and integrity.

Rangpur,
The 18th March,
1810.

I have the honour to be,
Sir,
Your most obedient servant,
J. Digby,
Collector.

Letter No. 7.

To
J. Digby, Esqr.

Sir,
I am directed to acknowledge the receipt of your letter of the 8th instant and to inform you that the Board are satisfied with the explanation you have given with respect to the style of your former letter of the 31st January.

The Board regret that they cannot with any degree of consistence or propriety make any alteration in their orders of 15th January and 8th February respecting the vacant office of Dewan to your collectorship, and they again direct me to advise that you will nominate some other person to fill that office, subject to the approbation of the Board, instead of Ram Mohun Roy. The Board observe that the punctual realisation of the public revenue is generally deemed a circumstance creditable to

the exertion of the Collector, though at the same time they would not be unwilling to deny the possibilities that some share of that credit might be due to the vigilance and attention of the Dewan. But the Board can by no means admit the argument that favourable Toujees for three months of the year or even for a much longer period alone afford a criterion for judging either of the talents or integrity of the native officer holding that situation.

Rev. Board,
The 16th March, 1810.

I am,
Sir,
Your most obedient servant,
J. Thackeray.

No. 8.

To

A. Stone, Esq.,
Sub-treasurer,
Fort William.

Ten days after sight be pleased to pay to Ram Mohun Roy or order the sum of sicca Rs. three thousand (s. Rs. 3,000), on which sum a premium of one per cent has been paid into this treasury, without further advice from

Rangpur,
Collector's Office,
30th Sept, 1800.

Sir,
Your most,
etc.,
J. Digby.

wealth of Nations. However, Col. Wedgwood thinks that much more is yet to be done in this direction and thus he has written the spiced volume. Therefore, it may be said that the "Seventh Dominion" is frankly propaganda literature in favour of the British Empire as well as the Jewish aspirations for a national home.

Col. Wedgwood does not care, as he says himself, even he be charged with being a British Imperialist. He frankly says that by advocating a policy in favor of a Jewish State in Palestine, Britain has nothing to lose, but much to gain. At the very outset of his book he states his position:—

"There are some fourteen million Jews in existence, well peppered over the world; not more than a million are likely ever to be loyal subjects of King George in Palestine, but those that remain in America are better to have as friends than enemies. Those who do settle in Palestine are likely to be of real political and commercial service to the Empire, for Palestine is the Clapham Junction of the Commonwealth. The air routes, as well as the ocean routes, east and west, and south and north, cross here where one flank rests on the Suez Canal and other on the port of Haifa, the natural trade base of Mesopotamia. With pipe-line and railway debouching at Haifa under Carmel, the British fleet can look after the Near East in comfort and safety. Egypt does not want us; we have no friends there. Palestine is emphatically a place where we do want a friendly and efficient population—men on whom we can depend, if only because they depend on us. The Jews depend on us; they also prefer us as the least anti-semitic people of the world *".

Although it is generally asserted by many that the Jews want an independent state, Col. Wedgwood thinks that no responsible Jew will ever object to make Palestine a part of the British Commonwealth, because they know that the protection of the British navy will be of greater value to a small state of Palestine than independence, which might be assailed by various Powers. If Palestine be accorded a real dominion status then it will be really independent and at the same time a source of strength to the British Empire. Col. Wedgwood does not believe that the British Government should confer dominion status now, when the Jews are in the minority in Palestine; but the immediate need is to orient the British policy in Palestine in such a way that the Jews might not prefer the protection of the League of Nations to that of the British Empire. He writes:—

"When the Jews are in a majority in Palestine, and when we confer upon that colony Responsible Government (as we are bound to do, mandate or no mandate, sooner or later), are the new rulers of Palestine to look for protection to the British Empire or to the League of Nations? With this alternative before them one knows that the British people prefer that Palestine should look to the Empire and the Jews should not be black-balled. As plain realists the British have perceived that moral as well as commercial advantages may well repay and balance the risks of protecting Palestine. But let us be under no misapprehension on this matter; it is possible still to throw Palestine into the arms and under the shield of the League of Nations instead of

into the British Union. The Syrians and Christians of Jerusalem would naturally prefer for their protection a League of Nations which is so profoundly influenced by the Papal Curia. British officials in Palestine can easily make the Jews prefer the League also, if day after day they show that Palestine and the Jews are not wanted inside the British Empire. †"

After exposing the faults of the existing system of taxation, local self-government, labour legislation, agriculture, education, police administration, public works, distribution of crown lands in Palestine, Col. Wedgwood charges that the British officials are in most cases prejudiced against the Jewish rights and interests. He thinks that the only consistent and constructive policy for the British Government in Palestine is to create the "Seventh Dominion". This policy is consistent with the Balfour Declaration which reads as follows:—

"His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people and will use their best endeavours to facilitate the achievement of this object it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of the existing non-Jewish communities in Palestine."

The very spirit of the Balfour Declaration is also incorporated in the Article 2 of the terms of the Mandate given to the British Government by the League of Nations, which reads as follows:—

"The Mandatory shall be responsible for placing the country under such political, administrative and economic conditions as will secure the establishment of the Jewish National Home and the development of self-governing institutions, and also for safeguarding the civil and religious rights of all the inhabitants of Palestine."

One of the first steps towards the creation of a Jewish Seventh Dominion in Palestine, according to Col. Wedgwood, is to create a special Department in the Government of Palestine which will do all that is possible in co-operation with the Zionist organizations to help the settlement and immigration of the Jews. The enthusiastic advocate of the creation of a Jewish State, under the British Empire, regrets that the British Government has not done as much as the Russian Soviet Government has done to encourage settlement of the Russian Jews in agricultural colonies in Ukraine, Crimea region and other parts of the Soviet Republic. He writes:—

"I am prejudiced against the work of the Russians in settling the Jews in the Ukraine because I want the Jews in Palestine... So there are now, at the end of 1926, some 100 Jewish agricultural Soviets, and 60,000 new Jews on the land, planted on from 40 to 50 acres per family of five. The applicants, far from diminishing, now number 30,000 families. Two and half million acres are still available for further settlement if capital for equipment were to hand. Also in 1926 the Government established an autonomous Jewish district in Kherson, of which the population was 85 per cent. Jew. No Englishman, contemplating what the Russian Government has done in this matter, can fail to deplore that his own Government has fallen short even of Russian

* *Seventh Dominion* : pages 2-3.

† *Seventh Dominion*, page 5.

standards. In Russia assistance has been given, capital from outside has been welcomed, settlement encouraged, land found, schools and training and experimental stations paid for. In Russia these Communists, whom we have been taught to despise, have seen that the settling up of men as free men upon free land is in consonance with the interests of the State. Let us hope that we, too, shall learn that lesson, both in Palestine and in England.¹²⁴

As an advocate of the Seventh Dominion, Col. Wedgwood thinks that the British Government should not court the friendship of the Arabs in Transjordan; on the contrary, the Jews should be allowed to settle there. The Jews are superior to the Arabs and after all they are "White men" and they might be more interested in preserving the British Empire than the Arabs, who may in a critical moment follow an anti-British policy. So the Jews should be encouraged to enter into British defence-forces of the Near East. According to him, "The Jews, if not merely because they are white men, yet for their very safety's sake, would be undoubtedly reliable and make much better fighters. A leaven of such men would put a steel frame in the machinery of Palestine and Transjordanian Frontier Defence Force."¹²⁵

British authorities interested in preserving British supremacy in Palestine are following a method of communal representation in the Civil Government of Palestine. This is a serious mistake, because it may become an obstacle to the creation of a self-governing dominion. In the light of what has happened in Cyprus, India and other parts of the British Empire where the curse of communal representation has been practised, Col. Wedgwood emphatically suggests that the policy of "divide and rule" through communal representation should not be practised in Palestine. He writes:—

"If we are to make a success of Palestine, the three peoples (Arabs, Christians and the Jews) must grow together, acquiring common interests and a common opinion. Probably the most fatal obstacle in the way of such development, in Palestine as elsewhere, is what is known as communal representation. A national public spirit and communal representation are incompatible."¹²⁶

In Great Britain, far-sighted statesmen think that it is worthwhile for them to support the Jewish cause.....Zionist movement.....because the support of the Jews scattered all over the world will be a great gain for Britain to further her interests in World Politics. The Jews must be used to promote the cause of the British Empire. Wise Col. Wedgwood, a Labour Member of Parliament, keenly alive to promote the interests of the British Empire, writes:—

"Indeed, though I protest my own disinterestedness, I do conceive that British support for Zionism may not be unconnected with a consciousness that it is useful for Great Britain to have a friendly people just in that corner of the Levant; and, indeed, that it is useful, all around the world, to find in authority men who will probably view English aims and policy with some sympathy. ...Nor is it only men in authority whose help matters. The attitude of friendship of the scattered Jewish race towards England matters, and make a difference to our comfort in the world. The change of attitude towards ourselves, which is going on among the Jews all round the world,"¹²⁷ from Shanghai to San Francisco, ought not merely to add our comfort but to our use in the world. Narrow-minded anti-Semitic and anti-British politicians may not like the British policy of supporting the Jewish cause of Zionism. But all far-sighted statesmen are bound to recognize the fact that British statesmen never neglect to promote their imperial interests by cultivating closer relations with those nations and communities which may be inclined to support British policies. They also exhibit the keen appreciation of the fact that, in international politics no real statesmen can afford to ignore anything which may become a significant factor. The Jews are numerically insignificant, they even do not have a State of their own; but they have a certain economic power and they can help in creating international public opinion. So the British authorities are courting Jewish support internationally, and in return are willing to create a Jewish State. The Seventh Dominion - within the British Empire which will be a source of added strength to it.

All Italics are mine.

"MOTHER INDIA AS SHE REALLY IS"

BY ONE WHO KNOWS

Professor Ernest Wood's Lectures in the United States

PROFESSOR Ernest Wood of England and Madras, India, is one of the best informed and most sympathetic Englishmen who have lectured about India in the United States.

Since his arrival here last winter, he delivered more than two-hundred addresses

and lectures to audiences often consisting of more than a thousand people.

Because of the wide publicity given to Katharine Mayo's book, Prof. Wood deemed it an imperative duty to reach as many people as possible with his first-hand knowledge and experience of India, gathered

during years of residence, travel and study in that land. His remarkable series of lectures covering almost every phase of Hindu life from religion to social and industrial conditions and his most candid and intelligent presentation of the political situation, have brought to the thousands who heard him a broader and more sympathetic conception of India and her people.

Intimacies and incidents of Indian daily life—in the village, among outcastes—among Brahmins, publicists, scholars, and holy men were recounted with a charming directness and sincerity which made a profound impression upon his hearers. Supplemented with interesting slides, illustrating types of people and their activities, these lectures proved most informative.

When the lectures were finished, numerous American and Hindu admirers gave Prof. and Mrs. Wood a testimonial Indian dinner at the Ceylon India Inn.

On this occasion Prof. Wood spoke in feeling terms about India, her present problems, her past and her future. He showed how all through history India had been great when compared with any contemporary country or civilization. This was true with respect to the study of man himself, he pointed out in the mental or moral sciences and also in material progress.

The destruction of the old village communities, indigenous industries and the alienation of the land to moneylenders, he named as the chief causes for the economic depression of India today. Said he:

"The fact is that India has still the old spirit which produced all the material success and prosperity of older times, ready to burst into renewed activity when economic conditions permit."

"India will have to be developed on modern lines by the same means which other parts of the British Empire are adopting, such as Canada and Australia. Sooner or later Britain will have to give internal self-government to India, and put the country on the same basis as other self-governing dominions. It would be better to do it now than to wait for trouble,

which will surely come if things are left as they are. The situation is critical. Though the Indians are racially one with the Europeans they are being forced into the arms of their geographical neighbors. If we do not stand we shall be faced with a pan-Asiatic combination from Yokohama to Constantinople, and perhaps even Cairo. The new Turkey is no doubt an object of admiration to Egypt. Japan is no longer a British ally and Britain has made movements of a somewhat irritating character in connection with the Singapore base. Also the Chinese

Professor Ernest Wood and Mrs. Wood

nationalists are at Pekin Indian feeling is growing very strong as Home Rule is delayed, and a feeling may grow not unlike that which developed in Ireland. India allied with her Eastern and Western neighbours may ultimately form the brain of the biggest combination known to history, and then the day of reckoning for the European in Asia will have come. Let us not drive India to this."

Mrs. Wood, wife of Prof. Wood and his charming collaborator had many interesting statements to make about the Women of India. Speaking to the American women present, she said:—

"I would like to bring a message from the women of India. They have been so misjudged, so much that is untrue has been said about them. It has been said they are behind the veil, that their interests are confined to the home alone. But in India as elsewhere women are coming more and more into the active sphere of the outside world. Recently there was held an all Indian Women's Conference at Poona at which a great number of women from all over the country gathered and

passed many very important resolutions regarding women's education and child marriage.

"Three times representative bodies of Indian women and men in 1924, 1925, and 1927 have demanded the raising of the age of marriage, and each time the government of India has turned down the application.

"The voice of Indian women is heard abroad in clubs and associations she is seen in numbers at many gatherings and she wields a strong hand in moulding the character of the sons and daughters of Mother India in the home. It is due to a large extent to her influence in the stories she relates to her children that the true ethical and religious thought of India is kept alive. For the East was ever a lover of stories and some of these stories Europe has inherited in all the old favourites.

"So the women of India are standing with their men, as in the days of old when it was thought that not even a god or a great angel could have much power without his 'better half' or his 'Shakti'."

Dr. Sunderland, who presided over the testimonial dinner meeting praised Prof. Wood and his wife, saying that if there were only many more Englishmen of the

type of Prof. Wood, India's political future would indeed be rosy.

Professor and Mrs. Wood have gone to Australia, but will return again to America. Professor Wood's book on India, covering much of the information brought out at his lectures, is now on the press and it is expected to clear up a great deal of injustice and prejudice in the American mind regarding India. A book on Mother India coming from "*One Who Knows*" as an Englishman, will be especially effective when the facts of thirteen years residence and study, a knowledge of Sanskrit and vernaculars are weighed in the balance against the scant 'four months' evidence offered to America in tabloid form by Katharine Mayo.

On behalf of the Hindustan Association of America Mr. Ramlal B. Bajpai thanked Prof. and Mrs. Wood for their great service they were rendering India in America.

Prof S. A. Baisey conveyed the appreciations and message of several other organizations. Also Dr. V. R. Kokatnur praised Prof. and Mrs. Wood.

FOUNDATION OF THE BRAHMO SAMAJ

By N. C. GANGULY

[A Chapter from the Author's forthcoming work on Raja Ram Mohun Roy which is to form part of the "Builders of India" Series.]

THE activity of the Unitarian Association was in this year (1827) renewed with increased vigour, like the last glow of a dying flame. Its religious services had been suspended for some time owing to various reasons. In Adam's letters of February and October 1826 it was said that Ram Mohun did not "attend anywhere," meaning his joining in Unitarian worship or the meeting of the Atmiya Sabha which had ceased to operate and exist, but at the same time made in his will provision for Adam's family. The reformer was now free from the vexation of law suits, which ultimately vindicated his son's character, and he had consequently time to devote to the advancement of Unitarian worship. The "One Hundred Arguments for the

Unitarian Faith," reprinted in 1826, in the Calcutta Unitarian Press from a copy sent out by the American Unitarian Association, indicated the reformer's unflinching zeal for Unitarianism. He liked it so much that it was published at his own expense and at his own press for free distribution.

Mr. Adam as before acted as the missionary of the Society and conducted his own journal, called the *Calcutta Chronicle*. This periodical was unfortunately suppressed by the Government most unceremoniously some time in 1827. Morning services were resumed in this year, on Sunday, the 3rd August. A room had to be rented for this purpose by the Unitarian Committee in the office of the *Harkara* newspaper and library. Ram Mohun's son Radha Prasad had already offered a site for building a chapel and school near the Anglo-Hindu School. The cost was estimated to be from three to four

"The Trial of Colonel Brereton" by Miss Ralinda Sharples. The Seated Indian Figure near the left-hand corner is that of Raa Ram Mohun Roy.
See "Notes."

thousand rupees, which Mr. Adam thought the reformer would be able to collect from his friends. Before this the British Unitarians had sent about Rs. 15000 to help the Indian work, but the money was set apart for the proposed building and other expenses. Miss Collet says this was Ram Mohun's second attempt to found the Unitarian Church and that it did not go far will be seen from the incidents of the following year. The fact was that the reformer tried to help every theistic effort or movement to go forward towards that Universal Theism which was his own ideal.

An estimate of his religious faith of this period and connection with Unitarianism is furnished by Adam in two letters to Dr. Tuckerman of Boston. One Mr. Tiffin enquired through Dr. Tuckerman if Ram Mohun was really a Christian. Mr. Adam replied—

"He is both a Christian and a Hindu—Christian with Christians and a Hindu with Hindus. And before you say I am contradicting myself, and that he is insincere in his religion, you must

candidly weigh all the circumstances in which he is placed. His relinquishment of idolatry is absolute, total, public and uncompromising, while he employs caste property, influence, everything to promote, not the nominal profession merely, but the enlightened belief and salutary influence of Christianity, his claim to be a practical, though not a nominal, Christian would seem to be undoubted. In this point of view Hinduism furnishes the antidote to his own inherent intolerance. The profession of Christianity would identify him in the opinion of the Hindus—with the low, ignorant and depraved converts recently made by the English or long since made by the Portuguese missionaries and in the opinion of the Mussalmans, who hold him in high esteem, with the Trinitarians generally. In other words the profession of Christianity would, inevitably in the present circumstances of the country, identify him with persons from whom he differs as widely as from those with whom he is now identified.

"You enquire whether Ram Mohun Roy is a Unitarian Christian or only a Hindu. He permits me to say that failing the male heirs of his own body, of whom there are two, he has bequeathed the whole of his property to our Mission and while he regrets the appearance of ostentation, which this statement may bear, he leaves it to yourself to judge whether he would have been likely to do so, if he did not sincerely embrace

the Christian religion and ardently desire to extend its blessings to his countrymen."

The complex mind of the reformer was thus a problem to his closest friends in India and abroad and it was not unnatural, since few could view things as he did from a vastly comprehensive stand-point. He looked at different faiths from the summit of his own universalism and so far as each had elements of truth he identified himself with it and appeared accordingly Hindu, Mahammadan and Christian. He himself had said just before leaving for England to Nanda Kishore Bose, the father of Late Rajnarayan Bose, that after his death he would be claimed as a Hindu, Mahammadan and Christian by the respective votaries of these religions. It is not new in India for synthetic geniuses to be so claimed, for Kabir is a standing example known far and wide, though in a much smaller measure than Ram Mohun. Miss Collet has significantly remarked, "His impartial attitude towards other faiths was not yet understood by his Unitarian allies". No wonder that a mind of such gigantic calibre and synthetic penetration should be judged like this from the narrow grooves of particular religions, but the truth will ever remain that he rose to that sublime height from which he could easily pick out the universal from the particulars. In the safe estimate of Dr. Macaulay he was the first Indian reformer who took himself to Christ's teaching. Kaur, Chaitanya, Nanak and Ramananda were not touched by western influence, but Ram Mohun was permeated with the ideal of pure worship in spirit and in truth and an altruistic urge which overleaped the boundaries of race and religion. He found them in his analysis of the gospel of Jesus, partially in the neglected strata of Hindu thought, in fact, in all religions more or less. In him Hinduism, Christianity and Mahammadanism met in an organic unity in order to bring to birth an altogether new conception, viz, the greatest common measure of all religions, which culminated in the Universal Religion formulated by him for the Brahmo Samaj, and it has not been as yet suppressed, nay equalled, by any other human attempt.

Ram Mohun lived among the Hindus like a Hindu, observing externally some rules of the caste system in which he had no faith. The motive was to preserve unimpaired his own usefulness to society which he

wanted to serve. In a letter to Dr. Tuckerman, dated June 21, 1837, Mr. Adam gave a description of what the reformer wanted to do in eating and drinking and family rites—

"This is the only remnant of the rules of caste to which he still adheres, and even this remnant I have reason to know he frequently but secretly disregards.....Both in the marriages and deaths that happen within his domestic circle he rigidly abstains in his own person from every approach to the idolatrous rites usually practised on such occasions, although he does not prohibit the other members of his family from engaging in them if they think proper."

Yet it was a known fact that he was against the tyranny and invidious distinctions brought about by the caste system. His whole doctrine of universal religion was a movement to rise above distinctions and consequently to destroy them. It allowed equal spiritual privileges and opportunities—the same type and quality of Brahma-knowledge to everybody; the rest was therefore a natural corollary. Indeed, caste was extremely distasteful to him not only on spiritual grounds but also from consideration of its evil effects. "He considered caste to be one of the gravest of many ills under which his country laboured." In one of his own letters he expressed his mind clearly and emphatically on this social question.

"I agree with you that in point of vices the Hindus are not worse than the generality of Christians in Europe and America, but I regret to say that the present system of religion adhered to by the Hindus is not well-calculated to promote their political interest. The distinction of castes introducing innumerable divisions and subdivisions among them has entirely deprived them of patriotic feeling, and the multitude of religious rites and ceremonies and the laws of purification have totally disqualified them from undertaking any difficult enterprise. It is, I think, necessary that some change should take place in their religion, at least for the sake of their political advantage and social comfort. I fully agree with you that there is nothing so sublime as the precepts taught by Christ and there is nothing equal to the simple doctrines he inculcated.

This conviction against caste on the part of the reformer was based on the most comprehensive vision of his nation's future. Again it is not simply spiritual as demonstrated in his "Pursuit of Beatitude Independent of Brahmanical Observances"; its implications embraced political and social philosophy. He was the first Indian to point out its disintegrating tendencies viewed from the standard of modern national organisation. He tried first of all to destroy its roots by

means of a spiritual democracy embodied in the Brahmo Samaj and founded on the best teachings of the greatest ancient seers of the nation itself. His effort to infuse Christian idealism into Hindu life and society was one of the strongest desires of his own life, not for the purpose of turning Hindus nominally into Christians, but for conforming life in general to the highest known truth wherever it might have expressed itself. And truth being one, it was only natural for him to look back to those olden times, when India was free from caste and idolatry and those ills of recent growth which he wanted to counteract by means of a synthesis of Eastern and Western idealism.

The true reason for his keeping some vestige of caste in his own life is explained conclusively by J. Young who was a friend of Jeremy Bentham and was in India for some time. It is found in a letter of introduction to the English philosopher bearing the date, 14 Nov 1830, the year in which Ram Mohun sailed for England. Young said that —

"He (Ram Mohun) has externally maintained so much, and no more of Hindu custom, as his profound knowledge of their sacred books enabled him to justify, relaxing however little by little, yet never enough to justify his being out of the pale. I need to say that in private it is otherwise, and that prejudices of all sorts are duly condemned by our philosopher."

This means that the reformer stood for a steady, firm and continuous progress in this matter, being aware, as he was, of its hold on the people. His programme for his nation was essentially constructive and there might have been in his mind a lurking suspicion of destructive forces being let loose all at once. His criticism of caste was in itself destructive enough in the realm of theory.

His publication of a translation of an ancient Buddhist work in Sanskrit, *Bajra Suci* by Mrityunjayacharya indicates Ram Mohun's keenness on the caste question. It was published by the reformer in 1827 with the original and its translation and it showed the futility of the caste system. The object of printing a work of this character was evidently to prove that the attitude of the ancients was similar to the reform movement inaugurated by him. It gave him support from the past as well as connection with it and showed that his was not a destructive propaganda against the existing social organisation and subversive of the accepted

beliefs of the people. It was only reviving what had been lost in course of time. Further, it illustrates anew Ram Mohun's readiness to borrow thoughts and arguments and even books from any religion, Mahammadan, Buddhist or Christian if only thereby he might purify Hinduism.

Yet he was not a mere eclectic, for he was fired with the vision of an organic unity of all truth, religious, political and social and of the whole body of human knowledge which made it. He looked at everything from all points of view and through all its

Portrait of Ram Mohun Roy in the Picture of the Trial of Colonel Bereton

ramifications, that led him to examine and adopt what was suitable to the building up of an ideal society as far as possible.

In the same year he brought out his pamphlet on the *Gayatri*, the most ancient theistic formula of the Hindus, under the title of "*Divine Worship by means of Gyutree*," in which the very essence of worship is laid down based on this hoary text. Those who have considered him a simple Deist and nothing more may find fresh materials in this small treatise for the

revision of their hasty judgment. Dr. Farquhar is one of those who also have made this mistake, through inadequate acquaintance with the writings of the reformer. This mistake is also unfortunately of the same type as Mr. Parekh's confusion pointed out elsewhere and indicates a tendency which often interferes with scholarly interpretation of truth. To the following year (1828) belongs "*The Answer of a Hindoo to the Question; why you frequent a Unitarian place of worship instead of...the Established Churches?*" It was on the line of the "*Answer to Four Questions* of 1822, yet positive in its arguments and bears the mark of dissatisfaction with polemics as well as the close of his polemical writings. A sentence in it shows, like one in the Brahmanical Magazine, that he was mentally soaring far above the narrow ruts of religious and sectarian differences and distinctions. The negative side of the cross-questionings directed to him from time to time made him say—"I feel weary of the doctrine of God-man and Man-God, frequently inculcated by Brahmans in pursuance of their corrupt traditions: the same doctrine of Man-God, though preached by another body of priests, better dressed, better provided for and eminently elevated by virtue of conquest, cannot effectually tend to excite my anxiety or curiosity to listen to it." In fact, priests, whether the destitute Brahmanical or the well-groomed Christian, had little attraction for him nor had the doctrines on which they lived. But his own criticism did not end with this assertion. He took it up in his own words—"ideas in the Western and Eastern heathen mythology—and showed the parallelisms in Divine appearance "in the form of a party-coloured life" and "on another occasion in the bodily shape of a dove." It tended according to him "to bring the Deity into ridicule under the shield of religion". Similarly Christian Trinity and Hindu Trithism called Trinity by him were both rejected. He said "the mind which rejects the latter as a production of fancy cannot be reasonably expected to adopt the former".

His main reason in attending Unitarian worship is given below—

"Because the Unitarians reject polytheism and idolatry under any sophistical modification and thereby discontinue all the evil consequences resulting from them. Because Unitarians profess and inculcate the doctrine of Divine Unity—a doctrine which I find firmly maintained both by

the Christian scriptures and our most ancient writings commonly called the Vedas".

Miss Collet observes that "*the Answer* simply amounted to saying that in a Unitarian place of worship he heard nothing of incarnation, union of two natures, or Trinity both doctrines which he regarded as only a variant of anthropomorphic and polytheistic mythology of popular Hinduism". And indeed he made no secret of it in the Brahmanical Magazine which after the three *Appeals* sets forth his theological views on these points. It is a wonder that in the face of such statements, innumerable as they were scattered all over his writings, there were efforts made to prove him a Christian or a Hindu after the particular bias of the writer. Ram Mohun left no point undiscussed in regard to which there could be the least doubt or misunderstanding as to his estimate of Hinduism and Christianity.

In the meantime a Unitarian service in English was begun in the hope of increasing and strengthening the Unitarian Committee and its life and work. This move in August 1827 did not produce the desired result. In November of the same year an evening service on similar lines was tried and proved a failure. Both were very indifferently attended and had little practical support from avowed Unitarians. The evening attendance fell from 80 to almost nothing in a short time. The proposal to erect a chapel for regular service in the Bengali language similarly failed, as was bound to be the case in the face of such lukewarm sympathy from those who were supposed to be supporters of Unitarianism. There was strong sentimental objection to the very idea of conducting services in Bengali instead of English. The vernacular was unfortunately considered unfit for any respectable use and in Adam's own words their plea was that "anything said or written in the Bengali tongue will be degraded and despised in consequence of the medium through which it is conveyed." Only classical languages, such as Sanskrit and Persian, could command respect in the eyes of the people together with English, the language of the rulers. Yet the Brahmo Samaj services succeeded quickly, and almost at once, probably because of the tincture of Sanskrit scripture reading. This tendency on the part of the educated people, illustrated in a positive contempt for the current dialect, revealed the significance of Ram Mohun's efforts to

encourage the use of the spoken language and to raise it to a literary status which the "panditic" adaptations and the "sahebi" translations of the Fort William College would not give to it. It was in reality a landmark in the History of Bengali Literature which has found a new career opened before it ever since the days of the greatest Indian reformer.

Mr. Adam was now forced to take to a different method of rallying round him the loose combination of the Unitarians that was gradually dwindling into nothingness. Its cohesiveness required strengthening and deepening by some means at this critical juncture. On the 30th December, 1827, he asked the Unitarian Committee to re-organise themselves into a more comprehensive body by connecting their association with the Unitarians in England and America. His proposal was somewhat of an affiliation, so to speak, "intended to deepen the esprit de corps" and to bring about a closer unity of all Unitarians in the world. The "more complete organisation"—to use Adam's own language—was called the British Indian Unitarian Association. It was probably under the auspices of this body that he started fresh lectures on the First Principles of Religion in order to make up for the lack of attendance at the regular services. This too did not fare well, though the discourses were given "for the exclusive benefit of the natives...in the native part of the city", i. e., in the Anglo-Hindu School of Ram Mohun. He used to have about twelve to twenty-five to hear him and after some time scarcely even one. The reformer himself could never attend because of pressure of multifarious duties. This sorry state of things discouraged Adam to such an extent that he proposed that he should be sent to Madras on a missionary tour. Ram Mohun had to oppose it on consideration of available funds and the importance of Adam's presence in Calcutta, which led the Committee to stop it as the only possible alternative.

There was perhaps some suspicion, if not doubt, about Christian connection with Unitarianism or whether the name Christian

could go along with the word Unitarian, and this may account for the next step taken by Mr. Adam in resuscitating his declining congregation. A separate group, described as Hindu Unitarians, was being formed to function with the Unitarian Association in an auxiliary capacity. Adam helped it to grow and to act in its own way. Ram Mohun called himself a "Hindu Unitarian" until the Brahmo Samaj was started and his followers also imitated him in this. In a

Ram Mohun Roy
[From the Second London Edition (1834)
of his "Precepts of Jesus."]

letter dated 5th February, 1828, Adam wrote to J. Bowring of London.

"I am endeavouring to get the Hindu Unitarians in Calcutta to unite in forming an Association auxiliary to the British Indian Association and for the establishment of the public worship of One God among themselves. . . . To prevent prejudice from being excited, it will be necessary to keep Christianity out of view at present in connection with this auxiliary, but it will be (what perhaps may not be nominally) an auxiliary to our views and a highly valuable one too, if I can succeed in creating the necessary degree of interest to begin and carry it on."

It was evidently Adam's last hope that this subsidiary body might revive the smouldering members of Unitarianism in Calcutta and the Hindu and the Christian sides might ultimately coalesce together and Christian

Mullick of Howrah. They promised to advance this great object by every means in their power. Chandra Sekhar Deb was charged with the duty of negotiating the purchase of a piece of land on the south of Siva Narayan Sircar's house in the Simla locality but the place was not considered suitable and it also meant the immediate building up of a house. A house belonging to Kamal Lochan Basu on the Chitpore Road in Jorasanka locality was selected and rented from the owner. Here the meeting for worship was established on the 20th August, 1828 and the spiritual idea of the reformer found its actual embodiment. This little band of seekers after truth became on this day, as if by the touch of the magic wand of the wizard, a regular community breathing an independent life of its own and having an objective existence apart from the originator and founder.

The meeting was held every Saturday in the evening from 7 to 9 P.M. The elements of the Service were recital of the Vedas reading of the Upanishads, discourse on the Vedic texts read or recited and hymn-singing. Two Telegu Brahmins recited portions of the Vedas, Mahamahopadhyaya Utsavananda Vidyavagish used to read from the Upanishads, Mahamahopadhyaya Ram Chandra Vidyavagish explained the Vedas by means of sermons. "Kisto" and his brother "Bistoo" sang hymns mostly of the reformer's composition,—a Mahammadan "Golam Abbas" by name accompanied with instrumental music. Occasionally Mohammadan and Eurasian boys sang persian and English hymns. Tarachand Chakravarty was its Secretary. Many orthodox Hindus presented themselves at such meetings for worship. Both Utsavananda Vidyavagish and Ram Chandra Vidyavagish were Ram Mohun's converts. The former discussed Vaishnavite philosophy with the reformer before his conversion, and the latter's case is already well-known. Both illustrate Ram Mohun's superb power of bending and conquering the best Brahmanical intellects of the day. The inaugural sermon by Ram Chandra Vidyavagish was on the spiritual worship of God and it was a fitting piece of philosophical exposition; "his text, which was taken from various parts of the Hindu Scriptures, read God is one, only, without an equal in whom abide all worlds and their inhabitants. Thus he who mentally perceives the supreme spirit in all creatures acquires perfect equanimity and shall be absorbed into

the highest essence even unto the Almighty." This sermon was translated into English by Tara Chand Chakravarty and was sent by the reformer to a friend, Capt. A. Froyer, with the remark that "it exhibited the simplicity, comprehensiveness and tolerance which distinguish the religious belief and worship formerly adopted by one of the most ancient nations on earth and still adhered to by the more enlightened portion of their posterity"

Stapleton Grove now

Miss Collet has observed that "the share which Unitarianism had in the birth of the Brahma Samaj was distinctly majestic, not maternal" and that "it was upon the ruins of the Unitarian Mission that the new Theistic Church was reared." On a superficial view this statement does not seem to need any qualification whatsoever, but the remark just quoted above of the proclaimer of Brahmoism when considered together with the trend of his thought in his various writings, will surely reveal another side of the mind which was busy with creation and construction. Perhaps it will be more scientific to say that Hinduism, Christianity and Mahammadanism stood in a catalytic relation to the Universal Theism formulated and established by Ram Mohun. Eclecticism is not at all the character of the truth he worked out. His was just the opposite process—a process that consisted in more than mere juxtaposition and conglomeration of religious ideas from all directions. It was a synthetic analysis going to the rock bottom of religious experience itself and its organic character, which depended on the very evolution of religion in the consciousness of humanity, was stamped by him with the mark and colour of individuality; what he gave to the world was the highest and the most

universal conception of religion—a type of theism free from the moorings in books and customs, personalities and traditions. An achievement of this kind is a discovery of the greatest value to the ever-advancing spirit of man. Theism before him was either the Monism of the Vedanta in the East or Unitarianism of Christianity in the West. He placed Theism on its own evidences as natural and necessary to all religions since it was the greatest common denominator of them all—their vital essence.

Mr N. N. Chatterjee's remark that the Service in the Brahmo Samaj was copied from the procedure of Unitarian worship needs examination as well as criticism. It is to be remembered that Ram Mohun had, not in vain, nor for nothing, opposed and shut out Christian doctrine in his Vedic school and Christian influence in the Anglo-Hindu school and coined the term Hindu Unitarian for himself and his friends. He was fully aware of the different orders of worship obtaining in different religions—Hindu, Muhammadan and Christian. In formulating a mode of worship he did not simply take up what he found in Unitarianism for in Hinduism itself there was the quasi-religious procedure of Hari-sabhas, Kirtans and Kathakatas which satisfied partly the communal instinct of congregational worship if that is simply the point at issue. Text-reading, discoursing, hymn-singing and Sankalpa—prayer were elements that could not have passed unobserved by him. There was also the Chakra-sadhana in Tantric group-culture in his time. It cannot, therefore, be said straight away that he simply imitated Christian worship, knowing as he did, the eight-fold sadhana or spiritual exercise according to the Yoga system and the Vaishnava methods of worship. The five elements of *udbodhana* or awakening, *aradhana* or adoration, *dhyana* or meditation, *prarthana* or prayer and *upadesha* or sermon are enough to illustrate the constructive side of spiritual worship evolved in the Brahmo method. That these purer forms were evoked by the very presence and example of Christian worship is beyond doubt and the principle of adaptation and not grafting, is accounted for by it. The idea that Hinduism had no congregational worship in its theory and practice, and so could not supply the reformer with any data needs modification in view of what is known to obtain among Buddhists, Jains, Vaishnavas and Sakts.

Ram Mohun did not add and Christianity could not have furnished anything more than the ordinary text-reading, discoursing, hymn-singing, meditating on the supreme spirit as integral parts in a combined form in the whole procedure.

The establishment of the Brahmo Samaj was according to Mr. Adam "a step towards Christianity" and he added "the friendly feeling which happily exists between Christian and Hindu Unitarians should be preserved." A sum of Rs. 500 was consequently recommended by him as a grant from the Unitarian Committee. He also attended their service at times and showed the deepest and sincerest sympathy with the movement. Yet there were in it things that were not and could not be approved by him, since in giving up Trinitarianism he could not by that very fact rise at once to the Universal Theism which was Ram Mohun's objective. In writing to Dr. Tuckerman on 22nd January, 1823, he stated clearly his objection to the Hindu character of the Brahmo service. A portion of his letter bearing on the point is given below :—

"There has accordingly been formed a Hindu Association, the object of which is, however, strictly Hindu and not Christian i.e. to teach and practise the worship of one God on the basis of the divine authority of the Ved and not of the Christian Scriptures. This is a basis of which I have distinctly informed Ram Mohun and my other native friends that I cannot approve."

Mr. Chatterjee says that Adam's eyes were opened as to the far-off aim of the reformer, and though "he and all his associations were spiritually begotten by Ram Mohun" in the language of Miss Collet and were therefore secondary agencies, the difference noted in the letter already quoted is too radical to need any comment. It says, further, with reference to the call on all Unitarians, Christian and Hindu, to organise themselves that—

"Ram Mohun.....supports this institution, not because he believes in the divine authority of the Veds, but solely as an instrument for overthrowing idolatry.....He employs Unitarian Christianity in the same way, as an instrument for spreading pure and just notions of God without believing in the divine authority of the Gospel."

The Brahma Samaj represented and embodied the truth which was rightly described by Adam to be pure and rational Theism without the aid of faith in authority and revelation. This was a tremendous step ahead of the religious thought of the world. In rational thought the reformer was much

influenced by the Muzalalas and the Absolute Vedanta as well as by Locke, Rousseau and Hume, and the Encyclopaedists yet he "was above all and beneath all a religious personality" with his Hindu spiritual nature deepened by the contact with Christianity and Mahammadanism. He tried Unitarianism as well as Vedantism as means to an end—a fact which was interpreted by the John Bull of Calcutta, dated 23rd August, 1828, in its report on the foundation of the Brahmo Samaj as "sliding from Unitarianism into pure Deism." But it has to be noted that "the foreign exotic" did not thrive on the Indian soil and died a natural death. Ram Mohun perhaps diagnosed early its weakness caused by transplantation, while his own mind was rising gradually to the sublime conception of a Universal Religion quite different from mere eclecticism. The Brahmo Samaj was the focus of the reformer's ideal and he made it spread its long arms like an octopus in many directions. Collet has appropriately translated the name "the Society of God," its social implications being indeed deep and pertaining to the ideal itself. It was then indifferently mentioned in the deed of land transaction of 1829 as the Brahmo Samaj, corrupted later on as the Brahmo Sabha in imitation of the Dharma Sabha as a private institution of 1830; compared with the Atmiya Sabha of 1815 it was a mighty achievement of a decided public nature with the clear stamp of a community, in short an organic unity of the highest order, a potential giant that was to shake the whole continent of India in after-years.

The Europeans naturally did not like such free movement of thought on the part of the Indians away from any form of Christianity. The John Bull of Calcutta failed to understand what was meant by the foundation of the Brahmo Samaj. Ram Mohun had already incurred their general displeasure and lost a good number of European friends for his agitation in favour of the liberty of the press. He was essentially a great lover of freedom and could not have helped doing what he did in all spheres of activity, whether religious, social or political. Col. Young in a letter to Bentham portrayed Ram Mohun's position among the Indians and the Britishers of that age—

"His whole time almost has been occupied for the last two years in defending himself and his son against a bitter and vindictive prosecution, which has been got up against the latter nominally,

but against himself and his abhorred free opinions, in reality by a conspiracy of his own bigoted countrymen and encouraged, not to say instigated by some of our influential and official men who cannot endure that a presumptuous 'black' should tread so closely upon the heels of the dominant white class or rather should pass them in the march of mind. It is strange that such a man should be looked upon coldly, not to say disliked, by the mass of Europeans, for he is greatly attached to our regime Not only has he no equal here among his own countrymen, but he has none that at all approach to equality even among the little 'sacred squadron' of disciples whom he is slowly and gradually gathering round himself in despite of all obstacles."

Even in face of such cross-currents and under-currents against him and his reforming activities, Ram Mohun's iron nerves knew no discomfiture. The unity of the Godhead

Where the Raja was Buried in the Grounds of Stapleton Grove. Stone marks the spot above the mark

and the brotherhood of man were passions with him and he believed in them with all the warmth of his great and mighty heart. They were not mere intellectual conceptions on which he staked his all including life itself. Whenever he had occasion to speak "of his Universal Religion, he was so much moved that tears came out of his eyes." Hearing of a man who had from a Theist turned an Atheist, he rejoined humcurously "and later he will become a beast." This vein of humour was characteristic of him and he could tolerate all types of men. One of his most intimate friends, Prasanna Kumar Tagore, was practically a sceptic who was at the same time closely attached to him and the Brahmo Samaj. He was called by the reformer "a rustic philosopher" in a loving yet good-humoured fashion. Being thoroughly acquainted with the writings of Rousseau

and Hume he knew how strong was their influence on his friend. Miss Collet has expressed the relation between these two leaders of Bengali public life in an expressive sentence as—"thus the master would banter and condemn without alienating an unbelieving disciple." These traits of his character attracted men and the Brahmo Samaj soon drew within its fold a large number of members and a large sum of money to its fund. It went on increasing by rapid strides and became a force in the national life of Bengal. In fact, the intimate friendship and inspiring confidence of Ram Mohun formed the cementing principle of the group, which like the thin end of a wedge successfully cut into the heart of society. It was a striking contrast to the utter failure of the Unitarian Association.

The reformer was much attached to his disciples, as they in their turn fully reciprocated his love. They respectfully called him *Devanji*, according to the title used by Mr. Digby, for he was not given the title of a Raja as yet, and he affectionately called them *beradar*, a Persian word from the same root as *brother*. Everybody was addressed as *brother* by him as people came to be attached to him. He constantly advised his disciples and helped them to go forward and demanded the strictest discipline from them in every respect. He was equally at times reminded of his own advice by these his intimate friends and followers. An example of this is very well-known. Tarachand Chakravarty once noticed that he gave rather too much time to brushing his hair, which was rather long, and dressing it in usual Mahamadan fashion. At once a line of Ram Mohun's own famous song was quoted to him—"How long will you with care see your own face in the mirror?"—with the caustic enquiry if this was meant for other people only and not for the composer himself. The reformer with his transparent frankness admitted the force of the observation and rejoined, "Ha! brother you are quite right."

Ram Mohun's dress was thoroughly Mahamadan as it used to be in his days. It consisted of a twisted turban, a long choga and trousers and he insisted that all should come in this dress to divine worship. His opinion was that good and clean dress ought to be used in "God's Darbar", i.e. a meeting where God is present. A member of the Brahmo Samaj was once

warned through another because of attending the service in ordinary Bengali clothes, *dhuti* and *chaddar*. It was an essentially Islamic idea that the reformer tried to introduce but it did not last long. Personally he kept to it throughout his life as is seen in his popular portrait. It had its undoubted utility from the standpoint of cleanliness. His aesthetic taste was evident in matters of clothes, for he never liked to see any one shabby or careless. He walked to the services as a sign of humility before God, but returned in his own carriage. His daily life was accurately punctual in minute details, as all strenuous lives are bound to be. He was a very early riser and always regular in his constitutional walks. In the Indian way he used to get himself oiled and shampooed before his bath every morning by two strong servants, while he read the Sanskrit Grammar, *Mugdhabodha*, in parts day after day. After this he had his bath and breakfast of rice, fish and milk and took nothing till his evening meal. He worked till two and then went out visiting friends. His meal in the evening at about eight used to be in English fashion with Mahamadan dishes.

Another account from Ram Mohun's servant, Ram Hari Das, gives a fuller picture of the ways and habits of the reformer probably in his later life at home. It is reproduced here verbatim—

"He used to rise very early about 4 A.M. to take coffee and then to have his morning walk, accompanied by a few persons. He generally return home before sun-rise and when engaged in morning duties, Gokul Das Napti would read to him newspapers of the day. Tea would follow; gymnastics; after resting a little he would attend to correspondence; then have his daily bath, breakfast at 10 A.M.; hearing newspapers read; and hours siesta on the bare top of a table; getting up he would pass his time either in conversation or in making visits. Tiffin at 3 P.M.; dessert at 5 P.M. Evening walk; supper at 10 P.M. He would sit up to mid-night conversing with friends. He would then retire to bed, again eating his favourite cake, which he called "*Haldi*." When engaged in writing he would be alone."

But above all he was a truly pious man. His cook who knew him from long and accompanied him to England bore eloquent testimony to his "punctual piety" as "the worship of God was Ram Mohun's first daily work." His religion made him a man of thoroughly democratic ideas as may be illustrated by an incident in his later life.

A RAJPUT LADY
From an old Painting.
By the courtesy of Prof. Sunilkumar Chatterjee.

While walking one morning in Bowbazar, the Central Calcutta of those days, he saw a vegetable-seller, just like those occasionally to be found even now in that quarter, looking for some one to help him with his load, so that it might be placed on the head to be carried to its destination. No man was low in Ram Mohun's eyes and without the least hesitation and with a natural grace, dressed

as he was in nice clothing, he advanced and lifted the basket to the head of the man. There were many men taking their morning walk, but how many would have revealed the inward man through such a simple act of kindness—an act such as Wordsworth speaks of—

"—that best portion of a good man's life,
His little nameless unremembered acts
Of kindness and of love"

THE AWAKENING OF EGYPT

By EDWARD ASSWAD OF CAIRO

THE inauguration of the monument representing the Awakening of Egypt has been celebrated in the most sumptuous way in the centre of Cairo Station Square, in the presence of His Majesty King Fuad I, His Excellency the High Commissioner, the Members of the Diplomatic and Consular Corps, the Senators and Deputies, the Ulama, the Dignitaries of the Churches, the Under Secretaries, the Senior Government Officials and Senior Officers of the Army and Police forces and other notabilities, who enjoyed one of the most pleasurable meetings ever held thus to contemplate the unveiling of the statue of the Egyptian Liberty. i

Egyptian Liberty

The garden surrounding the statue had been closed in with tentwork richly decorated with Egyptian flags and the Royal insignia. Rows of chairs were placed to accommodate the many guests invited to take part in the ceremony, also a throne for the King was put in the middle of the centre tent exactly

facing the statue. His Majesty was received by the Prince and Nabils, the Prime Minister and the other members of the Cabinet, and when he was seated, His Excellency Mostafa El Nahas Pasha read a speech felicitating His Majesty and the nation upon this important occasion and the recognition of a talented Egyptian artist. An ode, specially written for the circumstance by Ahmed Bay Shawky the Poet Laureate, was then recited by a member of the Department of Public Instruction, after which the wrappings were removed from the statue which was greeted with applause and enthusiasm.

The statue is an allegory symbolizing modern Egypt as a woman throwing back a heavy veil from her face and touching with her magic hand the head of a sphinx stretching its paws in preparation for new activity. It possesses simplicity, force and intellectual significance, discarding superficial realism for the clarity of essential truth.

Seen in its true gentility of rosy granite, bathed in Cairo sunshine, it has more than one reflection of the astounding relics of the Eighteenth Dynasty, of for example, the features of the young Tut Ankh Amen.

Those heaps of stone carried from Assuan to form one solid rock at the gateway to the Capital of the land of the Pharaohs, do but mark Egypt's claim for her ancient glory which had long been acknowledged in the early times.

Year after year, Egypt will retrieve her losses which she sustained in the past, through the development of art and industry and by pursuing the realization of her aims with a view to acquiring a remarkable standing among the modern states.

America Spreads its Wings

You can leave Hadley Field, at New Brunswick, N. J. just outside of New York city, at 12:15 in the afternoon, be in Chicago at seven o'clock, rush westward through the night down a pathway

of light, see the sun come up somewhere around Cheyenne, hop the Rockies at daylight and drop into San Francisco around 4:00 p. m., Pacific coast time, or seven o'clock, New York time.

That path of light across the sky which guides the mail through the hours of darkness is one of the marvels of the age. At twelve landing fields alone six billion candlepower is used in the beacons that aid the ships to land.

An accident on any regularly established airway is a rarity. The insurance companies have r-

Start for a Light at Heady Port. The Beacon of the Port is to be noted

From the Canyons that Lead North from Battery to the Sky-scrapers that Line the Chicago River is 1000 Miles but just a comfortable Afternoon's Ride. Hopping off from Hadley Field alights in Chicago in Time for Dinner or continues the flight to San Francisco at 1 p. m. Next day

organised this fact by amending their policies to pay the same benefits for aerial accidents, on regular commercial routes, as they do for death meet in such ways as falling downstairs in your own home, slipping on a banana peel, or being run down by an automobile.

Growing Precious Stores

Growing precious stones that are more perfect even than nature can make them, and finally producing a gem that will be entirely new, is the task that George Everett Marsh, chemist by night and picker by day, has set himself and his associates, E. Menzel and Frank E. Chellis.

These gems are not imitations, but are "grown" from the very substances nature uses to create her own rubies and sapphires, and these substances are made into one crystalline mass, called a "boule," perhaps weighing as much as 100 carates. There are only two gems which Mr. Marsh does not make. He can make the diamond, but at such high cost that the natural jewel is cheaper.

Mr. Marsh inspecting the Flame through a Shielded Telescope.

The other gem which is not made is the emerald. It is easy enough to obtain the raw materials for emeralds, but the element which contains the green coloring for the crystal invariably turns red under the heat necessary to fuse the substances.

The success Mr. Marsh has had in making synthetic stones is largely the result of his application to a hobby. For twenty one years he has worked in his laboratory at night. Three years ago he finally conquered the ruby and the sapphire, and now they have become regular commercial jewels which may be had in almost any jewelry store in the country.

After eight years of patient effort, the sapphire was successfully analyzed and not a trace of cobalt was found. The color was due to the presence of a very small percentage of ferric oxide and a form of titanium. That was the real

Uncut Jewels with Set and unset, which were Grown in the Basement Laboratory from Chemicals

James Basset, French Scientist, who has developed Process for making Diamonds from Coal. Intense Pressure is employed to effect Crystallization

birth of the synthetic sapphire so far as its chemistry was concerned. The equipment consists of a high-temperature flame produced by gas and oxygen, directed vertically down

onto a small rod of aluminum oxide which is used as a pedestal on which to grow the stone. To conserve the heat, Mr. Marsh invented a cylindrical shield of alumina, insulated with asbestos. He now has decided to abandon the asbestos because of its shrinkage under the terrific heat—2 (500) degree centigrade—to which it is subjected.

The raw materials for both sapphire and ruby are alumina and the oxides—ferrie for sapphires and chromic for rubies—which must be of the

highest possible purity. The mixture of the raw materials must be absolutely uniform. Ruby material is prepared by dissolving alum of the highest purity in distilled water, adding a quantity of chromic alum to provide the chromic oxide. The amount of chrome alum to be added depends entirely upon the depth of the color desired. Every color and shade has its own chemical composition and its own characteristic set of internal strains under crystallization.

CO-OPERATION IN AGRICULTURE

By SANTOSH BIHARI BOSE, L. AG.

Agricultural Station, Visva-Bharati.

THE term co-operation is very elastic, especially, when it is applied to Indian Agriculture, because there are so many factors that govern it, that it is a long way off, at present, to reach its goal in the truest sense of agricultural co-operation, which is found now-a-days in some of the most advanced western countries. There are at present, so many links to be united together, that it is not practically feasible to tackle all the problems, at a time, to attain its end.

Now let us pause for a moment, and ponder over the whole situation. The first question that arises, that who are the producers, and who are the consumers? What are the relations that exist between them? How and to what extent, these relations are maintained? What do the producers think at the time of preparing their cropping schemes?

The distance between the bulk of consumers, and that of the producers is far and wide. The consumers try to get the best and the cheapest thing and thus to bargain themselves; while the producers want to fetch the highest price for the produce of the soil at the expense of the consumers. Thus there is really a tug-of-war between them. Each one tries to bargain at each other's expense; and that is quite natural.

The consumers know that they are paying too much to somebody, other than the producers, on the other hand, the producers think, that they are getting much less from some body, other than actual consumers. Had there been any opportunity of mutual acquaintances, then the matter would have been compromised to a great extent. The consumers would have asked for a

reduction in prices, to which the producers would have gladly conceded, as the tension between the two parties would have been greatly curtailed owing to the elimination of certain factors, that produce that tension. But these factors are not easily to be removed, especially under the present circumstances, that prevail in our country.

The absence of organisation, good inter-communication, transit facilities, capital, and various other local technicalities in matters connected with agriculture, make these intermediate factors govern the situation uninterruptedly. Both the parties—consumers and producers—pay the penalty, which both of them resent. Under such circumstances, the producers—naturally get back, and reduce the total acreage under cultivation—producing only that much as is required for local consumption generally. Thereby curtailing, to a considerable extent, the extra supply for the great bulk of consumers, that live far and wide from them. Neither party is thus benefitted.

By merely meeting the ordinary demand of food, other amenities of life are not attended to, which are generally met at the expense of exchanges of the produce of the soil. On the other hand, owing to the paucity of supply of produce in the market, and the subsequent high price, the consumers are compelled to curtail other necessary daily expenses, just to meet the daily rations of any food any how. Now the question naturally comes, where lies the solution of the problem?

There is an eliminating factor that governs the purchasing power of the consumers, who can purchase much less than is actually

required for consumption. In other word, he can restrict his budget. But the producer invests something for which he wants a fair return, otherwise that would be a loosing concern. Consequently, he must try to find out something that pays him. It is, of course, possible to fix a price, but it is not possible to make the customers pay that price. Mr. W. M. Jardine of the United States, Department of Agriculture, has truly remarked that there is practically no agricultural commodity, which is so essential for human existence that substitution cannot be made for it, at least in part, and this possibility of substitution destroys any effective arbitrary control of price over a period of time.

It is often said that the Indian cultivators are very conservative. It is quite true, as the circumstances compelled them to be so. Now, how would it be possible to make them grow much more in order to meet the demand of the great bulk of the customers? It is quite possible for them to increase both the yield per acre, as well as the acreage under cultivation, provided the question of disposal of the produce is solved.

This can be effected in two ways. Firstly, it can be facilitated by quick and cheap transit etc., while secondly, by making provision for effective storage for a definite length of time. By quick transit, the problem of supply can be solved to some extent, but there is a limit of human consumption, beyond which they cannot go. The consumers cannot naturally overstock their daily necessities. On the other hand, the producers cannot grow each and every crop continuously, as each has got a respective season and for a short time only.

The produce of the soil, either must be disposed of then and there, or to be stored for future consumption in a most effective way. It can be either stored in the shop or at the place of disposal. By effectively storing the produce, the producers can command the market directly at least for a good length of time and thereby getting a reasonable return for their labour and money.

With this end in view, the policy of the

Agricultural section of the Institute of Rural Reconstruction, Visva-Bharati, has been

Potato Store House—Outside Sriniketan Farm

Potato Store House—Interior, Sriniketan Farm.

framed. Some years back, when the Agricultural Farm was first started at Sriniketan, it was the aim of the University to demonstrate to the local cultivators that waste-barren-land can not only produce so many crops (vide *Modern Review*, August, 1926) by following a judicious system of crop rotation, economy in manuring and irrigation, by conservation of soil moisture etc, but, that the produce of the soil, when grown on an extensively scale, can be stored most effectively for the better market in future.

This store-house has been built with the object of storing potatoes of the Visva-Bharati farm, as well as that of the neighbouring cultivators. A nominal fee at the rate of (2) two annas per maund will be charged for the period of storage, which generally comes to between four to five month—April, May, June, July, August. Visva-Bharati will get Rs. 187-8 as., per annum (300 maunds \times 10 as. at two annas per maund per month for five months) i.e., in the course of two years, the total sum of the cost of the house will be realised; while the individual cultivators

will make a fair profit out of his return by thus storing.

Potato is generally sold at the time of the harvest at Rs. 2 per maund but after storing for a period of five months, one maund of potato will at least, fetch Rs. 5. Thus after deducting an allowance for total shrinkage and wastage in weight during the period of storage, and as well as for house rent, a clear profit of Rs. 2 per maund might be obtained. This is likely to create an incentive for the cultivators to grow more by adopting better methods, and by increasing the total acreage under cultivation.

The following experiment was conducted last year (last season) and the result of the first year is given below :—

ABSTRACT STATEMENT OF THE EXPERIMENT

Potato (grown in the farm) stored 50 maunds in April, 1927. Total loss in weight from shrinkage and wastage,—after five months from April to August, 27, 10 maunds (approximately).

Months Difference of temperature
(inside room) maximum and
minimum—average of 30 days.

Remarks

(5)
50 mds. \times R. s.
— 1-12 Rs. as.
— 87-8-
40 \times 5-Rs 200-

The following points were taken into special consideration while storing potatoes.

1. Provisions were made for a free circulation of air in every direction of the room in order to keep the difference of the inside temperature, between the maximum and minimum, within a reasonable margin. The greater the difference, between the maximum and minimum temperature, inside the room, the larger the percentage of loss, owing to certain chemical changes that take place inside the tubers (potato). In other

word, the inside temperature of the store room should be more or less uniform.

2. Tubers were covered with sand during the months of June, July, when the potatoes generally appear. Care was also taken so that heat might not be developed inside the stack.

3. Lime boxes were placed at intervals in the recess of the windows, for serving the purpose of disinfectant, as well as for maintaining dryness inside the room to a certain extent.

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticising it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, *The Modern Review*.]

Professor Radhakrishnan on Indian Philosophy

DR. B. S. GUHA'S REJOINDER

In the July number of the *Modern Review* X.Y.Z. has reiterated his charges (pp 61-62) against Prof. Radhakrishnan's second volume of Indian Philosophy. As he wants 'categorical' answers from me: it will be best to take his objections seriatim:

1. X.Y.Z. asks me whether Prof Radhakrishnan is a medical practitioner and assuming that he is not, argues that consequently he could not have looked into all the volumes of the Br. Medical Journal but must have borrowed the extract from Rai Bahadur Srish Chandra Basu's Introduction to Yoga Philosophy. As I am not a mind-reader as X.Y.Z. appears to be, I cannot 'categorically' say whether Prof. Radhakrishnan looked into every issue of the Br. Med. Jour. or not, but it does appear to me that there is a third possibility which he has overlooked, namely, that without having hunted all the issues of the Br. M. J. and without even turning to Rai S. C. Basu Bd.'s *Yoga Philosophy* it was quite possible for Prof. Radhakrishnan to come across the reference in the course of his vast reading and then have it verified by actual reference to the particular issue of the Br. Med. Journal.

2 and 3. So far as his references to the Sanskrit classics go, as a reference to Prof. R's book will show, wherever sectional and not page references are given, there is no need to mention the particular editions which are quoted unless there are differences in textual readings. When the Professor refers to Vijnanabhikṣu's commentary he gives the sectional references and does not mention the editor's name. This is not intended to be a discrimination against Rai Bahadur S. C. Basu, for the author does it as a general rule with regard to all the Sanskrit classics which he uses in his writings. If he turns to volume I of Indian Philosophy X.Y.Z. will find Prof. R. writing—"the bibliography at the end of each chapter is by no means exhaustive. It is intended mainly for the guidance of the English reader" (p. 12).

4. X.Y.Z. argues that because Prof. R. occupies the chair of Philosophy in Bengal's premier University he should have known the Bengali works

on the Vedānta and imagines the grave situation created by a German Professor of Oxford writing in Latin and not mentioning any philosophical publication in English. I hope X.Y.Z. knows his Oxford where such phenomena take place but I should have been grateful if he had given a concrete instance instead of leaving us to the consequences of his imagination. There is however one slight thing which he has in mind, namely, Prof R's book has been published by the Library of Philosophy in England and is mainly intended for English students as the sentence quoted above from his first volume will show.

5. It is true that a scholar is supposed to be familiar with the history of the development of his subject and as such the particular views which go to make it up, but if he is expected to know the histories of all statements he comes across in his readings it is certainly expecting too much. Not having more than a general acquaintance I cannot claim to know what passes off as research in Philosophy but certainly the branches of science with which I am familiar will regard any such thing as preposterous. In this particular instance about "Nitrous Oxide" etc., Prof. R. has borrowed with due acknowledgement the passage from William James' *Varieties of Religious Experience* (p 387) where there is no reference to show that it was taken by him from any other writer. How could then Prof. R. be expected to know the indebtedness, if any of William James to the *Lahore Journal "Arya"* to which Rai Bahadur S. C. Basu is said to have contributed in 1833-19?

6. Lastly, Prof. R's book on Indian Philosophy has been highly appreciated among others by Bertrand Russell, Lord Haldane, Prof. Perry etc., and has won for the subject recognition even in such standard works as the *Encyclopaedia Britannica*. Whether X.Y.Z. considers it a creditable piece of work or not does not impress a layman like myself, specially as his own qualifications to speak on the subject are unknown. If he had the courage to disclose his identity, one could have known the value to be attached to his opinions.

Final Reply of X.Y.Z

I guess from Mr. Guha's epistles in the *Modern Review* that he is in touch with Prof. Radhakrishnan. If so, he could have saved himself much trouble if, instead of speculating about possibilities,

he had obtained from the professor a simple statement to the effect that he had not taken the extract in question from the Late Rai Bahadur S. C. Basu's "Easy Introduction to Yoga Philosophy," but from some other publication, which he could have named. As Mr. Guha has not adopted this straightforward course, my suggestion that the professor took the extract from Mr. Basu's book still remains worthy of serious consideration.

I cannot lay claim to the vast reading of Prof. Radhakrishnan and Mr. Guha. But among the small number of publications on some subjects in Arabic, Bengali, English, Gujarati, Hindi, Marathi, Panjabi, Pashto, Persian, Sanskrit, Urdu etc., which I have read, I have found the passage in question only in two publications, published before Mr. Radhakrishnan's book, viz. the British Medical Journal and Mr. S. C. Basu's book. Hence I have made the suggestion referred to above.

2 and 3. There is, so far as I am aware, only one printed edition of *Vijnanabhikṣu's* commentary and that is published in the Chaukhamba series. I find in Prof. Radhakrishnan's book a reference to *Vijnanabhikṣu's* commentary, p. 451 n. In the foot-note, p. 761, "*Prameya-ratnavali*, p. 8," what does "p" indicate, as "p." generally stands for page?

So far as I am aware, the only printed edition in Devanagari characters, with English translations, of Baladeva's *Govinda-bhāṣya* and *Prameya-ratnavali* is that by Mr. S. C. Basu. The original Sanskrit texts of these works are also available in Bengali characters. Mr. Guha should have said distinctly whether his friend used Mr. Basu's edition or whether he reads the Bengali script and used the latter.

In foot-note 2, p. 358, he refers to "*Baladeva's Prameya-ratnavali*, p. 14." What does "p" mean here? It does not certainly mean page! If it means paragraph, that appears to be a proof that the professor is indebted to Mr. Basu's edition and translation of that work, although he has not acknowledged it.

4. Mr. Guha tries to be humorous at my expenses, and asks me to give him a concrete instance of the kind, *imagined* by me only by way of imperfect analogy. How is it possible for me to give a concrete instance? Prof. Radhakrishnan is *sui generis* in leaving severely alone the philosophical writings in the language of a region in which he occupies the most important chair of philosophy. So I am, I hope, not to blame if I cannot discover another philosopher who has actually been capable of such a unique feat of scholarship and courtesy.

Mr. Guha refers to the fact of the work having been published in England and its being intended for English students. I confess I do not understand what that fact has got to do with exclusion of philosophical writings in Bengali from the work. I wonder whether Mr. Guha can by any possibility mean to suggest that things written in Bengali are *ipso facto* unfit to be used or referred to in works published in England and intended for English students.

Let me add the following with reference to the Professor's neglect of Bengali.

On page 736, Prof. Radhakrishnan writes:— "Thanks to the loving labours of Sir John Woodroffe, the chief of the available Tantra texts are published." He does not know that most of

the Tantra texts had been published in Bengali script long before Sir John Woodroffe interested himself in the study of that class of literature. Raja Ram Mohun Roy drew the attention of the public to the Tantras, and so did Rai Bahadur Sris Chandra Basu in his *Catechism of Hinduism*.

On this point I have nothing to add to what I wrote in the July *Modern Review*. I would ask Mr. Guha to consider whether he has really said anything more than, or essentially different from what I did. I would remind Mr. Guha of what I have stated previously, viz. that Mr. Basu's views in question were subsequently included in his "Easy Introduction to Yoga Philosophy," which was published before Prof. William James's work.

A book on Indian philosophy may be "highly appreciated" by distinguished persons who have no special knowledge of the subject and yet not be a creditable piece of work.

Mr. Guha refers only to appreciations of his friend's work but the volume under reference has also not been "highly appreciated," e.g. in *Mind* by Dr. Thomas of London, in *The International Review of Missions* by Prof. H. W. Schomerus of Halle (Germany), in the *Hindustan Review* by Prof. Malkani, and in the *Bihar and Orissa Research Society's Journal* by Pandit Umesh Misra of Allahabad.

The second volume of the professor's work has been published only recently. So far as I am aware, no new edition of the *Encyclopaedia Britannica* has been published after the appearance of that volume. I do not, therefore, understand how Prof. Radhakrishnan's work (I mean its second volume) could have "won for the subject recognition in the" *Encyclopaedia Britannica*.

I confess I am not a hero like Mr. Guha or his friend the philosopher. Possibly that is why I have taken shelter behind anonymity. But my anonymity may serve one good purpose also viz., my views may be taken for what they are worth, without my name influencing the reader in his judgment in any direction.

X. Y. Z.

EDITOR'S NOTE. This controversy is closed. Editor, *The Modern Review*.

The Highest Mountain in the World

In the issue of the *Modern Review* for August Mr. Satya Bhusan Sen, in his article on "The Highest Mountain in The World" says, "Sometime about the middle of the 19th Century the Trigonometrical Survey of India extended their base of observation to the foot of the Himalayas and from this newly attained base some day between November 1819 and January 1850 they observed a mountain peak at 27°59' 3"N.L. and 86°51' 7"E. which on measurement was found to be the highest mountain in the world, for it rose to an altitude of 29002 ft. Owing to our ignorance no name was current for this mountain peak. At a meeting of the Royal Geographical Society of London held on May 11, 1857 after much discussion the peak was named after Col. Everest, the late Surveyor General of India."

It is not clear whose ignorance the writer means by "our ignorance," and where according to him no name was current for this mountain

peak, but apparently he is supporting these Englishmen who insist on calling the peak by an English name, and justify their doing so by alleging that Indians were not aware of its existence and had no name for it. The desire of Englishmen to call the highest mountain peak in the world by an English name is intelligible, but the support of your contributor who appears to be conversant with such matters is not.

The fact is that before its so-called discovery by the Trigonometrical Survey Party, this peak was well-known, and had, and still has an Indian name, which I believe is familiar even to school boys. And it was not only a peak known in India but also in Europe, and by its Indian name too. It is not visible from Bengal unless one goes to out of the way and not easily accessible places in Darjeeling District, but it is easily visible from the neighbourhood of Kathmandu and other parts of Nepal, where it has always been known as Gauri Sanker. Its Tibetan name "Jomo-Kang-Kar" apparently is a variation of the Indian name. Some years before November 1849, which according to your contributor is the earliest probable time of its "discovery" by the Trigonometrical Survey Party, the German explorer Hermann Schlagentweit had identified this peak with Gauri Sanker, and ever since then it is known in Germany by its Indian name Gauri Sanker, and this name always appears in German maps and books of Geography instead of "Everest". It is the Trigonometrical Survey Party who were ignorant of its being a known peak and having a name, and probably also of its having been identified by an European explorer. Since then their ignorance and mistake has been recognised by competent British authorities who are free from racial bias in such matter. It is long ago that Mr. D. E. Freshfield, Gold medallist of the

Royal Geographical Society of Great Britain, and sometime president of the Alpine Club, supported the identity of Everest with Gauri Sanker before the Royal Geographical Society. His paper was published in the Proceedings of the Society Vol viii, New Series, as well as in the Geographical Journal for March 1893 (It has also been reprinted in his book entitled "Round Kanchenjunga"). Other British books in which the peak's having the Indian name of Gauri Sanker is recognised, on which I can lay my hands at present, are as follows. In Percy Brown's "Picturesque Nepal," there is a sketch map of Nepal in which this peak is named as "Gauri Sanker" or "Mt. Everest". In Arden Wood's Geography for Schools in India (1907) published by Mac Millan and Co, at page 133 this peak is named as "Mount Everest or Gauri Sanker". In Longman's Geographical Series for India, Book II, new edition (1923) published by Longmans Green and Co, at page 104 it is noted that "the loftiest peaks in the world are found in the Himalayas. Mount Everest (Gauri Sanker) reaches 29000ft". Some English men, however, still insist on saying that Indians were not aware of its existence, and in giving credit of its "discovery" to the British Officers of the Trigonometrical Survey Party of India. Your contributor, who wants us to gain the credit of the discovery of a still higher peak, has made a bad beginning by supporting them.

The next highest peak in the world which happens to be in the Karakoram range has also been given the English name of "Mount Godwin Austin", after another officer of the Survey of India Department in spite of its having the local name of "Chagori". If we support these nomenclatures or are apathetic to them, all the classical peaks of the Himalayas will some day have foreign names.

THE PASSING OF FANNIE GARRISON VILLARD APOSTLE OF PEACE AND FREEDOM

Achievement of a Pioneer American Woman In Public Life

By RAGINI DEVI

THE passing of Mrs. Fannie Garrison Villard at the advanced age of eighty-three years brings to a close the remarkable career of a famous American woman. July 3, 1928.

Mrs. Villard was the daughter of William Lloyd Garrison, the Abolitionist who championed the cause of the abolition of negro slavery in America—and whose name is eternally linked with the extinction of

slavery and a great step forward in the national history of the United States.

Fannie Garrison was born in Boston, Massachusetts on December 16th, 1844. Her early years were deeply affected by the antislavery struggle in which her father for years risked death at the hands of mobs. She shared the liberality and courage of her father and was his spirited and loyal supporter during those trying times.

Among her earliest recollections were those of helping her father read proofs for the "Liberator", his militant weekly, which advocated, in addition to abolition, the causes of women's rights, peace and temperance.

At her father's house Fannie Garrison came into contact with all the leaders of the abolition movement, such as the famous John Brown, Samuel J. May, Wendell Phillips, George Thompson, the English agitator Lydia Maria Childs and others.

During the Civil War she met and married Henry Villard a war correspondent of the New York Tribune who afterwards as president of the Northern Pacific Railroad became a great railroad builder and developer of the trans-Mississippi region.

Mrs. Villard subsequently threw herself into the Woman Suffrage cause, being notable in her appearance before the Legislature and other bodies where she distinguished herself because of her earnestness, eloquence and great beauty.

Later she devoted herself to the cause of peace, founding the Women's Peace Society—an organization based on the non-resistance doctrines of her father, who had been an inspirer of Tolstoi. In 1921 she was a delegate to the conference of the Women's International League for Peace and Freedom.

She was a member of the committee which made the first appeal for the establishment of Barnard College, New York. She was for several years a director and trustee of the American College for Women in Constantinople. From 1881 to 1917 she was the owner of "The New York Evening Post and 'The Nation'". For twenty-five years she was president of the New York

Diet Kitchen Association and for forty-eight years was its manager. She helped to direct the work of the Tarrytown and Dobbs Ferry Hospitals, the New York Infirmary for Women and Children, the Exchange for Women's Work, the Columbus Hill Day Nursery and the Hudson River Musical Settlement.

She is well-remembered by the Hindu residents of India's cause for freedom.

At the funeral services held in her home at Thorwood, Dobbs Ferry, N. Y. more than five hundred persons were present. Hundreds of wreaths were sent by her admirers and from many societies with which she had been associated.

In a commemorative address at the funeral services, the Rev. John Haynes Holmes of Community Church recalled that in all her pursuits Mrs. Villard had evidenced the brilliant character of her father, and had possessed the courage to carry through her undertakings. He praised her as one of the most remarkable women of her age in public life, and commended her noble influence upon her two sons, Oswald Garrison Villard, editor of "The Nation" and Harold G. Villard, editor of "The Nautical Magazine".

In a notable editorial, the Herald Tribune of New York City paid her tribute as "a notable American with a career covering an unusually wide range of public interests. She gave the best that was in her for others, freely and untiringly. She will be remembered as a potent contributor to many good causes and a high example of disinterested citizenship."

Brooklyn, New York City.

IMPERIAL GARDENS

THE GARDENS OF THE MOGULS IN KASHMIR, THE GARDENS OF VERSAILLES IN PARIS,
THE GARDEN OF PLEASANT THE GREAT IN RUSSIA

By JIVANJI JAMSHEDJI MODI, B.A., PH. D., C.I.E.

I HAVE read with great interest and pleasure the interesting article in the *Modern Review* of June 1928 from the pen of Mr. Arthur R. Slater, F. R. G. S., on "The Gardens of the Indian Moghal Emperors in Kashmir." I had the pleasure of visiting

Kashmir three times, and of visiting the beautiful gardens, a number of times during these three visits. I had the pleasure of visiting the beautiful garden of Versailles in Paris also three times during my life, once in 1889 and twice in 1925. Out of these

three visits to the Versailles garden, I examined it very thoroughly and carefully during my last visit of July 1925. This examination has led me to conclude that this Versailles garden, as it is at present, is an attempt to copy the Kashmir gardens, especially the Nishat Bagh. The Versailles garden may have existed in some form before, but the present form is a copy of the Kashmir garden. There is one difference and that may appear to some a great difference, but I think it is a minor difference. It is this: We have the large beautiful Dal Lake at the foot of the Nishat Bagh and the Salimar in Kashmir. We have not such a large beautiful lake, with its beautiful background at Versailles, but there an attempt is made to copy the Kashmir garden by creating a fine though small artificial lake. The Versailles garden is more extensive and vast, but, after, all, it seems to be a copy of the Kashmir gardens. Let Indian visitors who have seen the Kashmir gardens look carefully at the Versailles garden if they happen to go there, and see for themselves if these observations are correct or not. Let French visitors who visit Kashmir kindly do the same.

Now, it is a far cry from Kashmir to Paris. But, in this case, one has to remember that a great Frenchman M. Bernier had visited the Kashmir gardens when he went there in the company of the court of king Aurangzib. It is quite possible, that on his return to France, he may have suggested to some body in office the improvement of the garden at Versailles on the mode of the Kashmir gardens.

Now, I had the pleasure of visiting the beautiful and lovely garden made at St Petersburg (modern Leningrad) by Peter the Great. I had the pleasure of visiting it as one of the guests of the Russian Academy of sciences which, in September 1925, celebrated its bi-centenary. I take this opportunity to express humbly, but heartily my great gratitude to the Academy and to the Russian Government for their very kind hospitality. Now, moving about in these extensive gardens, I at once saw, that this garden was a copy and a better copy, than

the Versailles garden, of the Kashmir garden.

At Versailles they had not a natural, large, beautiful sheet of water like that of the Dal Lake at Kashmir. Though they tried to make up for that want by an artificial lake, that was somewhat of a drawback. But, in Leningrad, you have a natural large expanse of the sea in front to stand in place of the Kashmir Dal Lake, though the surroundings of that expanse of sea were not so beautiful as those of the Dal Lake. But the Russian garden is on a very large scale. The Kashmir garden may look like an infant before the Leningrad garden, but still the plan and the groundwork are the same.

Now, it is known that Peter the Great, when he tried to raise Russia, held to be a backward Oriental Asiatic country, to the level of an advanced European country, copied several institutions of France and other European countries. Among these, one was the modelling of this garden. But to me, it appeared to be a far better copy of the original Kashmir garden than of the Versailles garden. Can it be that he had heard something of the Kashmir gardens? Can it be that he may have sent some gardener or architect to Kashmir to look at the originals? That is a question on which some investigation may throw new light.

It may be noted here that the Mogul Emperors brought their taste of beautiful gardening to India from the direction of Persia, which is spoken of, by some, as the Home of gardening. The Pahlavi Bundahish of the Parsces gives us a section on a kind of "The Language of the Flowers and plants." Jehangir, who was very fond of Kashmir and who therefore said that he would rather like to lose India than lose his dear Kashmir, was a naturalist and was a great admirer of natural beauty. The gardens of Kashmir owe their beauty to him. I will refer those who want to know something of the visits of this Emperor and other Mogul Emperors to Kashmir, to my paper on "The Visits of the Mogul Emperors to Kashmir" (Jour. B. B. R. A. Society vol. of 1917. My Asiatic Paper Part III pp. 1-46).

DISSOLUTION OF HINDU MARRIAGE

By BANKIM CHANDRA LAHIRI

DR. Gour's Bill has raised the question, whether the Hindu marriage can be dissolved. We propose to discuss it in this article.

Narada-Samhita says that as Manu Samhita contained a lac of slokas, it was very difficult to master it, so Narad made an abridged edition of it called Narad-Samhita. Bhrgu also made another abridged edition of that Manu-Samhita, which is now known as Manu-Samhita or his Smriti. So the three Samhitas are virtually of one and the same person, named Manu, and are therefore of equal importance. Manu-Samhita by Bhrgu contains verses to the effect, "Manu knows the real meaning and actions of the Veda and there is no other person who knows so much. Whatever he has said he has said in accordance with the Veda. Because he possesses all the knowledge."* Kulluka Bhatta says, "Fault cannot be found in Manu's Smriti. It is approved by all great men. It is based on the Veda and it follows Veda."† Vrihaspati, says, "The superiority of Manu's Smriti lies in the fact that it contains what is described in the Veda and if there be any other Smriti, contrary to Manu's Smriti, it is not entitled to praise." From these it follows that Manu-Samhita is in accordance with the Vedas and that as the Vedas are binding on the Hindus in all Yugas, Manu-Samhita also is binding on the Hindus in all Yuga, Kali Yuga not being excepted.

The said Narad-Samhita contains the oft-quoted verse of "Nashte mrite pravrajit" &c. It means, "When the husband cannot be traced, or is dead, or when he gives up household life, or becomes impotent, or when he is fallen, in these five cases of misfortunes, the wife can take another husband". This verse is immediately followed by four other verses to the effect, "When the husband cannot be traced, then a Brahmin's wife who has a son, should wait for eight years, if she has no son then she should wait for four years, a Kshatriya's wife who has a

son, should wait for 6 years, if she has no son then she should wait for 3 years and a Bal-hay's wife who has a son, should wait for 4 years and if she has no son then she should wait for 2 years and so on. After that period they should marry other persons."

We have said before that Narada-Samhita was compiled from Manu's bigger Smriti. So the above verse may be justly described as Manu's. Therefore, Madhabacharya calls this verse as Manu's† And the reader will remember that whatever is said by Manu is said in accordance with the Vedas. Then this verse and the four verses that immediately follow it are in accordance with the Vedas.

Parashar claims to be the law-giver of Kali Yuga§ He too has quoted with approval that verse in his own Samhita.** Thus he too lays down, that the rule of that verse should be followed in Kali Yuga also. Narada-Samhita further says that the law prescribed by that verse and by the four verses which immediately follow it was made by Prajapati Brahma. Then Veda, Prajapati Brahma, Manu, Narada, Bhrgu and Parashar are in favour of this law. Narada-Samhita further says that the wives will not commit any sin if they will take other husbands in the cases mentioned in the verse. That verse provides that out of those five cases of misfortunes in four cases the wives can marry again other persons during the lifetime of their former husbands. Pandit Golap Chandra Sastri, M. A., B L., also is of that opinion††

The present Manu-Samhita by Bhrgu contains the following verses:—

"When the husband lives in a distant place, for purposes of religion, his wife should wait for eight years; for purposes of education or for fame, she should wait for six years; and for purposes of enjoyment,

* Narada-Samhita.

† His commentary on Parashar-Samhita.

§ Parashar-Samhita 1-23.

** Parashar-Samhita 4-24.

†† His Hindu Law P.111.

* Manu 1-3 and 2-7.

† His commentary on Manu.

should wait for three years. "After that she should marry another person."*

Although this last sentence is not in the text, yet as the rule is made in connection with marriages, the purport of the last sentence necessarily follows. Specially because in Narada-Sambhita the verse is immediately followed by four other verses, describing the period for which the wife of each caste should wait before marrying again another person.

"When the wife, being abandoned by her husband being dead or the husband, or she, of her own accord, marries again another person and gets a son by him, that son is called Paurṇavāha (पौर्णवह) son of the second husband. If she is chaste and goes to another person, then that person may marry her and if she abandons this second husband and afterwards returns to him, then that second husband may marry her again."†

Vasista provides,

"If the woman be married to one, whose ancestors are not good, or whose conduct is not good or who is impotent etc., or who has fallen, or who has hysteria, or who does whatever he likes, or who is permanently diseased or who is a false ascetic, or who belongs to his wife's gotra, the woman should be married again to another person."‡

Katyayana lays down,

"If the husband be of a different nationality, or fallen, or impotent or who does whatever he likes, or, who belongs to his wife's gotra or who is slave, or who is permanently disabled, then the wife should be married again to another person."**

Maine also is of the same opinion.††

Thus we find that according to the Hindu Sastras, during the life-time of the former husband, his wife can marry again another person in the following cases :—

(1) When the former husband can not be traced, (2) when he gives up household life, (3) when he becomes impotent etc., (4) when he is fallen, (5) when he lives in a distant place, (6) when she is abandoned by her husband, (7) when she of her own accord abandons her husband, (8) when the husband's ancestors are not good, (9) when the husband's conduct is not good, (10) when he has hysteria, (11) when he does whatever he likes, (12) when he is permanently disabled, (13) when he is a false ascetic,

(14) when he belongs to his wife's gotra, (15) when he is of a different nationality, and (16) when he becomes a slave.

Then these Sastras support the view that in these cases the former marriages are dissolved, otherwise the later marriages can not take place. If any one will argue that in all these cases the former marriages are not dissolved, then the conclusion will necessarily follow that the former husbands too will be entitled to conjugal rights equally with the later husbands. Surely, such a law is not sanctioned by our Sastras. Besides, had the contention been sound, then there would have been no necessity of providing that the wife can marry again another person in the cases mentioned above in 4, 8, 9, 11, 13, 14, 15 and 16. Because, after the marriage of their wives with other persons the first husbands continued as before to be their husbands. Only two husbands were provided instead of one, in cases of these misfortunes of the wives ! That is not intended by the Hindu Sastras.

Had the argument been sound, then there would have been no necessity for making a provision, as we have seen, that the former husband also can marry his wife again in certain cases, * and that when the husband becomes a slave, his right over his wife is extinguished. We shall presently give an example of it.

Besides, the reader will remember that according to the Hindu Sastras, the wife may abandon her husband and the husband may abandon his wife in certain cases. Moreover, the present Manu-Sambhita also provides, "If the wife being enraged leaves the house, shut her up or abandon her in presence of her relations. † All these support the argument that the former marriages are dissolved.

Now we shall give some examples which will further clear the point.

Indra, the king of Heaven, could not be traced. The Kshatriya king Nabu was then governing it. He proposed to marry Sachi, the wife of Indra. She replied, "I do not know where Indra has gone or his present condition. If he cannot be traced I will marry you."§

Professor Haridas Bhattacharya of Dacca University says that Saraswati became alter-

nately the wife of Brahma, Vishnu and Maheshwar.*

King Yayati was a famous Kshatriya Raja. He had an exceedingly beautiful daughter, named Madhavi. She first married Haryashkya, the king of the Ikshaku dynasty. By him she had a son. Then she left him and married Devadas, the king of Kashli, who was a very pious man. By him she had another son. Then she left him as well and married the famous king Ushinar, who was conversant with all the religions. By him she had a third son. Then she left him also and married the fourth line, the famous saint Maharehi Viswamitra. By him she had a fourth son. Then she left him too. All these persons married Madhavi knowing full well of her former marriages and knowing that those former husbands were still alive and that she had got sons by them. Then king Yayati and his his two sons Puru and Jadu wanted to marry her the fifth time in a Swayambara ceremony. But she refused and became an ascetic.† This Puru was the famous king and ancestor of the Pandavas and Kauravas and this Jadu was the famous king and ancestor of Krishna and Balaram.

Radha also married? Krishna while her former husband was alive.

Ram after killing Ravana said to Sita, "I leave you. You can now marry Bharat, Lakshmana, Satrugna, Sugrib or Vivishan."§

We have cited before from Katyayana the authority that when the husband becomes a slave, his marriage is dissolved. Therefore, the well-educated Draupadi raised the question that as soon as her husband king Yudhishthir became a slave of the Kauravas by losing the game of *Pasha*, his right over her ceased. Vidur and Bhikarna, a son of king Dhritarashtra, supported her contention.**

When king Nala could not be traced, his queen Damayanti wanted to marry again another person in a Swayambara. Hearing the announcement the king of Ajodhya hastened to marry her. Nala also went there in hot haste full of anxiety.††

When Sakya Singha (Buddha) gave up household life, many persons tried to marry

his wife, although she had a son. But she did not consent.*

A merchant of Ujjaini had a daughter named Ishi-Dasht. She was married first to one, who left her to her father's house. Then her father gave her in marriage to another person. He too abandoned her. Then her father married her the third time with another person. But he also left her. Then she became an ascetic.†

In the 18th Century A.D. Baji Rao II was the Brahmin king of Maharashtra. He made a social law fixing the marriageable age of girls. After the law was passed, a girl was forcibly married before she reached that age. But the marriage could not be consummated for certain reasons. According to the custom she could not be married again. But the said Brahmin king held that the marriage was invalid and when the girl reached the proper age he married her to another person. §

Even now the Coolia Barendra Brahmins first marry their daughters with bride-grooms, made of Kusagras*, and then marry them with living persons. Even now in the Hindu kingdom of Nepal, which is governed by Manu-Samhita, *marriage is dissolved*, when the husband becomes permanently disabled, or when he resides in a distant country for many years, or when the marriage becomes unpleasant. In these cases the wives are married again during the life time of their former husbands. ** Even now in Bihar and other Provinces, if men of Kahar, Kurmi, Keot, Dhanook, Halwai and of other castes will reside in a distant place for two years and will not support their wives during that time, then the marriages are dissolved and the wives marry again other persons.

All these conclusively prove that the Hindu Marriages can be dissolved.

We have in our Mahabharat-Maojari elaborately discussed it and the widows' remarriage and all other subjects relating to marriage quoting many Shastras. From all these it is also evident that those, who think that the Hindu marriages are over-lasting, are mistaken. Notwithstanding these Shastras and these examples, if the Hindu society could last long, notwithstanding the social laws made by the British Raj if the Hindu

ESSAYS ON THE GITA*

(A REVIEW)

By MAHESHCHANDRA GHOSH

Sri Aurobindo has, in two substantial volumes, expounded the principles of the Gita. In the first volume he explains principally the first six chapters, and in the second, the remaining twelve chapters of the Gita. Our author considers the Gita to be an organic unity and has tried to defend what he considers to be its fundamental principles. He is not fettered by any creed and has not blindly followed any particular commentator or commentators, or any particular school of Philosophy. He has philosophy of his own and it is akin to the *Vaishnadvaita* School of Philosophy. On this basis he has built a magnificent superstructure. In no other book do we find such an elaborate treatment of the subject. One may or may not accept his philosophy or his interpretation; but the essays are thoughtful, suggestive and edifying. His style is charming, exposition clear and defence brilliant.

We have not been able to accept all the conclusions of the author. We may note below some of the points where we differ.

(1) THREE PURUSHAS

Our author has based the metaphysical exposition of the Gita upon the theory of three *Purushas* as described in the fifteenth chapter of the Gita. These *Purushas* are (i) *Akshara* (অক্ষর); (ii) *Alshara* (অলক্ষর) and (iii) *Purushottama* (পুরোত্তম) XV. 16-18.

The theory of *Akshara* plays a very important part in other parts of the Gita. So it is necessary to understand this theory before we discuss the theory of three *Purushas*.

(a)

It has been described in chapter, viii. In the third verse we find the following:—*Akshara* is the Highest God (অক্ষর সত্ত্ব পরম্).

(b)

The eleventh verse is about *Alshara*. To understand this verse thoroughly, it is necessary to know three previous verses which may be translated thus—

‘With the mind controlled by continual practice and not wandering after anything else, O Partha, one by constant meditation goes to the Divine Supreme Being (পরম পুৰুষ হিন্দু). VIII. 8.

‘He who thinks of the Seer, the Ancient (or the Ancient Seer), the one who is subtler than the subtle, the supporter of all, of form inconceivable, refulgent as the sun, beyond darkness..... goes to this Divine Supreme Being (পরম পুৰুষ হিন্দু) VIII. 9-10.

In these three verses *Parama Purusha* (the Supreme Being) is described as the Goal. It is needless to say that there can be nothing higher than the Supreme Being.

(c)

The next verse is on *Alshara*.

‘I will briefly declare to thee that state (পরম্) which the knowers of the Vedas call *Akshara* (অক্ষর), whereunto passion-free ascetics enter and desiring which *Brahmacarya* is performed. VIII. 11.

The subject-matter of this verse is the same as that of the previous three verses. He who is called *Parama Purusha* in those three verses is, in verse, 11, called the *Alshara* (অলক্ষর). Whom do the knowers of the Vedas call *Alshara*? Into whom do passion-free ascetics enter? Whom do *Brahmacaryas* desire and for whom do they perform *Brahmacarya*? He is certainly *Parama Purusha* greater than whom none higher is and that *Parama Purusha* is *Akshara*.

(d)

The next verse is the twelfth which describes how that Highest Being is to be obtained. The following is the thirteenth verse:—

‘He who reciting *Om*, the one-syllabled-Brahman, and remembering Me, goes hence abandoning

* By Sri Aurobindo Ghosh. First series, pp. 379. Price Rs. 5-. Second series: pp. 301. Price Rs. 7-8. Published by Arya Publishing House, College Street Market, Calcutta.

the body, reaches the highest goal (परमार्थम्).

VIII. 13.

Here the speaker is Krishna and he speaks here as the Supreme Being. So the meaning of the thirteenth verse is that whoso, uttering *Oṃ* and thinking of God, leaves this body, reaches the highest goal.

The following are the next three verses:—

To the man who constantly thinketh on me and never thinketh of anything else, to the Yogi who is ever-harmonised, I am easy to win, O Partha (VIII. 14). Having come to me, these great souls come not again to birth which is non-eternal and is the home of woes; they have reached highest perfection (VIII. 15). The worlds even upto the world of Brahmā, O Arjuna, come and go. But for them who have come to Me there is no birth again. (VIII. 16).

The same Being who is called *Ākshara* in Verse 11, is described in verses 13-16 as the goal of life. Who is the Being reaching whom man overcomes rebirth? He is the Supreme Self and He is *Ākshara*.

(c)

The next three verses (VIII. 17-19) describe the day and night of Brahmā and the creation and dissolution. At the coming of Brahmā's night every thing is dissolved in the *Aryakṣa*, i. e., Prakṛiti. The following are the next two verses:—

But there is another existence,—an *Aryakṣa* higher than that *Aryakṣa*, eternal, which does not perish when all things perish (VIII. 20). This *Aryakṣa* is called *Ākshara* (अक्षर) : it is called the highest goal; they who reach it return not. This is my supreme state (परमं धाम, lit. supreme abode).

When one reaches *Ākshara*, one does not return; hence *Ākshara* is the Supreme Self. The *Ākshara* of verse, 11, is here described as the highest goal. In the following verse (VIII. 22) that *Ākshara* is called *Parāḥ Puruṣaḥ* (परः पुरुषः) i. e., the Supreme Being:—

He, the Highest Being (परः पुरुषः). O, Partha, may be reached by unwavering devotion to Him alone in whom all beings abide and by whom all this is filled (VIII. 22).

(d)

In chapter XI, there are two verses on *Ākshara*. In verse XI, 18 Krishna is thus addressed as Bhagavan by Arjuna:—

'Thou art, to my mind, *Ākshara* (अक्षर) and the Supreme to be known (or the Supreme *Ākshara* and one to be known); thou art the Supreme support of the universe, thou art unchangeable and protector of eternal *Dharma*; thou art eternal *Puruṣa*' (XI. 18). Here it is said that he who is *Ākshara* is the supreme self.

In another place in the same chapter, we find the following verse:—

'O Infant! O Lord of gods. O Abode of the universe! Thou art *Sat* (i. e. that which is manifest), *Asat* (i. e. that which is not manifest) and that which is beyond—the *Ākshara* (XI. 37).

Here *Ākshara* is described as higher than the

manifest (सत्) and higher than the unmanifest (असत्). The *Ākshara* is therefore the Supreme Self.

(e)

In chapter XII, there are a few verses on Divine worship. In one verse (XII. 1) Arjuna asks Krishna:—

'Those devotees who ever-harmonised, thus worship Thee, and those who worship the *Ākshara*, the *Aryakṣa*—which of these are the best-knowers of Yoga?'

Krishna replies:—

'I deem them to be the best in Yoga who with mind fixed on Me and ever-harmonised, worship me endowed with supreme faith (XII. 2).

He then says:—

'They who worship the *Ākshara*, undefinable, unmanifest, Omnipresent, unthinkable, *Kutastha* (immutable), immovable, steadfast, controlling the senses, regarding everything equally rejoicing in the welfare of all creatures,—they verily attain to me (XII. 3, 4). But the difficulty of those whose mind is attached to the unmanifest is greater; for the unmanifest god is reached with difficulty by the embodied (XII. 5).

Here *Ākshara* refers to the Supreme Self.

In the above verses two paths are compared, viz.—The path of knowledge (*Jñāna*) and the path of devotion (*Bhakti*). The path of knowledge is full of difficulties but that of devotion is easy. Those who follow the path of devotion, worship *Saguna* Brahman, that is, an anthropomorphic God, whereas those who follow the path of knowledge are worshippers of *Aryakṣa*, *Ākshara* Brahman. The path of devotion may be easier but that does not mean that *Saguna* Brahman is higher than *Arguna* Brahman. The author of the Gita has, in this chapter, established the unity of both. In verse 4, Krishna as Bhagavan says—'Those who worship *Ākshara* verily attain to me.' When it is said that the worshipper of *Ākshara* attains to Bhagavan, i. e., God, it is evident that *Ākshara* and the Supreme Self must be the same Being.

Again there is a theory in the Gita that the worshipper reaches the object of his worship. The worshippers of the gods go to the gods, the worshippers of the Fathers go to the Fathers and those who worship the Bhagavan go to the Bhagavan (VII. 23; IX. 25). So necessarily the worshipper of *Ākshara* must go to *Ākshara*. Now when it is said that those who worship *Ākshara* attain to the Supreme Self (XII. 3, 4), it is clear that *Ākshara* must be the Supreme Self.

We have discussed all the passages relating to *Ākshara* and we have seen that in every one of these passages *Ākshara* means the supreme self. In some verses *Ākshara* is called, *Parā Puruṣa* or *Parama Puruṣa*, that is, the Supreme *Puruṣa* (VIII. 8-10, VIII. 22). So *Ākshara* is the highest Being and there is no other being which can be higher than *Ākshara*.

Now we are in a position to discuss the theory of three *Puruṣas*.

THREE PURUṢAS

This theory is described in the following three verses.

'There are two *Puruṣas* in this world—the

Akshara (अक्षरः) and the *Alshara* (अक्षरः). The *Akshara* is all beings and the *Alshara* is called *Kutastha* (कूटस्थः) XV, 16. But there is another—the Highest *Purusha* (उत्तमः पुरुषः) called the Supreme Self (परमात्मा), the changeless Lord who pervading all, sustains the three worlds (XV, 17). Since I transcend the *Akshara* and am likewise higher than the *Alshara* I am proclaimed *Purushottama* (पुरुषोत्तमः) in the world and in the Veda (XV, 18).

The above passage is pluralistic whereas the Vedānta is monistic. The commentators have tried to explain this passage monistically and have thereby made the meaning more obscure. Our remarks on this passage are as follow:—

(1) What is perishable or mutable is *Akshara*. Here *Akshara* refers to the material world. The word *Alshara* means the imperishable or the immutable. In the Sankhya and the Vedānta and in other parts of the Gita, *Purusha* only is *Akshara*. But strange to say that in verses 16, of the fifteenth chapter of the Gita what is mutable and perishable has also been called *Purusha*.

(2) The *Alshara* (अक्षर) has been called *Kutastha* (कूटस्थ).

The word '*kuta*' means 'heap,' mountain, the summit of a mountain, the highest point, etc. The word *kutastha*, therefore, means 'standing like a heap,' 'stable like a mountain' etc.

This word has been used in two other places in the Gita. In one place (VI, 5) it has been applied to the 'Yogi' whose senses are subdued, whose mind is tranquil, and who looks upon a lump of earth, a piece of stone and gold with equal eye.

In another place (XII, 3) *Alshara* has been called *Kutastha* as well as Ineffable, unmanifested, omnipresent, unthinkable, unchangeable and steadfast (Vide Supra).

So in both these places *Kutastha* means immutable or stable.

In Pali literature the corresponding word is *Kutatha* (कूटस्थ) and it means 'steadfast' 'unchanging,' 'stable like mountain' etc. (Vide Dīgha, i, 14, 56; Jāyama, i, 517; Samyutta, iii, 211, P.T.S. Edition).

If we accept this meaning of *Kutastha*, it can refer only to the Supreme Self and the *Alshara* of verse XV, 16 also would then mean *Paramatman* i.e. the Supreme Self. In that case there can be no being which is higher than *Kutastha Alshara*. We have already seen that this *Akshara* is called *Para Purusha* or *Parama Purusha* (Highest Being).

(3) But in the next verse (XV, 17) we find that there is another *Purusha* higher than *Alshara* and this *Purusha* is called *Uttama Purusha* (उत्तमः पुरुषः) Highest *Purusha* and *Paramatman* (परमात्मा, Supreme Self). This theory contradicts the theory of *Akshara* as found in every other part of the Gita.

(4) Again in the next verse (XV, 18) it is more definitely stated that He the Bhagavan is higher than not only *Akshara* but *Alshara* also. We have

already seen that no other being can be higher than *Alshara*.

Again in the verse, Krishna, the Bhagavan says—'I am proclaimed the Supreme Being (पुरुषोत्तमः) in the world and in the Veda.'

This is not true. In no school of the Vedas has Krishna, or Bhagavan or Paramatman been called *Purushottama*. The word '*Purushottama*' is not even found in the Vedas.

In the Chandogya Upanishad, the phrase '*Uttamah Purushah*' (उत्तमः पुरुषः) is used (VIII, 12, 3). But there it does not refer to Paramatman, the Supreme Self, it refers to the Self which, when it leaves this human body, reaches the highest light and appears in its own form.

(5) The fact is that the word '*Purushottama*' is a technical word in the Vaishnava Theology, being a predicate of Krishna, Goyinda or Vasudeva. It is frequently used in the Vaishnava literature ancient and modern.

In the Gita, Krishna has been thrice addressed as *Purushottama* (VIII, 1 X, 15; XI, 3). The literal meaning of the word is 'the best of men.'

In Pali literature the corresponding word is *Purisuttama* (पुरिसुत्तम) and it is an epithet of the Buddha and of those who are on a higher level of perfection (Vide Dhammapala 78; Sutta-Nipata verse 544 and Anguttara Nikaya Vol. V, pp. 325-326 P.T.S.) In the Sutta N. and Ang. Nik. the language is—

Namo te Purisuttama (Adoration to thee, O the best of men) Both the books are canonical and the Sutta-Nipata is one of the oldest of the canonical scriptures and is older than the Gita. This idea and language seem to have been borrowed by the Vaishnavas from Buddhism.

(6) Krishna the Avatara is called *Purushottama*. This word has two-fold meaning, viz—(i) the best of men (ii) the Supreme Being. Krishna has been placed by the Vaishnavas even above *Brahman*. According to many Vaishnava theologians, *Brahman* is but a ray of the Body of Krishna.

(7) Now the question is—

Is *Purushottama* intra-spatial or supra-spatial? intra-temporal or supra-temporal?

(a) If He be 'the Cosmic Spirit in Time' as our author asserts (ii 270), if he be intra-spatial and intra-temporal, then he is really *Saguna Brahman* who is no other than *Nirguna Akshara Brahman* when it is or seems to be in contact with *Maya* or *Prakriti* and who is therefore considered to be inferior to *Nirguna Brahman*. For this idea of *Saguna Brahman*, it is not necessary to postulate the existence of a new Being called *Purushottama* here. From the standpoint of the Gita, every thing can be explained by means of *Prakriti* and *Purusha* (i.e. the self) Here it should be noted that *Purushottama* is different (अन्यः) from both *Akshara* and *Alshara* (XV, 17).

(b) If *Purushottama* be supra-spatial and supra-temporal, then also the theory of *Purushottama* is useless—for *Alshara* is such a Being.

So we see that whether the *Purushottama* be considered to be active or non-active, the assumption of his existence becomes superfluous. Over and above this theory contradicts the fundamental principles of the Gita.

The theory of *Purushottama* is, in fact, a Vaishnava cult and is not Vedantic. Our conclusion is

that the original Gita did not contain this passage. If we reject this portion, the Gita will not be mutilated; no other principle of the Gita depends upon this theory or is connected with it; in no other part of the Gita is a similar theory found and in fact, every other principle of the Gita directly contradicts the Pluralistic theory of *Kshara, Akshara* and *Purushottama*.

So we may conclude that the verses 16-19 of the fifteenth chapter are interpolations.

Yet this is the theory upon which our author has based his whole super-structure.

(ii) *Prakriti* and *Purusha*—We have not also been able to accept our author's interpretation of the relation between *Prakriti* and *Purusha*. In one place he writes:—

"In the Sankhya, Soul and Nature are two different entities; in the Gita they are two aspects, two powers of one self-existent being (I. 333).

In another place he writes—

"In this highest dynamics *Purusha* and *Prakriti* are one. *Prakriti* is only the will and the executive power of the *Purusha*, his activity of being,—not a separate entity but himself in Power" ii. 8.

But this interpretation of the Gita is fundamentally wrong. The Gita has accepted the dualism of the Sankhya with this exception that instead of many *Purushas* of the Sankhya the *Purusha* of the Gita is one. Gita's metaphysics is dualistic. Both *Prakriti* and *Purusha* are eternal. The *Prakriti* is, according to the Gita, under the influence of the *Purusha* but this fact does not make the system monistic. It should be borne in mind that even that influence is not voluntarily exerted by the *Purusha*. The *Purusha* is inactive.

(a)

We, moderns, consider the universe to be organic to God. But there is not a sentence, not a word in the Gita to indicate that its author entertained such a view.

(b)

In the Gita, as in the Sankhya system, *Prakriti* and *Purusha* are antithetical entities. *Prakriti* is active whereas *Purusha* is ever inactive. *Prakriti* is changeable, mutable but *Purusha* is unchangeable, immutable. *Prakriti* has qualities: qualities form the intrinsic nature of *Prakriti*; *Purusha* is without qualities; qualities are extrinsic to *Purusha*. To be attached to the qualities of *Prakriti* means bondage; to be free from qualities means liberation. So *Prakriti* and *Purusha* are altogether different. It is true that the activity of *Prakriti* depends upon the existence of *Purusha*.

But how *Purusha* can influence *Prakriti* is inscrutable. Neither the Sankhya nor the Gita has been able to shew how an inactive entity (*Purusha*) can move another entity (*Prakriti*) to action. It should always be remembered that *Purusha*'s influence is never actively exerted

(c)

Krishna has, in many places, used such expressions as स्वा प्रकृति (svā Prakriti, my own *Prakriti*, IV, 6; IX, 8). मे प्रकृति (me Prakriti—my *Prakriti*, VII, 15), मामिदं प्रकृति (māmidaṁ Prakriti—

my *Prakriti* IX, 7), मम माया (mama Māyā—my *Māyā* VII, 14). But the mere use of the word "my" does not establish a real intrinsic relation.

(d)

In one place Krishna says:—

"The *Mahat-Brahmā Brahman* (i. e. *Prakriti*) is my womb; in that I place the germ; thence comes out the birth of all beings, O Bharata. Of the forms (i. e. embodied beings) arising in all the wombs, the *Mahat-Brahman* is their womb and I their generating Father" XIV, 3, 4

Here God and *Prakriti* are sharply distinguished: one is different from the other. One is Father and the other Mother.

This dualism cannot be metaphorically explained to be monistic. It was and is the Sankhya view which has been accepted by the author of the Gita.

(e)

In another place Krishna says:—

At the end of a *Kalpa* (i. e. world age) all beings enter into my *Prakriti* (प्रकृति मामिदं) IX, 7.

Here it may be noted that the liberated persons enter into God (IX 51; XVIII, 55) whereas at the end of a *Kalpa*, all beings that are not liberated enter into *Prakriti*. Necessarily *Purusha* and *Prakriti* are distinguished in IX, 7.

(f)

In another place he says:—

Under Me as supervisor, *Prakriti* sends forth the moving and the unmoving (i. e. everything) IX, 10.

Here also *Prakriti* and *Purusha* are sharply distinguished.

The supervisor must be different from what he supervises. One aspect of God cannot supervise another aspect of His. For example, God is both *Jnanam* and *Sivam*. We cannot say that God as *Jnanam*, is supervisor of God as *Sivam* or vice versa.

(g)

The following verses describe the relation between God and the universe:—

Know that from me are the existences having the nature of *Sattva*, *Rajas* and *Tamas*. I am not in them (न मयि हेतुः) but they are in Me. VII, 12. Bewildered by the natures of these qualities the whole universe knows not me who am above these (मामेभ्यः परम्) and am unchangeable, VII, 13.

The meaning is that the whole universe is evolved out of *Prakriti* through the influence of God. The Universe is therefore said to be in God. But as there is no organic relation between God and *Prakriti*, it is said that God is not in *Prakriti* or in the evolution of *Prakriti*. In verse 13, it is said that God is above or higher than *Prakriti* which means that God and *Prakriti* are different.

(h)

The idea expressed in the above verses is further developed in the following verses:—

"By me, the unmanifest, the whole universe is

filled. All entities dwell in me; but I do not dwell in them. (न चाह तेष्वास्मिन्) IX. 4. "yet these entities are not in Me (न च मत्स्थानि भूतानि), See my divine Yoga. My self, though support and source of these entities, lives not in the these entities (न च भूतस्य) IX. 5.

The universe is evolved out of Prakriti. But it is evolved through a mysterious influence of God. It is therefore said that the universe is in, or lives in or is established in God. For the same reason it is also said that God is the source and support of the universe. But from this people may erroneously conclude that Prakriti is organically related to God. To dispel this notion the Gita adds these three sentences—

(i) God does not dwell in the universe (न हेतु यवस्थितः) IX. 4.

(ii) These entities do not dwell in God (न च मत्स्थाना भूतानि) IX. 5.

(iii) God's own self lives not in the universe, (न च भूतस्यो ममात्मा) IX. 5.

If it were said that these expressions simply mean that God is not attached to the universe, our reply would be that even that interpretation would prove dualism. The question of attachment or non-attachment can arise only when there are dual or plural entities.

Had Prakriti and Purusha been organically related, it would have been said that God is in the universe and the universe is in God. It is a definite principle of the Gita that to be united with God or 'to be God' means 'to pass beyond the qualities of Prakriti.'

स गुह्यं सम्प्रवक्ष्यामि
मत्तु मया कल्पते

"Passing beyond the Gunas he becomes fit for Brahman-hood." (XVI, 26).

This means that in Brahman or in the state of Brahman, there are qualities of Prakriti, i. e., Prakriti is outside Brahman.

Discussing all these passages we arrive at the conclusion that Prakriti and God are different entities, that Prakriti is not an aspect of God and that they are not organically related.

(iii) Liberation

According to our author Liberation, as described in the Gita, is to live in 'unchangeable conscious eternal being of Purushottama' (ii. 241)

It is doubtful whether consciousness, 'as we understand it, can be attributed to the Self and God of the Gita. It implies change; it involves memory, sensations, perception and conception of the Western philosophy and monas, Buddhi, Ahankara, celand etc. of Indian philosophy. All these belong to Prakriti (VII. 4; XIII. 6 etc.) and cannot be attributed to Purusha or the Self. Even our author has been constrained to admit that this consciousness 'is something very different from our mind consciousness to which alone we are accustomed to give that name' ii. 331.

About the personality of the liberated Self, our author writes—

"Mark that nowhere in the Gita is there any indication that dissolution of the individual, spiritual being into absolute Brahman is the true meaning or condition of immortality" (ii. 241, foot-note).

Our reply is:—

(i) At least there are two or three passages which indicate that the liberated self is merged in God. The following are the passages:

(a)

"By exclusive devotion to Me" says the Bhagavan, 'O Arjuna, I may thus be known and seen in essence and entered (प्रेष्यन्, O Parantapa. XII. 54

(b)

"By devot on he knoweth, in essence, who and what I am" says the Bhagavan, "and having thus known me in essence he forthwith enters into (विशते into That i. e., Me or God). XVIII, 55.

(c)

In VIII, If it is said that passion-free ascetics enter into (निराति) Akashara.

In the three passages it is said that the Self enters into God. The Self first knows God, then sees him and then enters into Him. Soul's entering into Brahman means losing its separate personality and becoming merged in Brahman and becoming Brahman.

This is not a new idea; it is borrowed from the Upanishads. In the Prasna (VI) and Mundaka Upanishad (iii. 2. 8) it is said that the liberated Self is merged in Brahman leaving behind him name and form as rivers are merged in the ocean.

(2) The word *Brahma-Nirāṇam* (Gl. 32; V. 24-26) which is the goal of the liberated Self may mean extinction in Brahman.

(3) To prove personal immortality, our author cites three examples. The first is the passage 'mayi masushyas' (XII. 8) which means 'will live in me.' It may mean either personal or impersonal immortality, or it may mean a condition before final liberation. His second example is 'Param dhāma'. This phrase occurs in four places (VIII. 21; X. 12; XI. 33; XV. 6) and means 'Supreme abode.' This supreme abode is really the noumenal world where the sun, the moon and fire do not lighten (XV. 6). So this phrase does not mean that the liberated Self resides there as a conscious being. It may mean impersonal or super-personal existence or it may mean 'existence as Brahman'. His third passage is the phrase 'munayah sarve from which he infers that all the sages still exist. The whole passage is:—

"I will again proclaim the supreme knowledge, the best of knowledges which all the sages (मुनयः सर्वे) having known have gone hence to supreme perfection" XIV. 1.

Here nothing is said about continued personal existence. 'Supreme-Perfection' does not necessarily mean conscious existence.

member takes the place of the genitive case, and translates: The minister of His Highness the Yuvajaya.

(11) The term *Draṅgila* for a city-magistrate' (*Harsha*, p. 109). Instead of asking Prof. Mookerji "to take the trouble of consulting the English translation of the *Ryatarangini* for the correct meaning of the word *draṅga* in Sanskrit" (*M. R.*) a meaning which has been wrongly given by Fleet also, in Mr. Banerji's opinion, may I in all humility ask Mr. Banerji to take the trouble of consulting the St. Petersburg Dictionary which quotes the very passage of the *Ryatarangini* in which the word *draṅga* occurs, but explains the word to mean a 'town' and not a 'boundary'.

(12) In his *Harsha* Dr. Mookerji has included a Note on the Art of the Age, 'of the Gupta Age'. Mr. Banerji "cannot understand what business Prof. Mookerji has to introduce this topic in a book on *Harsha*" (*M. R.*). Yes; he cannot understand it because he cannot understand the difference between 'the art of the Gupta Age' and 'Gupta Art'.

(a) "For the standpoint of art history the two reigns of Harsha and Pulakesin II have generally been included in the Gupta period, a position justified by the fact of the actual persistence of Gupta culture". [Dr. A. K. Coomaraswamy in his late work, *History of Indian and Indonesian Art*, p. 92]. I hope Mr. Banerji accepts Dr. Coomaraswamy as an authority not inferior to his favourite authority, Dr. (Miss) Kramisch.

(b) In the same work of Dr. Coomaraswamy are included as examples of Gupta Art, or more correctly, of the art of "the Gupta Period, 320-600 A. D." the following:—

(i) The Ajanta Caves (pp. 75-77-*ib.*)

(ii) The Ellora Caves (p. 77, *ib.*): in spite of Mr. Banerji's dream that "Prof. Mookerji is not ashamed to speak of Ellora as a centre of Gupta Brahminical Art." (*M. R.*)

(iii) "The Brahminical Durga temple at Aihole" a few other temples of the same place (*ib.* pp. 78-79): in spite of Mr. Banerji's patronising sarcasm that Prof. Mookerji "includes these within the sphere of influence of Gupta Art!" (*M. R.*) As regards 'the sphere of influence of Gupta Art', let him understand its fullest extent from the following sentence of Dr. Coomaraswamy: "The influence of Gupta Art was felt not only throughout India and Ceylon but far beyond the confines of India proper, surviving to the present day." (*ib.* p. 72).

On the subject of Ajanta, Dr. Mookerji writes: "Some of the best examples of both sculpture and painting for the period are seen at Ajanta." (p. 164 of *Harsha*). Nowhere has he described Ajanta art as Gupta art. Yet Mr. Banerji delivers himself of the following deliberate comment—"Prof. Mookerji is also not aware of the fact that Ajanta has no connection with Gupta art!" (*M. R.*) May I in this connexion present to Mr. Banerji the following conclusions of some art critics of more authority than he?

(1) "The epoch from the beginning of the fourth to the end of the eighth century A. D. will be most fitly summarised architecturally by a description of the rock-cut Viharas and Chaitya houses of Ajanta." [Havell, *Ancient and Mediaeval Architecture of India*, p. 139].

(2) "Apart from temple architecture the art of the Gupta period is illustrated by some of the earlier halls and chapels of the splendid abbey of Ajanta, one of the great universities of the time." [Havell, *Indian Art*, p. 184].

(3) "Among the most interesting architectural monuments of the Gupta period is the so-called Vishvakarma Chaitya House at Ellora." [*ib.* p. 185.]

(4) "The paintings in Viharas I and II (c. 600-650 A. D.) at Ajanta are hardly to be distinguished in style from those of the Gupta period strictly defined as such" [Coomaraswamy, *History of Indian and Indonesian Art*, p. 99].

(5) "Of flat-roofed temples of the Gupta period there is an interesting example in the Dehkan known as the Lad Khan's temple at Aihole in the Bijapur District" [O. C. Ganguly, *Indian Architecture*, p. 14].

Prof Mookerji says "In the Gupta period were also developed what are called the *Mudras*." (*Harsha* p. 162). Therefore, Mr. R. D. Banerji must remind him that the *Mudras* are to be found in the earliest Gandhara sculptures (*M. R.*)! In his opinion there is no difference between *origins* and subsequent *developments*!

Prof Mookerji writes (*Harsha*, p. 163): "Besides Sarnath, some of the best examples of the Gupta sculptures are being brought to light at Nalanda." Mr Banerji not seeing this passage on the same page he comments on, must pass the following verdict: "Up-to-date knowledge on the subject was evidently not considered necessary by the learned author of this book and therefore he does not know of the recently discovered Gupta art of Nalanda!" (*M. R.*)

Composite Culture of Bengal

In concluding his series of illuminating studies on 'The Culture Products of Bengal,' Mr. Rames Basu has this wholesome counsel for the Bengalis in *The Vaisa-Bharati Quarterly* (Sravan, 1935, B S)

Bankim Chandra Chatterjee, Mm. Haraprasad Sastri and Deshbandhu Chittaranjan Das used alike to deplore, with great truth that the Bengalis seemed to be the most self-forgotten race of India. It is surely obvious that in order to be true to any ideal, whether of Aryan or Semitic origin, they must first of all be true to themselves. If Bengal will but shake off her habit of oblivion nothing can prevent her attaining to the height of her inherent Genius. If both Communities get back to, and take their stand on their original Truth, they will there find on cause for differences or quarrels, for as our Hindu-cum-Muslim devotees of the middle ages pointed out, there is no difference between Ram and Rahim. The Muslim poet, Firdausi, has also freely acknowledged.

Whoe'er shall read the Indian's book will find Both pleasure and enlightenment of mind.

Nor is there anything in their precept day outlook which need keep these two sister-communities asunder. The wealth of symbolism which is the outstanding cultural achievement of the Hindu mind, may continue to be freely availed of by the Muslim, as it has been in the past, to enrich his own literary and artistic output; while the sense of brotherhood which is the crowning glory of Islam, can well serve as a much-needed example to the separatist Hindu. It is indeed a pity that, instead of their respective cultural attainments being used for mutual help and uplift, they should be allowed to be exploited by self-seekers to further their own ends by promoting artificial antagonisms.

The Quran says: *God has granted to every people a prophet in its own tongue.* Both Hindu and Muslim will find Prophets who have spoken in their common language, Bengali,—from Rammohan Roy down to Rabindranath,—to whom both can and do look up for inspiration and guidance on the path of loving service to their common motherland. If but Hindu, Moslem and Christian of Bengal would join hands, this magnificent composite culture of their Province, with its exquisite blend of Oriental and Occidental, Aryan, Dravidian and Mongolian, Vedic, Buddhist, Islamic and Christian factors, could well show the way to the larger synthesis of Greater India that is yet to come.

Peace has had a War Basis

The Madras Christian College Magazine writing editorially on the Renunciation of War, which is so much being talked of, makes this thoughtful observation:

It is significant that for the first time in history first-rate world powers have under discussion the possibility of renouncing war as a means for the settlement of international differences. Whatever may be the claims that are made for international law and policy it is fairly apparent that for a long time the entire structure of international relationship has been resting on a war basis. The persuasion of the diplomat has depended to a large extent on the force in whose name he speaks. The ability to negotiate favourable understandings is too often and too unduly influenced by military or naval power. Even peace itself has had a war basis, and nations have deluded themselves into thinking that the best way to preserve peace was to be armed to the teeth for war. At last the world is beginning to understand that armies and navies are not peace instruments. It used to be thought that they were built and maintained to meet the requirements of war; now we begin to see that wars sooner or later have to be made to meet the requirements of military forces. Even international law has allowed militarism to grow and flourish under its benign aegis.

Hermitages—the Spring-head of Indian Civilization

In an enumeration of 'The Gifts of Aryans to India, in *The Hindustan Review*, July, Professor Jadunath Sarkar, C. I. E. places "the institution of hermitages, which were distinct alike from the city universities and celebrate monasteries of Christian Europe," at the top of them all, lofty spirituality, the spirit of systematising every branch of thought, ordered imagination in literary or artistic creation, the grading of people into mutually exclusive castes, and honour to woman while rejecting matriarchy and polyandry. Says Prof. Sarkar:

The most powerful and most beneficent factor of Aryan influence consisted in the hermitages of the *Rishis*, which grew up in what is popularly called the epic age, i. e., after the Aryans had advanced to the fertile Gargetic valley and established large and rich kingdoms, with crowded cities and magnificent courts, and peace and leisure for the population.

The hermits or *Nishis* who lived in these forest-homes (*apouras*) were not lonely recluses or celibate anchorites cut off from the society of women and the family. They formed family groups, living with their wives and children, but not pursuing wealth or fame or material advancement like ordinary householders. All their attention was devoted to the practice of virtue and the cultivation of knowledge. Thus they lived in the world, but were not of it. They had frequent touch with the cities and the royal court by means of respectful invitations to the domestic ceremonies of the Kings and rich men, and the visits made by the latter to these hermitages in the spirit of pilgrimage. Their pupils included their own children and also boys from the busy world, who lived with the hermits, shared their toils, studied under them, and served them like their own sons. Then, when their education was completed, they would bow down to their *guru*, pay their thanks-offering (*dakshina*), and come to the busy world to take their places among the men of action.

Thus, the ancient Hindu University, without being rigidly isolated, was kept at a safe distance from the noisy, luxurious capitals and gave the purest form of physical, intellectual and moral culture possible in any age, if we leave out natural science and mechanics. Learning was developed by the *Rishis*, who were maintained in learned leisure partly by their pupils' foraging in the ownerless woods and fields of that age and partly by the gifts of Kings and rich householders.

These hermitages were as effectual for the promotion of knowledge and the growth of serious literature as the cathedrals of mediæval Europe, but without the unnatural monachism of the latter.

Lecky remarks about the celibate clergy of the Catholic world: 'The effect of the mortification of the domestic affections upon the general character was probably very pernicious. In Protestant countries, where the marriage of the clergy is fully recognised, it has, indeed, been productive of the greatest and most unequivocal benefits. Nowhere does Christianity assume a more beneficial or a more winning form than in those gentle clerical households which stud our land, constituting, as Coleridge said, 'the one idyl of modern life,' the most perfect type of domestic peace, the centre of civilisation in the remotest village... Among the Catholic priesthood, on the other hand, where the vow of celibacy is faithfully observed, a character of a different type is formed, which with very grave and deadly faults combines some of the noblest excellences to which humanity can attain. (*History of European Morals* cabinet ed., ii. 137, 331-335). This evil was avoided in ancient India.

The Brahmins of old enjoyed popular veneration and social supremacy, but they used their influence and pre-eminence solely for the promotion of learning and religion, and not for enriching themselves or gratifying their passions. The nation as a whole benefited by this arrangement. But it was possible only in a purely Hindu State, without a dense population and with science and technical arts in a simple undeveloped condition.

In the calm of these sylvan retreats were developed our systems of philosophy, ethics, theology and even several branches of literature proper. Witness the vivid scene of the discussion

of political science, and morality in the Naimish forest as described in the Mahabharat.

Herein lay the true spring-head of the ancient civilisation of the Hindus, and thus we owe entirely to the Indo-Aryans of the earliest or Brahmanic age.

Muslim Contribution to India

If the Aryan gifts are six, Prof. Sarcar enumerates in his estimate of 'Islam in India' in the *Prabuddha Bharata*, August, ten distinct contributions of the Moslems to the composite culture and national life of India:

What were the gifts of the Muslim age to India? They were ten:

- (i) Restoration of touch with the outer world, which included the revival of an Indian navy and sea-borne trade, both of which had been lost since the decline of the Cholas.
- (ii) Internal peace over a large part of India, especially north of the Vindhya's.
- (iii) Uniformity secured by the imposition of the same type of administration.
- (iv) Uniformity of social manners and dress among the upper classes irrespective of creed.
- (v) Indo-Saracen art, in which the mediæval Hindu and Chinese schools were blended together. Also, a new style of architecture, and the promotion of industries of a refined kind (e. g., shawl, inlaying, kinkhab, muslim carpet, etc.).
- (vi) A common *lingua franca*, called Hindustani or Rekhta, and an official prose style (mostly the creation of Hindu munshis writing Persian, and even borrowed by the Maratha *chintises* for their own vernacular).
- (vii) Rise of our vernacular literatures, as the fruits of peace and economic prosperity under the empire of Delhi.
- (viii) Monotheistic religious revival and Sufism.
- (ix) Historical literature.
- (x) Improvements in the art of war and civilisation in general.

Development of Indian Numerals

A. A. Krishnaswami Ayangar, Esq., M.A. L.T., writes thus about 'The Development of the Numeral Systems in India', in the fourth instalment of his contributions on 'The Hindu Arabic Numerals' in *The Quarterly Journal of the Mythic Society*, July..

One noteworthy feature of the development of the numeral notation in India is its 'progressive continuity' * and growth—one system leading on to the next and getting itself absorbed in it, imbibing new life partaking the essential principles

* There is nothing like it in the notations of other nations for examples, there is hardly any point in common between the earlier Attic notation and the later Greek alphabetic notation.

of the old and the new. We have seen how the iterative and additive notation of the Kharosthi numerals lent as it were its first four symbols to the Brahmi notation and got merged in it. Again, the Brahmi numerals did not advance further than a few hundreds, since the word-numeration developed alongside of it with the place-value principle and arrested the growth of the non-positional notation. Otherwise, we should have had, even in India, a kind of extension of the non-positional notation with a periodic principle corresponding to that of the alphabetic notation of the Greeks with the dashes and dots for numbers greater than 1,000, witness also the two-fold alphabetic notation, one before the invention of the decimal notation and another after it utilizing the positional principle and the zero. There has been also similarly a two-fold word-numeral notation, one non-positional and the other positional distinguished by the way in which the Dwandwa compounds (containing the numeral names) were dissolved, the one by 'or' and the other by 'and', the latter presupposing the existence of the decimal notation (*vide Buhler's Indian Palaeography*).

Teaching a Deaf Child to Speak

Mr T. G. Nawathe, a specialist in the Education of the deaf, writes on the above subject in *The Progress of Education*, July.

After the establishment of deafness is announced forever, the child, if found speechless, may better be brought to the teacher of the deaf at the age of six or seven. The deaf child is as good mentally and physically as his hearing fellows and his Will can be operated upon so much so that instruction may safely be imparted to him orally.

How this is possible is now to be seen. The deaf persons cannot have sound images as the gates to receive sound are closed. But kind nature has applied them with the sense of touch which enables them to feel, not exactly the sound itself but the vibrations of the sounding bodies. They are first asked to imitate to give out voice from their mouth, or more correctly from their larynx, by seeing the teacher's mouth open and bringing the larynx in action. In the absence of imitation on the part of the deaf to put the larynx into action, or more accurately into vibrating condition, the help of their touch sense is resorted to. The reason is that as the ear hears sound sounding of bodies if there is a medium like air between the sounding body and the ear, so in the case of the deaf the medium is their touch sense to feel it, not the sound as sound but only the vibrations of the sounding bodies; for independent of the sense of hearing, sound as sound has no existence in nature. They are asked to place their hands on the teacher's throat i. e. the sound-emitting place, and imitate to produce voice. The imitation at once results in giving out vocal sounds as desired by the teacher. Thus only by imitation the vowels and the consonants are taught and then the language teaching is a patient and arduous task as in the case of child who is taught language by his mother in his infancy by way of untiring repetitions.

Co-operation in Russia

In an informative article in the *Welfare* Mr. Wilfred Wellock M. P. gives an indication of the big strides that Russia has taken in Co-operation. Besides his experience, Mr. Wellock gives figures that tell:

The principal links in the Co-operative system are as follows: There is first of all a net work of rural town and industrial Co-operative Societies. Above these in rural areas, are District and Regional Unions. Above these again are the unions of the five autonomous republics which make up the Union of Socialist and Soviet Republics, while Controsovys unites the whole lot, and also the town and industrial societies.

There are now 26,697 rural societies, with about 60,000 stores 1,576 town societies with 15,000 stores 38 railway worker's societies with 2,000 stores 284 District Unions, and 5 Regional Unions. There is a rural store for every 2,600 persons, while their total membership is well over 7,000,000 as against 1,000,000 in 1915. It is estimated that more than one-third of the farmsteads in Russia are organised in Co-operative Societies with a capital of over £30,000,000, half of which is borrowed from the State. In 1926 the total sales of the rural Co-operatives amounted to £175,585,000 which is a four-fold increase on 1924.

These rural Co-operatives work on very low distribution costs, and sell at prices at 10 p. c. less than private stores. It is estimated that they thus increase the purchasing power of the peasantry by nearly £15,000,000 per year.

The membership of the town Co-operatives doubled between 1923 and 1926, being 5,000,000 at the latter date. Their total capital is £50,000,000 and their total sales for 1926 amounted to £247,876,000. It is estimated that these Societies save the workers who are members of them £30,000,000 a year in the way of cheaper commodities.

For 1925-26 the gross turnover of the Co-operative Societies amounted to £736,622,000, of which £442,292,000 represents retail trade. Of the total trade of the country in the year 1926-27 31 p. c. was done by the State 44 p. c. by the Co-operative Societies, and only 22 p. c. by private traders.

Dental Education in India

Dr. J. J. Modi of the Grant Medical College Bombay traces the history of the past, present and the future of Dental Education in India in *The Indian Dental Review* for June. Regarding Dentistry in Ancient India we read:

That Dental Education must have existed in the long past is certain, for Dentistry flourished in India in an efficient condition several thousand years ago and it could not have flourished without some means of educating people in this art of dental relief.

Regarding the position of dental education in modern times the writer says :

In the early eighties of the last century there came in Bombay an English Dentist—one Mr. Stephen—who undertook, to train pupils to learn Dentistry. He had five pupils. I am told, who on finishing their training under him, set themselves up in practice, and in their turn also took up pupils who in their own turn did the same. Thus did the dental profession grow to its present extent and its scandalous state. That state is that the bulk (95 p.c.) of the Dental profession is composed of unqualified men, and it is entirely due to the total want of facilities for systematic dental education in India, and neglect on the part of the Government to stop this mushroom growth of these unqualified men. The first official attempt at dental education was made by the Government in 1906 by establishing the Chair of Dentistry, which I have now the honour to occupy, in the Grant Medical College from 1906 to 1923 is a far cry, and yet the Government did nothing more in that direction, than making pious promises. The absence of facilities for dental education in India, for there is not one single Dental School and Hospital in this country, is a stain on the fair name of the Government. But now thanks to the efforts of Sir Leslie Wilson, the Governor of Bombay, and the financial help of the Trustees of Sir Currimbhoy Ibrahim Memorial Fund, that stain will soon be removed, for Bombay by the end of this year will have the Sir Currimbhoy Ibrahim Dental College and Hospital—the first full-fledged dental college and hospital of India. The opening of this institution will be a historic event in the history of modern India, for through its portals Dentistry will, after a lapse of several centuries, officially come back to India, the land of its birth.

England at the time when the great scientist Tyndall was being severely criticised. In his Belfast address he had said that the time was coming when science would see in matter the promise and potency of mind. This was a heresy to many and a number of criticisms appeared against him in the press. Pratap Chandra Mazoomdar paid a visit to Tyndall, and in the course of his talk the great Indian mystic referred to the Belfast address and the criticism in the papers. Pratap Mazoomdar expressed sympathy with Tyndall and referred to some of the ancient Upanishadic conceptions of the relation between matter and mind. Tyndall said:—"Your words are a great comfort to me: the light once came from the East: the light will travel again from the East." And in all humility I submit, there is one domain in which India still has a message to give to the World. In the domain of objective sciences the West is great, and we must sit at the feet of the West to understand more the spirit of observation and experimentation. But there is another domain in which, I believe, India has a message for the world: to understand the right mind of India we must make a study of ancient Indian culture.

French Engineers in Kabul

We read in the *Bulletin of the Iran League* for July.

The Afghan Sovereign admirably keeps the balance of power among the European competitors for his favours. While the Germans, Italians and Russians are so much in evidence, we heard little of the French influence in Kabul. Now we understand that M. Clemenceau, grandson of the famous French politician, is in Kabul with three French engineers. They have been invited by the Afghan Government to discuss the improvement of the road transport and communications. It is possible that they will submit plans of a railway in Afghanistan linking the latter country with India.

Vices of Heavy Smoking

The Red Cross for July publishes an article under the caption "The Case against Tobacco: In it we read that excessive smoking produces may be a symptom as well as a cause of mental and physical inferiority. We are further told that

Heavy smoking is undoubtedly injurious. The neurotic girl, who is an "end-to-end" cigarette smoker, and who consumes 20 to 50 cigarettes a day, may do so because she is already a neurasthenic wreck, but the more she smokes, the more neurasthenic does she become, and thus a vicious circle is created which it is very difficult to break. It is the naked truth that tobacco is a narcotic poison, and that even its moderate use is attended by the risk of becoming a prey to it. It has been well said by Professor W. H. Park that "it is not consistent with wise counsel to the public to encourage even the moderate use of such a drug—"

the public should be encouraged to maintain standard of health that is independent of these narcotic resources and attempted shortcuts from life strain.—

Ramayana Relief from Prambanan

Prof. Dr. Suaiti Kumar Chatterjee gives a glimpse of the artistic achievements of Hindus in Java in an illustrated article in *Rupam* (January-April number). About the Ramayana sculptures at Prambanan we read:

The temple group at Prambanan in Java is a veritable epic in stone. These magnificent temples dedicated to God the Creator, God the Preserver and God the Destroyer and Regenerator and Merciful Teacher, to Brahma, Vishnu and Siva, present the finest fruit of the earlier Hindu culture of Java. Borobudur and Prambanan are twin flowers borne by the transplanted tree of Hindu art in Java—twins born with in the same period of cultural awakening and self-realisation of the race; and as twins they show agreements, but it has its peculiar individuality as well, and this has given rise to the contrast between them which irresistibly fixes our attention.

The Ramayana sculptures at Prambanan have other appeals than the purely aesthetic one. They are inestimable documents of Indian literature and mythology. The reliefs amply show that the artists followed not so much Valmiki as other independent versions of the Ram story.

Authenticity of Feminine Portraits of the Moghul School

Mr. O. C. Gangoly contributes an interesting article in the same journal in which he shows that majority of the feminine portraits of the Moghul school are "imaginary pictures and are not the record of actual likenesses." This fact, of course, does not in any way diminish the artistic value of the exquisitely beautiful Moghul miniatures as the writer truly observes in conclusion:

To sum up, with occasional exceptions, the surviving portraits of women are not, as a rule, authentic likenesses, or actual portraits, but imaginary visualisations, based perhaps on familiar types. However, the loss to history is in this case, a distinct gain to Art. For the lack of realistic data, drives the Moghul artists to seek inspiration from an imaginary vision, and to create an ideal type of exquisite artistic convention, which, transports the somewhat prosaic and pedestrian art of the Moghul court on the wings of heightened fancy, to a higher plane of imaginative sublimation.

Bombay Government and Prohibition

Mr. R. G. Pradha, M.L.C., strongly criticises the excise policy of the Bombay Government in an article in *The Indian Review* for July and accuses the government for "circumventing" and "frustrating" non-official efforts in the direction of prohibition. Says the writer:

What is the moral of all this? If the Government really intended to make a real and substantial beginning in the direction of prohibition, they could certainly introduce prohibition at least in those districts where the consumption of liquor per head is very low and where, therefore, the loss of revenue would not be much and could be easily made up. The majority of the Committee have recommended such a course, and there is everything to be said in its favour, at any rate, as an experimental measure. But this postulates a genuine will to promote prohibition. Such a will however it must be painfully said, is absolutely lacking on the part of the Government, including the Minister. The present system of Government seems to be hopelessly incapable of prompting the material and moral progress of the people according to their views, sentiments and wishes. The Government talk of the money derivable from fresh taxation being required for education. But what have they done in the matter? I sent in a Bill which would have brought about compulsory education throughout the Presidency in seven years. That Bill was vetoed on the ground that it would entail additional expenditure with the Government had no means of meeting. Have the Government ever brought in a taxation Bill, to meet the requirements of compulsory education? As is well-known, compulsory education has made no progress whatever, and nothing has been, or is being, done to obtain more revenue for the purpose. The fact is, Government are earnest neither about education nor about prohibition. Unless the Bombay Legislative Council asserts its will and compels the Minister and the Government to loyally carry it out, prohibition in the Bombay Presidency is doomed.

Queen Mary

M. E. Chambers in the course of a review of Kathleen Woodward's *Queen Mary* in *The Indian Ladies' Magazine* for July shows how Queen Mary finds beauty in order and harmony in all her household arrangements:

As Queen, in the great royal houses of Windsor Castle and Buckingham Palace, she regarded herself as the servant of the nation—the custodian on the people's behalf of the treasures collected there. The vastness of Windsor Castle is perhaps hard to imagine. It includes chapels, picture-galleries, library, towers and gateways which are open at times to the public. Then there are the royal suits used by the King and Queen themselves, and over one thousand other rooms not seen by the visitor. Queen Mary has been discovered moving furniture

- Regarding the position of dental education in modern times the writer says :

In the early eighties of the last century there came in Bombay an English Dentist—one Mr. Stephen—who so undertook, to train pupils to learn Dentistry. He had five pupils, I am told, who on finishing their training under him, set themselves up in practice, and in their turn also took up pupils who in their own turn did the same. Thus did the dental profession grow to its present extent and its scandalous state. That state is that the bulk (95 p.c.) of the Dental profession is composed of unqualified men, and it is entirely due to the total want of facilities for systematic dental education in India, and neglect on the part of the Government to stop this mushroom growth of these unqualified men. The first official attempt at dental education was made by the Government in 1906 by establishing the Chair of Dentistry, which I have now the honour to occupy, in the Grant Medical College from 1906 to 1923 is a far cry, and yet the Government did nothing more in that direction, than making pious promises. The absence of facilities for dental education in India, for there is not one single Dental School and Hospital in this country, is a stain on the fair name of the Government. But now thanks to the efforts of Sir Leslie Wilson, the Governor of Bombay, and the financial help of the Trustees of Sir Currimbhoy Ibrahim Memorial Fund, that stain will soon be removed, for Bombay by the end of this year will have the Sir Currimbhoy Ibrahim Dental College and Hospital—the first full-fledged dental college and hospital of India. The opening of this institution will be a historic event in the history of modern India, for through its portals Dentistry will, after a lapse of several centuries, officially come back to India, the land of its birth.

Value of Ancient Indian Culture

The Vedic Magazine for June publishes the illuminating presidential address of Principal T. L. Vaswani at the Karachi Youth Conference wherein he puts forth a strong plea for the study of Indian culture by our youths. In the course of his speech he refers to the great Indian mystic Pratap-chandra Mazoomdar and his expositions of the Upanishadic conceptions and says :

According to some, Indian culture is perfect. I do not believe that any culture is final. I believe that human cultures progress as civilizations progress. Recognizing that Indian culture is not final, I submit in all humility that Indian culture has a great message for the modern world. Indian culture is permeated with the spirit of a great ideal and I want that high spiritual ideal to flow again into the life of India and the modern world. I remember a little incident mentioned by a great Indian mystic who went to England many years ago. I am not sure if all of you are familiar with the name of that great Indian, Pratap Chandra Mazoomdar, a great leader of the Brahmi Samaj. He lived away many years ago. He was in

England at the time when the great scientist Tyndall was being severely criticised. In his Belfast address he had said that the time was coming when science would see in matter the promise and potency of mind. This was a heresy to many and a number of criticisms appeared against him in the press. Pratap Chandra Mazoomdar paid a visit to Tyndall, and in the course of his talk the great Indian mystic referred to the Belfast address and the criticism in the papers. Pratap Mazoomdar expressed sympathy with Tyndall and referred to some of the ancient Upanishadic conceptions of the relation between matter and mind. Tyndall said:—"Your words are a great comfort to me : the light once came from the East : the light will travel again from the East." And in all humility I submit, there is one domain in which India still has a message to give to the World. In the domain of objective sciences the West is great, and we must sit at the feet of the West to understand more the spirit of observation and experimentation. But there is another domain in which, I believe, India has a message for the world : to understand the right mind of India we must make a study of ancient Indian culture.

French Engineers in Kabul

We read in the *Bulletin of the Iran League* for July.

The Afghan Sovereign admirably keeps the balance of power among the European competitors for his favours. While the Germans, Italians and Russians are so much in evidence, we heard little of the French influence in Kabul. Now we understand that M. Clemenceau, grandson of the famous French politician, is in Kabul with three French engineers. They have been invited by the Afghan Government to discuss the improvement of the road transport and communications. It is possible that they will submit plans of a railway in Afghanistan linking the latter country with India.

Vices of Heavy Smoking

The Red Cross for July publishes an article under the caption "The Case against Tobacco : In it we read that excessive smoking produces may be a symptom as well as a cause of mental and physical inferiority. We are further told that

Heavy smoking is undoubtedly injurious. The neurotic girl, who is an "end-to-end" cigarette smoker, and who consumes 20 to 50 cigarettes a day, may do so because she is already a neurotic wreck, but the more she smokes, the more neurotic she becomes, and thus a vicious circle is created which it is very difficult to break. It is the naked truth that tobacco is a narcotic poison, and that even its moderate use is attended by the risk of becoming a prey to it. It has been well said by Professor W. H. Park that "it is not consistent with wise counsel to the public to encourage even the moderate use of such a drug—

The insignificant ticket office and wooden shanties at the ingress to the Elephanta Caves may be taken by the enthusiastic visitor as not a bad symbol of the modest entrances to India's spacious art-to-day. How an artist must regret that he did not live in the Golden Age, when India was filled with gorgeous paintings and sculptures; when the mind of the people projected itself, and their hands transformed the idea into fact, so that celestial forms materialised out of the hard crust of Mother Earth!

But the World's greatest religions have preached the apotheosis of the Poor. We must not forget that the same great creed which inspired the artists to chisel the *trimurti* in the great Temple of Elephanta, (that most marvellous of sculptures!) which portrays the three aspects of God as three awesome giant faces upon one trunk, of which only the bust is seen above the Earth, gave the conquest of the Three Worlds to the naked ascetic rather than to the renowned warrior. There were few exceptions to this rule,—the road to power was the path of self-abnegation, and when the ascetic, proud of his accumulation of merit, vaunted himself unduly, the stroke of the Divine Vengeance was not long delayed.

Gaur—The Ancient metropolis of Bengal

Prof. Rakhaldas Banerji writes "in the ably conducted and nicely-got up *E. B. Ry* Supplement to the *Indian State Railways Magazine* for August.

Very few people in Bengal know that long before Murshidabad and Dacca, Gaur or Lakshmanavati was the Capital of Bengal for many centuries. Many Bengalees do not know where Gaur is and inconvenient questions have often been asked about it. Gaur is the name of an ancient city in Northern Bengal which was the Capital of Bengal for 900 years. Its original name was Gauda and was derived from Gur the Bengali word for molasses. From the oldest known records of Bengal it has been ascertained that it became the Capital of the Empire founded by Dharmapala in the middle of the 8th century A. D. Its name was changed to Ramabati at the end of the 12th century by king Ramapala of the Pala dynasty; to Lakshmanavati by king Lakshmanasena of the Sena dynasty, and to Jannatabad by Mughal Emperor Humayun. Shamsuddin Iqbal Shah, an independent Musalman King of Bengal, founded a suburb named Fuzzabad to the north of old Gaur, where the Capital remained from 1345 to 1446. It was retransferred to Gaur in 1446 and remained there till the destruction of the city by a great plague in 1550.

Very little can be seen of old Gaur of the Buddhist and Hindu periods. Its ruins are supposed to be buried under the vast mounds locally known as "Ballal-hari" which lie to the east of modern Malda. The ruins of Gaur still attract hundreds of visitors on account of the splendid remains of the Musalman period.

Birth of the Congress Movement

In his interesting survey of "Rural Bengal in the Seventies" in the *Calcutta Review* for

August, Mr. Francis H. Skrine shows how the simmering discontent of educated Indians gave birth to the Congress movement."

Fifty-seven years ago, all superior appointments were reserved by Act of Parliament for British subjects who had stood highest in a competitive examination held annually in London. After being trained for a Indian career, they were called on to enter into a "Covenant" with the Secretary of State, which forbade them to engage in private trade. Very few Indians could afford the cost of the journey to England, and in 1871 only one had gained a footing in the Covenanted Civil Service. His fellow-countrymen who stood outside its jealously guarded pale could reach no higher posts than those of Deputy Magistrate or Subordinate Judge. But Indians performed the routine duties in every office with marked efficiency, and rumour had it that a humble clerk was "the power behind the throne" occupied by many a highly placed Civilian. It was only natural that educated Indians should view the European monopoly of office with displeasure. Their feelings were timely voiced by the vernacular press, and found vent at meetings of the Dharma Sabhas, or Religious Assemblies which took place in every large town. Thirteen years later the simmering discontent was brought to a head by the Lieutenant Governor's ill-judged attempt to limit the right of trial by jury. It gave birth to the Congress Movement, to which Indians stand indebted for every political privilege they now enjoy.

"Movable School" at Tuskegee

Prof. Dr. G. S. Krishnayya gives a description of the Movable School of Agriculture and Home Economics at Tuskegee in the August number of the *Youngmen of India Burma and Ceylon*. We read.

Speaking of the problems of his people, Booker T. Washington is recorded to have said: "We shall prosper in proportion as we learn to dignify and glorify labour, and put brains and skill into the common occupations of life." Entirely in keeping with this ideal is the Extension work of the great Institute which he created, to reach Negro farmers and their families and to influence them to adopt better farm practices, to help them to increase their earning capacity, and to improve their living conditions, to interest Negro boys and girls in farm activities, and to train them in the use of improved methods in farming and home-making. It is undoubtedly one of the best means discovered recently for proving to the people generally that they can improve their own conditions.

A most practical phase of that practical activity, Agricultural Extension Service, and yet one with a certain amount of native dramatic flair, which, without doubt adds to its effectiveness is the "Movable School" whose history goes back some twenty-five or thirty years when Booker T. Washington was Principal.

This "Movable School" travels the entire year on a schedule, visiting all parts of the State, particularly regions which are difficult of access.

and hanging pictures herself, but it is obvious that, in houses of such vast magnitude, her task must be chiefly one of oversight. But it is very real, sympathetic, intelligent oversight, for she has none of that affectation, which imagines that the details of domestic affairs are not the concern of a great lady. Two women, wives of Labour Members of Parliament, once visited the Queen, and are said to have been delighted at the friendly way in which she received them and at the efficiency so markedly seen at the Palace. As they were leaving one of them uttered their highest word of praise, 'And I'll guarantee that if we went into her kitchen, it would be as clean as ours.' Yes, Queen Mary knows what is happening in her kitchen. She made a special point during the War of managing the details of housekeeping, and effecting those economies and preventions of waste, which were demanded in the interests of the nation. All her work is selfless. Of Buckingham Palace it has been said, 'There are no slaves here, but the King and Queen: they are slaves to duty.' So this 'royal slave' dedicates to others her energy, efficiency, sympathy, and sound artistic taste. In all her household arrangements she finds beauty in order and harmony, and has done much to bring to light hidden treasures, and to get the right thing in the right place in those innumerable apartments.

Extravagance of Indian Princes Abroad

The Maharajadhiraja of Burdwan who, is himself sojourning in England is reported to have said in an interview to the "Observer" that the Indian Princes should take up the business of Government seriously and not spend their time "Gallivanting in Europe" at the expense of their subjects. Commenting on this statement *The Feudatory and Zemindari India* for July observes:

We are sorry if the reports circulated by the Nationalist press in India are true about the extravagance of the Indian Princes in England. Although we admit that by their frequent tours to foreign parts they are able to learn much and get first-hand information about the places they visit, to a large extent they must curtail their expenditure. Leaving a wide enough margin for the personal expenses of the Ruling Princes in keeping with their high dignity there are instances of extravagant personal expenditure which we are sure will be greatly minimised if the Princes are appraised of their financial position now and again. The traditions of a native court and its hospitality demand a scale of expenditure which to an outsider will look like folly. But these traditions have to be respected, and it means some expenditure. Well, leaving a good margin for that, we cannot help saying that some of the Princes, especially on their tours abroad go in for a scale of personal expenses for which there can be no justification and which in some cases are evidently beyond their means.

The Maharajadhiraja's advice applies

with equal, if not greater, force in case of Zemindars. The Indian Zemindars also should take up the business of managing their own estates instead of holiday-making and touring abroad.

Sati

Stri Dharma for August writes:

A young girl of Bihar committed Sati. When the flames became intolerable, she jumped into the Ganges, but was rescued. After two days and nights of agony she died. Sufferings as these which gave a thrill of horror to all civilized sensibilities elicits the following remarks from the *Searchlight* of Bihar: "Sati represents the acme of moral perfection and its whole merit is based on its voluntariness. In course of time, however, under demoralising political conditions corruption crept in and voluntariness disappeared to a very large extent. But with all this a pure Sati—pure in the sense of voluntariness—yet invokes the profound reverence of all Hindus who have not divested themselves of their age-long culture."

There is no "voluntariness" in conduct, to the extent it is wrought of deception. It is deception to tell uneducated young girls that their husbands are their gods however devoid of merit, and that to mount their funeral pyre is the surest way to Heaven.

There is no "voluntariness" in action to the extent it is induced by pressure. Public opinion is a mighty pressure, and in olden days there were millions like the writers to the *Searchlight* who pointed to widows the funeral flames of their husbands as the best place for them.

There is no "voluntariness" in deeds to the extent they are inspired by fear. The fear inspiring is the suffering and humiliation that Hindu Society has reserved for widows who elect to live.

One many also consider how many men have followed "the acme of moral perfection" that they so easily preach to women, and mounted the flames of their wives. "Voluntary" self-torture seems never popular with those who have liberty to do what they please. Do women have that liberty? "No liberty for women" says the code of Manu.

Spirituality is often distinct from the practice of religion and ceremonial. The history of religion and crime have therefore many coinciding points—Sati is one. Also, religious men are often the worst criminals. When wickedness stoops to cruelty, cowardice seeks exculpation in ceremonies and religion.

The Elephanta Caves

In the profusely illustrated and neatly printed *Indian State Railways Magazine* for August, Mr. W. E. Gladstone Solomon gives an illustrated account of his visit of the Elephanta Caves. Says he:

The insignificant ticket office and wooden shanties at the ingress to the Elephanta Caves may be taken by the enthusiastic visitor as not a bad symbol of the modest entrances to India's spacious art-to-day. How an artist must regret that he did not live in the Golden Age, when India was filled with gorgeous paintings and sculptures; when the mind of the people projected itself, and their hands transformed the idea into fact, so that celestial forms materialised out of the hard crust of Mother Earth!

But the World's greatest religions have preached the apotheosis of the Poor. We must not forget that the same great creed which inspired the artists to chisel the *trimurti* in the great Temple of Elephanta, (that most marvellous of sculptures!) which portrays the three aspects of God as three awesome giant faces upon one trunk, of which only the bust is seen above the Earth, gave the conquest of the Three Worlds to the naked ascetic rather than to the renowned warrior. There were few exceptions to this rule,—the road to power was the path of self-abnegation, and when the ascetic, proud of his accumulation of merit, vaunted himself suddenly, the stroke of the Divine Vengeance was not long delayed.

Gaur—The Ancient metropolis of Bengal

Prof. Rakhaldas Banerji writes "in the ably conducted and nicely-got up *E. B. Ry* Supplement to the *Indian State Railways Magazine* for August.

Very few people in Bengal know that long before Murshidabad and Dacca, Gaur or Lakshmanavati was the Capital of Bengal for many centuries. Many Bengalees do not know where Gaur is and inconvenient questions have often been asked about it. Gaur is the name of an ancient city in Northern Bengal which was the Capital of Bengal for 900 years. Its original name was Gauda and was derived from Gur the Bengali word for molasses. Its name was changed to Ramabati at the end of the 12th century by king Ramapala of the Pala dynasty; to Lakshmanavati by king Lakshmanasena of the Sena dynasty, and to Jannatabad by Mughal Emperor Humayun Shamsuddin Firoz Shah, an independent Musalman King of Bengal, founded a suburb named Firozabad to the north of old Gaur, where the Capital remained from 1345 to 1446. It was retransferred to Gaur in 1446 and remained there till the destruction of the city by a great plague in 1550.

Very little can be seen of old Gaur of the Buddhist and Hindu periods. Its ruins are supposed to be buried under the vast mounds locally known as "Ballal-bari" which lie to the east of modern Maldah. The ruins of Gaur still attract hundreds of visitors on account of the splendid remains of the Musalman period.

Birth of the Congress Movement

In his interesting survey of "Rural Bengal in the Seventies" in the *Calcutta Review* for

August, Mr. Francis H. Skrine shows how the simmering discontent of educated Indians gave birth to the Congress movement."

Fifty-seven years ago, all superior appointments were reserved by Act of Parliament for British subjects who had stood highest in a competitive examination held annually in London. After being trained for a Indian career, they were called on to enter into a "Covenant" with the Secretary of State, which forbade them to engage in private trade. Very few Indians could afford the cost of the journey to England, and in 1871 only one had gained a footing in the Covenanted Civil Service. His fellow-countrymen who stood outside its jealously guarded pale could reach no higher posts than those of Deputy Magistrate or Subordinate Judge. But Indians performed the routine duties in every office with marked efficiency, and rumour had it that a humble clerk was "the power behind the throne" occupied by many a highly placed Civilian. It was only natural that educated Indians should view the European monopoly of office with displeasure. Their feelings were timidly voiced by the vernacular press, and found vent at meetings of the Dharma Sabhas, or Religious Assemblies, which took place in every large town. Thirteen years later the simmering discontent was brought to a head by the Lieutenant Governor's ill-judged attempt to limit the right of trial by jury. It gave birth to the Congress Movement, to which Indians stand indebted for every political privilege they now enjoy.

"Movable School" at Tuskegee

Prof. Dr. G. S. Krishnayya gives a description of the Movable School of Agriculture and Home Economics at Tuskegee in the August number of the *Youngmen of India Burma and Ceylon*. We read:

Speaking of the problems of his people, Booker T. Washington is recorded to have said, "We shall prosper in proportion as we learn to dignify and glorify labour, and put brains and skill into the common occupations of life." Entirely in keeping with this ideal is the Extension work of the great Institute which he created, to reach Negro farmers and their families and to influence them to adopt better farm practices to help them to increase their earning capacity, and to improve their living conditions, to interest Negro boys and girls in farm activities, and to train them in the use of improved methods in farming and home-making. It is undoubtedly one of the best means discovered recently for proving to the people generally that they can improve their own conditions.

A most practical phase of that practical activity, Agricultural Extension Service, and yet one with a certain amount of native dramatic flair, which, without doubt adds to its effectiveness is the "Movable School" whose history goes back some twenty-five or thirty years when "Booker T. Washington was Principal.

This "Movable School" travels the entire year on a schedule, visiting all parts of the State, particularly regions which are difficult.

by rail. Arrangements in the county for its coming are made in advance by the country Negro agricultural agent who spends considerable effort and time securing the offer of a farm on which the school force may work, the assembling of supplies which will be needed in the week's work, and in arousing interest among the farmers of the community to come with their families to the demonstrations. Through posters, handbills and other means, the time and place of the meetings are thoroughly advertised.

To Motorists

A motorist who completed a journey from "Dhanbad to Hazaribag by car" writes in *the M. T. Monthly* for August:

The enthusiastic motorist in Bengal has ample scope to satiate his desires for pastures now as the Province possesses in the Grand Trunk Road and offshoots, a first class line of communication, covering the whole of India from Peshawar in the North-West to Calcutta. The trip from Dhanbad to Hazaribag, lies partly along the Grand Trunk and partly along the District Board Road, the latter branching off at Mile 216 towards Hazaribag. It is truly a delightful run to undertake as the scenery and country passed through is mostly characteristic of the province of Behar and a pleasant and welcome change from the monotonous landscape presented by the low-lying rice flats and swamps of Bengal.

Mr. Andrews and the Zulus

How Mr. C. F. Andrews conquered the heart of the South African Zulus would be evident from the following narrative published in *The Star* for August:

At one of the largest gatherings which was held in South Africa, near to the time of my departure, at the city of Durban, the branch of the Bantu Race, called the Zulus, came in greater numbers than ever at the farewell meeting which had been arranged for me by my friends of the Indian community.

I had spoken to the Indians in their own language the last message of love before leaving for India, their Motherland and mine. When the meeting was over, I was seated in a neighboring Indian house where a very old resident of Natal, who himself had very friendly relations with the Zulus, was living. He was a merchant dealing in the goods, which the Zulus used to wear, and he knew their language from old experience of their ways and customs. While I was sitting there, one of the Zulus who had been present at that meeting came to me and sat down at the same table with us and spoke to my Indian host in the Zulu language.

He turned to me and said, "They want to ask you a question." "Please tell them," I said. "I shall be glad to listen to what the Zulus have to say." Then he spoke very pointedly indeed, in the Zulu language, to my host. He turned to me and said:

"They have said to me, Mr. Andrews, that they understood from your speech, which you have just delivered, that you are ready to die for the Indians."

Then I turned to my host and said to him, "Will you ask him one question from me, because he came here to put me a question and that question has not yet been asked. Would you therefore, ask him, why he came here especially at this moment, to see me, and what he wishes me to do to help the Zulus." When my host had put this question, the leader said with a look, which was intense and almost ardent in its character, "We want to know, whether you would be prepared to die for us."

No word that I ever listened to in South Africa went home to my heart like that. I had to ask myself again and again, that night, whether it was not a call from God, and whether I ought not to give up everything in the world to follow the call.

Up till now, the answer has not come quite clearly. But ever ringing in my mind are those tremendous words uttered by that Zulu in the hour of dark sorrow and oppression "Will you not be prepared to die for us?"

Hard Lot of Cabinmen

The G. & P. Union Herald for August, comments editorially:

We have on several occasions criticised the long hours of work and the inadequacy of relieving hands; but our criticism has gone unheeded. The authorities instead of lessening the hardships are acting quite the other way. The case has been brought to our notice in which a cabinman was required to work continuously for 16 hours as no relieving hand was available. It was but natural that after working for so long a time he should have complete rest for at least 33 hours. The authorities would not allow in and the cabinman in question was required to attend after a rest for sixteen hours only. In the meantime another cabinman was posted on duty and the cabinman in question was informed to come on the following day at 10 o'clock, and was subsequently ordered for 6 P. M. In spite of all this the poor cabinman has been penalised and has been reduced R. 5 for three months for not coming to duty after 16 hours rest when called. We believe that the cabinman has not only been denied justice but on the contrary has been unjustly penalised. The hours of work for cabinmen are 8 hours a day. And it is but just that he should be relieved after he has worked for 8 hours. We hope that authorities concerned would look at the matter from a humanitarian point of view and cancel the order of reduction.

When Women Smoke

Reviewing Dr. Hofstaetter's latest book entitled "The Smoking Women" *The Oriental Watchman* comments:

God pity the children when both father and mother smoke. Fortunately, when both parents

smoke, the chances are there will be no children. If by chance children are born to such a couple they are handicapped through life because of their unfortunate heredity. Woman has in this respect been a redeeming factor in the prevalent race decadence in the past. When she begins to smoke, and smoking becomes as common among women as it is among men, there will be a landslide in race decadence.

The mother is the home-maker. The smoking mother becomes a home-breaker.

What is wrong with the Musalmans

Addressing the Muhammadans in the course of an well-written article in the Anglo-Urdu journal *Naraida*, Mr. N. A. Abilais laments:

Our general contribution towards the literary activities of the country is negligible in quantity and poor in quality; devoid of deep thought, profound study and scholarly grasp. Pick up any good Indian Magazine and you will invariably miss us there. Have you ever read in any of the hundreds of Indian newspapers that some Mr. Khan, or Mr. Beg, or Mr. Husam delivered a lecture on any literary, philosophic, economic or Scientific subject before a learned audience? And the same Khans, Begs, and Husams, I promise you, will bore you to death at a *Marashia* party with their demoralising love poems at any place any day. For other dialects of the country—some of which are richer than our poor Urdu—we have, as it were, a sort of national distaste. In our own tongue (I admit that we have 5 or 6 monthly magazines that may be passed on as fairly good) we produce a sort of literature more than half of which is worthless and degenerating.

Modern China and the Christian Movement

In *The National Christian Council Review* for August Mr. T. L. Shen discusses the position of "Christian Movement in a Revolutionary China. The writer begins by saying:

The present-day Chinese revolution is unique in the history of the world for two reasons. First, it is based on a recorded past of five thousand years with its rich content of cultural achievement and its wonderful capacity to adapt itself to new situations through assimilation and conquest. Second, it calls for magnificent changes in all spheres of life to be effected within a limited period of time as contrasted with the experiences in the West where the same amount of work has been accomplished through evolution in many centuries. So revolution in China can be pictured as an accelerated process of adaptation and change in contemporary Chinese life, which would pass with much less notice under normal conditions. In its broad realm the revolution really gives impetus to all vital forces, whether destructive or constructive towards the making of a new China. Therefore a fair observer should not be tied to isolate

its politico-military aspects from other equally important reforms, economic, educational, etc., and consider them as only manifestations of the revolution. To a very large extent revolution in China has touched vitally the problem of religion, hitherto unchallenged for centuries. It has questioned the fundamental value of religion, the purpose of religious activities, the social function of religious institutions, and other significant points.

According to the writer:

Traditionally, the Chinese have been accustomed to take for granted that one's belief is not to be interfered with unless it implies or actually brings harm to others.

The Public and the Untouchable

In answer to an interrogation "Is there a change in the status of the untouchable and the attitude of the public in regard to his place in Society?" by the editor of *The Social Service Quarterly*, Mr. V R. Sindhe, the well-known social worker says in the July number of the said journal.

Practically both parts of the above question are identical. Yes, there is some little change in the status, but the littleness of this change causes disappointment and even annoyance to a genuine advocate of these classes out of all proportion to satisfaction caused by the change itself. Nowadays much is made, both by the friends and enemies of the "untouchable", of the new political status granted by British rule in India to him in the shape of nomination to the Legislative Councils and local bodies. But those who may look deep enough into the matter will be convinced of the shallowness of this questionable favour. For these nominees are in no way representatives of either the people or their needs. The sting of untouchability is still felt in all its poignance in the mills owned by capitalists as much as in the offices controlled by the foreign bureaucrats or capitalists (all Government is only the worst form of capitalism)! If this is the situation in modern cities what can I say of the districts and the villages.

Political status is measured or ought to be measured by the power of vote secured by any class and not by any extra favours thrown at them. Moreover, such favours work at times positive harm rather than possible good as they create an unhealthy desire to run after them among some who turn out eventually bad leaders of blind crowds.

Though, as a result of the work of the Depressed Classes Mission carried on by the so-called higher classes and latterly by some enlightened leaders of the depressed classes themselves, a very large number of "untouchables" residing in cities and provincial towns are evincing an awakening as to their degraded position, the general mass of the submerged millions in the country is still born and bred up under the shades of this titanic slavery without any ray of self-conscious freedom; and even the Titans of the "touchables" in general do not still betray a pang of effective conscience so as to create a hope in us that "by elevating the depressed we are but elevating ourselves."

The Prayerful Spirit

The note of lofty idealism and spiritual fervour, so characteristic of the man, is clearly sounded in a short utterance of Gandhiji—a message to his Indian followers—which *Message of the East* for July reproduces. Says Mahatmaji :

One word that I would like to leave with you doubly afflicted people of this afflicted land, is that you will lose yourselves, in the ocean of the submerged humanity about you. Because it is submerged, the problem is simple. The way is straight, even though it is narrow, and you must treat it in the right and prayerful spirit. We have been praying here for three days. Prayer brings a peace, a strength and a consolation that nothing else can give. But it must be offered from the heart. When it is not offered from the heart, it is like the beating of a drum, or just the vocal effect of the throat sounds. When it is offered from the heart, it has the power to melt mountains of misery. Those who want are welcome to try its power.

As food is necessary for the body, prayer is necessary for the soul. A man may be able to do without food for a number of days, but believing in God, man cannot, should not live a moment without prayer. You will say that we see lots of people living without prayer. I dare say they do, but it is the existence of the brute which, for man, is worse than death. I have not the shadow of a doubt that the strife and quarrels with which our atmosphere is so full to-day, are due to the absence of the spirit of true prayer. You will demur to the statement, I know, and contend that millions of Hindus, Mussulmans and Christians do offer their prayers. It is because I had thought you would raise this objection that I used the words "true prayer." The fact is, we have been offering our prayers with the lips but hardly ever with our hearts, and it is to escape, if possible the hypocrisy of the lip prayer that we in the Ashram repeat every evening the last verses of the second chapter of the Bhagavad Gita. The conditions of the "Euable in Spirit" that is described in these verses if we contemplate them daily, is bound slowly to turn our hearts towards God. If you students would take your education on the true foundation of a pure character and pure heart there is nothing so helpful as to offer your prayers every day truly and religiously.

Finding Truth in All Creeds

The Literary Digest (June 30) thus introduces a writer on the above subject :

All truth is not confined to one sect, or even to one religion, says a modern who has been in search of it in Methodist conferences, Confucianist temples, New Thought centres, Hindu monasteries, Buddhist colleges, and High Church retreats, and found particles of truth in all, but not all of it in any of the creeds. Strangely enough, he finds surprising similarity among the great prophets of religion and dispensers of truth. It is in the organizations of the followers that differences appear and divisions are created. The conclusion of the matter to him is that God resides in man, and that we can achieve anything we like by sinking our differences and uniting our efforts for the common spiritual welfare. Writing under the initials "S. T.," this modern tells us in *The Century Magazine* that the great failing of organized religion—of every religious organization he knows anything about, in fact—is its persistent claim to exclusive possession of a final truth. "A group of men," he says, "set up a part of the truth and call it the whole. And because it is not the whole—because there was another great soul or another great law—another group rises and sets up another part. And so on—sects, denominations, divisions, and subdivisions; part against part, all loudly proclaiming unity and love to a world that they have kept in an uproar down the centuries, with their own quarrels, persecutions, and dissensions." We shall never achieve love and unity in "hot and noisy competition," he says. To the men and women of to-day "the superior, condescending, and stubbornly ignorant point of view of most religious organizations toward everybody and everything outside their own particular creed, is a point of view intellectually and spiritually impossible."

Non-recognition of this simple truth has perhaps cost some creeds the loss of their hold on many thinking and unlightened minds.

The Voice of the Inaudible

The same journal for July 7 reproduces an article in *The Spectator* on the scientific discoveries of Sir J. C. Bose regarding plant life with the following prefatory remarks :

The latest public demonstration of the sensitivity of plants, given in London by Sir Jagadis Bose Hindu plant-physiologist, are described in the *Spectator* (London) by F. Yeats-Brown under the above title. Mr Yeats-Brown does not agree with the eminent American botanist who calls the Bose experiments unscientific. He sees in them a proof of the unity of living forces throughout creation and believes that they "have intellectual and philosophical, as well as purely medical, consequences of the greatest importance."

Dr. Paul Dahlke

Dr. Paul Dahlke, the founder of the 'Buddhist House' in Berlin and an eminent writer on Buddhist subjects, passed away sometime ago, and Mr J. F. Mc Kechnie gives a brief sketch of his life in *The British Buddhist*.

Dr. Dahlke died of heart-failure at the 'Buddhist House' at Frohnau, near Berlin, on the 20th of February last. As he considered that to die is one of the least important of a man's actions, he left instructions that the fact of his death was to be withheld from publicity for as long as possible, hence the lateness of the present notice.

He had suffered from a weak heart for many years, and had previously had attacks of heart weakness which almost terminated his life so that when the final attack came it was no surprise to himself or to those about him.

He was one of the most eminent writers on Buddhist subjects in Europe, for which he was pre-eminently gifted by his keen, searching intellect, and his command of a style of great lucidity, the outcome of lucid thinking. He also had visited the East through many winters, studying Buddhism at first hand from the lips of native pundits in Ceylon and also in Burma, during two visits there. On these visits he acquired a knowledge of the language of Buddhism, Pali, and of this made good use in the issue of several volumes of Pali translation in his native language, German. The titles of the books he issued on Buddhism, during his life, were (we give their titles in English): "Buddhist Essays," "Buddhism and Science," "Buddhism as Religion and Morality," and "Buddhism: Its place in the mental life of mankind." He wrote three slighter books of Buddhist interest called respectively: "Buddhist Stories," "From the Buddha's Realm" and "The Book of Genius." He also wrote a little book of "English Sketches," the outcome of his many visits to England. In addition, his literary activity found expression in the publication of a little Buddhist magazine which he called "New Buddhism," which had a very hard struggle to exist during the war. But after the war, when he had more financial means, he issued a much better and larger magazine at irregular intervals called "The Scrap-Collection," the contents of both these magazines being entirely written by himself. They expounded his own idea of what Buddhism means to Europe and European thought, and were extremely interesting as the revelation of a profound intellect working upon the material supplied it by one of the oldest and most rational religions in the world.

As he went on thinking upon Buddhism he finally came to the decision that it was not enough to introduce it, as he had endeavoured to do, into the mere thought of Europe; he felt that some attempt ought to be made to embody it in Europe's life. Accordingly, as soon as his means permitted it, after the war he procured a plot of land on the outskirts of a Garden City about thirteen miles outside of Berlin (but included in Greater Berlin) and there built himself a house which he called the "Buddhist House," where he lived with two of his sisters as housekeepers, and in the grounds he had built a number of erections meant to serve as places to which those who wished might retire and live in solitude for the practice of thought and meditation. Here, to his House he welcomed any one who cared to come whether Buddhist or not, who were willing to observe the rules of the house, celibacy, vegetarianism, no music no news-paper reading, no frivolous talk, and as much as possible, silence. Meanwhile he earned the means of supporting the House by the diligent practice of his profession, no longer, as before the war, ever leaving it for travel in the east. Indeed, towards the end, his heart-weakness forbade his ever leaving the house or even going up or down stairs except in the most painfully slow manner. Yet he still worked on, giving addresses at the Temple in the grounds of his house, on Buddhist subjects once a month to crowded audiences; editing and writing his magazine, and giving lectures on medical and Buddhist subjects and finally in writing of a medical work in which he sought to bring medicine also within the purview of Dhamma principles.

to Animals Week

The Young East (June) supplies us with an instructive bit of information:

Thanks to the tireless efforts put forth by the Nihon Jindo Kai or Japan Humane Society, the citizens of Tokyo were given an object lesson in right treatment of animals during the last week of May. During the week which was called "Be Kind to Animals Week," every conceivable measure was taken by the members and friends of the association to show to the general public that to treat animals with more kindness was not only right but profitable. The most spectacular was a parade of 200 carthorses through some of the principal streets. It was the first of the kind to be held in this country and attracted great attention of the public to the condition of work-horses. Prizes were given to exemplary drivers who were found to have treated their horses with kindness.

Cannot our Indian S.P.C.A.S. organise something like this?

Woman and Sacrilege

The same journal for July puts forth a plea for the removal of the religious barriers which operate against woman within the Buddhist world. Writes the Journal:

It is astonishing that in this age of modern girls there are still men and many at that who still cling to the prejudice that women are unclean creatures and must therefore be rigidly excluded from grounds considered "sacred" from early times. Mr. Koya, for instance, had been closed to women for centuries until some years ago. We had thought there no longer existed any such place in Japan, but we now find that we were mistaken. According to a press report, a dispute is now going on between the priests of a monastery on Mt. Omine in Nara Prefecture and about 10,000 devotees as to whether the mountain, hitherto closed to women, should be opened to them or not. It appears that the Rev. Shinko Katsuma, head priest of the Ryusenji, one of the adjunct temples to the main temple on the mountain, has made a plan of admitting women to the main temple and has already secured the consent of the controlling board of Godai branch in Kyoto which partly controls the temples on Mt. Omine. Learning of it, the leading adherents in Osaka and elsewhere, known as Sango-gumi, who exercise powerful influence among the groups of adherents who make it their perennial practice to climb the mountain because of their devotion to Buddhism, have started agitation in opposition to the above said plan, on the ground that it is sacrilegious to allow women to visit the "sacred" precincts. We would suggest to the priests of Mt. Omine, with whom we are in thorough sympathy, to circulate among their opponents a translation of Dr. Kumura's treatise entitled "Women in Buddha's Eye," which we published in this magazine some months ago. It will disillusion those bigoted men and open their eyes to the fact that Buddha never regarded women as "unclean."

Political Ideas and Actions

Mr. Crane Brinton writing about the 'Political Ideas of the Jacobin Clubs' in *Political Science Quarterly* concludes with these observations:

Ideas do not make desires; any more than desires make ideas. The two are merged organically and not mechanically in human life. Therefore, no arguments shrouded in metaphors which make inarticulate desires the driving force in politics can hold. Steam certainly makes a steam engine go; but at present we can only say of human beings that life makes them go. This conception of life is not purely mystical, and much of it is subject to logical analysis. But when such analysis denies itself, and seeks to separate thought from any manifestation of human life, as when it declares that political ideas are results but not causes, it must assume the burden of a completely mechanist philosophy. And mechanism, with its too simple doctrine of causation, shows signs of failing even the physicist.

Rousseau's philosophy obviously was part of the lives of the men who made the French Revolution. No one can glance at contemporary records and doubt that. And that is enough. The question as to whether they would have acted differently had Rousseau never existed is at bottom an idle one, since again it assumes that political action is

mechanical, and that a force, once weighed, can be subtracted from the whole. The eighteenth century itself may be allowed to have the final word in this matter. For as to the Rousseau of the Revolution, *s'il n'existait pas, il faudrait l'inventer*.

Spencer and Syntheic Philosophy

Mr. Alexander Goldenweiser assigns in *Evolution* to Herbert Spencer the following role which he so fittingly played:

In a sense Herbert Spencer rather than Darwin should be regarded as the father of Evolution. Under the sweep of his integrating intellect, the hypothesis of evolutionary development reached a comprehensiveness and a logical rigor which no one else either before or after Spencer was able to transcend or equal.

After a brief narration of his early life writer proceeds:

Having a rather delicate constitution and being a poor reader, Spencer hardly could have achieved what he did, if not for the stimulation he derived from the counsel and criticism of such figures as John Tyndall, the physicist, John Stuart Mill, Huxley, Hooker, George Eliot, and Lewis. The direct inspiration for his evolutionary theory, Spencer derived from Von Baer's work on embryology, Charles Lyell's contributions to geology, and Malthus's "Essay on Population," which had inspired so many other notable achievements. Darwin influenced Spencer only directly as the "Principles of Biology" had appeared. Spencer at once accepted the theory of natural selection as a striking formulation of the mechanism of biological evolution, and made it his own by incorporating it in the second edition of the "Biology."

But for Spencer the world was a unity: evolution, if true in biology, had to apply to the entire cosmos. Thus we find that in his "First Principles," Spencer enunciated evolution as a universal process manifesting itself in the phenomena of inanimate matter, life, mind and society. This determined the scope of the synthetic philosophy which comprised the "principles" of Biology, Psychology, Sociology, and Ethics. Unfortunately, the two volumes which were to deal with cosmology and geology remained unwritten, so that Spencer's ideas in these two domains must be gleaned from the schematic treatment in the "First Principles."

Spencer's "Biology" contains two important principles: Individuation varies inversely with propagation, or the more an organism does for the race, the less is it able to do for itself; and 2. Acquired characters are inherited, meaning by this that physical or psychic traits acquired by an individual in the course of his life are transmissible of the offspring.

Areoplanes help Archaeology

In the *Theosophical Path* an observer in the 'archaeological field' thus finds areoplanes,

the latest triumph of modern invention to be a handmaid of archaeology, concerned with the early triumphs of ancient skill.

How strange it would have seemed a few years ago to be told that in no long time flying-machines would prove of great service in archaeological discovery! And yet this has come to pass. An aerial photograph of an important hill seven miles north of Jerusalem in Palestine was found to show a depression hardly noticeable from the ground. Excavation was started and an ancient temple with the remains of five different towns, one above the other, were found. The temple was built about 900 B. C., but the oldest town was at least five thousand years old, perhaps from the Canaanite period.

In England slight differences in color of the grass, invisible from the ground but quite clear from the air, have enabled archaeologists to distinguish traces of early agricultural systems which are found to be quite different from the later Roman and Saxon field-arrangements, and which are now being studied with great care.

U. S. Vital Statistics for 1927

According to Sir George Newman, the Chief Medical Officer of the British Island, 'an amazing transformation in the public health of England' has been effected in recent years. The U. S. Census Bureau report on the vital statistics of the States in 1927, as indicated by the following from *The New Republic* (July 11), is no less amazing:

The infant death rate has been still further reduced; whereas, ten years ago, a death rate of 100 per 1,000 live births per annum was not uncommon in the thirty-three states which comprise the registration area, the average for 1927 was only 64.3. This is an amazingly good record, even New Zealand, which leads the world in this respect, did not pass this figure until just before the Great War, and the American problem is greatly complicated by the presence of the Negro and the Mexican and other immigrants. Oregon, for example, with a large native white population, has a death rate of only 47.5 which is not far behind the New Zealand record, while Arizona, with a huge recent Mexican influx, has a rate of 125.8. The death rate for the population as a whole continues to decline though at a slow pace which suggests that it may soon become stationary; it was 11.4 in 1927. The birth rate has also declined, from 20.6 in 1926 to 20.4. This net increase of nine per annum per thousands is still one of the largest in the western world, and is likely to diminish, as it is doing in almost every European country.

The Indian Vital Statistics have a different tale to narrate, as we know.

Age Limit for Workers

Mr. James J. Davis, U. S. Secretary of Labour, protests under caption "Old Age" at fifty reprinted in *Monthly Labour Review* (June) against 'arbitrary age limit' that obtains' Mr. Davies says in effect:

The practice of setting an arbitrary age limit for employment is anti-social and unsound, according to an article by the Secretary of Labor. Some plants class a worker as old at 50 years of age, and in some the age limit is even lower than 50. In occupations requiring youthful strength there may have been some justification for this practice in former years. Now, with industry highly mechanised, skill and experience are more valuable in a worker than brute strength. On the whole, a machine operator is probably better at 60 than at 20 (p. 1)

Shop Closing Legislation in Europe

International Labour Review (July) discusses the above subject, and says on the regulation of opening and closing hours

THE REGULATION OF OPENING AND CLOSING HOURS.
To prevent confusion, a distinction must be made between three very different things: "the hours between which shops may be open"; "the length of time shops may be open", and "the hours of work of the employee". To bring out this distinction, the case of Poland may be cited where the hours between which shops may be open cover a period of 16 hours, but a shop may not stay open more than 10 hours, and employees may not work more than 8 hours.

Most laws state both the hour of opening and the hour of closing. In Great Britain, the Irish Free State, Rumania, and certain Swiss cantons, however, the legal restriction applies only to the closing hour.

In several cases it has been found necessary to insert certain special regulations in the Act itself.

In this way the hours between which shops working under normal conditions, or the large majority, may keep open have been reduced to the narrowest possible limits, except for certain classes of establishment with very special working conditions. With the same intention some laws—for instance, those of Basle Town and Czechoslovakia—allow the administrative authorities, either communal or provincial, in particular cases to authorise permanently the opening or closing of shops at other hours, better suited to the needs of the local population.

Our Day of Independence

Unity (July 2) of Chicago 'proposes to celebrate' the Fourth of July—the day of American independence—"by levelling a few questions at the American President,

be he President Coolidge, in absentia, or the prospective President Smith, Thomas or Foster." 'A quiz for the President' is this:

OUR DAY OF INDEPENDENCE

This editor-citizen propose to celebrate the day by leveling a few questions at the President be he President Coolidge, in absentia, or the prospective President Hoover, Smith, Thomas or Foster.

Do you believe in our Declaration of Independence? Do you "hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness." Also, Governments derive "their just powers from the consent of the Governed." There are other things to be mentioned—and quite important too—but these are enough to believe for one day.

You are asked to cast your eyes across the Pacific and note what America and Britain are doing in China, where people, whom the Creator made our "equal," are struggling for independence as we struggled for independence in 1776? Do you believe our Declaration to the world—made at that time? Have you not some way of communicating to the Chinese that we Americans are with them?*

Nationalism at Geneva

The Inquirer makes the following observation on this subject, which we, as our readers know perceived sometime ago:

NATIONALISM AT GENEVA

It is deeply disturbing to hear, on the authority of a correspondent of *The Manchester Guardian*, that appointments to the highest offices in the League of Nations Secretariat are being made not from among men of international outlook and reputation, as was at first the case, but from among professional diplomats in the service of the Great Powers, on whose Governments they are dependent for their future careers. Not only Italy (whom we know of) but other Powers, it is asserted, are using their countrymen as their agents, a practice which must undermine mutual confidence and co-operation within the Secretariat. We hope the Assembly will take cognisance of these criticisms.

The Power of the Pen

Writing on the above subject in *The China Journal* (July) Arthur De C. Sowerby compares the power of the pen with the power of the lungs:

We know how much value has always been set on oratory, the power to express sustained thought in eloquent language to a group of fellow beings. Wrung, while it loses a certain amount of

the moving power of oratory, yet has the advantage of enormously increasing the number of people to whom the thoughts it sets down can be conveyed.

In any case this new instrument in men's hands came to be enormously revered, and we have that reverence reflected today in the value set upon the written word by the general mass of the people. To enormous numbers of people what is printed and published is looked upon as indisputable fact. How often have we experienced this in our daily contacts with our fellow beings? "Here it is in black and white," they say in regard to some statement or fact in dispute, and that, as far as they are concerned, seems to settle the argument.

It is this, perhaps, more than anything else that gives the pen its power. Of course, in writing just as in talking, eloquence counts a great deal, but the fundamental fact that writing is something set down in a permanent form seems to give it a tremendous advantage over mere talking, and to make of the pen a weapon in the eternal conflict of man against man that is far superior to the sword. *Cedit ensis calamo.*

The Embargo on Thought

Japan sees 'red,' and is launching measures to stifle some 'thought' in middle and higher schools. This has led the *Japan Weekly Chronicle* (July 19) to enter a spirited protest against 'the embargo on thought':

Reaction has made great strides in Japan during the past couple of years. First there was a campaign against "thought" in middle and higher schools. Numerous prosecutions were made of high school boys, and their associations for the study of social questions were suppressed throughout the country. But it was definitely stated that so far as the universities were concerned, the students might study whatever they pleased. This still left some liberty of thought, and it was obvious that the way to ensure university students taking a lively interest in the undesired subjects was to put an embargo on all acquaintance with them until university days. Perhaps this effect was soon felt, for it was not long before a determined weeding out of progressive professors took place. There were some protests among the more liberal of their colleagues at this weeding out, but the protests were not sustained and afterwards died away altogether. And at the present time we find extraordinary actions being taken for the suppression of freedom of thought without any protests whatever being raised. The proceedings of reactionaries are seldom surprising; they are always true to type and are but a repetition of history; but the silence of liberal thinkers is a much more serious matter. Does it mean that there has been a general conversion and that no leading men wish any longer for thought to have free expression except within such narrow limits as the official world thinks desirable? If there had been any such 'conversion' there would be no need to drive professors from their posts whenever they showed signs of independent

* Do you know that Sunyat Sen was a disciple of Abraham Lincoln?

thinking, and there would be no need of making such drastic regulations as to the qualifications of students for entry to a university. The silence can certainly not be interpreted as an indication of the unanimous assent of all thinkers to the action recently taken, for that action would then have no motive. On the contrary, the measures taken for suppression imply that there is a great deal of thought which would be expressed if only there were any liberty of speech.

War Lies

The same journal for June 21st observes in referring to Mr. Arthur Ponsonby's book.

We laugh at bumpkins for their willingness to believe every wild tale they hear, but experiences during the war show that we have nothing to laugh at Mr. Arthur Ponsonby has collected details about all the horrors with which the papers used to regale us during that period of frightfulness (*Falsehood in Wartime*. By Arthur Ponsonby, M. P. London: Allen and Unwin, Ltd., Museum St. 2s. 6d.) Here are the Belgian babies without hands, the German corpse factory, the Lusitania medal, the Louvain Altar-piece, all the stories which sustained the angry passions through those five terrible years. Of course, the campaign of falsehood was not conducted by the British Government alone. All the Governments were equally busy in running their lie factories. In Germany the favourite atrocity story seems to have been the gouging out of the eyes of wounded soldiers. It was denied again and again but was always revived, "a whole bucketful of soldiers' eyes" being one report. One curious point about the atrocities is that when it was proved that they did not happen at the place first stated they always jumped somewhere else. Also the same stories, discredited in one country were repeated in another. The United States proved a great field for such propaganda, which was encouraged by the British Secret Service. The most gross and palpable falsehoods were accepted with astonishing credulity, and Pershing himself had to deny them when they became too outrageous. In such cases the denials were not believed, however, and probably to-day there are people who still cling to these fables which insulted our intelligence during the war years. Mr. Ponsonby has dug them all up, stories, denials and all, and preserved them in a handy form for future reference. But when the next war comes we shall not refer to them but go on believing all we hear just the same.

Christian Missions on Economic World Problem

In the two weeks from March 28, April 8 The International Missionary Council that assembled at Jerusalem "faced frankly the question of the place of missionary enterprise in the post war world" and decided to form a Bureau of Social and Economic

Research Information. In *Current History* (August), Mr. Samuel Guy Inman indicates its 'new world policy,' which shows clearly its recognition of the part played by economic problems:

The report of the Commission on Economic Conditions pointed out some of the more outstanding economic ventures undertaken by so-called "advanced countries," which send economic agents to so-called "backward peoples," who are asked to submit to those countries' economic dominance, on the one hand, while on the other hand, they are asked to receive the spiritual ministry of the missionaries. The report said in part.

Experience shows that among the most prolific causes of friction among nations has been the rivalry of competing imperialisms to secure preferential access to sources of raw materials, markets and opportunities of investment in the still undeveloped regions of the world. It is of vital importance to the future of civilization that this rivalry, ruinous alike to the nations engaged in it and to the indigenous populations, should be brought under control. Such control can be established only by the action of an international authority, which can do impartial justice to the claims of all nations. The International Missionary Council looks forward therefore, to such an extension of the activities of the League of Nations and of the International Labor Organization and other similar movements as may result in the creation of an international code defining the mutual relations between the various Powers interested in colonial expansion, and the indigenous population affected by it. It regards the economic functions of the League in relation to such matters as loans, concessions, labor and tariff policy and communication as among the most important branches of its work, and desires to see them extended as widely and as rapidly as possible.

Democracy in China - Is it a Failure?

Mr. Taw Sein Ko, C. I. E., I. S. O., Late Advisor on Chinese Affairs and Assistant Secretary to the Government of Burma, takes a survey of the situation and problems of China in *The Asiatic Review* and concludes.

Upon the evidence adduced and commented upon above, I pass my final judgment that "Democracy in China cannot yet be pronounced a failure, but that, under happier auspices, it may thrive and prosper and be conducive to the happiness and contentment of the Chinese people, so that China may take her proper and rightful place in the Comity of Nations at no distant date." In my judgment, I use advisedly the expression "under happier auspices," because China, under her present circumstances, cannot move hand or foot without the assistance and guidance of the "Big Five Powers"—namely, the United States, Great Britain, France, Italy and Japan—who, by signing the Treaty of Versailles in 1918, secured the peace and prosperity of Europe, and indirectly of the world in general. If that peace is required to be confirmed, solidified, and perpetuated, it behoves the same "Big Five" to come to the rescue of

China. Above all, the United States, which has an overflowing Exchequer, and which is noted for her Generosity, Philanthropy, and Altruism in propagating Culture and Medical Science, for alleviating human suffering, should take a prominent part in this humanitarian campaign in China.

Mr. Paul Blanchard in speculating on 'The Future of China' in *The World Tomorrow* (July) finds that the remedy for the Yellow Peril lies with the West itself. Says he:—

When China has completed the present process of unification and militarization there is only one thing which can prevent her from joining an Asiatic bloc against the West, that is a rebirth of social-democratic anti-imperialism in the United States and Europe. At present we in the West are not fit to associate on terms of confidence and goodwill with an honest Chinese government. We can win the permanent friendship of the new China only if we force our State Department to break off the present military and diplomatic alliance with Japan and Great Britain in China. In the long run that means the repudiation of the ancient policy of protecting private dollars abroad with American human beings in uniform. That policy has already ceased to pay in China. A militarized and unified China will make it doubly unprofitable.

Persia—Free At Last

So thinks the *Literary Digest* (July 21) in reproducing under the above heading the

various comments of the western writers on Persia's abolition of the old unequal advantages gained over her by foreigners.—The significance of the step for Asia is apparent.

Two Severe Limitations, so we are told, have beset Persia's sovereignty until within the past few days. The "for years nominally independent, she "had to allow foreigners within her borders to be tried by their own consular courts," and she was not mistress of her own customs tariff." Both limitations are now at an end, and an English writer, H. Wilson Harris, feels that this may be "a matter of much consequence," for "Persia is far from being a negligible country," tho "all our tendency is to underrated her importance, except, of course in the matter of oil" and in that of her veto, now withdrawn, on British air service across her territory, which lies on the route between Egypt and India.

In the London *Westminster Gazette*, Mr. Harris defends his belief in Persia's importance by explaining, "To begin with, Persia is one of the only five independent States in Asia, a continent which apart from Japan and China, Persia, Afghanistan and Siam, consists entirely of dependencies. Consequently, Persia can claim with some justice to be regarded as one of the few mouthpieces of Asia at Geneva and elsewhere."

India has also a voice at the Geneva Hall—but she only echoes 'her master's voice,' and it is often keyed to a note quite antagonistic to that which the interest of Asia (or even of India) demands.

A LABOUR VIEW OF SWARAJ IN INDIA

By ASHOKE CHATTERJEE

SOME days ago we read the following news in the daily press.

London, Aug. 19.

Reviewing Mr. Lajpat Rai's reply to "Mother India," Mr. Tom Johnston, Labour M. P. for Dundee, who recently toured India, ridicules the idea that Swaraj is the sole or sovereign cure for ignorance and poverty.

"America" he declared, "has Swaraj but the lynching of negroes continues; Britain has Swaraj but masses of the people still live in ignorance and poverty. Let not Mr. Lajpat Rai delude himself that when the Indian army is officered by the sons of zeminders and babus and a Raja or a Pandit sleeps in the Viceroy's bed ignorance and poverty will flap their wings and flee from Hindustan. That is a delusion of political infants. The remedy for Indian poverty is not Swaraj but Socialism along with the abolition of usury, private landlordism and capitalism—Englishman."

It is very strange how during recent years leaders of British Labour have developed a strong antagonism to the Indian Independence Movement. One reason for this is that many Labour leaders have not the moral courage necessary for renouncing

Labour's Share of the Imperial Loot, which is naturally and largely involved in any successful culmination to the Swaraj agitation. Another reason is that the views of the Indian Nationalists do not in all details agree with the views held by some Labour Extremists, i.e., those who advocate Communism, destruction of the Middle class or Nationalisation of all capital.

Now, if we could remove these two discordant features from the field of Indian Nationalist-British Labour *entente*, we might arrive at some sort of a clear understanding with British Labour. Unfortunately, we are not in a position to dislodge any imperialistic greed that might be lurking in the secret places of the heart of British Labour. As to Labour extremism, we regret we do not see eye to eye with its advocates. In the language of Mr. Tom Johnston of Dundee, we may say that we do not think "Socialism is the sole or sovereign cure for ignorance and poverty."

Take equal distribution of wealth, for example. By adopting this method of distribution of wealth one can assure to each member of the community an income equal to the average per capita income of the community. But this method of distributing wealth does not by some magic increase the total national wealth and where poverty is due to the smallness of the annual national income, communism is hardly a cure for poverty. In India, if we had communism each member of the Indian nation will have an income varying according to the estimate of different authorities as follows.*

| Authority | Date of estimate | Amount of annual income Rs. as. p. |
|---|------------------|---------------------------------------|
| Dadabhai Naoroji | 1870 | 20 0 0 |
| Baring-Barbour | 1882 | 27 0 0 |
| Digby | 1898-99 | 18 9 0 |
| Digby | 1900 | 17 4 0 |
| Lord Curzon | 1901 | 30 0 0 |

So that the knowledge that one's extreme poverty is shared equally by all Indians, even if a palliative of suffering, will not remove the poverty itself. Also while it will not materially lessen the suffering of most Indians who are now used to a very low standard of living, it will drag millions into dire misery due to a lowering of their standard of living. On the whole, it will create more solid misery than it will remove. Moreover, communism at this stage of our economic progress will intensively affect the accumulation of fresh capital on which the economic future of India depends to a very large extent.

If one could look at communism through the halo that it has been provided with by British and other economic-fetishists, one would perhaps have it at any cost; but looking at it, as we do, as merely a way of distributing wealth to individuals, we might be excused if we challenged its suitability and efficacy. One can consume wealth only as an individual. There can be no such thing as communal consumption of wealth in the real sense of the term. The coat that I put on covers *my back* and not a section of that (non-existent) Greater Back *The Back of the Community*. I may have come by the

coat in one way or another, through some capitalistic institution or through communism; but the vital fact remains to me, that the coat covers *my back* and does so well.

Similarly if we look at Socialism, State Capitalism, or any other economic jujitsu in the cold light of facts dissociated from all religious sentimentality, we easily realise that they are also economic methods and *not virtues* having any absolute claim on our life and loyalty. Social capital may be managed, worked, added to and guarded either by individual sanction or by social sanction. Neither the one way nor the other is immune to abuse. The officers of a State Capitalistic institution could be just as wasteful, shortsighted or stupid as any Chetti, Marwari or Jew. It is not true that under social management capital will necessarily be always properly used; accumulated and conserved, no more than it is true that company management of railways or factories is always inferior and less efficient compared to State management. So that socialism in itself is no guarantee of economic progress and prosperity, as Mr. Tom Johnston would like us to believe. There is little difference between the mental attitude of Mr. Tom Johnston of Dundee and that of the clergyman from the same locality who thought that it was the Holy Bible which alone could give India all that was good and necessary for her.

Englishmen (including Scots and other Britishers) are by nature conventional and even Pure Reason runs the risk of being conventionalised in the hand of an Englishman, specially of the middle class. We have tried to go a little deep into Mr. Tom Johnston in connection with communism and socialism. Let us now do the same with Swaraj, Zemindars, Babus, Rajas and Pundits.

One has no reason to think that Mr. Tom Johnston has not received the average school education given to every British Boy under the present capitalistic government of great Britain. For does he not show all the prejudices that the average British boy imbibes from his school books? Also his stunted logic? There is Swaraj in America, still there is lynching; therefore, the lynching must be either due to the Swaraj or be totally unrelated to it either positively or negatively! God must be on the side of British Labour or how could the Cause survive advocates with such giant intellects?

* Shah and Khambata, *Wealth and Taxable Capacity of India*, p. 68.

Does not Mr. Johnston know that lynching is slowly disappearing from America under their Swaraj, even as slavery did some decades ago? Doesn't he also know that, though lynching persisted in America inspite of Swaraj, a thousand other good things came as a result of it. For example, the coming of Swaraj in America saved that country from British exploitation, bullying and standstill-do-as-your-fathers-have-done-ism. As a result America to-day leads the world, including Great Britain, and she can boast of great achievements in practically every field of life. Mr. Tom Johnston also points out that England has Swaraj as well as poverty and ignorance. As everybody knows that under English Swaraj poverty and ignorance are fast disappearing from England, need one quote figures to show how with the growth of democracy all sorts of evils have progressively disappeared from that country? In this connection also Mr. Johnston has proved a failure as a clear thinking realist. For, just as in his mind he has made gods out of Socialism, State Capitalism etc. he thinks that we Indian nationalists have similarly made a god out of Swaraj. For his information we may say that we have done nothing of the kind. We know that Swaraj, like Communism, Socialism and Labour leadership, may not function properly and beneficially of itself and that abuse of Swaraj may yield just as much evil as abuse of State Capitalism. A Soviet Parliament could be as stupid and tyrannical as, let us say, the British Parliament. So that, if Mr. Johnston has only attempted to tell us that if we abused Swaraj we would suffer he has wasted his breath. But if he means to suggest that Swaraj properly used will yield no benefit to us, unless we instituted Communism along with it, we regret, we cannot agree with him. Swaraj is the first step, (the main spring, we might say) to every kind of progress in India. (if we wanted Communism that also involves our having Swaraj first; for our present masters are a bit too fervent in their anti-communism.) A study of progressive legislation in India and how it has been hampered in the name of non-interference will easily prove the urgency of having Swaraj. A study of India's budgets and the proportions of non-exhaustive and exhaustive expenditure will confirm one's faith in Swaraj as a "Sovereign cure" for India's backwardness.

Mr. Johnston, being a modern socialist, does not certainly believe in Special Creation, determinism and the unscientific anthropological superstitions that infest the mind of the Nordio Superiority mongers. Why does he then try to belittle the possibilities of running the Indian Army by "the sons of Zemindars and Babus"? Why does he think that a Raja or a Pandit will be less efficient (or not more efficient) than an English Peer, Scotch banker or a Jewish stock-broker? There are no biological or anthropological reasons which would justify any belief in the innate inferiority of the Zemindar, Babu, Raja or Pandit as soldier or administrator. A race which has produced some of the greatest soldiers and administrators in history cannot degenerate so far during a hundred and fifty years of British domination as to be unable ever to make history repeat itself. A conquered nation can surely rise when the impulse to rise comes from within. England herself did not go down for ever after the conquests she had undergone. Italy, Poland, Czecho-slovakia, Spain, Greece, etc., are other examples. As a matter of fact, whatever Mr. Johnston's view point may be, the British people themselves do not think the Indians such incapable soldiers and administrators after all. For, did they not generously allow many sons of Zamindars and Babus to fight for them during the war? Had the war lasted longer probably more Zamindars and Babus would have got a chance to shed their blood for the British. As to administration, we believe many Rajas and Pandits acquit themselves fairly well as rulers everyday. Would we consider the Nizam, the Gaekwar, the Maharaja of Mysore and many other Rajas as worse than some viceroys? And would we consider Pandit Madan Mohun Malviya or Pandit Motilal Nehru or Pandit Iswar Chandra Vidyasagar (now dead) as worse possibilities as viceroys compared to Mr. Tom Johnston who might be sent to rule at Simla by the next Labour Government?

Our view is that just as all Englishmen are not good soldiers and administrators, similarly all Indians be they Zemindars, Babus, Rajas or Pandits, are not bad soldiers and administrators. With proper selection we could get the best men to fight our battles and manage our state affairs. Such selection is no possible under a system in which servility is counted as the greatest qualification. It is possible only under Swaraj.

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Purnabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc. will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc., according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

RICHIEU: By Karl Federn, English Translation by B. Miall (G. Allen and Unwin), with 27 illustrations. 12s. 6d. net.

America has conquered England—we mean, not in finance alone. The American method of brass band advertising has been adopted by Messrs George Allen and Unwin, an indisputably British firm. They have most thoughtfully prodded their dull-headed reviewer by telling him (and incidentally the reader too), in the jacket of the book, that this work "is as interesting as a novel, always readable and always lucid and intelligible." A life of the man who worked the central power-station of Europe for eighteen years and remoulded the institutions of France—and of its imitators in other monarchies of the *ancien regime*, too—nearest to his heart's desire, if compressed as here into 230 clearly printed pages, must be an addition to the railway library if it is to be read at all. And we admit that the publisher's claim as to its clearness and ease of style is justified.

Karl Federn belongs to the new school of writers of historical biography without tears. He avoids the acridulated wit of Lytton Strachey and the erratic originality of Ludwig. The book is no doubt thin and the serious reader will learn more about Richelieu and his work from the *Cambridge Modern History*, Vol. IV, while the result of the special researches conducted in France during the last half century cannot be expected in a small popular volume like this. But it is quite good so far as it goes.

We draw the reader's special attention to Chapter XI (the administration). A review of Richelieu's difficulties and achievements gives student of Indian history much food for thought. He asks himself how did a minister without family connections or a strong party behind him but dependent upon the caprice of a half-witted king, and opposed by an imperious and wicked queen-mother, with jealous and turbulent nobles filling the Court and a silent powerless population at the

base of Society,—succeed in healing the internal troubles of France, crush both Huguenots and feudal barons and make French diplomacy and arms triumph over those of Spain which had so long dazzled the eyes of Europe? The answer is not only Richelieu's clear-sighted genius for perceiving what was possible with his available forces and the best method of utilising these forces, but also the public spirit of the vast middle class of France and of several of the nobles, which made them put their country's interests above everything else and do their duty, each in his own sphere, regardless of political rewards actual or prospective. If Richelieu's system, failed it was because his successors had not prescience enough to inaugurate an advance even after the foundation laid by him had consolidated. There is a time in the history of every nation when stagnation is no less a danger than any "leap in the dark" can be.

EMPIRE OF THE GREAT MUGOL—Translation from the Latin of De Laet. By Prof. J. S. Hoyland, with Introduction and Notes by Prof. S. N. Banerjee (Taraporevala) Rs. 5-8.

These two professors have been doing very useful service to students of Indian history by their English renderings of Latin writers on the Moghal empire like Father Monserate and De Laet. The latter was a Dutchman who stayed at home as a Director, of the Dutch E. I. Co and compiled a Latin descriptive account of the Moghal empire in 1631. The first part is really a gazetteer of Jahangir's India. It is "a movement of painstaking industry and a store-house of varied information." De Laet "assiduously pieces together facts dug out of a host of writings and closely reproduces them." The second part is a chronicle of the reigns of Akbar and Jahangir originally written in Dutch (by Pelsaert most probably) and translated into Latin by De Laet.

The original sources of the information contained in the two parts were Persian manuscripts but

all their proper names and in some cases the facts also, have undergone a strange transformation in being done into Dutch and from Dutch into Latin, especially as the author of the published book was ignorant of Persian. Many names have been corrupted beyond recognition and it is a heart-breaking task to read the book—valuable as it otherwise is—in spite of all the notes and corrections of Prof. Banerjee. The corrections, however, are anything but exhaustive.

We suggest that when the book goes into a second edition it should be entirely rewritten, with all the corrected proper names in modern Romanized transliteration and obvious errors of fact rectified in the body of the book, instead of in foot-notes as now.

J. SARKAR.

GLIMPSES: By T. L. Vaswani. Theosophical Publishing House, Madras, 1928.

This booklet contains some inspiring thoughts in Professor Vaswani's emotional style. One example will suffice.

"India was great in the day she was strong in the life of the Spirit.

"To-day India lies in the dust, for Her children have changed the pearls of the Rishis for the glittering tinsel of a "civilization" whose gods are greed and bhoga.

"Let this be my word to the Nation's youth: Be simple and strong as the Flame—strengthen it (the inner spirit) with *Brahmacharya*, with service of the poor and lowly, with the *Tapasya* of truth and love. Out of strength will grow Greatness, and out of Greatness, Freedom."

THE NEW CIVILISATION: Four lectures delivered at the Queen's Hall, London, in June 1927. By Annie Besant, D. L. Theosophical Publishing House, Madras, 1928.

This neatly got-up little book contains four lectures delivered in a pleasant gossip style in which the learned authoress talks of the more spacious days of universal brotherhood and the evolution of a higher humanity of which she sees signs in the new sub-race which is growing up in the "Happy Valley" of California. Incidentally, she manages to put in a word here and there for India, and she gives a definition of the science of yoga which will prove interesting. It is "the union of the human spirit with the divine Life, self-consciously attained. This is won by using the laws of the mind as we know them, just as a gardener desiring to produce fine flowers uses the laws of natural growth in the vegetable kingdom, eliminating those that are against his aim—we find it is possible to develop this intuition ahead of our race, and so to attain the knowledge of the eternal verities before that knowledge is reached by the average evolution, which only works slowly by the many workings and antagonisms in Nature; whereas evolution can work more rapidly when the antagonisms are eliminated and the powers we desire to develop are given their full scope."

POL.

THE LIGHT OF CHRIST: By John S. Hoyland, M. A. Published by the Swarthmore Press Ltd, London Pp. 64. Price 2s. 6d. (cloth) 1s. 6d (paper).

This booklet contains the Swarthmore Lectures for 1923. "The Lectureship has a two-fold purpose—first, to interpret further to the members of the Society of Friends their message and mission; and secondly, to bring before the public the spirit, the aims and the fundamental principles of the Friends" (Preface.)

The book has been written in a loving and liberal spirit. The author has found many beautiful thoughts in Plato, Plotinus and the Gita. About the Gita the author writes:—

"There is much that we may learn from the great ethical message which rings through the Gita, that duty must be done for its own sake alone, without anxiety for results and the devotional message of the Gita is unquestionably one of the great spiritual assets of mankind, a message which is for all ages and for all races. Especially, as the Christian reads it, must he be filled with shame at the thought that his own love for Christ is so poor and thin when compared with the trust and love which this Hindu saint, so many centuries ago, felt for God as he had come to know Him" (p. 31).

Our author's Christianity is non-aggressive and spiritual. The book is worth reading.

Malles Ch. Ghosh

THE CODE OF CRIMINAL PROCEDURE: By Mr. A. C. Ghose, M. A. B. L. Advocate, High Court, Calcutta. Published by Messrs. N. M. Raychowdhury & Co. 11, College Square, Calcutta. Price Rs. 3.

We have now before us a new edition of A. C. Ghose's Criminal Procedure Code. The book has been brought literally up-to-date (Feb. 1928) by incorporating in it all the recent statutory amendments which the somewhat prolific legislation of our times has effected in the Code. We congratulate the author for having taken particular care in bringing into prominence the characteristic features of individual sections and in noting the points of various decisions under each of them. Most redeeming feature of the book is that the sections have not been burdened with unnecessary load of cases which tendency is found in most of the modern books. The fact that the book has passed through two editions and a third edition has been called for is, we think, sufficient proof of its popularity and usefulness. We commend this useful publication to the legal public.

G. M. S.

BENGALI

SHEERAN-O-CUTTING SIKSHA: By Srimati Tushar-mala Devi. Published by Acharya and Sons, Model Library Dacca and Mymensingh. Price Rs 1-5, 1928.

Our authoress's treatment of the subject with the help of illustrations has been marvellous. In this book she has not only dealt with cutting of different kinds of garments but she has given instructions in a simple style, on darning and patching, herring bonning, button-holing, embroidery etc. The printing and get-up of the book leave nothing to be desired and we hope that it will command a wide circulation.

BIPLABER AHUTL By *Sr. Benoy Krishna Sen*
Tarun Sahitya Mandir, 19, Sree Gopal Mallik Lane,
Calcutta Re 1

A translation of Tolstoy's "What for" and "The Divine and the Human." These stories depict nicely the picture how the oppressive Russian Government tortured the revolutionists. Printing and get-up excellent.

BIDHAYA BIDHANA Translated by *Sr. Benoy K. Sen*
Tarun Sahitya Mandir, 19, Sree Gopal Mallik Lane, 4th Edition. Price -2-6 pies.

Translation of Mahatma Gandhi's writings on widow remarriage.

P C S

MARATHI

PRATAPGADCHEN YUDDHA By *Capt G V Modak,*
Gwalior Army, (1927.) Rs 3-8, with a volume of plans.

This work breaks new ground altogether so far as Indian history is concerned, and therefore requires careful consideration if it is to be the progenitor of a new class of books. It is true that the famous campaigns of Anglo-Indian history have been studied by competent British officers from Malleson down to the writers in the *United Service Journal of India*. But this is the first time that an Indian battle of pre-European days has been described and critically commented upon by a writer trained in European military schools and experienced in the command of a modern regiment.

No doubt the principles of war have remained the same from the days of Epaminondas—or rather Rameses II, to those of Marshal Foch but the difference arises in their application to the circumstances of each age and country. The military pedant sticks to his text-book rules blindly, but the successful general varies his action according to the weapons, the *terrain*, and more than anything else the racial character of his troops as opposed to that of the enemy. Given the same weapons, the same European civilisation, the same period of history, an immense difference is caused by the dissimilarity of national temperament between the two sides. As general Maude writes in his *Jena Campaign*: "Whereas the well-drilled troops of Frederick the Great carried position after position with not more than 13,000 men to the mile, British troops often get through with even less than 10,000. ... Napoleon could only succeed in his attacks with men crowded together at the rate of 100,000 to the mile, and then only as a consequence of his superior artillery preparation." (p 9)

So, also, the difference in the two modes of advance, the British one of thin *lines* and the French of deep *columns*, caused all the difference in the result of the Peninsular War as Oman has pointed out, and even contributed to Sir Eyre Coote's victory over Lalcy according to his biographer Wylie.

There is not a scrap of contemporary evidence to prove that any of the minute details and successive steps described in this book by Capt. Modak did actually happen. The whole is pure imagination, based on the probabilities of the case. And

the probabilities would have won the complexion of truth if Shivaji had been a military student fed on the text-books of Jomini, Clausewitz and Hamley and experienced in the movements of modern European-trained armies. Therefore, as a history or record of what *actually* happened in 1653, this book is absolutely useless.

We also deprecate the fashion of making such books—and indeed many other classes of works—intolerably long by the addition of irrelevant matters and emotional outpourings.

J. Sarkar

AITIHASIK PRASTAWANA By the *Late V. K. Rajawade.* Publisher—*The Chitrasala Press, Poona*
Pages 500 Price Rs Three

The name of the late V. K. Rajawade is a household word in Maharashtra as an untiring and zealous research-worker, who has left behind a vast treasure in the form of very valuable writings on various subjects such as Maratha history, Marathi literature, sociology. It would be a great loss to Maharashtra if they were allowed to go into oblivion. The Chitrasala Press has therefore earned hearty thanks of Maharashtra by undertaking their publication in three or four volumes of which the present is the first.

Rajawade resembled Dr Johnson not only in strong and penetrating intellect, wonderful capacity for work and robust independence of thought, but also in his eccentricities and several other traits of character, and these are visible in his writings. His so-called *Praस्तावना*s or introductions of which the book under review is a collection had no relation to the subject of the volumes to which they were originally attached (excepting the one on the battle of Panipat) and his assertions in some cases were wide of truth or at any rate were of a questionable or fantastic character. Yet his writings are scholarly and deserve preservation from the rapacities of Time, for who knows future researches may perhaps bear him out.

HINDI

1. **MOTHER INDIA AUR USKA JAWAN.** By *Srimati Uma Nehru*—Published by *Kashinath Bapat, T. Ranga Street—Allahabad, pp 186+185+90—Price Rs. 3-8.*

2. **MOTHER INDIA KA JAWAN.** By *Srimati Chandrakanti Lakhanpuri M. A*—Published by *Prof. Sahasrabrata Siddhantankar Gurnukul Kangri—pp 144. Price 0-12.*

No book on India has done more and deserved less to create a sensation than Miss Mayo's *Mother India*. From all quarters of India indignant protests have been still pouring in with such frequency that one is inclined to think that this agitation against Miss Mayo is doing more harm than good, a book that should have been promptly relegated to the dustbin is being unnecessarily advertised and our enemies are slyly suggesting that the lady is protesting too much.

As a full reply to *Mother India* can only come from a committee of publicists hailing from all parts

of India the members of the Legislative Assembly if they are so inclined, may think the matter out.

Mrs. Nehru has done right in not attempting to deal with Miss Mayo by contradicting her lies. In that direction she has done hardly anything beyond giving in the appendix translations of the articles contributed to the Indian Press by Mahatma Gandhi, Lala Lajpat Rai, Natarajan, Rabindra Nath Tagore and others. She has really approached the question from another angle of vision. She goes to the root of the matter and rightly concludes that the reasons of the present unfortunate state of India are, not social but political. In her long introduction she traces the relentless, systematic and cold-blooded manner in which England has been emasculating India and depriving her of all that she held most dear. It is an irony of fate that this very England is now talking of our incapability to manage our own affairs. Mrs. Nehru has not stopped at that. She has carried the war into the enemy's camp and exposed the hideous reality underneath the glamour of the European civilization. The basic idea of this civilization is survival of the fittest. According to western interpretation it means cynical disregard for the feelings of the weak an intense aggrandisement of the self, a suppression of all the nobler emotions of the heart and a blind worship of Mammon. Europe is now riding roughshod over all moral rules and declaring in brazen tones that the whole world exists for the gratification of her insatiable sordid passions and all nations must sacrifice themselves for this noble purpose. Therein lies their salvation. Our country has so often been compared to Europe to its disadvantage that this warning is very welcome.

One thing which is remarkable about Mrs. Nehru's book is her restraint. One should have expected an Indian lady to give way to her feelings while writing about Miss Mayo's work. But she has not done so; she speaks with genuine feeling no doubt but she never has recourse to retaliatory arguments.

Srimati Chandravati's book is fundamentally different in tone and temper. She is an Aryya Samajist and so does not believe in taking things lying down. Like all writers of this class of reformers she too wields a forceful pen. Her language is vigorous and her blows very direct. She does not spare her countrymen either, in the course of her arguments, puts certain very inconvenient questions to the orthodox leaders of Hindu society. She gives the lie direct to Miss Mayo's assertion that there is no reforming zeal in India. In her appendix she draws a lurid picture of America in order to show that there is an ample field for Miss Mayo's activities in America where over 1200 young people between the ages of 15 and 24 take their lives in one year, where with the present state of statistics every marriage will end in divorce in eleven years; where 80 percent of all crimes are committed by children under eighteen, and where 42 percent of unmarried mothers are school girls, under sixteen.

India, where even Miss Mayo could not find any trace of oppression against unmarried girls, and where 60 percent of the girls are not even married at the age of 16 has nothing to learn about immorality from white people in general. The last chapter of the book for conditions prevailing

in Europe and America) and from Miss Mayo in particular. We are thankful however that Srimati Chandravati with true Indian modesty has left Miss Mayo's past life severely alone.

G.

GUJARATI

We have received two parcels of books from the Commissioner of Education and Vidyadhatkari, Baroda State, containing the following books:

- (1) *THE WILES OF THE SPIDER*: By Bhanusukharam N. Mehta, containing a delightful and scientific description of spider's life and ways.
- (2) *JIVAN RASAYANA VIDYA*: By Jagannath P. Pandit, a treatise showing how to preserve health.
- (3) *MARS*: By S. R. Gharekhram, B.A., LL.B. comprising all up-to-date information about the planet Mars.
- (4) *THE PRIMITIVE HOME OF THE ARYANS*: By the same author discussing the various theories about the place we originally came from.
- (5) *SUN*: By Bulwantrai H. Vira, B.Sc., a translation, rather difficult for ordinary readers to follow.
- (6) *THE LIVING ORGANISMS OF A LAKE*: By Bhanusukharam N. Mehta, also a translation giving interesting details of the insects and other minute organisms found in lake-waters.
- (7) *STHANIK SWARAJYA KI SANSTHA*: By Rajji R. Parar, B.A., LL.B., an original work on Local Self-Government.
- (8) *THE LIVER*: By Ghanashyam N. Mehta, a small book on the construction and functions of the liver.
- (9) *ENGLAND AND INDIA*: By the late Satyendra B. Divedia, a translation of R. C. Dutt's well-known work of the same name.
- (10) *THE EDUCATION OF THE LONDONER*: By Narhari-sankar S. Shastri, B.A., a translation of "Londoner's Education", showing the vast extent of expenditure incurred in educating Londoners and the success of the methods employed therefore.
- (11) *JIVAN PRABHAT OF ITALY*: By Lalitprasad Shriprasad Dave, B.A., LL.B., B.Sc., an independent work showing how Italy rose in the scale of nations.
- (12) *THE HISTORY OF THE BARODA STATE*: By Chunilal Maganlal Deshai, a complete work of the annals of the Baroda State.
- (13) *NAPOLEON BONAPARTE, PART IV*: By Gokuldas Mathuradas Shah, B.A., LL.B., constituting the last volume in the series, finished after 15 years' labor.
- (14) *SIDDHANTA DARSHAN*: By Chhotatalal Narsharam Bhatt, a translation of a Sanskrit work, very important philosophical treatise.

The list shows how varied and useful the activities of H. H. the Gackwar's Educational Department are.

DADED: By Gopalankar Y. Bhachech. Printed at the Jnan Mandir Press, Ahmedabad. Cloth bound pp. 136. Price Re. 1-4-0 (1927).

Rabindranath Tagore
1 Baisakh 1335

SJ. RABINDRANATH TAGORE
(Photo taken on April 11, 1925)

An autobiography of the author who rose from a mere clerkship to a Deputy Collectorship and later to the Divanship of Jamnagar, teaching a lesson of staunch faith in oneself, and determination to overcome difficulties. It contains poems on metaphysical subjects also.

SUREA SANGRAHA. PART II: Published by the Society for Encouragement of Cheap Literature, Ahmedabad and printed at its own press. Cloth bound, pp. 686. Price Rs. 2 8 0 (1927).

A bulky volume containing 260 articles on various useful subjects; from the life of Prof. Jadunath Sarkar to Atma Jnan (self-knowledge). These articles are collected from various newspapers and periodicals and show the very wide range of reading of the selector.

DARSHAN: A tiny little booklet of ten pages, by Chandravati C. Mehta, B.A., containing feeling verses on bereavement.

K. M. J.

RAM MOHUN ROY

By RABINDRANATH TAGORE

WHEN the Great Ones of the world come, they bring conflict with them; or their coming had no significance. The multitude which drifts down with the stream places its trust in the ebbing current of humanity. But, for him who would work the boat of life up the stream, there is unending toil. When Ram Mohun Roy came to this country he refused to go along with the moving mass of turbidity which was ever flowing out downstream and which fought him as an enemy every minute up to the very last. The height of the Himalayas is measured only from the different level of the plains all round; it is the hostility of the unenlightened that measures the magnitude of the Great.

In the history of a nation, Man marches onwards, ever amending, ever conquering himself with his own innate, conscious principle, only so long as the vital nature is all-powerful. This is, in fact, the very process of life—this never-ending fight. As we walk, our every step is a challenge to the constant pull of the earth; inertia besets us on all sides, and each of the organs of the body is ever engaged in fighting it. The heart goes on, night and day, in sleep as in waking; the enormous passivity of things stands up against that unrelenting exertion; it is building up, every minute, barricades of fatigue, to be fought down by the heart as long as it has the strength.

The air flows all around us in its blind laws; but the Vital Nature forcibly drags this air along into its own system of

channels. The germs of disease, and conditions favourable to their growth, are everywhere, both within and without us; the army of health is all the time engaged in an unceasing combat against them. The life-process is, in fact, this never-ending struggle, this continual warfare between the inert and the living forces, between the battalion of ill-health and the battalion of health. If this relentless struggle weakens, if the forces of rigidity, as against the forces of movement, gain the upperhand in the corporal economy, then the human body begins growing more and more clogged with the accumulating filth of wastage. At last Death, in its mercy, comes down to remove this battle-weary defeat from the world of the living.

The social body, too, is a living organism; and all its evils find their opportunity when its own energy grows sluggish. Its life force, too, trained in fighting, has ever to keep up hostilities against dull intellect, feeble will, against narrow knowledge and poverty in sympathy and loving-kindness. The most powerful of its enemies is apathy of the mind. When the mind weakly surrenders its rightful dominion and wishes to remain immobile, the garbage of slovenliness accumulates and imprisons it. It is through this besetting that Death gradually advances in the field of life. The Great Person who appears at this period, brings along with him a powerful antagonism against the drag of this dead grossness. The feeble spirit, enchained by indiscriminate customs, cry out in anger and pain

Rabindranath Tagore
1 Baisakh 1335

SJ. RABINDRANATH TAGORE

(Photo taken on April 14, 1925)

Though at that period, men had been able to find a place in the knowledge of every civilized man, they had not found the way to his heart. Even to this day, the realization of human unity is hampered, in this world, by so many prejudices born of blind instinct or bred by deliberate training. It is not possible to assert even to-day that a New Age has arrived—an age of solidarity on every side. In our age that wide highway must be opened which would bring together all the human resources in knowledge and in co-operation. A beginning has already been made in the domain of science where caste-distinctions in different departments of knowledge are being removed. Co-ordinated action, too, is gradually gaining in world-commerce—even though trafficking in trickery is still rife round the corners of that winding highway. It is also impossible to deny that a beginning has been made even in the realm of world-politics, though the way is beset with myriads of thorny obstructions. Ram Mohun Roy is the first and foremost of those brave spirits who have stood up, in the face of hostility and misunderstanding, and who in all their varied activities have eloquently welcomed the Spirit of this New Age. He was the herald of India, the very first to bear her offerings to the outside world, and accept for himself and his country the best that the world could offer. He had envisaged in its entirety the truth of man and therefore his service to his country became complexly many-sided, which never narrowed its path of welfare by following the line of least resistance and of immediate expediency.

Ram Mohun had to hew out the way in strenuous struggle, across the unexplored region of Bengali prose, when he was engaged in developing the potentialities of his own language for the self-expression of the people of Bengal. When eager to illuminate the Bengali mind with the philosophy of the spirit, he did not shrink from the difficult endeavour of expounding Vedanta in the yet-unformed Bengali prose to a reading public, some of whose learned men had ventured to scoff at the Upanishads as spurious and considered the Mahanirvana Tantra to be a scripture fabricated by Ram Mohun Roy himself.

Even in the West woman was really powerless and had her rights restricted on all sides, when Ram Mohun Roy stood up, alone, to support the rights of women in his own society.

There was not even a glimmering of political consciousness in the country when he had demanded respect for his countrymen in the world of politics.

He had faith with all his strength of conviction in the varied elements of human nature. It was not possible for him to have a dwarf's vision of man in any way, for, in him manhood had an extraordinary fullness of manifestation.

More than one hundred years have now gone by, but the true recognition of his greatness still remains incomplete even to-day it is not an impossibility for his countrymen to do him irreverence; that generous vision to which alone would his magnitude be clearly visible is still enshrouded in mist. But the mist has nothing for which it need be proud, even if it envelops the luminary and rob the morning of its majesty. The sun is the more indelible and the more magnificent. Greatness goes on doing its own work even in the midst of rude obstructions and is not obscured even when light is withdrawn from it.

The force that Ram Mohun had set into motion is still operative to-day; and a day will yet come when the country will attain a transluence of mind freed from dense superstitions and will climb up to an altitude of unobstructed perspective which are essential for realizing Ram Mohun's place in our history and his strong unthwarted magnanimity. Those of us, who have received from him the inspiration to accept man in the completeness of his truth even against profuse contradictions, may feel deeply hurt at each insult levelled at him, but when he was alive the hundreds of insults that were his share could not in any way weaken his beneficent power, and it is this unperturbed power which even after his death will continue, in the face of all contempt and contumely, to sow seeds of fulfilment in the very heart of ingratitude itself.

against the pressure of his onward urge. The history of India had been standing stagnant for a long time, giving up in weariness of spirit all independent seeking of truth, all adventures of life, and initiation of intelligent operations for its internal and external cleansing; venerating its own deterioration, it had ceased from attempting any readjustment with the changing ages. One by one, almost all the lights of its life had become dimmed through poverty of food, poverty of health and poverty of knowledge. Its defeat had been extending from century to century. Man's defeat comes when his own will abdicates and some external will occupies the vacant throne, when his personal intelligence retires and he clings as a parasite to some foreign intelligence, be it borrowed from his own dead past or imposed upon him from the present of some stranger nation. That is man's defeat when the activities of the spirit are arrested and when he blindly goes on turning the wheels of the machine of habit, fashioned through the succession of the centuries—when he ignores reason and accepts authority, when he lowers the dignity of his innate informing principles and exalts external observances. For him, wearied with the load of decrepitude, there is no escape, through any narrow short-cuts devised by any over-subtle artifice.

Ram Mohun Roy appeared in India at this very period, when the country, in its blindness extending over many centuries, had come to regard vegetation as holiness. Such an overpowering and sudden contrast to one's own country and age is very seldom found in history. and they in a shrill loud voice repudiated him. But it was by that impatient execration that his country proclaimed to all the ages his supreme greatness, and vehemently announced that he had brought the conflict of light against the darkness of the land. He did not follow the futile path of dull intellect by repeating well-worn feeble formulas; he refused the humiliation of being the far-famed leader of the flattered multitude using its stupidity as the foundation for his power; he was never frightened by the unintelligent antagonism of the threatening mob with its upraised stick; through temptation of the ignorant reverence of the crowd, even the slightest deviation from the path of truth was for him an impossibility. He had struck at the demon of unreason,

enshrined through the ages in the altar, and that demon did not forgive him.

He knew that insult to the living spirit brings about a bankruptcy of initiative. For the animal, there is no Swaraj, for it is merely driven by its blind instincts. Man's Swaraj only extends as far as his own intelligent self, the master within him, occupies his social consciousness and inspires his creative activities. The history of man's progress is the history of this extension of Swaraj through the dominance of his self-thinking, self-confidence and self-respect.

The victory of the *atman*, of the higher self of man, has never been proclaimed from the heights of manhood anywhere except in India, with such an unhesitant voice. It was this message that Ram Mohun Roy brought anew, when in the India of his days it had become narrow and perverted, disclaimed in practice. For ages the major part of India was sunk in self-abasement through an unashamed acknowledgment of inferior rights for its multitude in religion and in social affairs, rendering the people unfit for the difficult responsibility of its self-expression. Not only did the mind of India of his times passively discard the claims of this highest right of humanity, but it actively denounced and wounded it.

The strange thing is that Ram Mohun was eager to invoke the message of the spirit not merely within the narrow boundaries of his own self-forgotten land; he assayed, by the test of the spiritual ideal, every great religious community which had in any manner obscured the true form of its own inner self in mere external forms and in irrational rituals.

Only a very few people in the whole world could, in that age, realize through the mind and spirit and express in their lives the Unity of Man as Ram Mohun had done. He realised that it was only when man regarded the external boundaries of his religion as more valuable than its infinite inner significance that man was jealously kept apart from man.

The worldliness of sectarian piety called up pride, hatred and strife, and muddled the whole world with blood, to a degree impossible for any secular cause. In that age of religious exclusiveness he had gained in his heart and expressed in his life the Universal background of Religious Truth.

Though at that period, men had been able to find a place in the knowledge of every civilized man, they had not found the way to his heart. Even to this day, the realization of human unity is hampered, in this world, by so many prejudices born of blind instinct or bred by deliberate training. It is not possible to assert even to-day that a New Age has arrived—an age of solidarity on every side. In our age that wide highway must be opened which would bring together all the human resources in knowledge and in co-operation. A beginning has already been made in the domain of science where caste-distinctions in different departments of knowledge are being removed. Co-ordinated action, too, is gradually gaining in world-commerce—even though trafficking in trickery is still rife round the corners of that winding highway. It is also impossible to deny that a beginning has been made even in the realm of world-politics, though the way is beset with myriads of thorny obstructions. Ram Mohun Roy is the first and foremost of those brave spirits who have stood up, in the face of hostility and misunderstanding, and who in all their varied activities have eloquently welcomed the Spirit of this New Age. He was the herald of India, the very first to bear her offerings to the outside world, and accept for himself and his country the best that the world could offer. He had envisaged in its entirety the truth of man and therefore his service to his country became complexly many-sided, which never narrowed its path of welfare by following the line of least resistance and of immediate expediency.

Ram Mohun had to hew out the way in strenuous struggle, across the unexplored region of Bengali prose, when he was engaged in developing the potentialities of his own language for the self-expression of the people of Bengal. When eager to illuminate the Bengali mind with the philosophy of the spirit, he did not shrink from the difficult endeavour of expounding Vedanta in the yet-unformed Bengali prose to a reading public, some of whose learned men had ventured to scoff at the Upanishads as spurious and considered the Mahanirvana Tantra to be a scripture fabricated by Ram Mohun Roy himself.

Even in the West woman was really powerless and had her rights restricted on all sides, when Ram Mohun Roy stood up, alone, to support the rights of woman in his own society.

There was not even a glimmering of political consciousness in the country when he had demanded respect for his countrymen in the world of politics.

He had faith with all his strength of conviction in the varied elements of human nature. It was not possible for him to have a dwarf's vision of man in any way, for, in him manhood had an extraordinary fullness of manifestation.

More than one hundred years have now gone by, but the true recognition of his greatness still remains incomplete. Even to-day it is not an impossibility for his countrymen to do him irreverence, that generous vision to which alone would his magnitude be clearly visible is still enshrouded in mist. But the mist has nothing for which it need be proud, even if it envelope the luminary and rob the morning of its majesty. The sun is the more indelible and the more magnificent. Greatness goes on doing its own work even in the midst of rude obstructions and is not obscured even when light is withdrawn from it.

The force that Ram Mohun had set into motion is still operative to-day; and a day will yet come when the country will attain a translucence of mind freed from dense superstitions and will climb up to an altitude of unobstructed perspective which are essential for realizing Ram Mohun's place in our history and his strong unthwarted magnanimity. Those of us, who have received from him the inspiration to accept man in the completeness of his truth even against profuse contradictions, may feel deeply hurt at each insult levelled at him, but when he was alive the hundreds of insults that were his share could not in any way weaken his beneficent power, and it is this unperturbed power which even after his death will continue, in the face of all contempt and contumely, to sow seeds of fulfillment in the very heart of ingratitude itself.

The Bardoli Satyagraha struggle is over and Bombay government have at last conceded most of the demands put forward by the tenants. In this connection mention must be made of the signal

their hour of trial. Their action proved a tower of strength to the workers, and no small credit is due to them for the successful termination of this peaceful struggle

CLIFF DWELLERS, NEW MEXICO

By KATHRYN WHITE RYAN

Climbers of cliffs are an enchanted race,
They trust, they trespass, and they leave no trace.
They give back to the earth each thing they took.
They give all back, manos and shepherd's crook.

Ladders that knew the unretreated reaching hand
And ladders are together under sand.

Arrow and bowl and blanket on the loom
Have disappeared from every hollowed room.

Time smooths the cliffs in secrecy of how
Such trust in them earth chose to disavow.
These tiered, sun-baked incisions on a ledge
Give silent proof earth makes no one a pledge.

By BENARSIDAS CHATURVEDI

Indian Settlement In Tanganyika

Mr V. R. Boal writes from Dar-es-Salaam, Tanganyika :—

Very few in India know about Tanganyika, one of the East African Territories administered under a mandate by His Britannic Majesty. This is apparently due to Tanganyika Indians being always under the impression that because India is a member of the League of Nations their position is secure and will for ever remain unaltered. But things are now entirely changed. The European propaganda, encouraged and supported by some hidden forces behind it, is being carried on with a view to bringing about the federation and this indicates that there is a fly in the ointment and that it is necessary for Indians to carry on a very strong propaganda for the purpose of safeguarding and strengthening Indian Settlement.

The number of Indian settlers (by settlers I mean producers and not merchants and traders) is very small. Messrs. Karimji Jiwani and Naaji Kalidas are the only two names, Indians can point to with some degree of pride. But what are they when compared with the ever increasing number of Britishers and Germans penetrating into the Territory with a view to exploit it to its fullest extent? We want Indian capitalists to settle in Tanganyika, which has a very brilliant future before it, and the descriptions of which I briefly give below.

The area is about 373,500 square miles, which includes about 2,000 square miles of water. Along the coast lies a plain, varying in width from ten to forty miles, behind which the country rises gradually to a plateau constituting the greater part of the hinterland. This plateau falls sharply from a general level of 4,000 feet to the level of the lakes (Tanganyika, 2,500 feet, Nyassa, 1,607 feet) which mark the great valley extending northwards to lake Naivasha. The highest points in the Territory are in the north-east, where are the extinct volcanoes, Kilimanjaro, which rises to 19,720 feet, and is snow-capped and Mount Meru (14,960 feet). In the South-West are the Livingstone Mountains, where the highest peak is over 9,000 feet. The climate of the territory varies greatly according to the level of the several districts. Roughly, four climate zones can be distinguished, namely (i) the warm and rather damp coast region with its

adjoining hinterland (ii) the hot and moderately dry zone between the coast and the central plateau (300 ft—2,000 ft) (iii) the hot and dry zone of the central plateau between 2,000 feet and 4,000 feet in height and (iv) the semi-temperate regions around the slopes of Kilimanjaro and Meru of the Usambara highlands, the Ufipa plateau and the mountainous areas of the South-western area (5,000 ft—10,000 ft). There are two well-defined rainy seasons annually. Generally speaking, the rains begin in February or March and last for two or three months, while a short rainy season extends from October to November but the rainfall is low for a tropical country, and droughts are not infrequent. The seat of Government is Dar-es-Salaam, a modern town founded in 1862 by the then reigning Sultan of Zanzibar and subsequently occupied by the Germans in 1887. The second town in importance is Tanga, 136 miles north of Dar-es-Salaam and 80 miles from Mombasa. According to the census of 1921 the population of the territory was, Europeans 2,447, British Indians 9,111, Goan and Portuguese Indians 798, Arabs 4041, Baluchis 352 and Natives 4,107,000. Since 1921 there has been considerable increase in the European and Indian population. The principal domestic exports consist in Sisal, Groundnuts, Coffee, Cotton, Copra, Hides and Skins, Grain, Gummi, Beeswax, and Cmilies. Diamond, Gold, Tin, Coal and Mica. Mines are being worked progressively and great care is taken by the Government to see that the Mining Industry is fully developed. The territory is at present served by two railways and construction of other railways is under contemplation. The administration is carried on by a Governor assisted by a Legislative council consisting of the Governor and 13 official members and 10 unofficial members nominated by the Governor, of whom two are Indians. Towards the end of this year the proposed Indian Central School with provision for education up to the matriculation will be established in the capital of the territory and the Government propose assisting other Indian schools in the interior by grants-in-aid.

Such is the country to which Indian capitalists are invited to settle. In cities like Bombay, Calcutta and Karachi there are numerous wealthy Merchants, Bankers and Millowners. Is it not possible for a few of them to form companies and take advantage of the opportunities offered them as is being done by peoples in England, America

and Germany? Surely, they are not invited to throw their money away: their capital would bring them large returns and besides that, they would be most helpful in perpetuating the existence of the Indian community which is in danger of being rooted out any moment.

We draw the attention of Sir Lallubhai Samaldas Mehta, Shriyut Ambalal Sarabhai, Sir Purushottamdas Thakurdas and other capitalists to this letter of Mr. Boal and hope that they will give it serious consideration. It is a great opportunity and may never come to us again.

Mr. U. K. Oza in East Africa

Level-headed workers who are of strong convictions, yet ready to see the opponents' point of view, who can be firm yet moderate

Mr. U. K. Oza.

to East Africa though his heart was always in the cause of our people overseas and as editor of the Voice of India he was ever ready to do what he could for our cause. After a year's useful work in Tanganyika as editor of the Tanganyika Opinion Mr. Oza moved to Nairobi, the capital of Kenya and has been carrying on his activities there for the last one year. Mr. Oza worked as a special organising officer of the East African Indian National Congress for two or three months and was then appointed its General Secretary. The success of the last meeting of the Indian Congress at Nairobi was to a great extent due to the untiring efforts of Mr. Oza. He had also to work hard for the reopening of the question of Common Roll, which has strengthened the Indian case and has become a live issue again. It must be admitted here that Kunwar Maharaj Singh and Mr R. B. Ewbank, the representatives of the Government of India, performed their duty admirably in this matter as well as in persuading the Indian community to show a united front to the Hilton Young Commission. The complete boycott of the elections on a communal basis by the Indian community in Kenya was a step that produced a great impression on the European community in the Colony. Indeed, we in India thought that such a strong attitude could not possibly be taken on account of the loss of morale by the Indian community after the death of that sturdy fighter, Mr. M. A. Desai, the great Indian leader of East Africa. The credit for this work must go to other Indian leaders as well as to Mr. Oza and if we have singled out the latter in this note it is not because we minimise the work of people like Messrs Phadke and Achariar, Malik and Verma, Pandya and Jeswanjee, but because we feel that Mr Oza has been doing his work at considerable self-sacrifice resisting the temptation to return home where things are getting more lively and where a journalist of his qualifications can easily get a prominent position in the press. Mr. Oza, I understand, has been busy carrying on conversations with some reasonable Europeans about the Indian question in Kenya. I have no right to give any piece of advice from this end, for our people in East Africa are the best judges of the situation; but I should, as a worker in their cause, request Mr. Oza and his friends not to hurry up things. They should move very cautiously and should take the Indian

in their writing and speeches and who take a long view of things are as rare in Greater India as in India itself. Our people in East Africa should be congratulated on having such a worker among them and he is none else than Mr. U. K. Oza of Bhavnagar. It was by a mere accident that Mr. Oza went

masses in Kenya with them. Any wrong step at this stage will not only ruin the cause of our Indian population in East Africa but will also do an irreparable harm to Greater India of the future.

Honourable Mr. Husein Hasanally Abdool Cader Bar-at-Law. M. L. C

We must heartily congratulate H. E. Sir Hugh Clifford, the Governor of Federated Malaya States for the admirable statesmanship that he has shown in appointing Mr. Abdool Cader Bar-at-Law as the successor of the late lamented Mr. Nambiar of Penang in the council of the Straits Settlement. The whole future of our countrymen in the colonies depends on cordial relations subsisting between the different Indian communities more than on anything else and if Communism once sets in, it is bound to wreck the whole thing within a decade. The appointment of Mr. Abdool Cader will give a great relief to those who, like ourselves, were much upset on account of that deplorable speech of the Governor which put the Indian population on the wrong track of communalism. We also congratulate Mr. Abdool Cader who, to use the words of the Tamil Nesan, is an Indian first, Indian next and Indian last. Here is a short sketch of our compatriot :—

Mr. Husein Hasanally Abdool Cader, Bar-at-Law (Lincoln's Inn London) Advocate and Solicitor S. C. and F. M. S. was born in Surat, Bombay Presidency in 1890 and is the eldest son of Mr. H. A. Cader J. P. a well-known merchant of Penang. After being educated in Surat and afterwards at Raffles School, Singapore and the Free School, Penang Mr. Abdool Cader proceeded to England in May 1905 and joined the County High School, Ilford. He matriculated there in 1908 and later he joined Lincoln's Inn and Christ's College, Cambridge University and took up Law Tripos. He was called to the bar in 1912 and had the honour of being presented to His Majesty King George V on March 11th 1912.

He returned to Penang in April 1912 and was admitted to the Straits Settlements Bar in November of the same year and to the F. M. S. Bar in 1913. Since then he is practising in Penang. He is the President of the United Indian Association, Penang and he is a representative of the Indian community on the Municipal commission, Penang since January 1925. He holds certificate for French from the Royal Society of Arts, London. He has travelled extensively on the continent and in India. He is connected with several recreation clubs as the Christ's College Club, Cambridge, National Indian Association, London etc. His principal recreations are association foot-ball,

tennis and rowing. His office is at George Chambers, 29, Beach Street, Penang, S. S.

Appointed Member of the Legislative Council of the Straits Settlements 23rd July, 1923.

With two such sturdy nationalists as Honourable Mr. Veerasamy in the Federal Council and Honourable Mr. Abdool Cader in the Straits Council our countrymen in Malaya are assured of amiable relations between the Hindus and Mohammedans in that colony. We are fighting against the demon of Communism at home and we know what mischief it can do if it raises its head in the colonies also.

The Agent of the Government of India in Malaya

An esteemed correspondent writes :—

Rao Shaib Subbaya Naidu, the present agent to the Government of India in British Malaya has been trying hard to bring about the Standard wage

Rao Shaib Subbaya Naidu.

system for the Indian labourers in rubber estates in the F. M. S. In fact, the Indian labourer has worked not a little for the steady advancement and prosperity of Malaya and there can be no

justification for the planters to get aside the claim of the Indian labourer for a minimum wage. This question has been fought very well by the Rao Sahib soon after his coming to the office and as a result of his labours the Standard wage system is to come into force very shortly. Besides this Mr. Naidu has started co-operative societies among the labourers which are working smoothly and to him goes the credit of bringing important changes in the Malayan Labour code.

Mr. Subbaya Naidu is a graduate of the Madras University and has to his credit a long service in the Madras Provincial Government Service. He became the Agent to the Government of India in the F. M. S. after relinquishing his office of Acting Assistant Secretary to the Local Self-Government Department of the Madras Secretariat.

We wish Mr. Naidu every success in his admirable efforts for our people in Malaya.

Mr. Sastri in South Africa

The following estimate of the Right Honourable Mr. Srinivas Sastri's work in South Africa by the Natal Mercury will be read with great interest by our countrymen in India:—

So admirably has Mr. Sastri, the Agent of the Government of India in the country, identified himself with the public life of the Union, so completely has he won the respect of all classes of the community, that it is difficult to realise that he arrived here over a year ago and that before very long we shall have to contemplate the end of a term of office already extended by six months. But we sincerely trust that not for some considerable time shall we find ourselves deprived of those services which Mr. Sastri has so signally rendered to this country to his own and to the Empire as a whole.

Mr. Sastri sacrificed a great deal when he accepted the office of Agent-General in South Africa. And it might seem unreasonable to expect him to sacrifice still more. Apart from his duty to his own country and to the Indian in this country, his personal inclinations, to say nothing of his family ties, naturally draw him strongly towards India itself. Nevertheless we feel that the Agent-General could best serve India if by that high sense of duty to which he has always listened he could be prevailed upon to remain beyond the year as the servant in South Africa of his Government. Much of the value of the Indian Agreement depends upon its interpretation and the manner of its interpretation. Mr. Sastri, by his culture and personality and by his really statesmanlike qualities has been ideally suited to the office he has occupied. He has been able to reveal to the vast majority of South Africans a new type of Indian opinion, to show us India and her people in an entirely new light. Moreover, he has gone a long way towards reconciling those differences in the Indian community which have for so long been a barrier to any settlement. There is one paramount consideration which we would strongly urge on Mr. Sastri, however. South Africa to-day stands at the verge of a political change. A General Election looms in the near

future. Fresh personal factors are bound to emerge as a result of the appeal to the electorate. And it is absolutely vital to the success of the Indian Agreement that when the change comes the Indian Government should have in this country an Agent who possesses not merely the intellectual stature of a statesman but also great gifts of culture and personality. We have that man at the moment. It depends entirely on Mr. Sastri whether we have him when the time arrives that he may be most urgently needed.

It is to be noted that the Natal Mercury has the reputation of being unfriendly to the cause of our countrymen in South Africa. This shows what a great effect Mr. Sastri's charming personality has produced even on our opponents. We hope Mr. Sastri will see his way to prolong his stay in South Africa at least for a year.

The work of Indian educationists in South Africa

After spending seven months in South Africa, where they were sent by the Government of India to assist the Natal Government to put Indian education on a sound basis, Mr. K. P. Kichlu and Miss C. Gordon have returned to India. The Indian opinion of South Africa pays the following tribute to their work in connection with the Indian Education Enquiry Committee:—

Natal:—
While we do not wish to minimise in any way the work of the Indian Government representatives who have come to this country in the past in connection with the Indian question, we would say this, without the slightest hesitation, that the work that has been done by the Indian Educational Experts has been the most practical of all and the good fruits of their labours we are already beginning to experience. It may be said that it is the Education Enquiry Committee that is to be thanked for the benefit we are able to derive. While that is so it should hardly be forgotten that the Committee could never have come to the conclusions it has, had it not been for the convincing evidence laid before it by the Indian community and most of all, had it not been for the very important memorandum prepared by Mr. K. P. Kichlu in which Mr. Kichlu has proved to the hilt the injustices done to the Indian community in regard to their education by the Provincial Administration.

Mr. Kichlu, we believe, is the first representative of the Government of India who will leave the shores of South Africa with the satisfaction of seeing with his own eyes the fruits of his labour. They may be poor at present but let us hope that they will be richer in time to come.

While both Mr. Kichlu and Miss Gordon are Government officials they have by their simple and amiable ways won the hearts of the Indian people. They were above the ordinary

Mr Kailas Prasad Kichlu, M. A.
Vice-Chancellor of the Agra University.

Miss C Gordon B Ed.
Associated with the Female Training College,
Saidapeth (Madras).

officialdom and mixed freely amongst Indians and entered into their very life.

Mr. Kichlu has not spent a minute in vain. He had come in connection with the educational conditions in Natal but we understand he has inquired also into the condition prevailing in the Transvaal and has prepared a very important and useful memorandum which, while it may not be published, will be of immense guidance to the education department.

Mr Kichlu and Miss Gordon deserve the

gratitude of the Indian public for the splendid work they did in South Africa and we must also congratulate the Indian Government on their excellent choice. It will be good if the Government sends these educationists to East Africa, West Indies, Fiji Islands and Mauritius also to assist the Colonial Governments with their expert advice regarding the education of Indian children abroad.

THE CERTAIN CALM

By ETHEL ROMIG FULLER

For harassed minds, for hearts assailed by ills,
For all abrasions of the soul, all scars,
There is a panacea of tall bills,
The healing balm of rediscovered stars;
The scent of dew on sleeping ferns and grass,
The flight of homing winds to waiting treta,
And there are clouds that brush the moon and pass...
Shadows and dark's pulsating subtleties.

Before the constancy of night and sky,
The certain calm; the peace— if any grieves,
He'll shed unhappiness and let it lie
As maples drop their weight of yellow leaves
And so detached from pain and comforted,
May even for a space forget the dead.

—The Christian Century, Chicago

NOTES

Portraits of Raja Ram Mohun Roy

Of the three portraits of Raja Ram Mohun Roy published in this number, the one forming the frontispiece is reproduced from a photograph of the oil painting in the Bristol Art Gallery, by H. P. Briggs, R. A. This is a contemporary portrait. Another, reproduced from a steel engraving forming the frontispiece to the second London edition of his "Precepts of Jesus," published in 1834, may also be considered contemporary. The third one is enlarged from a small photograph of the painting, by Miss Roliunda Sharples, of "The Trial of Colonel Brereton" after the Bristol riots in 1831. The following particulars relating to this picture are taken from a descriptive list of paintings in the Bristol Art Gallery :

The court-martial of Colonel Brereton for his negligence in handling the troops at his disposal during the Bristol riots, 1831, and declining to take vigorous action in the suppression of the rioters, was opened on the 9th January, 1832, in the Merchants' Hall, Bristol..... The proceedings were abruptly brought to a close, after four sittings, by the suicide of the unhappy defendant.... Amongst other local notabilities in the picture may be seen, seated with her back to the spectator, Mrs. Sharples, the mother of the artist, and to the left, with her sketch-book open in her hand, Miss Sharples herself, behind the Rajah Ram Mohun Roy."

In this painting the Raja has a youthful appearance. But at the time of the Brereton trial he was about 60. So, it is probable that the artist merely drew a sketch of the scene on the spot and afterwards painted the different figures from portraits procured by her, and the portrait of Ram Mohun Roy which she could get was perhaps one painted in India years before he left for England.

For the photographs of these portraits and the other pictures illustrating the article on the "Foundation of the Brahmo Samaj" in this issue, we are indebted to Mr. N.

C. Ganguly, the writer of the article. He was able to obtain the permission of Dr. Herbert Bolton, Director of the Bristol Museum and Art Gallery, for the reproduction of these portraits through the

Miss Gladys Stevens

good offices of Miss Gladys Stevens of Bristol, a member of the Society of Friends

(Quakers). She is an admirer of Raja Ram Mohun Roy, a convinced pacifist and internationalist and keenly interested in all liberal movements. It was through her efforts that the picture of the Brereton Trial was secured, together with its key and history. She is trying to find out other relics of the Raja in Bristol, London and Liverpool.

In the Memoir prefixed to the second London edition of the *Precepts of Jesus*, published soon after the Raja's death, he is described as "a remarkably stout, well-formed man, nearly six feet in height, with a fine, handsome and expressive countenance" Victor Jacquemont, a young contemporary French scientist who was personally acquainted with the Raja in Calcutta, gives the following pen-picture of the great Indian reformer in his *Voyage dans l'Inde*, Tome I, Paris, 1841, pp. 183-188 —

Before coming out to India I knew that he was an able orientalist, a subtle logician and an irresistible dialectician; but I had no idea that he was the best of men...

Ram Mohun Roy is a man of about fifty years of age, tall, stout rather than fat, and of a middle complexion among the Bengalees. The portrait in profile which they have made here, is a close likeness, but the front view is not so good, his eyes are too small for his large face, and his nose inclines to the right side. He has a very slight moustache, his hair, rather long behind, is thick and curly. There is vigour in his physiognomy, and calmness, dignity and goodness. His dress is of the simplest, differing from that of well-to-do Indians only in the socks and shoes of European pattern which he used instead of wearing slippers on bare feet. He wore no trinkets, not even the sacred thread, unless he had it under his dress...

.. He never expresses an opinion without taking precautions on all sides...

.. He has grown in a region of ideas and feelings which is higher than the world in which his countrymen live; he lives alone; and thence, perhaps, the consciousness of the good he is accomplishing affords him a perpetual source of satisfaction, sadness and melancholy mark his grave countenance. (Translation by N.C. Chaudhuri)

Lord Haldane

By the death of Viscount Haldane at the age of 72, Great Britain loses a philosopher, jurist and statesman whose equal she perhaps does not possess. There may be greater statesmen, greater jurists, or greater philosophers, but there does not seem to be any whose combined record in these several spheres of work equals his. He was educated at Edinburgh Academy and University and at Göttingen,

was called to the Chancery bar in 1879, and in 1890 was made a Q. C. He was Liberal member for Haddingtonshire in 1885-1911. Thereafter he was raised to the peerage. With Kemp, in 1883-86, he translated Schopenhauer, and wrote a life of Adam Smith. His Gifford Lectures at St. Andrews University on the fundamental problems of philosophy and theology were published in 1903 as *The Pathway to Reality*. He insisted on educational reform in *Education and Empire*, published in 1902. As Secretary

Lord Haldane

for War in the Liberal ministry from 1905, he reorganised the army in 1907, creating a small expeditionary force always ready for war, and displacing the old Volunteer by a new and more efficient Territorial force. He was Lord Chancellor under Mr. Asquith from 1912 till 1915, when his former work for a better understanding with Germany viewed in the war temper of the time, combined with the fact that he had received part of his education in Germany, resulted in his exclusion from office in the first Coalition

ministry, and in his retirement for a time from politics. His *Reign of Relativity* appeared in 1921 and his *Philosophy of Humanism* in 1922. As his political sympathies had been given for some time to the ideals of the Labour Party, he became Lord Chancellor in the first Labour Government. He was an ideal host. He was a class-fellow of Professor Dr. P. K. Ray, who is happily still in our midst.

Viscount Haldane on Indian Thought

Lord Haldane tried to cultivate a sympathetic understanding of the ideals and outlook on life of races and peoples other than his own. This was exemplified in his keen and deep interest in Indian philosophy and in Indian students of philosophy. His article on "East and West" in the July number of *The Hibbert Journal*, which is perhaps his last published literary production, illustrates our remark. In the course of this article he observes :—

About what has been done in the West in developing knowledge we are well-informed. But we are not as well-informed about the contributions to reflection that have come from the East. We ought to have diffused among us information that we have not. There are competent students of Indian philosophy, in Europe and America, but they are relatively few in number and the results of their researches have not penetrated widely. In the East itself this is less true. There are to-day at least some Oriental students of philosophy who know Western thought as well as Eastern, in a fashion which would stand high in the West itself. They have published books, but these are known only by very few in Great Britain or America, and hardly by more on the Continent. This cannot be right if the Oriental writers have anything to tell us. The purpose of this article is to answer the question whether they have a lesson to teach us and what it is. We must make a start by getting rid of the current idea that because things have been expressed in words that are not our words, therefore, what they tell us may be passed by.

"To refer first to resemblance in teaching," says he, "it is striking to observe how the doctrine of the highest teachers of Buddhism is akin to that of our Christian teaching. ... Both religions seek to effect the deliverance of mankind from sin."

But there are divergences which are deep, though they hardly touch the basic principle. One of these divergences is that the Buddhist sphere declares the ultimate salvation of all beings. Christianity in its historic forms, on the other hand, divides by a gulf the saved from the

The writer then gives in brief some idea of the teachings of Buddhism and of the Upanishads. In connection with the latter he quotes some sentences from Professor Radhakrishnan's *Philosophy of the Upanishads*. Of living philosophical writers in India Lord Haldane writes :—

The University of Calcutta has produced a series of professors of high gifts who have not only worked out the subject but have written about it in admirable English. Radhakrishnan, Das-Gupta, Haldar, are among them.

Being himself distinguished for intellectual curiosity, it is not surprising that he should write :—

It has been for long in my mind that we in the Western world have been deficient in intellectual curiosity. We have not explored the philosophical systems of India and the East with the same keenness that we have brought to bear on philosophy and science in Europe. There have been exceptions, such as Schopenhauer and in a less degree Hegel. But the work has been mainly left to scholars, great of their kind, but insufficiently trained in philosophical research.

The result has been unfortunate. In India it is thought, by competent Indian students, that we do not appreciate, much less understand, the work that has been done by a long series of Hindu metaphysicians. No doubt it is true that until recently the latter have not really shown familiarity with European philosophy, and have expressed themselves largely in images and metaphors. But it is said against us that underlying the popular creeds of India there is a system of analysis in truth not less comprehensive than that of the idealism of the West. It is, of course, far less precise in its language, and has suffered from insufficient training, on the part of those who wield it, in the theory of logical forms. Still, it is added, there is the analysis and there are the ideas which have resulted. It is said that we over here are the more open to reproach because contemporary Indian writers of philosophy have not only shown in their works that they have mastered the principles of our idealists, but have displayed alongside of them the fruits of speculative development in India.

I do not think that the reproach is one which is wholly without justification or ought to be any longer ignored, and I wish to say something illustrative of it in connection with a book which has recently been written by a distinguished Hindu Professor of Philosophy, Professor Das-Gupta, late of Cambridge University here, and now Professor of Philosophy in the Presidency College at Calcutta.

The book is called *Hindu Mysticism* and was published last year by the Open Court Publishing Company. It consists of a series of lectures delivered in the United States, and is popular in style. It is in part a defence of a form of reasoned mysticism, grasping spiritually the aims and problems of life in a more real and ultimate fashion than the author considers possible for mere abstract reason. Its importance is the account it gives in outline of the development of

this and other types of thought in the story of Indian philosophy.

The writer then devotes about one-third of his article to a summary of Prof. Das-Gupta's book on *Hindu Mysticism*, and observes :—

In the passages from his Lectures which I have summarised Professor Das-Gupta gives us an interpretation of the Hindu mind which we do well to remember. For, in its foundations it resembles much in our own views. Religion all over the world and in all ages seems to have more of a universal foundation than we commonly imagine. We may be right in our preference for what has developed in the West. We may think that the infinite is disclosed in it more fully. But many millions of people in India think otherwise, and do not seem likely to cease to think otherwise. The reasons for their attitude I have tried to state in outline in this article.

Lord Haldane then shows that the sympathetic understanding of Indian thought is necessary not merely for satisfying intellectual curiosity; it has a bearing on practical affairs also.

Whatever the truth in the Indian view, there is something that it compels us to recognise. Beliefs with such old and wide foundations influence profoundly where they exist the outlook of the people, not only on religion, but on practical and political affairs. We have, as the Professor says, succeeded admirably in "policing" India. We have done much for her, and have protected the various peoples who make up her population. But have we secured in exchange the faith and confidence of that population? He would be a bold man who would say that we have. Their gratitude for having kept the peace we may have secured, but even this not ungrudgingly. Not the less in that gratitude do they look on us as strangers who do not enter into what they value most. The sound of the flute of Krishna has not reached us. To the inhabitants we are as folk of a different faith.

The "policing" and protection have been done mostly to the extent and in the directions necessary for promoting British interests.

To guard against misapprehension Lord Haldane observes in conclusion :—

Now, no one suggests that we or our representatives should, when we go there, adopt the faith of India. That would be one thing. It is quite another thing, however, that we should not understand it or even have an understanding account of it. The spirit is all-important in our approaches to Hindus and Mohammedans alike. Yet when we send a Commission to India to devise a better form of Government, the last thing we think of is the spirit. We propose to confer with politicians, but not with the leaders of native thought of different schools who inspire the people in various forms. We seem to be determined, in this case as we were when dealing with the Irish, to put the cart in front of the horse.

I doubt very much whether our political efforts can succeed until after a long day's work has been done, and the sympathy and confidence of the spiritual leaders in India has been gained by a further and different effort on our part. We have surely to convince them that we understand their outlook, though it is not ours, and that we have set ourselves to accord to them the fullest liberty and help in working out their own point of view. Some things we have already done, though on a comparatively small scale. We have founded Hindu and Mohammedan Universities. But we are far behind in effort to provide the children of India with primary education, and there remains everything to be done in securing co-operation in social reform. It is tasks like these that we have to enter on, and to get for ourselves in our work the sympathy and help of the leaders of Indian thought seems a condition even more necessary of fulfilment than that of the secondary stage of seeking co-operation from leaders in political subjects.

Here it may be observed that it is more necessary for Indian leaders to secure the co-operation of the British officials in social reform than for the latter to obtain the co-operation of the former.

The purpose of what I have now written is not to take sides in what must inevitably remain for long a matter of controversy. It is to draw attention to the fact that under wholly diverging forms the great religions of the East and of the West have more of a common substratum than we here at least commonly suppose. If this be true it is well that we should realise and rely on it.

For common principles, if discovered, may lead us to see that East is not so wholly severed from West in the foundations of faith as we are apt to assume in our practice. That assumption once got rid of, a new task is opened up, the task of learning to govern India through a mutual understanding and sympathy which may carry us a long way towards the solution of a problem that seems insoluble largely because we have made it so.

When Lord Haldane says, "We have surely to convince them that we understand their outlook, though it is not ours, and that we have set ourselves to accord to them the fullest liberty and help in working out their own point of view," the sentiment has our cordial approval. But when he concludes his article by observing, "That assumption once got rid of, a new task is opened up, the task of learning to govern India through a mutual understanding and sympathy . . ." he says something which is at variance with the idea, supported by him, of according to us the fullest liberty and help in working out our own point of view.

ministry, and in his retirement for a time from politics. His *Reign of Relativity* appeared in 1921 and his *Philosophy of Humanism* in 1922. As his political sympathies had been given for some time to the ideals of the Labour Party, he became Lord Chancellor in the first Labour Government. He was an ideal host. He was a class-fellow of Professor Dr. P. K. Ray, who is happily still in our midst.

Bardoli Satyagraha

The Satyagraha at Bardoli will bear tangible fruit if, as the result of the enquiry to be conducted by a judicial and a revenue officer, the assessment of land-revenue is revised in such a way as to satisfy the cultivators. But the intangible results are far more important. It is a great thing that men, women and children in humble spheres of life have preferred not to submit to injustice even though their resolve has exposed them to much pecuniary loss and suffering, insults and great risk. They have acted heroically under their brave and wise leader Mr. Vallabhbhai Patel. The men and women from outside Bardoli who helped him to carry on the struggle, some of whom were sent to jail, have also made history. Every bloodless fight against wrong is a moral gain to humanity.

Festival of the Rains at Visva-bharati

In our last issue we gave a description of the festival of the rainy season at Visva-bharati. In this issue we printed a sketch of the tree-planting ceremony, drawn by Sriyut Nanda Lal Bora, the artist, and two snapshots of the festival of tilling the soil.

Artists need not be told that the sketch is not realistic.

In one of the photographs the Poet is seen singing a song from one of his books. In the other he is seen putting his hand to the plough and starting the ploughing.

Ram Mohun Roy at Rangpur

Elsewhere in this issue the fact will be found recorded that the Board of Revenue never confirmed Ram Mohun Roy in the post of Dewan of Rangpur, carrying a salary

of a contradiction has also been published. If the contradiction be like the general run of official contradictions, the marriage may yet come off. And in that case, people would consider it a diplomatic one.

Chintamani Ghosh

By the death of Babu Chintamani Ghosh at the age of full 74 years Allahabad has lost a citizen of whom she could be justly proud. He never was nor ever sought to be in the lime-light. He was a self-made man in the literal sense of that term. He came to Allahabad when he was not yet 13 and obtained a clerkship in the *Pioneer* office on a salary of ten rupees per mensem at that early age. After serving there for some time he got a job in the Railway Mail Service. Finally he obtained a clerkship in the Meteorological Office at Allahabad carrying a salary of Rs. 60. He retired from Government service comparatively early in life when earning Rs.

The Afghan Princess

100 a month, and started business as printer and publisher. As a man of business, he always kept before himself a high standard of excellence. His press has always stood for high-class printing. He was never afraid of spending considerable sums of money for attaining and keeping up a high standard of typography. The Hindi, Urdu, English and Bengali books printed at his press are noted for their neat get-up. Though Allahabad is not in Bengal, any press in Bengal would be proud to print Bengali books like some of those turned out by the Indian Press. It was never the desire of Babu Chintamani Ghosh to publish catch-pennies. Hence, he always insisted on securing good text books and other books by competent authors for publication. He rendered signal service to the cause of Hindi literature by the publication of a standard illustrated edition of Tulsidas's *Ramayan*, of a Hindi translation of the *Mahabharat*, of numerous other Hindi works, and of the high-class Hindi monthly *Saraswati*. Latterly

his press has been entrusted with the work of bringing out the publications of the Nagari Pracharini Sabha, including its standard Hindi lexicon. The improvement of Urdu literature also received his attention. Bengalis should be grateful to him for the preparation and publication of the Bengali dictionary by Babu Jnanendra Mohan Das, which is the best of its kind. Journalism also owes a debt of gratitude to him, as he was the publisher of the now defunct *Indian Union* and the *Indian People*. The Indian Press has branches at Benares, Agra, Patna, Calcutta and Nagpur.

The present writer's Bengali monthly *Prabasi* was at first printed at the Indian Press. The work was well done. He records with gratitude that when, after giving up the principalship of the Kayastha Pathshala, he started the *Modern Review*

Chintamani Ghosh

also, Babu Chintamani Ghosh brought out that magazine month after month, excellently printed on good paper and with unvarying punctuality, never asking for payment but

leaving the editor-proprietor to pay when he could, which he began to do only when the journal was many months or perhaps a year old. But for this generous attitude of friendliness on the part of Babu Chintamani Ghosh, this monthly would perhaps never have seen the light of day, or, if at all born, would have died an untimely death. For its editor-proprietor had no savings to finance it.

Babu Chintamani Ghosh died a comparatively rich man possessed of property worth many lakhs. But his wealth was not accumulated by shutting his ears entirely to the cry of suffering humanity. He founded a general charitable infirmary for the benefit of the poor, provision being made for surgical operations in a separate building. He gave liberally to more than one educational institution and helped many poor students. *The Pioneer* states that "he made the cause of Indian widows his own, and spent lavishly in ameliorating their lot."

—

Foolish and Perverse Favoritism

In reporting the proceedings of the last meeting of the Calcutta University Senate, *The Bengalee* writes :—

In discussing the proposal to put Dr. Nagendra Nath Gangulee, Professor of Agriculture, a son-in-law of Dr. Rabindranath Tagore, a member of the Agricultural Commission—on equal footing with other professors of the University, some of the members of the Senate opposed it on the ground that Dr. Gangulee could show no merit in his particular profession. Others supported the resolution on the ground that it would look awkward if Dr. Gangulee was not brought in line with other professors in respect of pay. Dr. Nilratan Sircar held that Dr. Gangulee fully deserved it. He said that it was due to his (Prof. Gangulee's) initiation that the Agricultural Commission was appointed. The resolution was put to vote and carried by 25 to 17 votes.

Agriculture is not one of the subjects taught in the Calcutta University. It was not taught in 1921, when Mr. Nagendra Nath Gangulee was appointed professor of agriculture; nor is it taught now. When he was appointed, the late Sir Asutosh Mookerjee held undisputed sway over the university. We will not now discuss why at that time he made this perfectly unnecessary appointment—he might have had reasons of his own, unconnected with the work of the University. But it may be charitable to *imagine* that it was in contemplation at that time to add agriculture

to the subjects taught in the university. But that has not been done or even attempted to be done, though seven years have since past; and hence that piece of imagining can have no foundation in fact. The result is that a man has drawn thousands of rupees from the university funds in the shape of salary, etc., for doing absolutely no work for the university. This is nothing short of criminal waste of public money. Those who support such waste deserve the severest condemnation.

It is highly to be regretted that Dr. Rabindranath Tagore's name should have been mentioned in this connection. He had, of course, nothing to do with the appointment when it was originally made, nor, it goes without saying, had he anything to do with the proposal carried at the last meeting of the Senate. That his name should be dragged in and exploited by anybody for a selfish purpose is a tragedy.

That a man is a son-in-law of any particular person is no qualification for a professorship. Even if Dr. Gangulee had shown "merit in his particular profession," that would not have entitled him to be the paid professor of a subject not taught in the university. It is also quite idiotic to suggest that a man deserves higher salary for being professor of such a subject because he was a member of the Agricultural Commission. The appointment itself, when made, was indefensible from any and every point of view. The supporters of the proposal under discussion should have first proved to the public why Dr. Gangulee's services were and are required;—they should have satisfied the public that for the money he has already received he has done sufficient or *any* university work. The question of an increment could have then been brought forward and discussed. But the facts are that, agriculture not being a subject taught in the university, the university never stood in need of his services, that he has done no work for the university, that, therefore, his post should never have been created and should be abolished, and that, *a fortiori*, the question of increasing his emoluments could never have arisen. It has been argued "that Dr. Gangulee fully deserved it." We should like to know in detail how he has deserved it, *in terms of university work done*. Assuming that the Agricultural Commission was appointed at the suggestion of Dr. Gangulee, it has still to be proved by the logic of facts that that commission was a desideratum and

is or will be a blessing to India. But supposing it is or will be a blessing, and that, therefore, Dr. Ganguleo deserves some *balkshish* for his suggestion, why should the gratuity have come, both retrospectively and prospectively, from the funds of the university, which, it is said, is unable to meet some absolutely necessary items of expenditure?

The proposal was to put Dr. Ganguleo on an equal footing with other professors; and it was argued that it would look awkward if he was not brought in line with other professors in respect of *pay* (not of *work*!). But the supporters of the proposal were blind to the fact that his university *work* could not be placed on an equal footing with that of the other (active) professors, because he had no such work; and that it was amazingly unjust, absurd and awkward that a perfect sinecurist should have drawn and should draw a salary, etc., far greater than those of many a competent and devoted professor actually doing educational work in connection with the University. "No work, no pay. Equal work, equal pay", should be the motto of all who are impartial and not devoid of intelligence.

It has been our lot to criticise the Calcutta University for many of its doings, but perhaps the one commented upon in this note is one of the most absurd, idiotic and perverse that have come under our notice. It is to be hoped that it is not a sample of the things to be expected during the Vice-chancellorship of the Rev. Dr. Uquhart.

German Industrialists Secure South African Railway Contracts

The Johannesburg correspondent of the *Times* (London) gives the following interesting news-item:—

Johannesburg, July 17.

The South African Railway Board has given a contract for seven narrow-gauge locomotives of the Garrett type to the Hanomag group of Hanover, at £1427 each, f. o. b. Hamburg, delivery within 22 weeks.

The German tender was not the lowest, but the British quotation was £5613. It is pointed out that, however well-disposed the Railway Board might be towards British manufacturers, it cannot afford to ignore the question of prices, and to have given the present contract to the lowest British tenderer would have involved an Imperial preference of 27 per cent. It is suggested in business circles here that there must be something wrong in British methods of tendering, or that the British tenderers were not very anxious to secure this contract.

From this, it is clear that the South African Government is not in favor of "Imperial preference" which may cost the South African people considerable amounts for the benefit of the British manufacturers, who cannot compete with Germans and others. The British authorities regard India to be the "dumping ground" for British manufactures and they in the past followed a policy of destruction of Indian industries to promote the British economic control of India. The South African attitude of independence may serve as a lesson for Indian statesmen opposing "Imperial Preference."

Co-operation Between The Anglo-Indian Association and the European Association of India

At a recent meeting of the Anglo-Indian Association held at London, over which Mr A.B. Kunning presided, Lord Meston and Lord Winterton supported the claim of special privileges for the Anglo-Indians:

Lord Meston said the Anglo-Indian community had now reached the position which had lately been attained by minorities in many powerful and ancient nations all over the world. Those minorities were recognized and definitely protected under the aegis of the League of Nations. Following that analogy, the Anglo-Indians were as much entitled to claim minority rights as the Croats in Yugoslavia or the old Germans in Czechoslovakia. Their point of view should not be that of mere defence against stronger forces but that of a minority which by virtue of being so had its rights and privileges.

Mr. C. B. CHARTERS, president of the European Association, India, said his association made it one of the first articles of its policy to try to work in co-operation with the Anglo-Indian Association. Both had been considering the views to be put before the Simon Commission. There had been joint meetings of their councils, and in the memorandum the European Association was submitting to the Commission next week it was supporting many of the views and claims which the Anglo-Indians had put forward.

Anglo-Indians want to enjoy the advantages, if any, of being considered Indians by claiming to be statutory Indians, and they want the privileges of their partial non-Indian descent, too!

If the membership of the European Association of India includes persons from all the European countries residing in India, then the above news-item of co-operation between the European Association and Anglo-Indian Association has international significance.

The Anglo-Indians are interested in

securing the co-operation not only of Britishers at home and abroad to preserve control over Indian affairs, but they have in addition taken steps to cultivate the support of European nations through their European members and propaganda methods.

It is needless to emphasise the point that at the present juncture all Indian political groups should unite to maintain Indian rights in India. Indian political bodies should formulate a programme of joint action so that the alien rulers of India may be dispossessed of their special privileges and Indians may recover control of India. They should also take steps to cultivate international co-operation (especially Asian co-operation) in their efforts to recover their national freedom.

T. D.

British "White Australia" Policy

Lately the "White Australia Policy" has taken a new shade of particularism. A few weeks ago the ex-Premier of Australia, the Rt. Hon. Mr. Hughes, openly declared that "the Italians are undesirable aliens and there should be certain restrictions against their coming to Australia". This remark evoked rage in certain Italian quarters; and they reminded the Australian statesmen of the ancient civilization of Rome and the re-awakening of Italy, which will not submit to any national insult from any quarter.

Now Mr. Bruce, the Federal Prime Minister of the Commonwealth, has come out with his programme of keeping Australia 98 per cent. British. The *London Times* reports —

Mr. Bruce, the Federal Prime Minister, speaking at Heidelberg, said that the Commonwealth Government had determined to maintain in Australia 98 per cent. of British stock.

Australia's obligation to observe a "White Australia" policy, he continued, had not been received enthusiastically by other nations. It was not desirable that Australia should "antagonize" the white nations as it possibly antagonized the coloured races on this issue. It would not be wise, therefore, to exercise a power which the Commonwealth undoubtedly possessed to exclude foreigners from the Commonwealth. The question had to be approached with a little more tact.

The arrangement with Italy and other Southern European countries, by which a limited number of their nationals would enter Australia yearly, had been made with the utmost cordiality and goodwill and without any suggestion of quota systems. In this way Australia would maintain the British character of her population rather than by throwing out a defiance to the whole world.

"The fact" of Mr. Bruce imposes indirect restriction against all so-called white men and women unless they are "British." This is a peculiar caste-system or class discrimination, based not only upon colour-prejudice but also racial vanity.

History teaches us that racial or religious solidarity becomes short-lived among peoples of two nations, if their economic and political interests come into conflict. During the World War the British whites, were willing to starve the German women and children by blockade and sought the co-operation of Moslem Egyptians, Arabs, Hindus, Siamese, Chinese and Japanese, whereas the Germans, Austrians and Bulgarians sought Turkish support. The Catholics of Belgium, France and Italy fought the German and Austrian Catholics.

The population problem—the problem of human migration—is as old as the history of the human race. In the past, pressure of population swept away many artificial racial barriers raised by privileged communities which wanted to fence the most fertile portions of the world as their exclusive property. As the discriminated people of the so-called coloured races form more than the half of the human race and they are audibly thinking about "racial equality" and "equal opportunity for migration to all parts of the world," it may come to pass that their demands will receive some consideration, in spite of all the arrogance of the so-called British "white men" who think themselves a little bit superior to all other "white people."

T. D.

All Parties Conference Report

The Report of the Committee appointed by the conference to determine the principles of the constitution for India is an able and very sober production. The time at the disposal of the Committee was not quite sufficient for drafting such a report. The result of their deliberations is, therefore, all the more praiseworthy. The three appendices, for two of which they acknowledge their indebtedness to Pandit Jawaharlal Nehru, add to the value of the report. It is well got up and furnished with two maps, reproduced elsewhere, to show the comparative numerical strength of the Hindu and Muslim communities in the Panjab and Bengal.

Those who are out and out

India's political rights in the abstract will not be satisfied with the report. For it is drawn up on the assumption that Dominion status will at present satisfy the majority of politically-minded Indians, whereas there are very many who cannot reconcile themselves to anything short of freedom and absolute independence. *The Modern Review* stands for freedom and absolute independence. But as the Conference was an all parties conference, as one and all of the parties do not want independence at present, and as none of the principal political parties, to the best of our information, want anything less than Dominion status, we think the Committee have been well advised in their assumption that the constitution should be framed on that basis. Absolute independence and freedom can be won by a successful armed rising or by some other movement which would put equivalent pressure on the British Government and people. To be free, Ireland brought both violent and non-violent pressure to bear on Great Britain. But she did not succeed in winning absolute independence and freedom—though she may do so yet. India is not yet in a position to put greater pressure of either description on Great Britain. Hence, though one may have the most ardent longing for freedom and independence for India, one may, for the present, agree to put forward a claim for something less, without prejudice to a higher demand. History shows that even the most despotic and absolute autocracy has not stood in the way of nations winning full freedom. Therefore, Dominion status cannot be a bar to the attainment of full freedom—rather, on the contrary, it may facilitate the carrying on of an absolute independence movement. There is no finality in politics. Moreover, "Dominion status has come to mean something indistinguishable from independence, except for the link with the Crown."

It has been argued that Great Britain would be as unwilling to agree to a Dominion status for India as to absolute independence. We do not think so, though opinions may differ.

Dominion Status and Responsible Government.

The Committee are right in stating that "the attainment of dominion status is not viewed as a remote stage of our evolution but as the next immediate step." They

have given a convincing reply to certain false issues and fanciful theories raised in official circles with a view to defeat or delay the establishment of any form of responsible government in India. They have succeeded in tearing to shreds Sir Malcolm Hailey's thesis that full dominion self-government is of somewhat wider extent than responsible government and that responsible government is not necessarily incompatible with a legislature with limited or restricted powers. "There is no half-way house between the present hybrid system and genuine responsible government...The real problem, to our mind, consists in the transference of political power and responsibility from the people of England to the people of India."

The Settlement of the Problem of Minorities

The kind of settlement of the problem of minorities recommended in the Report does not conform to any principles of abstract justice. If any safeguards are to be provided in the interests of minorities, they should be available to all minorities; and the weaker and less numerous a minority, the greater the safeguards it requires. But the Committee have recommended safeguards for the strongest minority community in India. In this they have followed the rule of expediency. The Muslims have been the most clamorous and insistent in their demand for separate treatment, and hence their demand has received attention. It is also true, as the Report states, "that there is no such sharp cleavage between them (the non-Muslim minorities) and the majorities among whom they live as there unfortunately is between Hindus and Muslims."

"We would, however, point out that the problem of minorities is not peculiar to India. The existence of that problem in other countries has had to be faced in the framing of their constitutions after the war, but has never been treated as an argument or reason for withholding from them self-government in the fullest measure. We would earnestly recommend to the conference that if, in addition to, or in substitution for, our recommendations, the settlement of the problem of minorities is possible by agreement on any other basis, such basis should be accepted in the larger and more abiding interests of the country."

The all important Question Now

The all important question now is how we can obtain the same power and responsi-

bility in the affairs of our country as other peoples have in theirs. The respective shares of different communities in that power and responsibility is a minor and a domestic problem. If by agreeing to a temporary compromise, for ten years, the main object can be gained, one may be expected to be reasonable enough to accept such a compromise. But, of course, it is allowable to doubt whether the acceptance of the compromise by all parties in India would lead to the admission by England of our demands as just. We have also seen the doubt expressed somewhere that once the Muslims obtain a privilege, they will never agree to give it up. But if they accept it on the understanding that it is only for ten years, it will have to be given up automatically at the end of that period. If they want it permanently or for an indefinite period, there would be no compromise, and the settlement would fall through.

"The Communal Aspect"

Hindus form 65.9 per cent. and Muslims 24.1 per cent. of the total population of India and Burma. But, says the Report,

In the Panjab, the Muslims are 53.3 per cent. and in Bengal 54.9 per cent. In Sind they are 73.4 per cent. and in Baluchistan and the N.-W. F. province they are overwhelmingly strong.

A new comer to India, looking at these figures and at the strength of the Muslim community, would probably imagine that it was strong enough to look after itself and required no special protection or spoon feeding. If communal protection was necessary for any group in India it was not for the two major communities—the Hindus and the Muslims. It might have been necessary for the small communities which together form 10 per cent. of the total.

But,

Logic or sense have little to do with communal feeling, and to-day the whole problem resolves itself in the removal from the minds of each of a baseless fear of the other and of giving a feeling of security to all communities. In looking for this security each party wants to make for itself or to set a dominating position. We note with regret that the spirit animating some of the communal spokesmen is not one of live and let live. The only methods of giving a feeling of security are safeguards and guarantees and the grant, as far as possible, of cultural autonomy. The clumsy and objectionable methods of separate electorates and reservation of seats do not give this security. They only keep up an armed truce.

The Committee's solution of the communal problem consists in giving the fullest religious liberty and making provision for

cultural autonomy, "although people may not realise it." In the absence of details we do not quite understand the latter part of this solution.

It is stated in the Report that the status of the N.-W. F. Province and Baluchistan must be made the same as that of other provinces. It is added: "We cannot in justice or in logic deny the right of any part of India to participate in responsible government." We agree. But does it follow that "any part of India" has the right "to participate in responsible government" as a *separate provincial unit*? Baluchistan has a population of 4,06,48, N.-W. F. P. 22,51,340, and Sind 32,79,371. All these, according to the Committee, have the right "to participate in responsible government" as *separate provincial units*. Why then should Ajmer-Marwara with a population of 4,95,271 be denied that right? And Berar with a population of 30,75,316? And each of the overwhelmingly Muslim Bengal districts of Bogra, Rajshahi, Pabna, Noakhali, Mymensingh and Tippera, with populations of 1,04,86,006, 1,44,9,75, 1,88,94,94, 1,12,78,6, 4,87,37,30 and 2,74,30,73 respectively? There seems to be more of expediency in the Committee's decision than of logic and reason.

As regards Sind the Committee observe that, for the last eight years, since the National Congress made Sind into a separate province, no voice was raised in protest. But that was done for the purposes of Congress elections, etc., not for any administrative, legislative, executive, judicial or revenue purposes. So why should any voice of protest be raised?

It is satisfactory to find the Committee saying: "We agree that the Muslim demand for the separation of Sind was not put forward in the happiest way."

They observe:

To say from the larger view-point of nationalism that no "communal" provinces should be created is, in a way, equivalent to saying from the still wider international view point that there should be no separate nations.

Both these statements have a measure of truth in them. But the staunchest internationalist recognises that without the fullest national autonomy it is extraordinarily difficult to create the international state. So also without the fullest cultural autonomy, and communalism in its better aspect is culture, it will be difficult to create a harmonious nation.

It would be beside our purpose to examine the above statements here too critically. Assuming their general truth, may we ask,

is it the absence of Sind's separate provincial existence which has stood in the way of the Sind Moslems' "fullest cultural autonomy"? How is it, then, that though the Muslims do not live in a separate "communal" province of their own in the U. P., where they are only 15 per cent. of the population, they have been able to establish the fullest cultural autonomy in Aligarh? If in spite of the lesson conveyed by the example of Aligarh, it be argued that the Sind Muslims cannot have the fullest cultural autonomy unless Sind be made a separate province, would that mean that the largest portion of the educational expenditure of Sind must then be devoted to the promotion of Islamic culture? In that case, would there be sufficient money left for the fullest cultural autonomy for the Sind Hindus, who would naturally and rightly want Hindu cultural equipment on the Islamic scale? Or, are only the majority community in each province to have the fullest cultural autonomy?

We are afraid most of the arguments brought forward in favour of the constitution of Sind, N.-W. F. P., and Baluchistan as separate provinces are mere after-thoughts, and the real reason for supporting this Muslim demand is to be found in the reluctance or inability to negative the "novel suggestion" referred to as follows: "The Muslims being in a minority in India as a whole fear that the majority may harass them, and to meet this difficulty they have made a novel suggestion—that they should at least dominate in some parts of India."

Disadvantages of Separate Electorates

The following observations of the Committee should be seriously considered by all advocates of separate electorates:

It is admitted by most people now that separate electorates are thoroughly bad and must be done away with. We find, however, that there has been a tendency amongst the Muslims to consider them as a "valued privilege", although a considerable section are prepared to give them up in consideration for some other things. Everybody knows that separate electorates are bad for the growth of a national spirit, but everybody perhaps does not realise equally well that separate electorates are still worse for a minority community. They make the majority wholly independent of the minority and its votes and usually hostile to it. Under separate electorates, therefore, the chances are that the minority will always have to face a hostile majority, which can always by sheer force of numbers, override the wishes of

the minority. This effect of having separate electorates has already become obvious, although the presence of the third party confuses the issues. Separate electorates thus benefit the majority community. Extreme communalists flourish thereunder and the minority community, far from suffering, actually benefits by them. Separate electorates must, therefore, be discarded completely as a condition precedent to any rational system of representation. We can only have joint or mixed electorates.

"A Sprawling Province"

The Committee state on page 34 of the Report that among the various proposals about reservation of seats in legislative bodies for majority and minority communities one was, "Amalgamation of the Punjab and N.-W. F. Province, with no reservation of seats." They have no objection to this proposal. But as they do not know how far this will meet the different view-points of the parties concerned, they have not made any recommendation in regard to it. Then they go on to state:—

"A similar but more far-reaching proposal was made to us, namely, that the Punjab, the N.-W. F. Province, Baluchistan and Sind should all be amalgamated together, and that there should be no reservation of seats, unless the minority desires it, in this area. We were unable to entertain this proposal. It would mean the creation of an unwieldy province sprawling all over the north and north-west."

The description of "sprawling" applies more or less to the Bombay Presidency and Bihar, Chota Nagpur and Orissa also. It is not a serious objection. Unwieldiness is an objection. A province may be unwieldy as regards area or population or both. Let us see in what respects the proposed amalgamated area may be considered unwieldy. The Punjab has an area of 99,846 square miles; N.-W. F. Province, 13,419; British Baluchistan, 54,228; and Sind, 46,506; total area, 213,699. The biggest Provinces, in the Indian Empire are Burma (area 233,707 square miles) and Madras (area 142,260 sq. m.) So the amalgamated province would not have been the most unwieldy in area. As regards population, the total population of the combined areas is, according to the census of 1921, 26,636,389, which is greatly exceeded by Bengal, U. P., Madras, and Bihar and Orissa. So the combined areas would not have been more unwieldy in population than these. It would not have been nearly as heterogeneous, too, in population as some existing provinces; e. g., Burma with its Barmans, Shans, Karens, Kachins, Chins,

Arakanes, Talangs and Palangs, besides Indians, Chinese, etc.; Assam with its Mairkhis, Mikirs, Garos, Naga tribes, Kacharis, Lushei Kuki clans, Khasis, Angami Nagas, Sema Nagas, Lhota Nagas, Lalungs, Rabhas, Syntengs, etc., besides the Assamese and Bengalis.

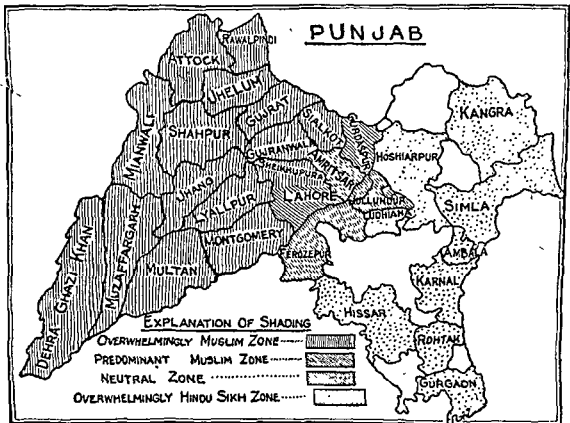

Still we would not urge the creation of this "sprawling" province. But as neither Sind, nor N.-W. F. Province, nor Baluchistan possesses a population or revenues sufficiently large for meeting the expenses and other requirements of a separate provincial existence, we would suggest the amalgamation of these three and their formation into one province. The combined area would then be 114,153 square miles, with a population of 5,951,365. This area is exceeded by three of the existing "Governor's Provinces" and nearly equalled by one, while this population is exceeded by those of all the "Governor's Provinces." So this province would not be considered unwieldy.

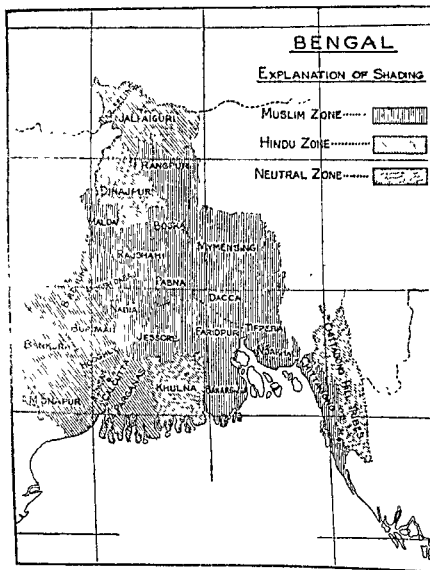

Our suggestion may be considered for what it is worth. We are opposed to making any area a separate "Governor's Province" which cannot be financially self-supporting. None of the existing provinces can afford to contribute to the maintenance of any financially parasitic province. Some of them have to remain disease-stricken, illiterate, poverty-stricken and economically undeveloped for want of funds.

Reservation of Seats for the Majority

The argument against reservation of seats for the majority is thus ably put in part —

It is absurd to insist on reservation of seats for the majority and claim full responsible government at the same time. Responsible government is understood to mean a government in which the executive is responsible to the legislature and the legislature to the electorate. If the members of the executive with the majority behind them have all got in by reservation and not by the free

choice of the electorate, there is neither representation of the electorate nor any foundation for responsible government. Reservation of seats for a majority community gives to that community the statutory right to govern the country independently of the wishes of the electorate and is foreign to all conceptions of popular government. It will confine minorities within a rigid fence and leave them no scope for expansion.

For separate electorates and reservation of seats are evils and ought not to be tolerated by those who oppose them, because others insist upon having them. All communities should rely solely on the growth of a humanitarian and national outlook and of altruism, public spirit and ability. Other considerations, reproduced below from the Report, should also help to dispel fear.

We are certain that as soon as India is free and can face her problems unhampered by alien authority and intervention, the minds of her people will turn to the vital problems of the day. How many questions that are likely to be considered by our future legislatures can be of a communal nature? There may possibly be a few now and then but there can be no doubt that the vast majority of the questions before us will not be communal in the narrow sense. The result will be that

the provinces, humanly speaking, Muslims would be assured of a clear majority in the legislature. This, of course, presupposes adult suffrage for both sexes, which the Committee have recommended. For details see the Report.

In Bengal, "the Hindu minority, although it is a very big minority, is highly likely to suffer in numbers in an open general election without reservation." This is no imaginary fear, as the Bengal district board elections show. Though the voting strength of the Muslims there is now less than it be with adult suffrage,

Yet we find that they made a clean sweep of the Hindu minority in three districts—Mymensingh, Chittagong and Jessore. In the first two of these not a single Hindu was elected, though the Hindus are about 24 per cent of the population, and in the third only one Hindu managed to get in, though the community forms 38.2 per cent of the population. As against this we find that Muslims, where they are in insignificant minorities of 3 and 4 per cent, have managed to send one to three representatives to the District Board.

Nevertheless we would not advocate the reservation of seats for the Hindu minorities.

parties will be formed in the country and in the legislature on entirely other grounds, chiefly economic we presume. We shall then find Hindus and Muslims and Sikhs in one party acting together and opposing another party which also consists of Hindus and Muslims and Sikhs. This is bound to happen, if we once get going.

Reservation of Seats for Minorities

The Committee have, for reasons stated in the Report, recommended, as a necessary evil, the reservation, for ten years, of seats for Muslim minorities, both in the Central and Provincial legislatures in strict proportion to their population, with the right to contest additional seats. The last-mentioned right is "calculated to advance the Muslim on national lines" and to enable non-Muslims to influence them by fraternization. Non-Muslim minorities are allowed reservation of seats on similar terms only in the N.-W. F. P. and Baluchistan. Is it or is it not understood that if Sind be made a separate province, non-Muslims there, too, will have this "right"?

On the whole we consider these recommendations of the Committee politic.

Redistribution of Provinces

It is stated in the Report "that the present distribution of provinces in India has no rational basis." This is not quite true. Nor is it quite true to say that 'it is merely due to accident.' In most parts the distribution is due to geographical or historical or economic or linguistic reasons.

It is not a correct statement of facts that Hindustani is to-day the common language of half of India, though we do not object to efforts being made to make it the *lingua franca* of India. Of course, the use of English will not and cannot be prevented; rather would it be necessary to encourage it.

The Committee favour redistribution of provinces on a linguistic basis, provided the people concerned so desire. "A third consideration, though not of the same importance, is administrative convenience, which would include the geographical position, the economic resources and the financial stability of the area concerned."

We have not been able to appreciate the difficulties in the way of the Committee favouring the unification of Utkal nearly to the extent that they favour the unification of the Karnataka. The Oriyas have been agitating for it for at least a quarter of a century,

there is a considerable amount of literature on the subject, Government deputed some officers to enquire into the matter, and the Committee also "have received a small book giving the case for Utkal." Yet they say, "we regret we have been unable to consider it in the absence of any special memorandum or representation." Did the Utkal people forfeit the favour of the Committee simply because their small book did not take the form of a memorandum or representation? If so, it is sad that our own leaders were prevented from doing their duty because of such a characteristically bureaucratic technical objection.

Regarding the demand for the amalgamation of the Bengali-speaking tracts in Assam, and in Bihar and Orissa, the Committee only say that their colleague, Mr. Subhas Chandra Bose, is of opinion that it is reasonable and legitimate. The Committee, minus Mr. Bose, neither have nor express any opinion, though as regards Sylhet at least there have been resolutions and debates in councils and Government statements. It would be idle to speculate what would have been the result if the Bengali-speaking Muslims had made the demand.

About Sind we have already written much.

On the whole, everywhere we should be opposed to the creation of linguistic provinces which cannot be financially self-supporting. Other wise, we would not raise objections any where.

The Indian States and Foreign Policy

The official and anti-Swaraj case for the Indian States has been stated and is being prepared in such a way as to prevent India from ever being united and free. This case, so far as it is available, has been thoroughly exposed and been made mince-meat of in the Report. Only one small extract from the letter of Sir Leslie Scott, the learned counsel engaged by the princes, published in the *Law Quarterly Review*, will suffice to show the Machiavellian ingenuity with which the anti-Swaraj case is being prepared.

"The British Government as paramount power has undertaken the defence of all the States, and therefore to remain in India with whatever military and naval forces may be requisite to enable it to discharge that obligation. It cannot hand over these forces to any other Government

to a foreign power such as France or Japan; to a dominion Government such as Canada or Australia; nor even to British India" (*italics ours*).

We support the recommendations of the Committee relating to the Indian states.

Federal and Unitary Types of Government

So far as we can see from a cursory perusal of the Report, the Committee have not discussed the advantages and disadvantages of federal and unitary types of government, nor the question of having two houses in the provincial legislatures. These topics will not, therefore, be further referred to here.

The Recommendations

As the Committee were entrusted with the work of indicating the principles of the constitution, many details, to be expected in a fully drawn up bill, cannot obviously be found in the Report. So, generally, we shall not try to say what is wanting. We shall offer only a few suggestions and comments on some of the Recommendations, most of which merit cordial support.

Among the fundamental rights, (xiii) is stated as follows:

"No person shall, by reason of his religion, caste or creed, be prejudiced in any way in regard to public employment, office of power or honour and the exercise of any trade or calling".

After the word "creed" we would add, "or the province or place of his or his ancestor's birth," or words to the same effect.

We are not satisfied that the election of members of the Senate by the Provincial Councils is quite the best method, as it leads to loss of touch with the people, and responsibility becomes rather indirect and remote. In the United States of America the senator is re-chosen by direct popular vote.

As in the case of the Senate so in that of the House of Representatives it should be stated explicitly that the allotment of seats to the provinces will be on the uniform basis of population, as indicated on page 91 of the Report.

Clause 21, pp. 107-8, should be so distinctly worded as to convey the sense that our Parliament is to have the same final power of making laws as the U. S. Congress possesses; in the wording as it stands it is not

clear what will happen if the Governor-General does not signify the King's assent when a bill is "again presented to the Governor-General for the signification in the King's name of the King's assent." In the U.S.A., the practice is: "Every bill which passes Congress must have the president's signature to become law, unless after he has returned it with his objections, two-thirds of each house support it and pass it over his veto." We ought to have some such rule. The King's veto may be a dead letter as regards his white subjects in Great Britain and the white men's dominions, but we should not expect it to be so here.

Recommendation 38 lays down: "If the Governor withholds his assent from any such bill the bill shall not become an Act." This makes the Governor the final authority in legislation, which is entirely undesirable. There ought to be a provision, like the American one, for the passing of a law over the veto of the Governor.

Recommendation 23 (b) states: "The Prime Minister shall be appointed by the Governor-General and the ministers shall also be appointed by him on the advice of the Prime Minister." It is not stated whether these officers must be chosen from the elected members of Parliament and whether after their appointment they would continue to have a seat in Parliament. In the case of the Provincial Executive also, similar information is not given. Such things ought to be explicitly stated. In the absence of such information, further comment is not possible. In the U.S.A., the President chooses a cabinet of ten members, each having charge of an administrative department, but none of them having a seat in Congress."

It is not clear from the Recommendations how the central and provincial legislatures are to make the central and provincial executive respectively responsible to them. In fact, in the case of the Provincial Executive it is not even stated that it shall be responsible to the legislature.

According to Recommendation 81, the Indian Parliament may make laws for regulating the sources and methods of recruitment of the civil services in India. It is nowhere stated in the Report, this why Parliament is not to make laws similarly for regulating the sources and methods of recruitment of the army, navy and air services, nor, if Parliament is not to do it, who else is to do it.

If such laws are required for the civil services, it stands to reason that similar laws would be required for the military, naval and air services also.

Division of Subjects into Central and Provincial

In Schedule I of the Report the control of mines is mentioned as one of the central subjects, whereas in Schedule II the development of mineral resources is mentioned as a provincial subject. Hence the control to be exercised over mines by the central government will have to be clearly defined in such a way as not to hamper the development of mineral resources by the provincial governments.

Electoral Constituencies

Recommendation 9 lays down that members of the House of Representatives shall be elected by constituencies determined by law. In the introductory address to his Swaraj Constitution Mr. C. V. J. Raghavachari of Salem says :—

I am one of those who believe that these (electoral) constituencies should have no reference whatever to the boundaries of administrative provinces; but on the other hand the whole country should be divided entirely on a population basis without any regard to geographical or administrative conditions. This is one sure way of getting rid of provincial patriotism and particularism among members of Parliament, where, more than anywhere, broad harmony and outlook should prevail without factions and with only parties advocating broad and profound policies for the government and advancement of the country.

The idea seems to us very attractive, and the object still more so. It should be seriously considered whether the plan is feasible.

Centenary of the Brahmo Samaj

A century ago on the sixth day of *Bhadra*, corresponding this year to the 22nd August, Ram Mohun Roy and a few friends and followers of his met for the first time in a hired house in Upper Chitpur Road to worship the Supreme Spirit in an unsectarian manner. In that unpretentious manner were the seeds of the Brahmo Samaj sown a hundred years ago. So, in the month of August this year the Brahmos have begun to celebrate the centenary of Brahmoism. As the first Brahmo house of worship, known as the

Adi Brahmo Samaj Mandir, was erected in 1830, some Brahmos hold that the centenary should be celebrated in 1930. So, by way of reconciling both the views, the centenary celebrations will be continued in different ways and in different places till January 1930.

In Calcutta divine services have been conducted, addresses delivered by the followers of different religions, including Brahmos, conferences held for the discussion of problems relating to the community and the country, women's and children's festivals celebrated, and future programmes of work outlined. Brahmo men, women and children attended from many parts of India.

The principal day of the celebration was the 22nd August. That day in the morning Rabindranath Tagore, in spite of illness and weakness, spoke from the *Vedi* of the Sadharan Brahmo Samaj Mandir and read a brief address in Bengali on Ram Mohun Roy, which will be published in *Prabasi*. His English version of this inspiring address is published in this issue of the *Modern Review*.

The faith and ideals of the Brahmo Samaj have a universal appeal. Brahmos can fraternise with men of all creeds, colours, and countries. Ram Mohun Roy bore witness to the faith that was in him both in India and in foreign lands. Keshub Chunder Sen, Pratap Chunder Mozoomdar, Sivanath Sastri and others have done so. They all went westwards. It struck some ardent souls that, in however humble a way, the message of the Brahmo Samaj should be made known in the Far-East. So, two of our brethren, Mr. T. C. Khandwala and Mr. G. Y. Chitnis, have started for Japan, carrying with them the hopes, good wishes and prayers of their fellow-believers. On the return journey they will visit Burma and some other regions.

The Brahmos are an extremely small community, numbering only 6,388 out of 318,942,160, the total population of India, according to the census of 1921. But they are happy and hopeful that many of them have been able to serve their country and humanity in different fields of work—spiritual, moral, social, educational, literary, philosophical, scientific, artistic, political and economic. That they have been able to render this service is due, they think, to the fact that their faith gives them spiritual and social freedom. They believe that they

can be worthy of the name of man only to the extent that their spirits are serene and free, their reason unfettered, and their conscience unclogged.

Many Brahmos of the present generation are deeply discontented with their present condition, achievement and influence. They are humbly praying and hoping for a full measure of new life.

Syed Amir Ali

Though for years Syed Amir Ali had ceased to be in India, he was and continued to be of India. He was a distinguished lawyer and judge. But he will be remembered longer as a scholar and author. His works on Muslim culture and history have served to give their readers new ideas of Islam. He raised and administered many funds, on different occasions, for the relief of foreign Muhammadans. Mahatma Gandhi has written in *Young India* that, throughout the Indian *satyagraha* in South Africa, Syed Amir Ali was on the side of his Indian fellow-countrymen.

A Notable French Publication on India

Madame Andreo Karpeles and her husband Mon. Hogman, both ardent lovers of India, have started a series of publications relating to Indian culture, named "Feuilles de l'Inde" or The Leaves of India. The first volume of the series, which we have had the pleasure of receiving recently, is entitled "India and her Soul" (*L'Inde et son ame*). It is a beautifully printed volume of over 500 pages, presenting for the first time in French an anthology of the messages, thoughts, poems, stories, songs and of the scientific and artistic utterances of modern India. A detailed review of the book will be published in our next number. Here we simply wish to express our hearty congratulations to the organisers of this series, who have shown a rare taste in selecting the pieces and in publishing the first volume decorated with 40 woodcut designs by the talented artist Andreo Karpeles. The volumes under preparation are also of capital interest: No. 2 will be the "Fireflies" of Rabindranath Tagore. No. 3, "The Ho Legends." No. 4, "The Cradle Songs of Bengal" by Abanindranath Tagore, etc. We wish the publishers all success and recommend the opening volume "India and her Soul," to the general public interested in

contemporary India and her creative artists and thinkers.

The Late Mrs. Villard

Elsewhere in this issue we publish an article on Mrs. Fannie Garrison Villard, an apostle of peace and freedom, by Srimati Ragini Devi. Her portrait is published here.

Mrs. Fannie Garrison Villard

Ram Mohun Roy's Last Illness

The life of Dewan Ramcomul Sen by Peary Chand Mitra (1880) contains extracts from some letters written to the former by Professor H. H. Wilson. In one of these, dated the 21st December, 1833, he wrote:

In a letter I wrote to you I mentioned the death of Ram Mohun Roy. Since then I have seen Mr. Roy's brother, and had some conversation with him on the subject. Ram Mohun died of brain fever; he had grown very stout, and looked full and flushed when I saw him. It was thought he had the liver, and his medical treatment was for that and not for determination to the head. It appears also that mental anxiety contributed to aggravate his complaint. He had become embarrassed for money, and was obliged to borrow of his friends here; in doing which he must have been exposed to much annoyance, as people in England would as soon part with their lives as their money. Then Mr. Sindford Arnot, whom he had employed as his Secretary, importuned him for the payment of large arrears which he called

arrears of salary, and threatened Ram Mohun, if not paid to do what he has done since his death, claim as his own writing all that Ram Mohun published in England. In short, Ram Mohun got amongst a law, needy, unprincipled set of people, and found out his mistake, I suspect, when too late, which preyed upon his spirit and injured his health. With all its defects, he was no common man, and his country may be proud of him.

Incidentally it may be pointed out that this extract supports our remark in the *Modern Review* for May, 1926, page 562, footnote, that Sandford Arnot "was not quite reliable."

Dr. Jolly's "Hindu Law and Custom"

The Greater India Society now publishes, for the first time, an authoritative English translation of the German work "Recht und Sitte" published as early as 1846 by Dr. Jolly, the venerable professor of Sanskrit and Indology in the University of Würzburg. Though published more than thirty years ago the book is still the most comprehensive and critical history of Hindu Law. The translator, Mr. Batakrishna Ghosh, a talented Sanskritist and research worker of the Society, has spared no pains to bring the book up-to-date with the valuable suggestions of the learned author, who is too old (over 78) to revise his book in the light of the latest researches into Hindu law. Dr. Jolly in revising the English version of Mr. Ghosh generously praises the translator for his fidelity to the original German text as well as for his careful revision and annotations. The learned German savant writes in his Foreword:

"During the more than thirty years which have elapsed since the publication of 'Recht und Sitte' the study of Sanskrit law-books has been progressing with rapid strides and it is a matter of regret that my advanced age and ill-health should have prevented me from bringing my work thoroughly up-to-date before it was translated into English. It is hoped, however, that the learned notes added by the translator will to some extent supply this deficiency."

He further wrote to Mr. Ghosh: "The translation is excellent and its value has been greatly enhanced by your very interesting and instructive notes."

Dr. Jolly discusses further in his Foreword the value of a comparative study of Dasa mashastra and Arthashastra. The latter "though a text-book of polity is replete with useful information on Law and Judicature as well."

The veteran German historian of Hindu Law pays a warm tribute at the end to the Indian scholars and publishers working in the same field.

Important additions to our knowledge of Dharmashastra literature have been supplied by the publication in India of such valuable texts as the *Balakrda* of Visvarupa the earliest gloss of Yajñavalkya, Apararka's commentary, on the same work and Balambhatta's (not Lakshmidēvi's) commentary on the *Muktasara* The Tagore Law

Prof. Dr. Julius Jolly
Würzburg

lectures, the Sacred Books of the Hindus, Madras Law Journal, Anandasrama texts and other periodical publications abound in valuable informations regarding Sanskrit Law..."

"Hindu Law and Custom" is the *second* in the series of the Greater India Society publications and it may be had either in the office of the Society (91, Upper Circular Road, Calcutta) or from M. C. Sarkar and Sons, Agents (90-2A Harrison Road, Calcutta).

The "Public Safety Bill"

We do not know if the Public Safety Bill has been drafted by the Government of India with a view to meet a real emergency or merely as a gesture to convince the present anti-communist cabinet in England of the wide-awakeness of the Government of India to problems and dangers which, whether real or non-existent, would readily rouse the British Conservative fighting spirit. Such a rousing of British passion, even if achieved by giving a false alarm, would doubtless have its desired effect. The British Conservatives would at once realise the urgency of keeping the power of such dutiful and devoted servants intact in India, the land of their financial hopes, however much the Indians themselves may agitate for the curbing of the irresponsible powers of the Anglo-Indian Bureaucracy.

Let us, however, assume that communist propaganda is rampant in India and a large number of foreign communists are daily moving about all over the country, preaching disaffection and violence against the established order. Assuming such a state of affairs, we do not find any justification for such legislation. If the draft bill is passed into law, Government will be in a position to use the same sort of irresponsible and lawless powers against foreigners as they have been for a long time using against the Indians themselves whenever the latter have protested with any degree of strength against British domination and exploitation of India. In this sense the Public Safety Bill is merely a Foreigners' Edition of Regulation 3 of 1918 and sister regulations, ordinances and "laws." A study of the draft Public Safety Bill clearly shows that, although it is theoretically directed against foreign communists of the violent type there is no guarantee that it will not be used (abused?) against all foreigners who show or act in sympathy with Indian aspirations, economic

as well as political. It is not necessary to discuss the clauses which describe the persons who are the object of this legislation; for the way in which the proposed law will be used is simply one great loop-hole for abuse. Under this new law if it is passed, the Governor-General in Council may order in writing any such (as described) person to remove himself from British India within such time and in such manner and by such route and means as are specified in the order. The Governor-General in Council or any officers authorised by them will have the right to enforce compliance with the order by "any and every means." They could, for example, command the master of any ship leaving India to carry any undesirable person and his dependants, if any, away from India and land him or them in any port specified by the officials to which the ship may be proceeding. That is to say, an American "Communist" with his invalid wife and infant daughter, may be, by order of the Government of India, transported to Oslo or Zanzibar or any other port that may be available. The passage to this far off port will be graciously borne by the Governor-General in Council, i.e., by the people of India. But no one knows how and where the American and his dependants will find necessary funds to maintain themselves in their enforced exile and to ultimately get back to America. Many foreigners stay in India to earn a living and their banishment will often deprive them of their means of livelihood. Who will compensate them for their loss? Who will feed them until they obtain a job, let us say, in Constantinople, or Yokohama or wherever the ship chosen by the Governor-General may carry them? What will they do if the Turkish, Japanese or any other government in whose territories they will be so peremptorily landed, order them to leave their country forthwith? One can easily see that this new piece of proposed legislation is full of possibilities for all foreigners who desire to be persecuted, tyrannised over, tormented and tortured in every moral, physical, economic and political sense. And there is no surety that the foreigner who will be so mauled by the Government of India will be one who deserves such treatment. For No court shall take cognizance of an offence under this section save upon a complaint made by an order of or under authority from the Governor-General in Council.

AND

No removal order shall be called in question in any Court or by or before any other authority whatsoever and nothing in section 491 of the Code of Criminal Procedure 1898 shall apply to any person who has been committed to custody under section 6 or any other person in respect of whom a removal order has been made and no suit, prosecution or other legal proceeding whatsoever shall lie against any person in respect of anything in good faith done or intended to be done under this Act.

God help the foreigner who incurs the displeasure of the Government of India !

We are, needless to say, not communists ; but we believe that communism is a serious economico-political view-point held by many serious minded and intelligent human beings, not all of whom are anti-social bomb-throwers. Even those who are advocates of bomb-throwing may legitimately contend that along with themselves many Imperialists, Monarchists, Democrats, Republicans, Fascists, etc., also believe in throwing bombs (from aeroplanes) for the promotion of their respective causes. So that, communists are not any extraordinary humans for whom any government should make extraordinary laws. If any communist breaks the normal laws of a country, he should be dealt with and punished in the usual legal way, just as a person would be who stabbed another fellow-man for not singing "God save the King," or "*la Marseillaise*". If an Indian or a foreign communist worked within the limits of law for the overthrow or reform of the existing order, we do not see why he should be punished. All causes have a right to be preached and supported by all legal means. Even a good cause has no right to be advocated illegally (as shown above). So that, repressive and extraordinary legislation directed against any social, political and economic view-point can never be justified. We read a lot about communism, its principles and methods, in such standard books as the Encyclopaedia Britannica and the Encyclopaedia of Religion and Ethics and in numerous special treatises. The Government of India do not prohibit the circulation of these books in India. Then, why should they adopt oppressive measures against persons who give out the same ideas by word of mouth? And that in the barbarous way suggested in the proposed Public Safety Bill.

India a Good Ground for Communist Propaganda

Sir Ibrahim Rahimtoola has written a

very pertinent and well-reasoned letter to the *Indian Daily Mail*, Bombay, in connection with the spread of communism in India. His standpoint is that to remove communist propaganda from India one must first remove the causes that foster the growth of communist ideas among the Indian masses. Unless this is done, it is no use attempting its removal by force or in any other way. Says Sir Ibrahim :

The soil has been suitably developed in consequence of the economic backwardness of the people of India cannot I think be disputed. When large masses of people have not sufficiency of food and adequate clothing they would readily fall victims to any insidious propaganda which promises plentiful supplies for their daily necessities. With the masses contented with their lot in consequence of having adequate means of livelihood such propaganda would fall on barren soil. Such is the case especially in India. The people of this country follow in the main two principal religions in the world, namely Hinduism and Islam both of which enjoy contentment with the lot in life in which God has chosen to place them. They regard existence on this planet as a mere passing phase and as preparation for the next existence. But for this faith there would have been great trouble much earlier and even now on a much wider scale.

Agitators can and do preach that want and insufficiency of food and clothing are due not to inadequacy of production but to the high cost of foreign administration and to exploitation of the land in the interests of foreigners. This policy produces insufficiency of food and clothing because the whole production in India is not available for the Indian people. This doctrine has gradually upset the cherished faith of the people of India, and when they are urged to be up and doing in order to retain all that is produced in India for the benefit of the people of India it tells.

Sir Ibrahim next criticises the Government's revenue policy. He thinks that the sources chosen for raising revenue are provocative to the masses and the total of taxes paid by the people is excessively and unjustly heavy. We are told :

The food grains of the masses are subject to land as esment and the surplus produce has to pay heavily increased railway freights. Their clothing is taxed, their salt, their fuel, their kerosene, their sugar and even the grazing of their cattle are subject to taxation. The District Local Boards, the Municipalities, the Provincial Government and the Imperial Government are levying taxes, both directly and indirectly, which substantially reduce the savings, if any, in agriculture. The petty tyrannies of the village tax-gatherer and the village police are also some of the factors which affect the economic well-being of the masses. Is it any wonder that the masses, situated as they are under these conditions, should fall an easy prey to political or communist agitation? They have really very little stake in the country. They stand to lose hardly anything, while rosy pictures

drawn for their future prosperity cannot but have an unsettling effect.

The Government is not as keenly alive to the necessity for increasing the national income of India as they are to absorbing a disproportionately large share of it for purposes which mainly do not go to increase either the national income or the capacity of the people to produce more wealth. Sir Ibrahim Rahimtoola says :

The whole problem, as it appears to me, is a problem of national income. If the national income of a country is insufficient to meet the cost of administration and to supply the minimum requirements of the people, that country must slide downwards to what depths it is difficult to realise.

In all civilized countries it is the primary duty of the administration to devote all attention to increasing the national income of the people, and continuous action by the executive is one of the essential functions which the Government of a civilized country discharges. I wish I could say that the Government of India does this.

Portrait of Rabindranath Tagore

For the portrait of Rabindranath Tagore published in this issue we are indebted to Mr. Pinakin Trivedi of Santiniketan, who photographed him on the first day of the current Bengali year on his coming out of the Mandir after Divine Service.

Romain Rolland on Ram Mohun and the Indian Renaissance

To the special number of the international French review "Europe," consecrated to the centenary of Tolstoy's birth, M. Romain Rolland contributes a paper entitled "The Response of Asia" (*La réponse de l'Asie*). While surveying therein the spiritual correspondence of Tolstoy with China, Japan, Persia and India, Rolland with the vision of a true historian traces the broad outline of the picture of the renaissance of Modern India :

"In 1828 one of the greatest spirits of our time, Raja Ram Mohun Roy, founded the community of the *Brahma Samaj*, uniting all the religions of the world into a religious system based on *faith in one God without a second*. Such an idea was necessarily confined at first within a group of *elite* and gradually ever since roused profound echoes in the souls of the great mystics of Bengal and through them, it is permeating, little by little, the masses of India.

"Europe is as yet far from imagining the prodigious resurrection of Indian genius which was announced about the year 1830 and which shone resplendent towards 1900.

That was a flowering season, as sudden as it was brilliant, in all the fields of spiritual activity : in art, in science, in thought. The single name of Rabindranath Tagore, detached from the constellation of that glorious family, hatched its lustre over the entire world.

"Almost simultaneously, we find Vedantism renovated by Dayananda Saraswati, the founder of the *Arya Samaj*, also called the Indian Luther; and we see Keshub Chunder Sen making the *Brahma Samaj* an instrument of ardent social reforms and the ground of rapprochement between the Christian religious idea and that of the Orient. Above all, the religious firmament of India was illuminated by two stars of primary grandeur, suddenly appearing—or reappearing after centuries—(speaking after the grand Indian style of profound significance)—two miracles of spirit: Ramakrishna (1836–1886), the 'mad man' of God—who embraced in his love all forms of Divinity; and his heroic disciple, Vivekananda (1863–1902), whose torrential energy had reawakened in his exhausted people the God of action, the God of the Gita."

We know that Mon. Rolland, as a genuine and passionate lover of India's spiritual heritage, started his survey of this *renaissance* with "Mahatma Gandhi." We know also that he is devoting these days to the study of the Ramakrishna-Vivekananda epoch of this grand spiritual drama, which will soon be made public. We hope and pray that health and leisure may be granted to him to compose another of his *Symphonic Heroique* on Ram Mohun, the precursor and prologue of this grand Drama, thereby completing his trilogy on the Resurrection of India. —K. N.

New Light on the Brahma Sabha of Ram Mohun

Mr. N. C. Ganguly, the author of the latest study on "Ram Mohun Roy", from which a chapter is printed in this issue, has discovered two new facts of capital importance. The Raja with his characteristic universality of outlook invited the members of every denomination then available in Calcutta to participate in his new religious service, Armenians, Jews, Eurasian Christians all joining in the chorus of adoration and a Mahomedan musician, Ghulam Abbas, supplying the musical accompaniment with his pakhoos.

The Raja further found to have appointed one non-Brahman Biswambhar Das as the Secretary of his *Brahma Sabha* which was not therefore a close preserve for the Brahmans, as it was supposed to be. —K. N.

drawn for their future prosperity cannot but have an unsettling effect.

The Government is not as keenly alive to the necessity for increasing the national income of India as they are to absorbing a disproportionately large share of it for purposes which mainly do not go to increase either the national income or the capacity of the people to produce more wealth. Sir Ibrahim Rahimtoola says :

The whole problem, as it appears to me, is a problem of national income. If the national income of a country is insufficient to meet the cost of administration and to supply the minimum requirements of the people, that country must slide downwards to what depths it is difficult to realise.

Mr. N. C. Ganguly, the author of the latest study on "Ram Mohun Roy", from which a chapter is printed in this issue, has discovered two new facts of capital importance. The Raja with his characteristic universality of outlook invited the members of every denomination then available in Calcutta to participate in his new religious service, Armenians, Jews, Eurasian Christians all joining in the chorus of adoration and a Mahomedan musician, Ghulam Abbas, supplying the musical accompaniment with his pakhoj.

The Raja further is found to have appointed one non-Brahman Biswambhar Das as the Secretary of his Brahma Sabha which was not therefore a close preserve for the Brahmans, as it was supposed to be. —K. N.

MESSAGE TO THE WORLD LEAGUE FOR PEACE

By RABINDRANATH TAGORE

A literal translation of the letter addressed to the
Poet by the Director of the World League for Peace, Geneva

Ligue Mondiale pour la Paix. Geneve le 13 juin, 1928.

Honoured Sir,

Be pleased to permit us to approach you through the esteemed personality of Monsieur Romain Rolland, to pray that you be gracious enough to grant us an autograph for the Golden Book of Peace.

This work will consist of reproductions of the thoughts on peace from the most illustrious personages and the most eminent writers of each country.

We have received, up to this day, for this book, over 270 documents, among which are the autographs of Messrs. Heriot, Briand, Paul-Boncour, Poincare, Briens, Marcel Prevost, Chamberlain, Stresemann, Ador, Henri Barbusse, Maurice Donnay, Vandervelde, Charles Richet, Quidde and others.

We pray that you believe, Honoured Sir, that we shall consider it a very great disappointment if you do not consent to honour the Golden Book of Peace with some reflexion emanating from your great heart.

We feel sure that you will undoubtedly approve of our effort and that you will contribute to its moral success by letting us have a few lines that we solicit from your generosity.

Be kind enough, honoured monsieur, to accept the expression of our great admiration and the assurance of our profound gratitude.

(Sd.) Georges Dejean, Director, Ligue Mondiale pour la Paix.

A piece of vellum was sent for an autographed message from the Poet and he wrote the following lines and signed it both in English and Bengali :-

In our political ritualism, we still worship the tribal god of our own make and try to appease it with human blood. This fetishism is blindly primitive and averts truth that leads to death-dealing conflicts. To many of us it seems that this blood-stained idolatry is a permanent part of human nature. But we know in our past history, there have been things born of dark unreason producing phantoms of fear in our mind and ferocity of suspicion. Within the boundaries of night they also had loomed large and appeared as everlasting. But a great many of them have already vanished, making the social life of a fruitful peace possible in civilised communities.

Let us, to-day, by the strength of our own faith prove that the homicidal orgies of a cannibalistic politics are doomed, inspite of contradictions that seem overwhelmingly formidable.

UNITARIANS AND THE HALL OF FAME.

OR

THE RELIGION OF EMINENT MEN

By JABEZ T. SUNDERLAND

WHY does the American National Hall of Fame contain the names of so many Unitarians?

This question is not one of idle curiosity. There is in it a lesson which may well be pondered by all churches and all persons who care for religion.

No other single event connected with the celebration (in April and May, 1925) of the Centenary of American Unitarianism was so picturesque as the march (Sunday afternoon, April 19th) of the great procession of men, women, and children, through the long corridor of the Hall of Fame in New York, when a group of little girls, dressed in white as the procession advanced placed wreaths of flowers on the busts or the tablets of the *twenty-two eminent Unitarians* who had places there among the nation's most honored dead.

What is the whole number of names in the Hall of Fame, and what proportion do the Unitarians bear to the whole? The answer is, the total number is sixty-five and therefore the twenty-two Unitarians form a little more than one-third of all.

The names of these twenty-two (arranged alphabetically) are:

John Adams
John Quincy Adams
Louis Agassiz
George Bancroft
William Cullen Bryant
William Ellery Channing
Peter Cooper
Charlotte Saunders Cushman
Ralph Waldo Emerson
Benjamin Franklin
Nathaniel Hawthorne
Oliver Wendell Holmes
Thomas Jefferson
Henry Wadsworth Longfellow
James Russell Lowell
Horace Mann
John Marshall

Maria Mitchell
John Lothrop Motley
Francis Parkman
Joseph Story
Daniel Webster

Is it not astonishing, that a group or body of religious people so small in numbers as the Unitarian Church should furnish so large a proportion of the men and women who are acclaimed by the nation as its greatest sons and daughters? Is there not some mistake about it?

If we turn to the census of the churches, perhaps that will help us. The 1924-25 issue of the Year Book of the Churches, edited by Dr. E. O. Watson, secretary of the Washington office of the Federal Council of Churches gives the total membership of Protestant churches in this country, in 1923, as 48,224,014, and the total membership of the Roman Catholic church as 18,260,793. Adding these we have 66,484,807 as the whole number of members of all the Christian churches in the United States. What is the total membership of the Unitarian churches? It is about 110,000, or one six-hundredth part of the whole church membership in the land. Yet, this very small fraction, this one six-hundredth part of our Christian population actually contributes, as we have seen, one-third of the names in our National Hall of Fame.

Turning now from the census of the churches to the census of the whole nation, what do we find there? We find something quite as favorable to Unitarianism; the total population of the country is about 110,000,000. Of these, the Unitarians (110,000) form about one-tenth of one per cent. Yet it is this one-thousandth part of the whole population of the country that has furnished between thirty-three and thirty-four per cent of the names in our Hall of Fame, and seventeen per cent of the Presidents of the United States.

Let us pursue our inquiry further still. Fortunately, one of our eminent American scientists has recently published book which throws very direct and very important light on the subject.

In his volume, "The Character of Races," issued in 1924, a work which gives the results of extensive scientific investigation of the causes which produce eminence or inferiority in races and in individual men, the author Dr. Ellsworth Huntington, of Yale University, calls attention to the remarkable number of distinguished men and women produced by the Unitarian Church. He says "In proportion to their numbers the Unitarians, and especially their clergymen, have contributed a greater number of eminent leaders than has any other group of Americans for whom we have statistics." In the next paragraph he cites the fact mentioned above of the amazing disproportion of the Unitarian names in the Hall of Fame of New York University; and he adds: "The productivity of the Unitarians in supplying leaders of the first rank has been 150 times as great as that of the remainder of the population, while that of the Unitarian ministers has been nearly 1,500 times as great."

Since Professor Huntington wrote his facts, and conclusions have received confirmation from other sources. One of the most striking is that of investigations made by President Clarence Cook Little of the University of Michigan. On the 2nd of April, 1926, President Little gave an address before the Michigan Schoolmaster's Club, in which he affirmed his conviction that "intellectual leadership is closely connected with liberality in religion," and presented statistics which he had prepared, stating that persons belonging to various Christian denominations occur more or less frequently in "Who's Who in America" according to the liberality or illiberality of their creed.

President Little said that, using three letters of the alphabet, A. M. and W. he had tabulated four groups—medical men, scientists, authors or writers, and lawyers. The results, calculated on a percentage basis, when compared with the percentages of the various religious denominations in the whole United States, showed that Unitarians occur more than twenty-eight times as frequently as one would expect; Episcopalians ten and six-tenths times; congregationalists five and eight-tenths times; Universalists five and

five-tenths times, and Presbyterians three and five-tenths times; while in marked contrast with these Methodists occur only about three-fifths as many times as expected; Baptists a little more than two-fifths, and Roman Catholics between one-quarter and one-fifth.

The difference between denominations apparently is greater among scientists than among lawyers,—an interesting fact when one considers that science continually looks for new truths while law has for its chief duty the maintenance of the existing order. Thus, among the scientists, the Unitarians are found to be seventy times as numerous as expected, and the Congregationalists nine and four-tenths times; while the Catholics are only about one-fifth as many as their occurrence in the general population would indicate that they should be.*

What is the explanation of these almost incredible facts?

"There is only one possible answer, as both Professor Huntington and President Little make clear.†

The explanation is the superiority of Liberal Religion, the superiority of the Unitarian Faith, as a creator of the independent thinking, of intellectual strength, of moral character, and therefore of fitness and power to lead in the nation's higher life.

In other words the explanation is to be found in the fact that Liberal Religion in all its forms, but especially Unitarianism, differs radically from all forms of "orthodoxy," in that far beyond them all it trusts reasons, encourages investigation in religion as well as everywhere else; looks upon thinking as a religious duty, as much a religious duty as believing, and necessary as a preliminary to all believing that is worth anything or safe; welcomes science; rejects all backward-looking and mind-fettering creeds, and all external authorities imposed by priests

* It is worthy of notice in this connection, that when Sir Francis Kelton, many years ago made his study of the scientific men of England published in 1874 in his "English Men of Science: Their Nature and Nurture," he found that a surprising number of them, a number out of all proportion to the whole, were sons of Unitarian ministers.

† "Perhaps it ought to be said, that neither of these two men is a Unitarian; both are associated with orthodox churches; hence they cannot well be suspected of bias in favour of Unitarianism."

or churches; lifts the ethical above the theological, the practical above the ecclesiastical, deeds above profession; and dares to stand on its own feet and break new paths. These are exactly the qualities which modern Unitarianism in all its history has fostered and striven to develop in its people.

These facts and deductions are pointed out in no spirit of boasting, or arrogance, or

self-praise, or as a "flourish of authority," but simply and only to make clear to the American people the extraordinary value of the principles, the ideas, the religion for which the Unitarian Church stands, in building up the higher intellectual and moral life of the nation, and in creating leadership in all that is best in Christian civilization.

ART IN THE WEST AND THE EAST

BY NAGENDRANATH GUPTA

II

EUROPEAN writers in the references to Eastern art usually draw the line at Byzantium or Persia. Some writers have traced an affinity between Roman and Japanese arts. The land of the Chrysanthemum and the geisha has had a strong fascination for European travellers and holiday seekers, but no attempt was made to ascertain the indebtedness of Japanese and Chinese art to the ancient art of India. Much of the annals of Indo-Aryan civilisation is pre-historic but not mythic. History as such was never written by the Aryans, and their wisdom in this respect is justified by the doubtful truthfulness of many historical records. These ancient people in India recorded their thoughts on the tablets of their memory. So thoroughly saturated were their minds with a profound conviction of the illusory nature of the objective world, the evanescence of all worldly things and the transience of kingdoms and empires that neither dates nor history had any interest for them. The Hebrew Preacher said, "Vanity of vanities, all is vanity." This is an obvious truth but to the Aryans in India it was deep and real philosophy colouring all thought and governing every action in life. The original meaning of the Sanscrit word *itihāsa*, now translated as history, is tradition, and in this sense the great epics, the Ramayana and the Mahabharata, and several of the ancient Sanscrit dramas are historical. Cities like Ayodhya, Indraprastha

and Hastinapur were not poetic inventions. Among the ruins around Delhi a mound of earth is still known as the site of Indraprastha, frequently named in the Mahabharata. In the same epic a detailed account is given of a splendid Assembly Hall built for the Pandava Princes.*

Architecture is the earliest form of formative and decorative art. It is mentioned that the hall was ornamented with many pictures and the floor was so cunningly devised that it produced an optical delusion. The famous Rishi Narada, who was present as an honoured guest, gave King Yudhishthira elaborate descriptions of the assembly halls of some of the gods. In the *Mrichhakatilaka* (*Toy Cart*) believed to be the oldest Sanscrit drama and supposed to have been written a hundred years before Christ, there is a minute and full account of seven chambers in the mansion of Vasantaseva, the heroine. A man who has entered the house for the first time gives a description, beginning with the portico, or the various pictures and ornaments in the rooms. In the *Meghadutam*, or the Cloud Messenger, of the poet Kalidasa there is a wonderful, panoramic description of landscape, such as would be seen from an aeroplane sailing slowly over the country. Miniature paintings and likenesses from which an individual could be at once recognised

* The Mahabharata, Sabha Parva.

are mentioned in the Puranas, dramas and other works.

Beyond these records there are no remnants, no ruins, no fragments of Indo-Aryan art of the Vedic or epic period, or even of the time of Vikramaditya, the patron of the famous nine intellectual gems, of whom the poet Kalidasa was the most brilliant, the promulgator of one of the two eras now in vogue in India. There is a wide gap of time between prehistoric Indo-Aryan culture and the remains of sculptural and other arts which are found at the present time. No real broad-minded lover or critic of art in the West of either the traditions or remnants of art in India had any opportunity of observation or study in the early period of British rule in India. Attention was first drawn to the evidences of Brahmanic and Buddhist art by departmental Anglo-Indian writers, whose attitude of ill-disguised contempt towards the past of India was emphasised by their ignorance. Departmental archaeologists and antiquarians could not forget that they belonged to a race which now rules India, and the sense of superiority obscured their judgment. Pronounced scepticism and even denial of the great antiquity of the Vedas, utter ignorance of Aryan philosophy and literature, and the contempt for a race of heathens influenced their pronouncements upon the relics of Indian art. From the sculptures of the Gandharan school, admittedly the work of inferior Graeco-Roman artists and artisans, official English archaeologists rushed to the conclusion that India never had any original art, and everything was borrowed from ancient Persia, Greece or Rome. With a little more ingenuity these critics might have urged that Aryan mythology is borrowed from the Greek, that Krishna is merely an imitation of the Greek Orpheus, that the Mahabharata is a clever plagiarism from Homer, and, to complete the *reductio ad absurdum*, it may be maintained, with a sovereign contempt for chronological sequence, that the doctrine of *maya* must have been borrowed from Berkeley.

High above these pinchback professors of art and brummagen archaeologists stands John Ruskin, whose voice is heard as that of a preacher and prophet in his immortal books and of whom no one can speak without admiration and reverence. Ruskin himself wrote that he had seen every stone of Venice, but of Indian art he had seen

nothing beyond the careless and unrepresentative collection of worthless modern work scattered about in the British and South Kensington Museums. The great writer had never heard of the sculptures of Elephanta and Ellora, the paintings of Ajanta and the works of Indian art in Ceylon and Java. The poor specimens that he saw he designated as "barbarous grotesque of mere savageness as seen in the work of Hindoo and other Indian nations"* The still more grosser form of the barbarous grotesque was to be found among "the complete savage of the Pacific Islands" Thus in the opinion of Ruskin the Hindoo and other Indian nations were only one degree removed from the complete savage and the cannibal. In another place treating of architecture and referring to India, Ruskin makes a curiously infelicitous suggestion about keeping the lamp of memory alight "Let us imagine our own India House adorned in this way, by historical or symbolical sculpture: massively built in the first place; then adorned with bas-reliefs of our Indian battles and fitted with carvings of Oriental foliage, or inlaid with Oriental stones; and the more important members of its decoration composed of groups of Indian life and landscape, and prominently expressing the phantasms of Hindoo worship in their subjection to the Cross"† If this idea had been carried out and a building of the India Office designed in accordance with these suggestions it would have been a daily affront to Indian visitors and a monument of political unwisdom. But if Ruskin wrote of Indian art and the Indian people in ignorance he wrote of the followers of the Church of Rome with full and finished knowledge, and he poured his vial of contempt on 'Romanist idolatry' with burning iconoclastic zeal:—"It matters literally nothing to a Romanist what the image he worships is like. Take the vilest doll that is screwed together in a cheap toy-shop, trust it to the keeping of a large family of children, let it be beaten about the house by them till it is reduced to a shapeless block, then dress it in a satin frock and declare it to have fallen from heaven, and it will satisfactorily answer all Romanist

* Ruskin, *The Stones of Venice*, Vol. III

† *The Seven Lamps of Architecture. The Lamp of Memory.*

purposes."* Ruskin's literary judgment also is startlingly unconventional: "Cast Coleridge at once aside, as sickly and useless; and Shelley as shallow and verbose."†

Ruskin was far too great a man to wrangle with his early critics, but once, in the preface to the second edition of "Modern Painters" he replied to a critic in Blackwood's Magazine, and the first sentence may be quoted here: "Writers like the present critic of Blackwood's Magazine deserve respect—the respect due to honest, hopeless, helpless imbecility." The critic was none other than Professor John Wilson, 'the fair-haired Hercules-Apollo,' famous under his literary name of Christopher North. Language of such scathing contempt has not been applied even to the most ignorant critics of Indian art.

The word 'Hindu' is from the Persian word 'Hind' meaning black, and refers to the dark complexion of the people of India, but it has been accepted latterly by the Hindus themselves as distinctive of their religion. The word Hind occurs in the famous *guzal* of Hafiz:

"Agar an Toork Shirazi badastarad dile mara.

Bakhale hindyash bukshum Samarcando Bokhara ra.

If that Toork from Shiraz would take my heart in his hand I would make a gift of the cities Samarcand and Bokhara in exchange for the dark mole on his skin."

The word is an obvious corruption from the Sanscrit word Indu, the moon.

The illustrious Chinese traveller Hsien-tsiang, who travelled extensively in India, says that the country was called in ancient times Shin-tu (Sindh), also Hsien-tau ('Hindu') but the right pronunciation of the word is in-tu (Indu). The explanation of this name may be given in the traveller's own eloquent words: "The bright connected light of holy men and sages, guiding the world as the shining of the moon, have made this country eminent, and so it is called in-tu (Indu), the moon." It will be more accurate to refer to early Indian art as Brahmanic, Jain and Buddhist, for the word Hindu was unknown until the establishment of Islamic rule in India.

Preconceived prejudice, inability to appreciate the orientation of Indian thought and

Indian art, utter ignorance of ancient Indian theogony as contained in the Sanscrit scriptures, and of the hagiology of Buddhism and Jainism, and irresponsible empiricism have combined to make supercilious outside estimates of ancient Indian art utterly valueless. But the appeal here is not that of embalmed mummies and the trappings of death which have turned archaeologists into grave diggers, but of living thought and a profound symbolism. As Indian philosophy and Indian thought have penetrated the thick armour of Western materialism so has Indian art been vindicated and raised to its rightful place in the world of art. Continental critics like Foucher and Rodin, himself a great artist, the patient and earnest labours of Mrs. Herringham and her Indian helpers, and Victor Goloubeff have represented Indian art in its true light. Havell's works on Indian art and ancient Indian civilisation display an insight, an understanding and an intimate knowledge worthy of high admiration while Coomaraswamy has brought all the resources of his scholarship and all the enthusiasm of his patriotism to bear upon his exposition of Indian and Ceylonese art. And they have been succeeded by others, including a number of Englishmen, who have borne enthusiastic testimony to the greatness of Indian art, which is rapidly winning admirers and adherents in the West.

Time alone is not responsible for the destruction of works of art in India. Almost all vestiges of religious paintings have been effaced by the blind and indiscriminate passion of iconoclastic zeal. In considering the relics of sculptural and architectural arts that are still left the first feature that has to be stressed is the selection of the sites. With all the modern facilities of travel places like Elephanta, Karle, Ajanta and many ancient temples in South India are not difficult of access now. In ancient times they were entirely removed and remote from the haunts of men, and the men who worked in the cave temples and on rock sculpture lived in a state of complete isolation. The only forethought that they showed was in choosing a spot where there was a supply of fresh water near at hand, a natural spring of clear water or some mountain stream gushing out near by. In other respects their abnegation was as complete as of the *yogis* who renounced the world and went to the forest for meditation. It was sacred art at its highest and holiest. Their studio was the

* Stones of Venice, Vol. II

† Elements of Drawing, Appendix.

sea-girt island, or the steep mountain side. There were no admiring crowds to watch their work from day to day, no titles awaiting to reward their labours. It was a work of love, devotion and faith. The Greek sculptor chiselled out his figures or temples from blocks of marble or stone; the Indian sculptor attacked the whole mass of frowning unyielding and reluctant rock, and with hammer and chisel carved out colossal or small images, magnificent fluted pillars, wide, spacious monastic halls. It was the work of Titans done by humble and gentle laymen and monks, whose art was part of their religion. The physical peril was as great as the work was strenuous. The scaffoldings on which the sculptors worked must have been often erected over yawning chasms and a slip or a false step would have meant instantaneous death. Their indifference to fame was no less remarkable than their disregard of personal comfort and personal safety. There is no inscription, no memorial tablet to afford the slightest clue to the master artists who have left the impress of their handiwork on these rocks. Were they to obtrude their identity while making the images of the gods? Mr. Havell has written of the unknown Indian Michaelangelo, Pintoretto and Perugino who worked in the caves of Elephanta and Ajanta. In Western art we can easily reel off the names of ancient, medieval and modern artists, but in India not a single name has come down to posterity except the architects and sculptors of myth and fable, names like Visvakarma, the architect of the gods, and Moy, the demon builder. Ancient Indian art was an anonymous consecration of high talent, the culmination of self-surrender and self-effacement.

The second obvious feature of ancient Indian art is the greater attention paid to the durability of sacred structures as compared with secular. The Bharhut stupa is one of the oldest examples of Indian art and its date is approximately estimated about the third century B. C. There are no royal palaces of that date of which even the ruins have much attraction. The sculptures at Bharhut, Sanchi and Amaravati are not only of great artistic value but of considerable historic and educative importance. The great Chinese traveller Hsuen-Tsang when he visited India in the seventh century of the Christian era found the Nalanda University flourishing in all its glory but the old

capital cities of Magadha and other parts of India were in ruins. The universities at such places as Nalanda, Ajanta, Sudhanya Kata and Takshasila were sacred institutions and sacred learning was imparted in them. In the Brahmanic temples was heard the rise and fall of the Vedic chant, in the Buddhist chaitya houses learned and pious monks expounded the Law, in the Jain temples learned priests and Monis discoursed on the great Tirthankars, the Pillars of the Universe, the saints whose colossal images are to be seen at Jain shrines. The importance of Ellora is due not only to the Kailash temple, a marvellous combination of the finest sculpture and architecture, but also to the contiguity of Jain and Buddhist shrines. The Indra Sabha at Ellora is a Jain temple with sculptured figures of Mahavira, the twenty-fourth and last Tirthankar and a contemporary of the Buddha. There can be no more conclusive evidence of the tolerance of religious faiths in ancient India than that a great Saiva temple should be seen near other temples of other religions.

Of Ajanta Mr. Havell writes :

"Very rarely in the world's history has there come together that true symphony of the three arts—painting, sculpture, and architectonic design—creating the most perfect architecture, which are so beautifully harmonised at Ajanta."

In many places in India there are numerous relics of the finest plastic art, but the Ajanta frescoes reveal the acme of pictorial art, in its perfect technique, the bold and sure sweep of the lines, the living reality of portraiture, the variety of designs, the vividness and graciousness of expression. The idealised likeness of Prince Siddhartha, the Buddha that was to be, arrests the eye by the nobility of the countenance and the suggestion of latent spiritual splendour. A copy of a splendid fresco representing the Buddha after he had attained Enlightenment returning to Kapilavastu, with his beggar's bowl in his hand to see his wife Yasodhara and his son Rahul, was widely admired at the recent exhibition of Indian paintings at the British museum as "perhaps the noblest existing example of the art of the Gupta period, the classic age of all Indian culture." The pictures are not all hieratic and cover a wide range. Even in the sacred pictures there is evidence of the catholicity of the Indian mind. Brahmanic divinities are represented as freely as the Buddhist heavens. The Ajanta paintings cannot be dismissed as an

isolated or fortuitous incident; they are the remnants of a school of painting as gifted as the world has ever known. Buddhism undeniably gave the impulse to a period of unprecedented activity in art as it laid the foundations of the Empire of Asoka, a ruler and a saint as great as Constantine. Pataliputra, Asoka's capital, has been buried like other ancient cities of the world, but his monolithic pillar edicts, noble specimens of the sculptor's art, stand to this day as veritable sermons in stones.

Judged by territorial extent ancient Indian art wielded a wider influence than the art of Greece or Rome. In India itself the traces of Indian art are to be found from Gandhara to Gour in the north, from Rajputana down to the Bombay coast on the west, in Central India in the great stupas and temples, in the south in the temples and other structures at Mamallapuram, Srirangam, Madura, Rameswaram and Ceylon. Out of India on the west the famous capital of Mahmud of Ghazni was built by Indian architects, and the whole of far Eastern Asia was inspired by Indian art. The sense of the impermanence of things, "writes Mr. Binyon in *The Flight of the Dragon*, "the transitoriness of life, which in Buddhism was allied to human sorrow, became a positive and glowing inspiration in Chinese and Japanese art." Some of the finest Indian sculpture which has escaped the ravages of vandals and iconoclasts are to be found in Java. It is not in India but in the courtyard of a temple at Prambanam in Java that the finest series of relief illustrating the Ramayana has been found. There is no clear line of distinction between ecclesiastical and secular architecture, and "throughout all the many and varied aspects of Indian art—Buddhist, Jain, Hindu Sikh and even Saracenic there runs a golden thread of Vedic thought." Some of the Jain temples and other buildings are as splendid as the best Brahmanical and Buddhist temples. The towers of victory at Chitor, the vaulted shrines at Mount Abu, the hill temples of Palitana and Girnar, the colossal images of Tirthankars at Sravanbelgola, Karkalu and elsewhere are notable achievements of architectural and sculptural art.

To the uninterested and undiscerning observer from the West, the imposing figure of the Trimurti at Elephanta, the four-headed Brahma, the five-headed Siva, the elephant-headed Ganesha will appear as grotesque

sculpture to be classed with the centaurs, the satyrs and the fauns of ancient Greek art, monstrosities which are looked upon as divinities by a savage, heathen race. The difference between ancient European and Indian arts is that the former confines itself to the beauty of the figures whereas the latter suggests the beauty behind and beyond the figures. At its best the art of Greece and Rome is realistic in the sense that it seeks to typify and idealise beauty as perceived by the eye; Indian art represents the divinities of the different Indian pantheons as conceived by the mind and visualised by the eye of faith. It is possible for a man or a woman to resemble a sculptured Greek god or goddess, but no one in India would dream of comparing a human being to the image of a god. In actual practice Siva is not usually represented as having five heads, nor did the imagers and frescoists of Ajanta often depict Parvati with ten arms. Greek art was entirely detached from Greek philosophy. The Greeks attributed human suffering and sickness to the envy of the gods; the Indians ascribed them to Karma. The attainment of physical perfection in life was the great ambition of the Hellenic people and the Greek artist endowed his gods and goddesses with perfect symmetry of face and figure, the finest contour of the head and the most fascinating poise and grace of limb. The art of India is an academy of symbology. Even a flower like the lotus is a symbol of almost universal application: in architecture, in the theory of the creation, in the standing or sitting position of the gods, in ornamentation, the lotus recurs everywhere. No artists outside India ever thought of representing a god engaged in contemplation. In the classic art of Europe it is always the ripple of the muscle, the vivid vitality of the features, the dazzling outlook on life that arrest the eye; here in India art has fixed the tranquillity of repose, it has conveyed the majesty of meditation, the sublimity of aloofness and withdrawal. This calmness is not inertia, but the flickerless steadiness of a flame lighting a closed temple. The Western artist always thought of pose; the Indian thought reverently of posture. The great Buddha statue at Anuradhapura in Ceylon, the Trimurti at Elephanta, the statues of the Tirthankars, the Dhyani Buddha or Amitabha, the Bodhisattvas are all figures of physical restraint with intense

spiritual vitality. The image of the Buddha in its inconceivable calmness and passionlessness is the very embodiment of the immutability of the Law that he preached and the serene consciousness of the final and full attainment of liberty.

On the other hand, the fine bronze figure in Madras of Siva as Nataraja dancing the *Tandata* dance, is a symbol of cosmic commotion, the effervescent joy of creation. The Greek and Roman imagers knew nothing of the symbolism and significance of the gestures of the fingers and hands, the *mudras*, and it was only after the introduction of Christian art that the upraising of two fingers as a symbol of benediction is to be found in European pictures. If we place a likeness of the Apollo Belvedere by the side of one of the Avalokitesvara at Borobudur in Java, and of the Venus of Milo by that of Uma in meditation on the Himalayas we shall easily appreciate the difference and the distinction between Western and Indian art. If the art of Greece at its strongest and best may be likened to epic poetry ancient Indian art may be compared to the solemn and sacred poetry of the Vedas and the Gathas.

With the eighth century of the Christian era began the decadence of art in India, the perversion of religious thought and the political disintegration of the country. Some time later the repeated raids of Mahmud of Ghazni swept over parts of India like a hurricane of fire and destruction, the famous temple of Somnath was plundered, and destroyed and ten thousand temples in Kanauj were rased to the dust. With the coming of the Great Mughals there was a change and the conditions of life and occupation became more stable. Of the six Mughal Emperors from Baber to Aurangzeb it may be truthfully said that there is no other example in history of such remarkable heredity in conspicuous ability for six generations in lineal descent, but while the three greatest Mughals, Akbar, Jehangir and Shah Jehan, devoted themselves to the work of construction and consolidation, in Aurangzeb was born anew the unrestrained passion of iconoclasm and the fanaticism of bigotry, and his great energy was spent in the destruction of temples at Benares and other places, and in unwittingly sapping the foundations of the Mughal Empire. Akbar was one of those men to whom greatness comes from within, without help or guidance. Unlettered, he was

wiser than other men steeped in learning; untaught in religious dogma, he had the widest tolerance in religion; uninitiated in statecraft, he was one of the greatest statesmen the world has seen; ignorant alike of books and art he was one of the greatest patrons of art and letters and held some of the soundest views on art. As builders Akbar and Shah Jehan rank very high, but it is misleading to designate Mughal architecture as the Indo-Saracenic style. That would imply that there are different branches of the Saracenic style of architecture with certain features common to all. It would be clearly erroneous to make such classifications as Hispano-Saracenic, Turko-Saracenic, Arab-Saracenic and Indo-Saracenic, for Mughal architecture in India has nothing in common with any Saracenic style out of India. The Taj Mahal, the apogee of Mughal art, is essentially Indian in design, the ground-work, the central dome and the four small cupolas being conceived in the *pancha ratna* style. The decadence of Indian art did not mean its extinction. It became renescent in a modified form under Mughal patronage. At Agra, Fatehpur-Sikri and Jehanabad, Delhi, there are clear indications of a great and beautiful art, imperial in the magnificence of its proportions, and stamped by the individuality of Akbar and Shah Jehan. Mr. Havell very happily describes the Taj Mahal as a living image of Mumtaz Mahal herself in all the glory of her radiant beauty. In all inlaid mosaic work, whether in the Taj Mahal, Itmad-ud-daula or the tomb of Sheikh Salim Chishti the Koranic inhibition has excluded all living things, but the leaves, the plants, the vessels and the flowers are shown with consummate skill the coloured stones and the pearl and ebony being arranged with an excellent eye to effect. The 'fairy-like tracery windows' of the marble tomb of Sheikh Salim Chishti at Fatehpur-Sikri, the Pearl Mosque in the Agra Fort for the ladies of the Imperial harem, the perforated screens of marble are the productions of a delicate and dainty art. The mausoleum of Jehangir at Lahore is designed with great simplicity, the imperial idea finding vent in the great quadrangle on the four sides of the tomb and the roof with its impressive spatial effect.

Mughal painting as seen in miniatures,

* A. K. Coomaraswamy, *The Arts & Crafts of India & Ceylon*.

oil paintings, portfolio pictures in water colours, illuminated manuscripts and illustrations of books owes its origin to several influences. The Timurias were lovers of art and beauty in nature and Akbar whose views on all subjects, including religion, were extremely liberal, defended and justified painting on the ground that a painter was bound, while painting anything having life, to think of God as the Giver of life since the work of the painter stopped at the mere resemblance of the body. Persian and Chinese influence had a share but the tradition of painting in India had a larger and more definite influence. It is at this stage of the history of Indian art that the word 'Hindu' can be accurately used, for the word was then in use and the religious distinction between Hindus and Mussalmans was clearly defined. The fact that Akbar employed a large number of Hindu artists is proof sufficient because he would not have employed novices, and the similarity between Rajput and Mughal painting is unmistakable, though the contrast is equally obvious. The Rajasthani and Pahari groups of painting, the first from Rajputana and the second mostly from Kangra, Chamba and Poonch in the Punjab are older than Mughal painting which they survived till the last century. It is both sacred and secular whereas Mughal painting, which had a life of about two hundred years only, was of necessity merely secular and courtly. The Rajput artists, following ancient tradition, have left no means of identification behind them and their pictures bear no names; it is a repetition of the anonymity at Ajanta, Sarnath, Elephanta and a score of other places. Moghul portrait painting is of high merit and true to the life unless the artist had to paint a patron who required to be flattered. Moghul paintings bear names and the majority are Hindu names. Mansur, however, was a Mussalman and an artist of a high order, his portraits of animals being wonderfully life-like. Akbar and Jehangir admitted famous painters to intimate personal friendship. Artistic skill was not unknown in the zenana of the Emperors and the great nobles. Names have come down in history of cultured and highly intellectual queens and princesses and great ladies, some of them past mistresses of statecraft, others gifted artists and musicians, and authors of graceful verses. The impenetrable and inviolable secrecy of the purdah had

kept all their achievement from the notice of the world of men, but still the world knows of the saintly and vestal lady, a Princess of the Blood, Jahanara,* daughter of Shah Jahan, who devoted her life to the service of God and in ministering to her imprisoned father, and whose last request was that she should be buried in a pauper's grave with the green sward for a cover and the dome of heaven for a cupola, and who left the following simple and touching verse as an inscription for her resting place:—

*"Bur mazare ma gariban, na chirage,
na gule,
Na pare parwana suxad, na sadai
bulbule !*

On the grave of poor people like us there should be neither lamps nor flowers; nor should the wings of moths be burned, nor should there be the wailing of a nightingale."

It is reported that Rembrandt and Reynolds saw Mughal paintings and admired them and the former copied some of them.

The revival of Indian art and art tradition has begun in Bengal and is associated with the school of which Abanindranath Tagore is the leader. Their work has been appreciated and admired out of India. The influence of Japanese art is noticeable in their earlier work, but they have outgrown this stage and have produced original paintings conforming to Indian classic art. To keep alive the tradition of Indian art Indian artists, while fully receptive and responsive to modern and contemporary influences, and the far wider sweep of the vision of life, must seek inspiration in the ancient epics and dramas, in the symbolism of ancient sacred literature, in ancient philosophical thought and the multitudinous conceptions of supernal beauty. Mere portraiture, and painting from animated or still life can never be a high incentive to art, and this is one of the reasons why Mughal art, cramped by its limitations and debarred from dealing with all sacred subjects had such a brief career. And it is not only the artist who must be true to tradition and loyal to the ancient ideals of devotion, enthusiasm and selflessness, but our countrymen must return to the fold from which they have strayed and learn once again to breathe the atmosphere in which the ancient Aryans lived and had their being. How

* She lies buried near the tomb of Nizamuddin Aulia in Delhi.

many of the graduates of Indian universities have read the Ramayana and the Mahabharata. how many of them know even the names of Sanscrit dramas? The higher Vedic literature, the systems of philosophy are difficult subjects requiring special study, but there can be no excuse for educated Hindus being ignorant of literature and ideals which are still living forces in Hindu homes and Hindu lives. Modern manners and modern culture do not surely require that we should consign the past to oblivion.

In the present European sense painting means pictures in an oil medium. Auctioneers and professional dealers call paintings in water colours drawings. Indian artists have to be careful in the media they choose for their work. Sir Joshua Reynolds was praised as one of the purest colourists but his colours were sometimes so ill-chosen that some of his paintings are already fading. Well-known painters in Europe used sometimes lamp-black as an under-tint with the result that it came up to the surface and discoloured the upper coatings of different colours. Paintings at best are easily spoiled or loose colour even if they are not destroyed. Are the Indian artists who are attempting a revival of genuine Indian art satisfied that their work will endure as long as the Rajput and Mughal paintings? The paper, the pigments used by those artists are no longer in use. Is it not worth while to make an attempt to procure and reintroduce them? All the materials now used, the paper, the paint and the brush are brought from Europe. Artists' colourmen in Europe have put on the market more than two hundred colours of which less than twenty are reliable. The thought is disquieting that modern colours may not prove even so fast as those that were in use in India three or four hundred years ago. This is a matter that concerns primarily the present artists of India.

Truly has Ruskin said, "all great Art is praise": praise of all that is in nature, of all that has life, of the human form divine but above all what the mind and the spirit can conceive but the eye cannot see, of the noumena behind phenomena, of the thought symbol behind the projected object, of the absolute behind the concrete. Art is suggestion as well as representation eloquent not only by what it expresses but also what it leaves out. The aim of true art is not merely to produce fac-similes and verisimi-

litudes but to stimulate thought so that the mind of the beholder may endeavour to interpret the idea of the artist as outlined in the picture. The concentration of the true artist is as intense as that of the earnest worshipper. If there is joy in the artist's work, if there is pleasure in watching a thing of beauty grow under his hand there is reverence also in his devotion to this ideal, to the thought-image that he endeavours to shape in stone or trace on paper. It is the faculty of praise that tends to uplift man's nature and praise finds a noble expression in art. The original mouspring of all art in all lands is a conception of the divine. The form of faith may vary, but the divine transcends the human in all aspects and every thought of the deity is praise.

Since I began with a brief sketch of the history of art in the West these observations may be brought to a close by a reference to the prospects of art in that part of the world. The cultivation and development of art is among the triumphs of peace, but there is no real peace in the West. So real was the menace of extinction in the last war that the instinct of self-preservation has led the nations of Europe to establish the League of Nations, but the real guarantee of peace is in the heart and not in any tribunal or institution created for that purpose. The air is surcharged with jealousy and suspicion and thoughts of revenge are secretly nourished by the nations which were defeated and humiliated. There is no relaxation of tension, no relinquishment of aggressive vigilance. There is always a hint of rupture behind diplomatic relations, a chronic scepticism in professions of friendship. In the Far West across the Atlantic we see a new and great race founded originally by colonists and settlers from England and Ireland, and subsequently augmented by the interfusion of emigrants from the other nations of Europe. In industry and wealth the United States of America have left Europe far behind, but the nation is neither troubled nor stimulated by any memories of the past, nor does it recognise any tradition that has to be maintained. There are great names like Abraham Lincoln and Ralph Waldo Emerson, Benjamin Franklin and Thomas Alva Edison, but there have been no precursors of a great literature, or a great art, and it may be fairly doubted whether the Americans will achieve more

than they have already done. The architecture of America has introduced no new or attractive style. The great ambition is to erect sky-scrappers, piles of buildings high as the Tower of Babel. The usual comment of an American tourist when he sees some famous buildings in the Old World is that America has buildings twenty or thirty times as large. Since the Declaration of Independence America has not produced a single famous painter. The New World has introduced a new cult: Mammon and Megalomania sit throned on high, and the crowd bows down to them and worships them. Staggering figures of the fabulous wealth acquired by individuals are announced from time to time, but one looks in vain for any signs of any striking

use made of this hoarded treasure, of any liberal patronage of the arts, the erection of a structure that should arrest the eyes of the world, or any large endowment likely to benefit the cause of humanity. The great name of Andrew Carnegie alone has to be excepted. In ancient times wealthy men became famous because of the use they made of their wealth since there is no merit in the mere piling up of gold. Megalomania is a delusion of power and greatness that is considered a malady, but it has become a universal national failing. It is an omen of evil because the obsession of greatness is not good either for the individual or the nation. The auguries are not promising of a revival of great art in the Far West.

THE INDIAN STATES INQUIRY

By A. RAMAIA M.A., F.R. ECON. S. (London)

WHEN it was announced by His Excellency the Viceroy that a Committee had been appointed to inquire into the relations between the Indian States and the Government of India, it was expected by all people both in the States and British India, that the Committee was going to examine the various problems concerning the States and make suggestions regarding the future constitutional relationship between them and British India. This expectation was also strengthened by the appointment of the Statutory Commission, and it was thought, not unnaturally, that while the Committee would be engaged in finding out the best way in which the States could be made to fit in with the Government of British India, the Simon Commission would report about the further steps to be taken in developing self-governing institutions and extending responsible Government in British India. The exact terms of reference and instructions issued to the Committee have not been published. But during the course of the Committee's stay in India it has been made clear that its task is very limited and its terms of reference do not extend to more than examining the Treaty engagements with the ruling

Princes and reporting as to how far the position required modification in the light of modern developments. The whole work of the Committee in India has been from beginning to end conducted *in camera*, and no chance whatever has been given either to the subjects of the States or the people of British India to have their say in the matter of the Inquiry or express their views on any of its aspects, and except the movements of the members of the Committee from one State to another and their final departure to England from Bombay, nothing has been made known to the public in India. It would appear that even some of the princes were not enabled to understand the exact scope of the Committee's inquiry, for as the press reports of the proceedings of the Princes' Conference held at Bombay on the eve of the Committee's departure from India, would indicate, a good many of the Princes themselves were under a delusion that the Committee's scope of inquiry extended to an investigation of the constitutional position as between themselves and their subjects on the one hand, and as to the place which the States should occupy in any federal constitution of India which the Statutory Commission

introduction of the reign of law and elimination of arbitrary personal intervention with law and justice on the part of the ruler,

(v) Securing for all people in the State the ordinary rights of citizenship such as freedom of movement, freedom of speech, rights of property, freedom of the press, etc.,

(vi) The training of the people in some sort of responsible government by the introduction of representative institutions for purposes of legislation, and interpellation on all matters of administration.

In many of the Indian States all or some of these elements are lacking. Now, as the Montagu-Chelmsford Report itself pointed out, in spite of the varieties and complexities of treaties, engagements and Sanads which govern the rights and obligations of the ruling Chiefs, there is a general responsibility on the part of the Paramount power for the good Government and welfare of the people in the States, and if so, the attitude of non-intervention in matters of internal administration advocated by the same Report is hardly justifiable so long as even the elementary principles of good government as judged by modern standards, are found lacking in many of the States. It is a matter for regret, therefore, that a committee specially appointed for the purpose of inquiring into the relation between the States and the Paramount Power should have its task limited to an examination merely of the prerogatives, privileges and rights of the Princes arising under treaty engagements or established practice, and not also make a survey of the conditions of government in their respective States, which duty equally attaches under the same treaty obligations.

Indian States as well, any inquiry into constitutional matters should properly include an examination of the position of the States in the political organisation of India. Various practical suggestions have been made by thoughtful Indians for a federation of the whole of India as a single State, and even enlightened Princes have allowed their minds to turn in this direction. The Maharajah of Alwar, one of the ablest of his class, has declared: "My goal is the United States of India, where every province, every state working out its own destiny in accordance with its own environment, its tradition, history, and religion will combine together for higher and imperial purposes, each subscribing its little quota of knowledge and experience in a labour of love freely given for a noble and higher cause." When thus the attention of princes and people alike in the country is engaged in working out a constitution for the whole of India, the avoidance of an inquiry into the question both by the States Committee and the Statutory Commission is open to grave misgiving.

Though the States are many and found in varying stages of political development and there is no political unity between any of them and, British India, the country being a geographical whole, the peoples are brought together and closely united by common bonds of race religion, languages, culture and social and commercial intercourse, and they have also recently begun to exhibit common political aspirations. Until last year the people in the States took no part in the Indian National Congress and for the first time during the recent Congress held in December 1927, an attempt has been made to bring home to the minds of the people of both British India and the States that their interests and aspirations are so identical that, unless they united, there was no hope of realising *Swaraj* for the country. However much the Princes may resent this new development, it must in course of time, inevitably affect their position as rulers in their respective States, and unless they accede to the establishment of some sort of responsible government and assure at least as full rights of citizenship to their subjects as the people of British India enjoy, serious political disturbances may occur, which may even shake the very foundations of their position; in which case it will be a very delicate matter for

the Paramount power to interfere on behalf of the princes who would not move with the times and introduce constitutional government in their States even to the limited extent to which it has been introduced in India.

With regard to the relation between the States and British India there are, besides the establishment of harmonious political relations between them, other matters of considerable importance which being of common concern to the whole of India, require investigation at the hands of either the States Committee or the Statutory Commission, even if no political changes are to be introduced and the present state of things should continue. In the first place, the States are agitating for a share of the customs revenue of the Government of India, to which they lay claim on the ground that the seventy millions of people living in the States are also consumers of the imported goods on which duties are levied. They also claim a share of the revenue from salt and opium. Against

these there is the vital question of the enormous defence expenditure incurred by the Government of India for the benefit of the whole country but towards which not a pie is contributed by any of the States. There is also the question of unification of coinage and currency and also the question of the administration of railways, posts and telegraphs, in the control of which the rulers of the States evince a desire to have a share. In spite of their present importance, and in the teeth of the desire of the Princes themselves to have them thrashed out by expert investigation, the States Inquiry Committee has done nothing with regard to these matters and taken no evidence. In utter disregard of the real requirements of the situation, to confine the inquiry of the Committee to the very limited purpose of reporting on the relations between the rulers of the States and the British Government shows a lamentable lack of appreciation of the real needs of the country.

July 4, 1928.

THE SECOND AFGHAN WAR

By MAJOR B. D. BASU, M.S. (Retd)

THE British jingoes had hardly ceased clapping their hands at what they regarded as a brilliant performance by the actors of their creed on the stage of Afghanistan, than that state presented other scenes which seemed almost to stupefy them. The tragedy was now being played out to the end. The principal actor, Sir Louis Cavagnari, for whose installation on the state of Afghanistan so much money and so many lives were spent, met with a fate which fully justified the apprehension of the late Ameer Sher Ali in declining to permit the location of British officers in his dominion as agents of the British Government.

The Gundamak treaty signed on 26th May, 1879 permitted the British Government to station a British officer at Cabul. Sir Louis Cavagnari was chosen by Lord Lytton as an envoy to the new Amir. He took up his residence at Bala Hissar. When Ata

Muhamad was the British Agent at Cabul he had no medical officer to attend to him, no escort to protect his person and no secretary to write to his dictation. But to give great importance to the position of the British agent in the sight of the people of Afghanistan, Cavagnari was furnished by the Government of India with a secretary, who was a member of the Indian Civil Service, a medical officer named Surgeon Kelly, an escort of twenty-five sowars and fifty sepoy of the guides corps and also another British officer named Lieutenant Hamilton, in command of the escort. Ata Muhamad's agency did not cost India one-tenth the amount which the British Embassy now did. The embassy proved a failure. Ata Muhamad used to mix with the people of Afghanistan and thus his informations were first hand. But the English envoy, with the characteristic hold-aloo-f-ness

of his race, had to employ a large band of spies to collect information. He was at the mercy of others. Hence those who had protested against replacing Ata Muhammad by a British agent were right when they wrote that:—

"It is indeed difficult to see in what respect a European Agent could have served us better or indeed, so far as the procuring of information went, served us so well."

No reliance should be placed on the informations furnished by Cavagnari to the Government of India, for he did not know what was going on under his very nose in Cabul itself. Within twelve hours of his last message to the Viceroy on the 2nd September 1879, which concluded with the words "All well", the Residency saw the repetition of the scenes of 1840. Cavagnari met with a fate which recalled to memory that of Sir Alexander Burnes.

By the Treaty of Gundamak the new Amir Yakub Khan was obliged to receive the British embassy at Cabul. Sir Louis Cavagnari with his staff and escort arrived at Cabul on the 24th July 1879. Yakub Khan showed every honour to the embassy. Cavagnari was quite pleased with the conduct of Yakub Khan. That prince was a great friend of Cavagnari, who had no reason to suspect the sincerity of his protestation of friendship for the British Government. We should be very chary in believing European writers when they accused him of treachery. Yakub owed his release from prison and the throne of Cabul to the Government of India. He was not held in respect by his Afghan subjects, and it appears that he was not an able man. This is not to be wondered at when we remember the fact that he had spent a good many years of his life within the prison-walls of Cabul, which had the effect of dulling his intellect.

Lord Roberts writes that towards the end of March 1879, at the time when negotiations between the British Government and Yakub Khan were opened, the latter issued a proclamation to the Khagianis, in which Yakub is alleged to praise and compliment the Khagianis for their religious zeal and fidelity to himself. He exhorted them to have no fear of the infidels, against whom he was about to launch an irresistible force of troops and Ghazis and was up as

'By the favor of God, and in accordance with the verse "Verily God has destroyed the powerful ones," the whole of them will go to the fire of hell for evermore. Therefore, kill them to the extent of your ability.'

Lord Roberts says that this proclamation was intercepted and brought to Cavagnari, on or about the 29th March 1879.

We are inclined to believe that this proclamation, alleged to have been issued by Yakub Khan, was a forgery, for it passes our comprehension that the astute officers of the British Government should have held any intercourse with Yakub Khan after they had grounds to suspect his fidelity. It seems clear that Cavagnari himself did not believe in the genuineness of the intercepted document, otherwise he would not have reposed implicit faith in Yakub Khan as he did. In his very last letter, dated the 30th August 1879, received after his death, Cavagnari wrote to the Viceroy:—

"I personally believe that Yakub Khan will turn out to be a very good ally, and that we shall be able to keep him to his engagements."

Lord Roberts' allegations and assertions against Yakub Khan are not worthy of much credit, since he was biased against that unfortunate Afghan prince. It was this noble Lord who kept Yakub Khan a prisoner while he came to his camp as his guest, and succeeded in persuading the Viceroy that Yakub Khan instigated the attack on the Residency at Cabul. Hence we repeat that Lord Roberts' statement, even if he were to swear on the Bible, (supposing he believed in the solemnity of an oath, should be taken with the proverbial pinch of salt, since he was an interested party in the transactions which brought on such unhappy consequences.

There is no record to prove that Cavagnari, like Macnaghten and Burnes, opened through the agency of emigrants and other malcontents in Afghanistan a campaign of political intrigue in that country. But his band of spies must have been a source of great annoyance to the Afghan chiefs and nobles as well as the common folk of Cabul. Seventy years before, when Elphinstone was an envoy at Peshawar, he was assured by the Afghan chiefs that they would not allow the foreigners to meddle in the affairs of their country. They said that they were content with discord, they were content with alarms, they were content with blood, but they would never be content with a foreign master.

Seventy years had not produced any

change in the national character of the Pathans. They still resented the interference of the foreigners in their country's affairs. Moreover, they saw Candahar in the possession of British troops, although the Gundamak Treaty stipulated the restoration of Candahar to the Amir.

The real cause or causes which prompted the Afghan soldiery to attack the British Residency will never be known. But from the fact that it was the troops from Herat which headed the outbreak, we may surmise that the retention of Candahar was to some extent the cause of this outrage on the person of the English envoy at Cabul. These Herat soldiers accused the British of bad faith. The occupation of Candahar must have alarmed them. As the occupation of Quetta was the first step which led to the occupation of Candahar, so the occupation of the latter made them believe that the British meant to occupy some day Herat. At first it was given out that the British troops would evacuate Candahar by 1st September 1879. The first of September still found Candahar in the possession of the British troops. Hence the Herat troops were confirmed in their belief that the concentration of troops at Candahar meant an advance on Herat.

On the morning of the 3rd September 1879, the Herat troops asked for their pay which had fallen in arrears. The Cabul treasury was almost empty. The treasurer did not know what to do. He was besieged by the troops clamouring for their pay. To release himself from these troops he pointed them out the Residency.* It is probable that by

* This account appears to be the most probable of all the writer has come across and heard while on the frontier.

This differs, from the official version. In the Note issued by the Press Commissioner, on the receipt of the news of Cavagnari's murder at Simla on 6th September 1879, it is stated: "That certain Afghan Regiments, which had already shown strong symptoms of mutiny against the Amir, had been assembled in the Bala Hissar to receive arrears of pay which they had demanded. They suddenly broke out into violent mutiny and stoned their officers. They next made an attack on the British Residency which is inside the Bala Hissar."

The writer has inquired of many respectable and educated Pathan gentlemen as to the history of the outbreak. Their accounts differ from the official one in many important material points. One account was that the treasurer told the soldiers that the Amir in all state affairs was under the guidance of Cavagnari and that the latter

so doing the treasurer meant to remind Cavagnari of the payment of the subsidy stipulated for by the Gundamak Treaty. From the official records it does not appear that the annual subsidy of six lakhs was ever paid to the Ameer Yakub Khan. This amount was agreed upon

"for the support of His Highness the Amir in the recovery and maintenance of his legitimate authority".

It appears to us that this sum should have been paid in advance to Yakub Khan. The finances of Afghanistan were taxed to the utmost to meet the expenses inseparable from the war. When the Amir's troops crowded into the courtyard of the Residency in the Bala Hissar, clamouring for their pay, Sir Louis Cavagnari became angry at their thus invading him and said the matter was not one in which he could interfere, and ordered his escort to turn them out of the courtyard. Disappointed and ill-treated, the troops broke into open mutiny. They opened fire on the Residency. The invasion of their country by the British was still fresh in their memory. That invasion brought on them and their families nothing but ruin, miseries and disasters. Smarting under such grievances, and the Herati Regiments seeing that the occupation of Candahar meant an advance of the British on their country someday, it is not to be wondered at that they attacked the embassy. They tried to attract attention to their grievances by means of these demonstrations. The Residency was set on fire; and its inmates were all killed. The officers and men fought very bravely, but to no purpose. By the middle of the day, the Residency was a heap of ruins.

But what was the Ameer doing all this while? No sooner did he hear of the attack on the Residency than he sent his Commander-in-Chief, named Daud Shah, to the rescue of the Christian officers and men besieged in the Bala Hissar. Daud Shah was severely wounded. Afterwards Yakub Khan sent his own son. He met with no better fate. It was not necessary for Yakub Khan to go in

had prohibited the Amir from paying the troops; on hearing this, the men went to the Amir, who is said to have ordered the treasurer to pay the men. But the treasurer still refusing it, the men went to Cavagnari and demanded payment. Cavagnari turned them out; the men believing that the British ambassador had really prohibited the Amir from paying them, attacked the Residency.

person. Moreover, he was prevented from doing so, as the Mutineers had also besieged him in his palace. The Mutineers entertained no respect for Yakub Khan, for he had contracted alliance with the enemies of his country and sold the independence of his subjects to the Government of India. There is no evidence to prove that he either instigated, or connived at, the attack on the Residency.

The news of the fate of the Residency was conveyed to the Political officer at Ali Khel, named Captain Conolly, by a spy in the employ of Sir Louis Cavagnari. Captain Conolly at once telegraphed the news to General Roberts, who was at that time in Simla, engaged on the work of the Army Commission. In his work, named "Forty-one Years in India," Lord Roberts writes:—

"Between one and two o'clock on the morning of the 5th September I was awakened by my wife telling me that a telegraph man had been wandering round the house and calling for some time, but that no one had answered him. I got up, went downstairs, and taking the telegram from the man, brought it up to my dressing-room, and opened it; it proved to be from Captain Conolly, Political officer at Ali Khel, dated the 4th September. I was paralyzed for the moment, but was roused by my wife calling out 'What is it? Is it bad news from Cabul?.....' I replied, 'Yes, very bad, if true. I hope it is not.' I woke my A. D. C. and sent him off at once to the Viceroy with the telegram. The evil tidings spread rapidly."

Lord Lytton was dumb-founded and dazed. This attack on the embassy condemned his transactions of the past three years and justified the predictions of Lords Lawrence and Northbrook. Hurriedly, on that day, a Council of War was called, when it was decided to telegraph Sir Donald Stewart who was at Candahar to hold the place against the mutinous soldiery of the Amir. The Khyber column under Sir Samuel Browne had been broken up; but the Kurram Field force was still in existence, under the temporary command of Brigadier General Durham Massy, during the absence of General Roberts. General Roberts at once telegraphed to him

"to move 23rd Pioneers, 5th Gurkhas, and mountain train to Shutar garden, crest of pass; to entrench themselves there and await orders. Ten days supplies."

General Roberts was ordered to proceed at once to Kurram, resume his command there from General Massy and change the name of his force as the Kabul field force, as the object of the force was to advance on

Cabul, and sack that city to avenge the fate of the British embassy.

Roberts left Simla on the 6th September, 1879. On reaching Ali Khel, Captain Conolly handed him the two letters from the Amir.

The Amir expressed his regret at the unfortunate events that had occurred in Cabul. The Amir wrote:—

"After God, I look to the Government for aid and advice. My true friendship and honesty of purpose will be proved as clear as daylight. By this misfortune I have lost my friend, the envoy, and also my kingdom. I am terribly grieved and perplexed."

General Roberts' reply to these letters, under the instructions of Lord Lytton, was very stiff and harsh. He wrote that the British envoy had been deputed to his court as the Amir agreed by one of the articles of the Gundamak Treaty to protect the envoy and that the

"British Government had been informed that emissaries had been despatched from Cabul to rouse the country people and tribes against us, and as this action appeared inconsistent with 'friendly intentions,' General Roberts 'considered it necessary for His Highness to send a confidential representative to confer with him (Roberts) and his (Amir's) object."

Roberts relied on Ghulam Hussain Khan for all the reports and rumors against the Amir. This man had been the British Agent at Cabul and made himself obnoxious to Ameer Shere Ali. He bore a grudge against Shere Ali and his family. No wonder that he poisoned the mind of Roberts against Shere Ali's son, Yakub Khan. Ghulam Hussain Khan's good fortune and prosperity depended on creating confusion and disorder in Afghanistan. So he found a good opportunity to gain distinction and honor by getting Yakub Khan in trouble. Roberts also easily lent his ears to the machinations of this low and contemptible place-hunter. This man succeeded in convincing Roberts "that the Amir was now playing us false."

Yakub Khan, with the characteristics of a simpleton which his long imprisonment had made him, believed that matters would be set right if he proceeded in person to the camp of General Roberts and explain all the circumstances of his case. Accordingly he came on 27th September to the British camp at Kushi with a suite of 45 members and an escort of 200 men. Great was his chagrin when he found himself a prisoner in the

British camp. Lord Roberts writes that he detailed a guard

"ostensibly to do him honor, but in reality that I might be kept informed as to his movements. Unwelcome guest as he was I thought the least of two evils was to keep him now that we had got him, as his presence in Cabul would be sure to increase the opposition I felt certain we should encounter."

For our own part, we are of opinion that the opposition which the British army met with, was principally due to the people of Afghanistan believing that their sovereign Yakub Khan had been treacherously made a prisoner in the camp of the Christians. So many lives would never have been lost, and so much treasure would never have been squandered, had the proposal made by Yakub Khan been acceded to. That prince asked the British Government to leave the matter of punishing the murderers of Cavagnari and the men of the British embassy in his hands. There was nothing unreasonable in this request. He considered himself to be a friend and ally of the British Government, and that as the outrage on the British envoy had taken place within his dominion, he had the authority to punish the perpetrators of that foul deed. Supposing that a British envoy had been at that time attacked and killed in St. Petersburg, by the enraged Russian soldiery, and supposing the Czar expressed his regret for what had happened in his territory, and also his willingness to inflict adequate punishment on the perpetrators of the deed, would the British Government have gone to sack St. Petersburg to avenge the murder of the envoy? No one would ever think of doing such a thing. Yet the British Government of India did not hesitate to sack the capital of an ally for avenging the murder of their envoy. To lend color of justification to their proceeding, they even went to the length of not only suspecting the good faith of their ally, but accusing him of instigating and conniving at the foul deed, and making him a prisoner while he visited their camp as their guest.

Yakub Khan urged strongly upon the British Government the advisability of delaying the advance on Cabul, that he might have time to restore order amongst his troops, and to punish those who had participated in the attack on the embassy; and the innocent people in Cabul with their families would suffer, if the British troops were to march into Cabul.

But the advisers of the Government of India were determined to see Cabul sacked. The prospect of Cabul in flames delighted the hearts of many a good Britisher. The correspondent of the *Pioneer* wrote from Ali Khel on the 28th September 1879 :—

"The fate of the city (Cabul), in case any opposition is shown when our army moves forward, should be sealed. The only argument an Afghan understands is direct and severe punishment for offences committed, and the punishment should now be dealt without stint, even if Cabul has to be sacked. Not a man in the force that is now about to make the final advance would feel other than the keenest pleasure in seeing Cabul forced, Sunday next should see the British troops encamped before Cabul, and then will begin the punishment of a city which is only connected in the surest way with the expansion of our power in Asia."

In deference, however, to the Amir's wishes, a proclamation was issued, in which it was announced that

"The British Army is advancing on Cabul to take possession of the city. If it is allowed to do so peacefully, well and good; if not, the city will be seized by force. Every effort will be made to prevent the innocent suffering with the guilty but it is necessary that the utmost precaution should be taken against useless opposition."

After receipt of this Proclamation, therefore, all persons found armed in or about Cabul will be treated as enemies of the British Government."

To quote the words of the correspondent of the *Pioneer*, this proclamation was issued

"As a test of the disposition of the citizens, in deterring the soldiers from attempting to defend the place, as their position would be untenable were the feeling of the people shown to be against them."

It was perhaps due to the issue of this Proclamation that when the British troops entered Cabul, they found the city deserted.

Neither Yakub Khan nor his army had ever thought that the British Government, would again so soon plunge their country into the horrors of a war. Accordingly they were quite unprepared. But when the news of the imprisonment of Yakub Khan was made known to his soldiers, they tried to oppose the British advance. But the Afghan troops, owing to the rapid advance of the British force, had no time to organize and oppose Roberts' column. However, on the 6th October 1879, a battle was fought at Charasia, in which the Afghans were defeated. The road to Cabul now was clear. General Roberts with the British troops reached Cabul on the 10th October 1879.

On the 12th October 1879, General Roberts invited all the leading chiefs of Afghanistan to a durbar held by him on that date. They attended the durbar, when the gallant general read out to him his Proclamation, in which it was announced that the people of Cabul would be disarmed and placed under martial law. He said :—

"It would be but a just and fitting reward * * if the city of Cabul were now totally destroyed and its very name blotted out. But the great British government is ever desirous to temper justice with mercy, and I now announce to the inhabitants of Cabul that the full retribution for their offence will not be exacted, and the city will be spared. Nevertheless it is necessary that they should not escape all penalty, and that the punishment inflicted should be such as will be felt and remembered. Therefore, such of the city buildings as now interfere with the proper military occupation of the Bala Hissar, and the safety and comfort of the British troops to be quartered in it, will be at once levelled with the ground, and further a heavy fine, the amount of which will be notified hereafter, will be imposed upon the inhabitants, to be paid according to their several capabilities. This punishment, inflicted upon the whole city, will not, of course, absolve from further penalties those whose individual guilt will be held hereafter proved. A full and searching inquiry will be held into the circumstances of the late outbreak, and all persons convicted of bearing a part in it will be dealt with according to their deserts. I further give notice to all that in order to provide for the restoration and maintenance of order, the city of Cabul and the surrounding country to a distance of ten miles are placed under martial law. With the consent of the Amir, a military governor of Cabul will be appointed to administer justice, and to punish with a strong hand all evil-doers. ... For the future the carrying of dangerous weapons, whether swords, knives, or fire-arms, within the streets of Cabul, or within a distance of five miles from the city gates, is forbidden. After a week from the date of this Proclamation, any person found armed within these limits will be liable to the penalty of death. ... Finally, I notify that I will give a reward of Rs. 50 for the surrender of any person, whether soldier or civilian, concerned in the attack on the British embassy, or for such information as may lead directly to his capture. ..."

The Durbar did not pass off without imprisoning some of the important officers in the employ of the Afghan Ruler. General Roberts asked the Wazir, the Mustaufi, Zahiga Khan (father-in-law of the Amir), and his brother Zakariah Khan to stay as he wished to speak to them.

"They doubtless thought that they were to be consulted on questions of high policy, but their chagrin was great when they were told that they have to remain as prisoners until their conduct had been thoroughly investigated."*

This in plain language meant a treacherous act which the gallant general practised with an easy conscience.

The measures adopted by the enraged Europeans engaged in the task of suppressing the Indian Mutiny of 1857, now found favor with General Roberts and his officers. As soon as Cabul was captured, a military commission, consisting of three military officers, was appointed, with the object of trying all those persons who were concerned in the attack on the Residency or those who offered armed resistance to the advance of the British troops with the Amir under their protection on Cabul. This commission pronounced the sentence of death on all those who were brought before it. It was a pleasant occupation for British officers and men to see poor Afghans hanged day after day. The correspondent of the *Pioneer* wrote on the 23rd October 1879 :—

"Ten o'clock is the hour at which men are generally hanged; and now daily, a little crowd of soldiers, camp-followers, and traders from the city gathers near the 72nd quarter-guard. ... The soldiers in shirtsleeves and with the favourite short pipe in their mouths, betray but faint curiosity, looking upon the culprits with hearty contempt and only regretful that they have not had to meet them in fair fight."

All the sentences pronounced by the commission were confirmed by General Roberts, harshly and executed within twenty-four hours. The proceedings of the commission, at last, attracted the attention of the public in England, and General Roberts' conduct was very severely criticized. Roberts' proclamation of the prize-money of Rs. 50 made many a poor and hungry Afghan accuse their enemies and thus earn the reward. The leaders were not captured. To quote again the correspondent of the *Pioneer*.—

"It makes one exasperated to see the rank and file of these wretches being marched off to execution, while their leaders are still at large, and but few of the Cabul rabble have been brought to account. One grows sick of hanging ten common men a day."

Roberts' Military Law had the effect of quieting Cabul, for

"The shadow of the scaffold is over it, and not one among the ruffians who throng its narrow streets, and hides its filthy perils, but feels its influence. They have hitherto traded upon our known weakness—the worship of the quality of mercy,—and it is only now that they understand the new principle of retribution we have

of the *Pioneer*, from Camp Siah Sung, 12th October 1879.

*—Extract from the letter of the correspondent

introduced into our policy. ... Whether we withdraw again or not there will be the tale of lives taken by our hangmen still to be counted over in the city and the villages.*

General Roberts had after all to yield to the clamour raised against his hanging the innocent and the guilty alike provided that a few witnesses swore as to their taking part in the attack on the Residency or the resistance against the advance of the British on Cabul. On the 12th November 1879, he issued his proclamation of amnesty in which he withdrew the offer of reward as announced by him in the Darbar on the 12th October. His blood-thirstiness was satiated with the judicial murder of many men carried on uninterruptedly for a period of one month. The hanging of those men who fought for their hearths and homes by resisting the advance of the British on Cabul will always remain an indelible stain on the character of General Roberts and the Government he was serving under. He knew fully well that the Amir was a prisoner in his camp. He knew also that the people of Afghanistan who resisted his advance had good reasons for believing that the Amir had been made a prisoner by him while he visited his camp as his guest. Knowing all these facts, it puzzles us to understand, how General Roberts could honestly and conscientiously proclaim to the people of Afghanistan :—

"I hold out no promise of pardon to those who, well knowing the Amir's position in the British camp, instigated the troops and people of Cabul to take up arms against the British troops. They have been guilty of wilful rebellion against the Ameer's authority, and they will be considered and treated as rebels wherever found."

The special commission consisting of Colonel Macgregor, Dr. Bellad and Mahammad Hayat Khan, appointed to inquire into the conduct of Yakub Khan and those high officers of Afghanistan whom General Roberts treacherously imprisoned in the Darbar on the 12th October 1879, carried on their proceedings within closed doors. Witnesses were examined by the members of the commission, but the accused had no opportunity to cross-examine them or know the nature of their

evidence. The character of at least one member of the commission, that of Mahammad Hayat Khan, was not above suspicion. It was hoped that in due course the government would publish a connected narrative of the events of the Cabul affairs and the world at large would then be able to judge on what basis of proof suspicions against Yakub Khan and his ministers had rested. Contrary to expectation no such narrative has ever been published. But Roberts writes that the perusal of the proceedings satisfied him that Yakub and his ministers were guilty of all those crimes which he had suspected against them. He recommended their deportation to India. Lord Lytton, as he was bound to do, approved of Roberts' recommendation, so the unhappy prince, whose only fault was that he placed implicit trust in the good faith of the British Government, was despatched by double marches to India on the 1st December 1879. With his departure, the future of Afghanistan looked very gloomy. It seemed as if the Afghans were to lose their independence for ever. The government of India appeared to take over charge of Afghanistan on the alleged voluntary abdication of its throne by Yakub Khan. Roberts' proclamation of the 26th October 1879, left hardly any doubt in the minds of the Afghan people what the future government of their country would be like. In this proclamation, it was announced

"that the Amir having of his own free will abdicated, has left Afghanistan without a Government. In consequence of the shameful outrage upon its envoy and suite the British Government has been compelled to occupy by force of arms Cabul, the capital, and take military possession of other parts of Afghanistan. ... The British Government desires that the people shall be treated with justice and benevolence, and that their religious feelings and customs be respected. ... The British Government after consultation with the principal Sardars, tribal chiefs, and others representing the interests and wishes of the various provinces and cities, will declare its will as to the future permanent arrangement to be made for the good government of the people."

It is said that the Disraeli (or rather Beaconsfield) Ministry caused the Government of India to authorize General Roberts to issue this proclamation. Afghanistan now was virtually made a British province.

* The *Pioneer* correspondent in his letter dated 12th November 1879.

So long the Amir Yakub Khan's authority was proclaimed as justifying all the acts of General Roberts; it was given out that the British army was advancing on Cabul to punish the rebels against His Highness. But on reaching Cabul, General Roberts changed his tactics. The presence of the Ameer in the British camp served the gallant Christian general a great and useful purpose. It facilitated his advance on Cabul. But now it was necessary to get rid of him, for in no other way was it possible to make Afghanistan a British territory. In his work on forty-one years in India, Lord Roberts writes:—"the Amir was in my camp ready to agree to whatever I might propose." So it does not require much intelligence to understand that Roberts proposed to the Ameer to abdicate the throne of Afghanistan.

"My doubts as to what policy I ought to pursue," writes Lord Roberts, "with regard to Yakub Khan were all solved by his own action on the morning of the 12th. October* He came to my tent before I was dressed, and asked for an interview, which was, of course, accorded. My Royal visitor, then and there announced that he had come to resign the Amir-ship..... His life, he said, had been most miserable, and he would rather be a grass-cutter in the English camp than ruler of Afghanistan."

This reads like a dramatic performance carefully rehearsed before and merely enacted by the Amir at the bidding of Roberts to make the world believe that he abdicated the throne of Afghanistan out of his free will. Does it not appear very remarkable that the Amir should have voluntarily abdicated his throne on the day of the Durbar and the imprisonment of his ministers and relatives on mere suspicion? The coincidence is so significant that none but a fool would believe that Yakub abdicated the throne on the 12th. October out of his free will and choice.

The official records do not mention why Yakub Khan was led to take such an unusual step. We are not furnished with any satisfactory reply to the question, "What made Yakub Khan take such a step?" In a footnote to his work above referred to, Roberts writes.

"At an interview which Major Hastings, the political officer, and W. Durand, Mr Political

Secretary, had with his highness at my request on the 23rd October, he said, referring to the subject of the Amirship: 'I call God and the Koran to witness, and every thing a Musalman holds sacred, that my only desire is to be set free, and end my days in liberty. ... I earnestly beg to be set free.'

From this it appears that he abdicated the throne either by having been persuaded to do so by Roberts, or that the imprisonment in the British camp had become so unbearable to him that he earnestly begged to be set free so that he might end his days in liberty, and therefore he was even willing to abdicate the throne of Afghanistan. That Yakub Khan's abdication was not quite voluntary would appear clear to any one who reads between the lines of the letter written by the correspondent of the *Pioneer* from Camp Siah Sung, on the 28th October 1879, when he wrote:

"This morning only did it become publicly known that Yakub Khan had abdicated the Amirship.

"Up to this afternoon it was believed that the Ex-Amir was acting in good faith but within the last few hours we have had reason to change our opinion.

To-day has been marked by a new change of front on the part of Yakub Khan. Whatever his fears or suspicions may be, he has withdrawn so far from his position of the 12th,—that he has contemplated flight to Turkestan. Such at least, is the information generally believed to have been received; and the action taken this afternoon proves, that he has so far committed himself as to jeopardize his future freedom. About five o'clock his tent was isolated by the removal of all those of his servants pitched about it; his guard was increased to forty British soldiers, and instead of two sentries there are now four facing to and fro with fixed bayonets. A fifth sentry is within the tent itself, and the Ex-Amir is as close a prisoner as he can be made. Four personal attendants only are now allowed to him, and these, also, are under guard."

The sentences italicised in the above passage bear a very significant commentary on the alleged voluntary abdication of the throne of Afghanistan by Yakub Khan. On the 28th October 1879, when news was received that Lord Lytton had approved of the abdication by Yakub, it was considered a stroke of policy to closely confine that unfortunate Afghan Prince because it was alleged that he contemplated flight to Turkestan! Yakub's voluntary abdication resembles on all fours the abdication of the throne of Kashmir by the Dogra Prince of the Happy Valley in 1889, with this exception that while the public know, thanks to Bradlaugh and Digby, how the latter was

* On the same day (12th. Oct.) Roberts held his Durbar in the Bala Hissar, when, as narrated further on, the Amir's ministers and father-in-law were imprisoned by the gallant General.

obliged to take that step by the machinations of the British Resident, the true account of Yakub's abdication is still enshrouded in mystery. Roberts was prejudiced against Yakub and suspected him of conniving at, if not instigating, the attack on the Residency at Bala Hissar. He writes in his "Forty-one Years in India" that the truth of the murder of Cavagnari could not be discovered, as the people were afraid to give evidence fearing that they would be punished for so doing on the withdrawal of the British Force from Afghanistan and on the restoration of the authority of Yakub. The *Pioneer's* correspondent wrote on the 20th October 1879 from Camp Siah Sung ;

"It has been no easy matter to collect evidence in Kabul, many witnesses being afraid of after consequences, if they bore testimony to the conduct of men under suspicion. We have not notified in any way what is to be the duration of our stay here, and once our protection over our well-wishers is removed, their fate may be readily imagined. There is no one who cherishes revenge more fervently than an Afghan, and every witness would be marked down by the kinsmen of those against whom he had appeared."

Does it not appear then clear that it was considered political expediency by Lord Roberts to make Yakub Khan abdicate the throne in order to facilitate the task of the Military Commission of Inquiry which had been appointed on the very day the British Force occupied Kabul? Roberts suspected Yakub and his ministers as accomplices in the murder of Cavagnari. To prove that his suspicions were well-grounded, he made Yakub take the suicidal step, very likely under threats and promises, just as it is not an uncommon thing in India for the police to extort confessions from suspected persons. Roberts never concealed the fact that he suspected Yakub and therefore kept him a prisoner in his camp. On the 23rd October, the same correspondent to whom reference has already been made, and who was on that date ignorant of the fact that Yakub Khan had been made to abdicate the throne, wrote :

"Our relations with the Amir are on a different footing, though it would puzzle a Russian diplomatist to say what is the basis of our policy. It is a mixture of suspicion, forbearance, and contempt. Once Yakub Khan had thrown himself upon our protection and disowned the acts of the mutineers, his personal safety was assured, and this no doubt was his first aim. But how much further did he mean to go? That he heartily desired his turbulent regiments to be punished one can well believe, and that he schemed to save Kabul from the fate it had courted is quite

possible ; but unless an accomplice in their acts, he could not have expected that his most trusted ministers and kinsmen would be arrested and himself confined to our camp. Here he must see our suspicion peeping out ; but then mark our forbearance. In our proclamations rebellion against the Amir has been cited as worthy of death ; we are living upon tribute grain collected, as due to him, the citizens of Cabul have been declared 'rebels against His Highness,' and our Military Governor of the city is 'administering justice' and punishing with a strong hand, all evil-doers' with his consent. The Amir's authority is proclaimed as justification for many of our acts ; and yet at the same time we loot his citadel, and seize upon, as spoils of war, all guns and munitions of war ; our camp-followers are masquerading in the warm uniforms of Afghan Highlanders. This is the feature of contempt in our policy. The drift of evidence seems now fairly in his (Amir Yakub Khan's) favour."

But when the abdication of the Amir became known 'the drift of evidence' was all against him. The same correspondent, writing on the 30th October 1879, says :

"There is no bottom to the well in which Afghan truth was sunk ages ago, and it is disheartening to sound it now. The ex-Amir's partisans have lied honestly enough to shield their master, while he was still protected by us ; but now that he is a nonentity and all semblance of power has passed from him, there may be a change in their attitude. They have a certain role of faithfulness to their salt ; but when they see their Chief arrested without a word of warning, after being allowed to move freely among us for weeks, their fortitude may not be equal to the emergency, and they may seek to purchase their own safety by voluntary disclosures."

Whether these witnesses spoke the truth when they gave evidence against Yakub, is a matter which they and their conscience alone know, but this much is certain that they purchased their own safety by so doing because such evidence was pleasing to the prejudiced minds of the military officers who had occupied Afghanistan.

Lord Roberts writes :

"The progress (of the Inquiry Commission) had been slow, particularly when examination touched on the part Yakub Khan had played in the tragedy ; witnesses were afraid to give evidence openly until they were convinced that he would not be re-established in a position to avenge himself."

So then it is evident that to get "the witnesses to give evidence openly against Yakub Khan" it was necessary to assure them that that prince would never again rule over them. Such is the story of the "voluntary abdication of the throne of Afghanistan by Yakub Khan."

DONOUGHMORE DYARCHY FOR CEYLON*

By ST. NIHAL SINGH

I

THE recommendations made by the Special Commission on the Ceylon Constitution presided over by the Earl of Donoughmore, are, as I anticipated in an article entitled *Ceylon's Political Emancipation* printed in the issue of this Review for July 1927, meant to strengthen the hands of the bureaucracy in the Island, which is still predominately British. If those proposals are adopted, such power over the permanent officials as, through the holding of the purse strings, the existing Legislative Council has managed to acquire, will completely disappear and the public servants, instead of being under complete parliamentary control as they are in Britain and the self-governing Dominions, will become a law unto themselves, owing no responsibility to any Ceylonese individual or organization. The Governor who, according to statements publicly made by the present incumbent of that office and by his predecessor, had, in the natural course of constitutional evolution in the Island, become practically powerless, is not to become a figure-head, as in the case of the representatives of the King in the Dominions, but is to be armed with formidable powers which, it is expressly stated, are to be created, for actual use and not for mere ornamentation.

In view of the circumstances in which the Commission was appointed, nothing else could have been expected. As I noted in *"Ceylon's Political Emancipation,"* it was called into being at the request of a British pro-consul (Sir Hugh Clifford) who, according to his own statement, "had left his own country at the age of seventeen"; since then had spent only "an aggregate of ninety months in" the land of his birth; and had not stepped into "the House of Commons more than a dozen times in the last forty-one years." Having reached his sixty-first year while ruling British possessions in

Asia and Africa, he had acquired the temperament and habits associated with personal rule and had developed an antipathy toward the parliamentary type of Government. During the short period that he was Governor of Ceylon he naturally chafed at such power as the Legislative Council exercised; as, indeed, did the other British permanent officials. Speaking for them quite as much as for himself, he declared at a dinner party that the existing Constitution gave the Un-official Members of that Council "complete liberty to paralyse the Executive at any moment by declining to vote supplies."

The reference that the Colonial Office made to the Commission that it appointed in conformity with the plea put forward by that pro-consul showed that the virus had taken effect. That Commission was instructed.

"To visit Ceylon and report on the working of the existing Constitution and on any difficulties of administration which may have arisen in connection with it; to consider any proposals for the revision of the Constitution that may be put forward, and to report what, if any, amendments of the Order in Council now in force should be made."

An examination of these instructions shows that the Commission was not appointed for determining ways and means for devolving further powers upon the Ceylonese. The people in the Island had not, in fact, asked for such devolution. They, on the contrary, felt that the existing Constitution would not be changed for at least ten years. A statement to that effect was made by the Duke of Devonshire, then presiding over the Colonial Office in the despatch in which he communicated his final decision regarding the last series of reforms.

If any Ceylonese individual or association had pressed for constitutional reform the Colonial Office would have lost no time in issuing a ukase pointing to that declaration and refusing to reopen the question before the expiry of the proscribed period, say until 1933. The officials, however, wished for their own purposes, to put the Constitution in the melting pot and they treated that pronouncement as a scrap of paper.

* Right of reproduction and translation in Ceylon and other countries strictly reserved by the Author.

II

The Colonial Office must have exercised great care in choosing the men to whom could be entrusted, the task of re-writing Ceylon's Constitution so that the officials would no longer be in the grip of the Ceylonese legislators. As the sequel shows no better selection could have been made to ensure that object.

The Earl of Donoughmore, whom the Colonial Office placed at the head of the inquiry, was Irish by descent and British by education and residence. As Chairman of Committees of the House of Lords he had had great experience in dealing with questions of highly controversial character and had acquired much tact in handling men. He, for that reason, had been specially selected from among the members of the Conservative Party by Edwin Samuel Montague to accompany him on his visit to India for the purpose of consulting Lord Chelmsford and other officials in regard to constitutional reforms. During 1921, when Lloyd George was talking of having "murder" in Ireland "by the throat" and Earl of Birkenhead was declaring war to the knife against the "Irish rebels," the Irish blood flowing in Lord Donoughmore's veins caught fire and he, I am told, joined hands with several others to bring warfare to end and have the issues outstanding between the Irish and the British settled by consent.

Sir Mathew Nathan, who was associated with the Earl of Donoughmore in the Ceylon enquiry, is a Liberal of a type that has virtually disappeared. Nearly a quarter of a century ago, when I was in journalism in Hongkong, he was Governor of that Colony and was esteemed by every one I knew as a man of kindly disposition. After leaving Hongkong he held high office in other parts of the Empire, including Australasia and Ireland.

Sir Geoffrey Butler, who was also appointed to the Special Commission, comes of a family two members of which Sir Harcourt and Sir Montagu have held governorships of Indian provinces. He belongs to that group of young Conservatives who call themselves "Tory-Democrats." A man of exceptional ability, he has a charming manner, as I can attest from personal experience.

The only other member of the Special Commission, Dr. T. Drummond Shiels, is a Socialist of the mild variety known as Fabian.

He went to the war with Edwin Arnold's *Light of Asia* in his pocket and came back with a Military Cross. He entered the House of Commons after I had left England; but when I came across him in Canada year before last, especially after renewing his acquaintance in Ceylon, I formed the belief that he would not remain a Labour back-bencher for long. He has the Scotsman's cannyness, great social talents and untiring industry; and if he has half a chance he will go very far.

The Colonial Office appointed Mr. E. A. Clutterbuck, one of its most competent Civil Servants, as Secretary to the Commission.

These, then, were the men who were asked to find a way to get over the difficulties that grated upon the nerves of an Orientalized British pro-consul, as, indeed, they roused resentment in British Officials in general who had come out to rule Ceylon, not *serve* her. After reading their report I have not the slightest hesitation in saying that they showed rare ingenuity in performing that task I cannot conceive of any set of men who would have done the very difficult job entrusted to them more efficiently.

III

Two separate streams run through the pages of the report tendered by the Donoughmore Commission to the Colonial Office. One of them is "profession." The other is "performance." Or one may be called "good intentions" and the other "recommendations." The two run side by side, but never mingle. To the end of the volume they remain quite distinct.

The good intentions expressed by the Earl of Donoughmore and his colleagues do them credit. They profess to give the Ceylonese government "the responsibility of managing their own internal affairs, subject only to certain safeguards in the background," as they say. They tell them that they do not propose to reserve any subjects of administration, or to divide the Budget into compartments. They are not enamoured of the Indian device of dyarchy, which Mr. Lionel Curtis claims was invented by Sir William Duke of the Indian Civil Service and later of the India Office, but which Sir C. P. Ramaswami Iyer declares, is as old as Rome. Neither the Chairman nor his colleagues, would in any case, touch it with a ten foot pole. (So they say). Subject to a few constitutional safeguards and some

reserve power to be used by the Governor in critical moments, they propose to make the Ceylonese supreme in the managements of their own affairs. These are indeed sentiments worthy of respect.

Perhaps because I have spent so large a portion of my life in Britain, I am a matter-of-fact man. I do not, therefore, wish to delve into the good intentions expressed by the Commissioners, but confine myself to a searching examination of the recommendations that they have actually made.

Such an analysis shows that both in respect of composition and functions, the Commissioners have recommended the creation of a system which if it comes into being, should become known as the "Donoughmore dyarchy." Their proposals, if adopted as they stand, would abridge the legislative powers enjoyed by the Ceylonese under the present Constitution in many matters, instead of giving them new powers. They would particularly make it impossible for any Ceylonese to exercise any control whatever over the Executive, and if the Ceylonese who, under the Donoughmore dispensation, are called to office or become members of the projected State Council, show any spark of manhood, administrative complexities and crises would be inevitable.

These are conclusions which the perusal of the Donoughmore Commission report have forced upon me. I have nothing to do with Ceylon politics and I am personally biased, if anything in favour of the Commissioners.

IV

I shall now proceed to state the reasons which have made me arrive at these conclusions.

—First, as to the Donoughmore dyarchy :

The organ of Government that the Commissioners propose to set up in Ceylon will consist of two separate elements. One will be white, the other will be brown. The differentiation in colour and race would hardly matter if the white section were recruited from the permanent population of the Island and were it not there merely for a time for gainful purposes.

The two sections will be different in other respects as well. A part of the governing body will neither be appointed by nor will it be answerable to any authority in Ceylon. Even the emoluments of the members composing it will be outside the

control of the legislature, which in fact, will not be able to enforce its will upon them. Persons composing the other section will, on the other hand, have their roots sunk in Ceylon's soil and their tenure of office will depend entirely upon the pleasure of the State Council, as the new legislature is to be called.

If these arrangements are not of a dyarchic character, I should like to know what a dyarchical institution really is.

Group number one, irremovable by the Ceylon legislature, is to consist of three permanent officials. They are to be known as Officers of State. Each of them will receive emoluments upon a scale determined by the Colonial Office, will be answerable for his actions to that Office through its agent in Ceylon—the Governor—and will look to that Office for the protection of his interests while he is in the Island. Yet all the three are to be superimposed upon the legislature. None of them is to have the privilege of voting, but each of them is to enjoy the status of a Minister.

The second group may or may not consist entirely of Ceylonese. It is expected that a number of Britons engaged in growing tea or rubber or other products in the Island will be returned by certain constituencies and one or more of them may be called to ministerial office. Whether that development takes place or not, the seven Ministers are to owe responsibility to the State Council, and are not to be laws unto themselves, as the Officers of State will inevitably be.

Peculiar devices have been improvised by the Donoughmore Commission for the appointment of the Ministers. To understand their nature, it is necessary to know something of the projected State Council. It is to consist of :

(a) the aforementioned three Officers of State :

(b) sixty-five members elected by various constituencies upon an exclusively territorial basis ; and

(c) some twelve members, of whom as many as six may be non-official Britons, to be nominated by the Governor.

The Council is to sit in Executive as well as Legislative Session. Immediately after assembling the elected and nominated members (some seventy-seven in number) are to resolve themselves into seven committees. Each of these committees is to elect its own President, and that person,

if the Governor has no objection to him, will enjoy the status of a Minister. (The italics are mine)

This new-fangled system will naturally make it impossible for even those Ministers who are not merely in the legislature but are also of it, to be responsible in the manner in which Ministers are responsible to Parliament at Westminster or in any of the Dominions. Each Executive Committee being mandatory and in no sense advisory, is to hold the poor Minister in the hollow of its hand. He nevertheless is to be "individually responsible," together with his respective committee, "to the Council for the direction and control of the department."

It is difficult to understand why the Minister should be *individually* held responsible for acts which may have originated with the Committee or which may have been forced upon him.

The Commissioners have been so chary of giving details in respect of this system and the language they employ in giving such particulars as they have vouchsafed is so ambiguous that it is impossible to tell what they mean when, in addition to making each Minister individually responsible, they make him responsible together with his Executive Committee as well. Just what they mean passes my understanding. Perhaps it passes their understanding, too: for other parts of the report show that when a thing is intelligible to them they do not lack the gift of language to make it clear to others.

The Commissioners justify the creation of these seven standing Committees on the plea that political parties do not at present exist in Ceylon and they can come into being only along racial and religious lines. I do not agree with the latter assumption, since the line of political cleavage is already visible to any person who comes to look beneath the surface. The system which Lord Donoughmore and his colleagues propose will *artificially* split the state council into seven more or less water-tight compartments.

It is idle to ask if any Ceylonese with a spark of manhood would assume office under a system so manifestly unfair. A Ministership has great glamour even for persons belonging to nations that have not been in subjection for centuries as has been the case with the Ceylonese. The Commissioners have besides, recommended a salary of Rs. 27,000 per annum—an amount which few Ceylonese who have not inherited or married money

are able to earn. The suggestion that they have conveyed that they were offering Ceylon a form of government more democratic than that which exists in any country in Europe or America, moreover, tickles the fancy especially of some of the younger politicians who have yet to cut their wisdom teeth. I can, therefore, conceive that the Ceylonese will be falling over one another in the scramble for ministerships.

It is more profitable to turn from these speculations to the recommendations made by the Commissioners which, if adopted, would enable the three permanent officials who, without being made responsible to the State Council, are to be given the status of Ministers, to be able to administer the respective departments placed in their charge. To explain why they are thus merciful to their own countrymen—for it is not to be assumed for a moment that Ceylonese are normally to be appointed to hold one or more of these offices of State—the Earl of Donoughmore and his associates put forward the plea that "the functions of these officers will be largely advisory and the activities of their departments complementary of the decisions of the Council."

V

These words have a soothing sound. I have, however, lived too long among the British to be lulled into somnolence by such jingles. What is precisely their import?

An examination of the functions that the Donoughmore Commission reserve to these irresponsible officers of State—I am merely using constitutional phraseology and—those that they propose to transfer to their colleagues elected to the Council and responsible to it in the peculiar manner suggested by the Commission, will show exactly the position the two wings of the Donoughmore dyarchy will occupy in the administration of Ceylon if it is to be modelled upon that pattern.

The principal among the three Officers of State is to be known as the Chief Secretary. Hitherto Britons who had distinguished themselves in other parts of the Empire have held the analogous office—that of Colonial Secretary—and some of them have been liberal-minded and statesmanlike. I can speak from personal knowledge in those terms of two of them—the present incumbent of that office—Mr. A. G. M. Fletcher; and one of his predecessors—Mr. Graeme Thompson. The Commissioners, how-

ever, recommend that in future a man who has grown up in the Ceylon Civil Service shall be made the Chief Secretary; and if their proposal is given effect to, it will mean that Britons bound about with local prejudices will occupy the most important position in the Ceylon administration.

Whatever may happen in this respect, the Chief Secretary will, according to the Donoughmore scheme, control External Affairs, including affairs, concerning the Maldive Islands, which constitute a dependency of Ceylon. He will also be in charge of Defence, including Volunteer Corps or the Defence Force, to adopt the more modern phraseology. The drafting of legislation is further to be his concern. Lastly, and perhaps most important of all, he is to control Public Service administration. Such importance do the Commissioners attach to that matter that they specifically reserve to him the making of appointments and even transfers and matters pertaining to discipline. As I have already hinted and as I shall show later in detail, all officials of any importance are not only to be under the control of the Chief Secretary, who is to be irresponsible but they themselves are to be outside Ceylonese legislative control.

The Chief Secretary is also to keep an eye on the Audit Department.

While the Attorney-General, another member of this trinity, is not to be entrusted with the drafting of legislation, he will nevertheless prepare all legal instruments and contracts and advise the Government on all legal questions. He will also be responsible for the conduct of elections. He will further control the administration of justice. Justice in other words, is not to be a transferred subject.

The third member of the trinity—the Treasurer—will perform the functions that in constitutional countries are reserved for the Chancellor of the Exchequer, who, as the custodian of the money-bags, is able to dominate administration. He is to be responsible for the collection, disbursement and custody of revenue from whatever source; and the preparation of the annual Budget and estimates and of supplementary estimates. His advice is to be sought on taxation, exchange, loans, currency and other matters pertaining to financial policy. He is to control the investment of State funds, including the making of loans to local authorities, etc., as also the management of the public debt. Finally, he

is to supervise financially all departments, including contracts, stores, financial regulation of Public Services, strength of establishments, leave regulations, salaries, pensions and allowances.

The Commissioners insist upon placing the Treasurer in a position which will enable him to "be in intimate touch with the financial aspect of all questions from their inception." They further insist that he shall "be given an ample opportunity of expressing his opinion from the financial point of view in the initial stage of a proposal, in the intermediate stage at the Board of Ministers (of which more later), and in the final stage of discussion in the Council." He is to have both "the status and authority of a Minister," but he is not to have the responsibilities of a Minister. Unless he certifies that a Bill is free from provisions that will affect the financial credit of the Island, the State Council cannot proceed with it. The Treasurer will, in fact, be the Mussolini of the Donoughmore dyarchy.

It took genius of the highest order to sum up, in innocent sounding phrases, functions of such diverse and vital character entrusted to these three permanent officials completely outside the control of the legislature but who, through control of (a) the Public Servants and (b) the coffers of the State, or (c) on the plea of legal objections, would be able to exercise a formidable check upon the elected Ministers. The British have such genius in superabundance. They however, make a great mistake when they delude themselves into the belief that the nations under their political subjection lack at least a few individuals who possess the wit to lift the cloak in order to see the form over which it is thrown.

Do External Affairs or matters pertaining to Military, Naval and Aerial Defence of the Island fall into the category of "advisory" functions, or are they to be classed as functions "implementary of the decisions of the Council?"

Though I have examined the report from cover with the greatest care, I have not been able to come to any decision in regard to the authority, if any, that the Council is to exercise over these Departments. The statements that the Commissioners have permitted themselves to make in these connections are both scrappy and ambiguous. In the matter of defence of the Island they write:

"Among the Imperial affairs referred to above

is one of vital importance, viz. : the defence of the Island. In this matter we do not contemplate any change in the well-understood relations between the Governor as Commander-in-Chief and the Officer Commanding the Troops.

"On the question of direction by the Governor (in this and in matters affecting external relations) we think it necessary to state that while we are definitely of opinion that those affairs for which the Imperial Government is responsible to the Parliament of the United Kingdom, and to the people of the whole Empire, should remain under Imperial direction, we are not fearful that there will be any desire on the part of the representatives of the people of Ceylon so to order the policy of the Island as in any way to militate against the general interest of the Commonwealth of Nations to which they belong, or against the special interests of the people of Great Britain who have commercial, financial or other connection with the Island. What we heard and saw in Ceylon, the treatment meted out to ourselves there, the respect we observed to be shown on all occasions to His Excellency and to his High Office, the candid recognition to us of benefits derived from the long association of the Island to (with?) the United Kingdom, all forbid this fear."

The Ceylonese will no doubt be grateful for the trust that the Commissioners have thus shown in their good sense. Do these statements imply, however, that the legislature of the future will have nothing to say in external affairs and defence of every description, while having the privilege of voting supplies? Notwithstanding the trust that the Commissioners wish to repose in the Ceylonese, they have devised machinery whereby any obstreperousness upon the part of the Council in respect of such supplies can be easily and automatically overcome, while they deny to that Council the right of entertaining, much less passing, any Bill dealing with such matters, unless the British themselves ask it to do so.

And pray why should the activities of departments which are entrusted with functions "implementary of the decisions of the Council" be reserved in a system supposed to be constitutional, to persons who themselves are not made responsible to the legislature? No procedure could, in my judgment, be prescribed that would more completely secure the negation of responsibility than this.

VI

The allocation of the remaining functions of government to the Ministers--the junior partners in the Donoughmore dyarchy--does not call for any comment. I have already noted that in administering the department over which they are supposed to preside

they will have to reckon with the Executive Committees, and not merely with the legislature, as is the case in Britain and the British Dominions. That is, however, only one of the entanglements that have been specially created by the Commission for their benefit.

Each Minister is, for instance, to be "provided with a permanent official Secretary who would be a member of the Ceylon Civil Service" or at any rate of one or another of the superior Services. The grade in which that permanent official is serving is to be such that he will not be able to assume "a position of official superiority" when dealing with the heads of departments--his fellow permanent officials. He is, however, to act as "intermediary between the Chairman and, the heads of departments as the latter did not consider a case for direct personal touch." The "latter," of course, refers to the permanent officials occupying the position of heads of departments. The poor Minister evidently is not to have even as much initiative as they. He, it appears, is to be in the grip of the Secretary.

It has already been noted that none of the Ministers is to be competent to make appointments or even transfers in any of the departments he is supposed to administer. That power has been reserved to the permanent official who is to be known as the Chief Secretary and is to belong to their own caste and, at any rate in case of most high officials, also to their own race.

It needs, however, to be added that none of the high officials is to be under the control of the Minister placed at the head of the department in which they serve in the sense that public servants in Britain and the British Dominions are under the control of their political chiefs. In those countries the legislators, as a body, hold in the hollow of their hand all permanent officials, be they great or small, drawing large emoluments or in receipt of mere pittance.

The Donoughmore Commission actually recommend the abridgement of the control which the existing legislature in Ceylon possesses and exercises over officials in precisely the same manner, i.e., through the power of the purse. They propose that its successor, the State Council, shall have only the right of "comment and criticism" in respect of "all matters affecting the pay and allowances, pensions, prospects and conditions of service of public officers."

(The italics are mine). The scale for emoluments and conditions of service are to be laid down by Whitehall with the assistance of an "independent" Commission (independent, no doubt, because it is to be appointed from Britain and will consist, largely, if not exclusively, of Britons). And the decision of Whitehall in all service matters is to be final and binding upon the Ceylonese who will have to post the bill.

The Donoughmore Commission seek to give the impression that there is nothing in these proposals that is out of the way. The talk about "independence" and "fairness" would come better from them if positions carrying large salaries in Ceylon were not the monopoly of their people and they did not show anxiety to reserve a very considerable percentage of such posts for their own people for a long time to come. They moreover, suggest increase in the emoluments, partly on the plea that their countrymen are exiles "from the temperate climate which is their birthright" and partly because they must preserve "a standard of living and hospitality in keeping with their own traditions and those of a Service which for over 125 years has represented a great Imperial Power." So solicitous were they for the welfare of their countrymen serving in Ceylon (or is it ruling Ceylon?) that they did not forget to ask "whether some arrangement could not be made by Government for the storing of furniture of officers proceeding on leave of absence from the Island." The Commissioners wish, on the other hand, to enforce a "Ceylonese standard upon all Ceylonese serving in their own country, in tropical conditions, their birthright." The economy thus effected would go some way in meeting the increased expenditure upon the British officials.

I must point out that the benefits that the Donoughmore Commission wish to confer are not to be limited to the permanent officials already in the employ of the Ceylon Government, but are to be extended to all those "who may in future be recruited for posts under the Ceylon Government the filling of which is subject to the approval of the Secretary of State for the Colonies" and all important posts I note, are to be reserved for the signification of his approval.

The Commissioners cap these proposals with another series of recommendations which would give an "unqualified" right to enable any official (including even the

Ceylonese) recruited before the publication of their report to retire from the Service and demand "proportionate pension with compensation for loss of career." That option is to be "continuous" and not to last only "for a specified period."

In the space at my disposal I have not been able to deal at as great length as I should have liked with the "safeguards" proposed by the Earl of Donoughmore and his colleagues. I hope however that I have, indicated their drift sufficiently to enable the reader to realise that the high officials who will serve under the Ceylonese Ministers, will be their "subordinates," in mere name, and their masters in reality.

VII

The Ministers, even in their relations with their Executive Committees, are to be under the oversight of the permanent officials. The "Civil"—or the "Public"—Servant who is to act as the Secretary is to be present. So will be the head of the department concerned in the proposals under discussion. They will, of course, be there to assist the Minister. The head of the department, though at liberty to join in the discussion, is not to have any vote, and I dare say the Secretary will be in a similar position. The senior partner of the Donoughmore dyarchy—the permanent official occupying the position of Chief Secretary—is to "have the right to attend" any such meeting "either personally or by deputy" and may speak but cannot vote. I presume the remaining two senior partners of the dyarchy—the Treasurer and the Attorney-General—may be invited to be present, if necessary. They will, in any case, have their fingers in the pie, for hardly any important governmental matter can be divorced from financial or legal considerations.

The Commissioners take particular pains to emphasize, that the Governor is to be appraised of what happens in the administration. The Agenda of Executive Committee meetings will be placed simultaneously before him and the members. The substance of discussions relating to important matters is to be communicated to him.

Then there is to be a Board of "Ministers." I have placed the word Minister in inverted commas because it is used in the Donoughmore Commission sense and not in the ordinary constitutional connotation.

That Board is to consist of the three "Officers of State" and the seven "Ministers." The Chief Secretary is to be its *ex officio* Chairman. The position of Vice-Chairman is to be reserved for the Minister who may be elected to that office. The Secretary is to be a member of the Ceylon Civil Service. This Board is to "last the lifetime of the Council which would be four years," though the elected element would change from time to time, as individual Ministers incurred the displeasure of the Council and had to retire.

To this Board is assigned the function of settling "the order of business for the Council, both in Executive and in Legislative Session; and" the determining of "the procedure by which matters which concerned more than one Standing Committee could most be conveniently arranged." The Commissioners speak of these functions as "routine matters," though the settling of the order of executive and legislative business is considered in their own country to have an important bearing upon both administration and legislation.

The concurrence of this Board must be obtained by the Officers of State and Ministers before they, or any one of them, can initiate a money-bill or any proposal creating, in any manner, "a charge upon the public revenue." No other Member of the legislature than these Decemviri is to have such a right. I apprehend that this proposal is meant to stop the existing practice which has enabled unofficials to get a number of Bills involving considerable expenditure passed by the present Council.

The Board is to be the complete arbiter of the annual Budget and estimates as also supplementary estimates as they are introduced into the State Council. The responsibility is to be "collective."

The term within inverted commas has certainly been used loosely. How can there be any collective responsibility in a body which is presided over by an "irresponsible" permanent official and has two other equally or "irresponsible" permanent officials as members, all three superimposed upon the State Council, which cannot touch a penny of their pay, much less remove them from office? In this circumstance "collective responsibility" can only mean that the rejection of the Budget would make the Councils' are fall upon the necks of the elected Minister, as the Commissioners themselves say on another page.

The Budget will be unitary in name, but dyarchical in character. The salaries, allowances of various descriptions, pensions and gratuities of Public Servants constitute by far the heaviest item of expenditure. That item, as I have shown, will, if the Donoughmore recommendations are adopted, be open merely to "comment and criticism" of the State Council, but in reality will be unvoteable. Much the same can be said of the estimates relating to External Affairs and Military, Naval and Aerial Defence; and possibly of the other services such as finance, audit and justice, reserved for administration by permanent officials instead of by elected Ministers.

Apart from the very wide powers that the Governor will have, as will be pointed out later, he is specifically made competent to meet the situation that might arise through obstreperousness on the part of a Minister or his Executive Council. "Should any Executive Committee," propose the Commissioners, "omit to present its estimates within a reasonable time the Treasurer should report the omission to the Governor, who would be empowered to make up, with such assistance as he might require from the Board of Ministers and the heads of the departments concerned, what would be known as 'certified Estimate.'"

VIII

The Donoughmore Commission propose to confer formidable powers upon the Governor. He will be supreme in legislative matters, will hold the whip-hand over the State Council in both its legislative and executive capacities; and will constitute in certain circumstances, a second chamber comprised solely of himself, whose fiat will have the force of law, completely overriding, if in his estimation need be, the will of the Council.

The Donoughmore Commission recommend that the Governor shall remain the Commander-in-Chief. They propose that he be given the "power to declare," at his own initiative, "a state of emergency and after such declaration to take over the control of the police and of any other department or service which he may consider it in the public interest to direct." He is to be, in fact, given complete initiative to "take executive action, in default of the co-operation of the Council, in matters of paramount importance to the public interest." What these

days could not appear there, with his basket of red flowers. Now Krishnadasi had become the object of her envy, in the place of Bela. Krishnadasi did not possess beautiful red ribbons and smart frocks, like Bella, but what a wonderful voice she had! Miss Nag used to land her up to the skies. "Mukti can sing too," she would say, "but she is no match for Krishnadasi." Mukti wished Krishnadasi would leave the school. Then Mukti would be sure to get the prize for singing. But that girl was much fairer than Mukti. Did not Sushie-didi say so only the other day? It was very hard for Mukti. She could not bear Sushie to praise anyone besides herself. She wished she could keep Sushie to herself. When the bell rang for tiffin, the big college girls would take Sushie-didi by the hand, and walk about with her and laugh. They would whisper in her ear, and Sushie's beautiful face would become quite pink. She would laugh and slap those girls. But those girls would not get angry and go away. They stayed and talked on. Sushie-didi looked very beautiful and happy, at these times. Mukti liked to gaze at her face then. But when Mukti talked to her, she did not become pink, neither did she laugh like that. So Mukti hated those big college girls. Sushie-didi would never cast a glance at Mukti, when she met those girls. One day she rushed in amongst them, and clasped one of Sushie-didi's hands and tried to say something. But those big girls began to laugh, as if Mukti had no rights to Sushie. From that day, Mukti did not go near them. But even when these creatures had left, in those big buses, Mukti could not feel easy. Sushie-didi would then begin to praise Krishnadasi's beauty. Had not Mukti a right to feel angry then? She was so mad with Sushie, that she did not go near her the whole evening. Molina had praised Mukti's hair, so she stayed with her.

Just as in her old home, grandma teased her to drink her milk and brush her hair, so did Molina here. As the last bell rang at school, Molina would take away Mukti, wash her face, and brush and tie up her hair in a pigtail. Mukti did not like this. Still Molina was better than grand-mother. She did not tie up her hair in a tight knot as grandma did, she did it nicely and put in a big bow of ribbon.

One thing was very strange here. There were no fathers or mothers here, only

Mashimas (aunts) and Didis (elder sisters). Even the very big girls did not put vermilion marks on their foreheads, veil their faces or sit quiet with grave faces. They laughed, read from picture books and enjoyed lozenges and toffees. But when Mukti lived at home, she had visited many houses and found all the big girls busy cutting up vegetables or rebuking little children. They talked very gravely. None of them had picture books, they possessed large bunches of keys, big boxes and babies.

But Mukti now knew the reason why. Those were homes, and this was a boarding house. The Didis (elder sisters) lived in boarding houses and read books. Mukti was a fool when she came here, so she got puzzled. But now she understood all. When she grew big, she too would read in the college from big red books. She would not have to stand up and say her lessons to Miss Nag then. Men teachers, with English dresses on, would teach her, and she would have only to listen and write a bit now and then in her notebooks. She would get many hours off, every day. But she would not read at night as Sushie and Molina did now, sitting round a huge round table. Mukti would skip over a big rope to her heart's content, bathe as long as she liked and eat plenty of sour pickles, behind the back of Miss Nag.

Mukti's days passed on thus, day dreaming. She would seldom remember her father or her grandmother during the school hours. But when the last bell had gone, and the big buses rolled out of the stables and came and stood in front of the stairs, and Bimala, Aparna and the other little girls rushed to get into them with their books and slates, then Mukti would begin to get homo-sick. She wanted to get into one of those buses and drive home to her grandmother. But these big carriages never went the way to her home. Besides Sushie-didi had told her that little girls from the boarding house could not go home every day. If they went they got terrible punishment. Still Mukti would have gone, if the coachman Pitambar had taken her. But the man always refused, saying, "No, little Miss, I cannot drive all that way. My horses would get dead tired. Then who would pull this heavy bus tomorrow? The Big Mem Sahib will scold me very much."

Mukti could have torn her hair and howled with rage, at those times. If Molina happened to come for her then, she wanted

to beat her. But this was a boarding house! So the poor little girl had to swallow her anger, as well as she could.—She had to follow Molina, descend those ugly iron stairs and enter the dressing room. But if anyone mentioned her home then, she could restrain her tears no longer. Out they would come in a flood. Then Sushie would rush to her, take her up in her arms, kiss her, and make her laugh some how. Mukti would forget all her sorrows at the touch of Sushie's beautiful face on her own.

At night, the Christian maid-servant, who dressed in chemise and saree like a gentlewoman, would ring the bell loudly. Then she would bring up bowls of milk on a tray into the bed-room, where the girls slept on iron bedsteads. Mukti would sit up on the bed, with her small legs dangling in the air and remember her grandmother and their huge bedstead with regret. Her grand-mother would carry her in her arms from the kitchen where Mukti used to have her supper, and put her to bed. Then after finishing all her duties, she would come and sleep by Mukti's side, clasping her lovingly in her arms. Sometimes her father would come home early, and sit down to have his supper by Mukti's side. Mukti would lean against him and thus fall asleep. But if she fell asleep here, at the supper table, the other girls laughed and poked her. She had to walk up to the bedroom and sleep alone on the iron bedstead. If Miss Dutt had not been so angry at two girls sleeping on the same bed, Mukti would have taken her little pillow and gone to sleep with Sushie every night. She had done so once, but Miss Dutt came and scolded Sushie-didi in a loud voice and with very angry red eyes. She felt terribly nervous while sleeping alone, she wanted to cry. She would wake up in the middle of the night and tremble with fear, to find all sleeping and the street lamp shining through the windows and casting fearful shadows on the walls. She felt terribly frightened to remain awake alone, but that very fear kept her awake, even if she covered herself up completely and put her head under her pillow. Her fear reached its climax, if the wicked men of the street shouted, "Bala Hari, Hari bol!"* in their harsh voices. Little Mukti would grow cold with fear, her tongue would cleave to the roof of her mouth and she

would feel paralysed. One night, she rolled down from the bed, somehow. She must have fallen asleep then, because she seemed to wake up after a while, and found Sushie, Molina, and the other big girls putting water on her hair, and fanning her. Then for a few days, she slept in the house-keeper's room, but in a separate bed. But now she had come back to the big bedroom. She had not fallen down from the bed again. If the people in the street shouted, the other girls screamed and clasped one another in fear, but Mukti did not move. She would lie, stiff and cold with fear in her own bed.

Then the morning bell would ring very loudly, and Mukti would open her eyes to find the other girls leaving their beds, with tousled hair and sleepy faces. They would thrust their feet inside embroidered Japanese slippers or Burmese sandals and go out to wash their faces. Mukti would be astonished to find Sushie and a few other big girls walking about on the big verandah, even so early. She never could know when they got up. She would feel ashamed of sleeping late, and would sit up hastily on her bed. Then Molina would come and kiss her on her sleep-laden eyes, and take her away to wash her face. If she would sleep really late, Molina would come and gently rouse her up, passing wet fingers over her eyes. "Get up Mukti," she would whisper in her ear, "or Miss Dutt will scold you."

One day she would not get up at Molina's words. Miss Dutt really came then and shook her so roughly that even her bone began to ache. She remembered with regret the privileges of living in one's own home. There she used to sleep, all she desired and nobody shook her. Only grandma had sprinkled water on her eyes once or twice. Miss Dutt was not satisfied with shaking her, but she scolded Molina too. "Don't spoil the child like this," she said, "I did not put her under your charge for that." Then she said something in English, which Mukti could not understand. Molina's face became red, and she took away Mukti at once to the bath room.

But during the daytime Mukti was too busy learning her lessons, playing, singing or talking to her friends to remember her grievances. She would remember her grandma in times of sorrow, but would forget her with the passing off of her melancholy. But on a certain day during the

* The chant of Bengalis, while carrying a dead body.

"matters of paramount importance" are have been left undefined—if, indeed, a definition is possible—and the Governor will have an exceedingly wide latitude in consequence.

As already stated, the Commissioners propose that the Governor be "given the power to appoint the Chairman of Executive Committees"—i.e., the Ministers. He is also to be given the right of making appointments to the public Service, to be exercised, if I have read the recommendations aright, through the Chief Secretary—a permanent official enjoying the Status of Minister (in fact, Prime Minister) without owing any responsibility to the Legislature. The "prerogative of mercy" is "to be vested in him alone."

The Governor is to be furnished with "copies of all agenda and minutes of every Executive Committee and of the Board of Ministers." He is also to be given "copies of all documents supplied to the (State) Council, including the Orders of the Day and the official record of the proceedings."

The Commissioners declare that the desire to enable the Governor to keep in touch with what is going on actuates them in making these recommendations. I note, however, that they propose that the Executive is not to "be competent—to take action on any items approved by the" State Council, either in its legislative or executive capacity "until the Governor's ratification has been received." They go so far as to ask that "he should have power to approve, refuse approval, reserve approval pending submission to the Secretary of State (for the Colonies), refer back to the Council for further consideration, or certify any particular item" of executive action "as involving an important question of principle and so requiring the support of two-thirds of the members of the Council."

The submission of papers concerning executive as also legislative matters to the Governor is therefore, not meant merely to enable him to pass away time or to take a purely academic interest in the proceedings. He is, indeed, to make it possible to delay action, have it modified or entirely stopped and, if the Council takes offence and refuses co-operation, he, as aforementioned, will have power to act quite independently of it.

In legislative matters, too, the powers of the Governor are to be increased, if the Donoughmore Commission's recommendations

are to be adopted. He will not only be competent to reserve assent to a Bill passed by the legislature "pending signification of His Majesty's pleasure," but will be able to: Refer it

"back to the Council for further consideration with or without suggested amendments.

"Certify a Bill coming within the Article of the Order in Council which demands its passage by a two-thirds' majority.

"attach to his assent a condition withholding the ordinance from operation for a period not exceeding six months," or
"refuse assent."

The Governor is to be able to exercise all these powers "at his unfettered discretion" subject to being overruled from Whitehall.

Just as in respect of executive matters the Governor is to be given full scope for action independent of the legislative and executive machinery of every description, so in legislative matters he is to be able to act for himself. In case he "is of opinion that the passing of any Bill or any clause of it, or of any amendment to any such Bill, or of any resolution, or vote, is of paramount importance," he is to have the absolute "power to enact legislation" at his own discretion, and no "voting on" such a measure or measures shall "be required."

The Donoughmore Commission nevertheless wishes the world to believe that they are assigning to the Governor functions merely of a negative rather than positive, supervisory rather than executive" character. The worst of granting such formidable powers is that they have a tendency to overawe the Executive and the Legislature and to make them subservient.

IX

The Donoughmore Commission recommend the abridgement of the powers of the Legislature in respects other than those already named. It is, for instance, to be incompetent to legislate on the following matters, except with the prior consent of the Governor or at his request:

"Any Bill whereby the rights or privileges of public servants may be prejudiced.

"Any Bill whereby the financial stability of the Island may be prejudiced.

"Any Bill relating to questions of defence or public security, or any matter affecting naval, military or air forces or volunteer corps or the control of aerial navigation or aircraft.

"Any Bill relating to or affecting trade outside the Island or docks, harbours, shipping, or any

lands, buildings, or other matters of naval, military or aerial interest or of Imperial concern.
 "Any Bill relating to or affecting the administration of justice in the Island."

If these recommendations are adopted, the field of legislation will be very much restricted; and the legislature will really lie in the hollow of the Governor's (and Treasurer's) hands.

It is to be remembered that the Colonial Office is to retain the right of disallowing "any law assented to by the Governor." There is to be the Whitehall veto over the Queen's House (the Governor's residence in Colombo) veto.

It is to be further noted that the British Parliament will continue to have concurrent as well as over-riding authority.

X

The report is so smoothly worded that few Ceylonese have had the intelligence to grasp its implications. With two or three exceptions, even those few have not stated their views with force, much less urged upon their countrymen to beware of it.

Many among the Ceylonese, on the contrary, have been unable to resist the flattery that the Commissioners have bestowed upon them. That is particularly true of the younger inexperienced politicians.

In matters other than that of flattering Ceylonese vanity the Earl of Donoughmore and his colleagues have shown a wonderful grasp. They have, for instance, attached a salary of Rs. 27,000 per annum to each Ministry. For a people who have been given

only three Executive Councillorships of the second class—i. e., the right to sit in the Executive Council without any Departmental responsibility or executive functions—they have designed a system which would enable seventy-seven legislators to feel that they are Executive Councillors. By doubling the strength of the legislature they have enlisted the support of many aspirants. Their recommendation in favour of the extension of the franchise to all adult males and women over thirty, with certain residential qualifications, have won them support from both sexes, on a far greater scale.

The Ceylon National Congress has not been ignored. The proposal to get rid of the electoral machinery for filling seats reserved to certain minority communities has been advertised as the abolition of "communal representation," and the Congressmen have accepted that profession at its face value.

For these and other reasons of a similar nature the report has been swallowed. It is true that certain Ceylonese political associations have accepted it subject to specific reservations but the British are canny and have no doubt taken a correct measure of the Ceylonese at whose instance those "reservations" were made. It may, therefore, be taken for granted that if any modifications are made they will certainly not be in the direction of liberalizing the report, but to make it even more acceptable to the British official, financial, industrial and planting interests in Ceylon and their supporters and principals in Britain.

THE GARDEN CREEPER

By SAMYUKTA DEVI

(5)

IN childhood, we are great friends with nature and mother earth. We respond easily to every call of theirs. Joy and sorrow flash across our lives, like lightning, leaving no trace behind. As we grow older, we become strangers to our old friends. But joy and sorrow would no longer come and go, and leave no trace behind. They leave

glorious pictures or deep scars, which we carry to our last days.

So Mukti soon became accustomed to her banishment. She made friends with the small people round her, and accepted this boarding house as her home. This became her world, and Aparna, Krishnadasi, Sushie-didi and Bimala peopled it. Her father and grand-mother could seldom enter into it. Even the Oriya gardener, her slave of

week, she could think of nothing else except the garden and the house at Bhowanipore. On Friday, as soon as she got up, she would run down to the dressing room. She would take out a large towel from the big wardrobe and would take this with a big safety-pin to Molina. "Please Molina-di," she would begin coaxingly, "pack up my clothes. I shall go home today."

Molina would laugh and push her away, saying, "Go away madcap, are you starting this very minute? Wait till the evening and I shall make everything ready for you."

But Mukti stuck to her, till she had to give way. She would make a bundle with some of Mukti's clothes and fasten it up inside the towel, with the safety-pin and give it to her, saying, "Now run away with your bundle." Mukti would go about the whole day, with the bundle clasped in her arms. She would rehearse to herself all the stories, she would tell father and grandma, again and again. She would carry the bundle with her books to the class. Miss Nag scolded her for this, but Mukti never reformed. She did not like to go back to the hostel for it, before running to the bus which would carry her home.

(6)

Mokshada Devi found it very hard to pass her days, now that Mukti had gone off to the boarding house. The large house seemed like a desert. There was no sign of man or child anywhere. How could a woman live in such a place? She had begun to pester her son now to take unto himself a second wife. The wee bit of a girl had made the place homelike, but she too had been sent away to the school, for becoming a *Mensahib*. The house seemed like a haunted one now, so silent and deserted it had become. A mother could not tolerate such a state of affairs. Her son was young, why should not he marry again? He had no son, to inherit the estate or to carry on the family name. He ought to consider these points and to marry again.

But her son would not listen to her. So Mokshada had to fall back upon her old threat of going away to the country-house. She managed to while away the time making jams, fruit preserves and pickles for her grand-daughter. Mukti was very fond of these things. Shiveswar hated these things like poison. But though he spent a fortune

in biscuit, chocolates and lozenges, Mukti would cast greedy eyes at her grandmother's store of unwholesome delicacies. Though she was of her father's opinion, in all matters relating to dress, she sided with the old lady, when eating was concerned.

Her grandmother was busy the whole week, preparing for her home-coming in the week end. She looked forward to these two days with the eagerness of a young woman expecting her beloved. Mukti liked to put on sarees, like grown up girls, with a train trailing behind. So Mokshada Debi would call cloth vendors and buy all kinds of coloured sarees for Mukti. The barber's wife would receive strict orders from the old lady, to come punctually on Saturday, in order to paint Mukti's small feet with lac. She was under the impression, that Mukti did not get food enough at the hostel. So she would make fresh butter for her and keep it safe.

For five days these preparations went on. On the sixth day, Mukti was given a right royal reception.

Shiveswar, too, found time hanging heavy on his hands. There was nobody now to run out to welcome him home, when he returned tired, with the days' work. Nobody insisted on eating from the same plate, or drove him mad to take her out for a drive. All her toys, her tricycle, her swing were thrust in a corner and presented a forlorn sight to the eye. They too seemed to await her magic touch to wake into joyous life. Nobody ran to put *pan* in his mouth now after he had finished dinner.

He had wished to bring up his little daughter himself and to train her in the way he thought best. But fate intervened, and he had to send her away to school. She only came to him for the week end, so there was no time to teach her, the two days being completely taken up by petting and spoiling. But the time hung heavy on his hands. His mother was the only other person in the house besides himself, but it was rather difficult to talk to her. She had only one topic of conversation, viz., a second marriage for Shiveswar. "I plead and plead," she would wail, "but you never listen to me. Won't you bring home a bride?"

But Shiveswar was adamant on this point. And Mukti was at school and likely to remain there for a good many years. So he must think of some other way for passing his time.

He began to think over various schemes, when one day his mother said: "Do you know, Bishu had arranged a match for his daughter, with that boy of Bishnu's, I told you about. The girl is only a year older than our Mukti. You became quite wild, when I told you to secure him for your daughter. What do you think of it now? You will have to give your daughter in marriage, sooner or later, now, would not you?"

Shiveswar was probably thinking of something else, so he replied absent-mindedly. "Yes, yes, I shall settle about it soon."

His mother could hardly believe her ears. "With whom?" She asked eagerly.

"Oh, I shall tell you, when I have made up my mind," he replied.

Mokshada had to be content with this, and went off to the kitchen.

Shiveswar entered his office-room and called his bearer. The man answered and entered, with great alacrity.

"Did not you ask leave, for going home?" Shiveswar asked. "Well, you may go."

The servant was astounded. He had never expected such generosity. He had mentioned the matter, about a month ago, but Shiveswar had not deigned to answer then.

He replied with folded hands, "Yes sir, I shall go soon, I may even go to-morrow."

"All right," Shiveswar answered. Then as the man was about to go out, "What caste are the people of your village?" he asked.

"There are many castes, Sir," the bearer replied. "Most of them are untouchables like ourselves, There are two or three good castes also."

Shiveswar remained deep in thought, with a deep frown puckering his forehead.

After a while, he spoke again. "When you come back," he said, "bring an orphan boy from your village. I suppose there are many? Choose some one who knows how to read and write."

"So the master is thinking of adopting a boy," thought the bearer. "All right, Sir," he said and went away.

A few days passed off. Then as one fine morning Mokshada Devi was ordering the gardener to pick some green mangoes for her which she wanted for a favourite dish of Mukti's and the gardener was trying to excuse himself, the maid-servant, Nitya, came running up to her mistress. "Please Ma, come and look," she shouted, "a fine looking boy is coming with master's bearer."

The old lady was busy preparing for the weekly reception of Mukti; so she replied hotly, "Let him come. Do you want a band playing for him? He does not need to be received like a son-in-law." The maid went away rather embarrassed. After a few minutes, the bearer appeared, accompanied by a small boy of fresh complexion and fine features. He looked countrified and shy in his manners. Mokshada barely cast him a look. She had no time to waste on servants' relatives just at present, as she was expecting Mukti every minute and had not yet prepared a green cocoanut for her.

Mukti rushed in, within a few minutes. As she passed by her father's office room like a small hurricane, she saw a boy, slightly older than herself, sitting inside, to whom her father was talking. The boy wore ugly clothes and strange amulets.

Mukti was surprised, but she did not stop. "Grandma, I have come," she shouted and ran inside.

(7)

Gopal was a child from the bearer's native village. He lost both his parents when quite young and was taken away by a kind-hearted gentleman, who used to know his father. But his wife Mohini took an instant dislike to the boy. He seemed quite out of place in her well-arranged home. She was living very happily, with her two small children and her husband, when that great fool went and wasted a lot of money over some dying friend. Not content with that, he brought over to his home this spivelling wretch of a boy. Though her own husband was entirely responsible for this arrangement, Mohini made the unfortunate boy the scapegoat, and vented her anger on his devoted head, to her entire satisfaction.

Gopal felt himself an utter stranger in this household. He was not accepted as one of the family, neither was he treated as a guest. He became a parasite without root in any soil. His heart remained starved. Mohini kept her own children scrupulously apart from him and never came down from her heights herself to the level of the poor boy. The master of the house had probably forgotten all about the poor boy, for he never took any notice of him. Besides that he was seldom at home, business keeping him in Calcutta for the greater part of the year.

The house of widowed Kamini was the

only spot on earth where this homeless creature felt at home. She was also the only person who talked kindly to him. But her house was not easily accessible, because Mohini did not like Kamini. Kamini sold fried rice going from door to door, for her livelihood; so she could never be treated as an equal by her. And so no inmate of her house, though he be nothing but a recipient of charity, could get so familiar with her. The family prestige had to be maintained.

So four or five years passed off. There was no change in Gopal's condition. His only solace was Kamini's love, his only occupation was reading. Mohini had grown no kinder. Gopal always stood much better in the class than her own son Subodh. This had not served to endear Gopal to her.

Suddenly the face of the world changed for him. Bepin Babu died of a few days' illness. Mohini's relatives appeared in a horde, and within a few hours, everything became ready for starting. Nothing was settled about Gopal, because they were in a hurry, the only decision being that he was not to be taken with them. Mohini told him that she would arrange about him within a few days and so left, leaving him for a few days in Kamini's house.

But though weeks passed, there was no sign from Mohini. Kamini's love was superior to the power of her purse, so she had no other option than to apply to Mohini by post. She got a reply, soon enough, but it was far from satisfactory. Mohini's brother had replied for her. He was in no way responsible, he said, for all the stupidities of his dead brother-in-law. It was enough that he was supporting his sister and her children. But he had no desire to open an orphanage at his house.

So, as Kamini could not drive away the poor orphan, she had to accept service as a cook in a neighbour's house, in order to maintain him. But she could not pay his school fees, so the boy had to give up his studies. The last day he went, the headmaster told him that his name had been removed from the school roll, on account of non-payment of fees. So the boy came back with tears in his eyes, carrying his torn books and broken slate. "Why do you come back so soon?" asked Kamini.

Gopal threw himself in her arms sobbing. "They won't let me stay there," he said, "I have not paid my fees."

Kamini did not know how to comfort

him. She wiped her own eyes and went away to her work.

In the afternoon she had a bit of leisure. She did her own cooking at that time, before starting for her employer's. As she was about to take down the pot of boiling rice from the oven, somebody at the front door, shouted, "Is my little mother in?"

"Oh dear, it is uncle," cried Kamini, running to the door. Gopal stared with wide open eyes at the newcomer. Needless to say, it was Shiveswar's bearer, our former acquaintance. He had a name, viz, Krishna, which was of no service to him, in his master's house, because he hated anything connected with idolatry.

Krishna came up to the earthen verandah and sat down. "I have just arrived," he said. "It is a long while since I came home. My master is too strict, he would never give me leave. This time my luck was good, so I got leave for a few days. Who is this boy?"

Kamini related the whole history of Gopal. Krishna listened carefully, and shook his head very wisely at the end. He said nothing however, but left, promising to come again.

He came the very next morning. "Look here, my little mother," he began as soon as he saw Kamini, "I want to have a few words with you. You are a poor widow, how could you bring up another's child? It is no easy job. So, what I say, is this. Give him to me and I shall take him to Calcutta, to my master's house. He is a very rich man, there are many living on his charity. If the boy goes there, he will be well-provided for. He has even asked me to be on the look out for just such a boy."

Kamini was surprised at this whim of a great man. "Indeed?" she asked, "has not he got children of his own?"

"Only a girl," Krishna said, "and even she has been sent away to a Mem Sahib's school. The large house seems like a desert now."

"Then take him away," said Kamini, her eyes filling with tears at the very thought of parting from Gopal. "He had become like my own son, and my heart will break to part from him. But I won't stand in his way. He will have to starve to death before my very eyes, if he stays on here." Gopal began to weep, when told of the arrangement. But he did not

object. He knew he had no rights, anywhere or over anybody. He had no right even to be angry or to cry. He knew sorrow to be his birthright, and joy always came as a most unexpected miracle.

So four or five days after, one foggy night, he started in a bullock cart, in company with Krishna, for his new home. The doors of the houses he passed were mostly closed, there was no other light,

save what the hurricane lantern, tied under their cart, cast on the road. The wheels of the cart creaked and the village curs yelped. There was no other sound.

Krishna sat and smoked his *hookah*. Gopal's head began to nod and, after a while, he fell asleep, putting his head on the bundle. Kamtai had made for him. His cheeks still bore the stain of tears.

(To be continued)

RESTRICTION OF THE ACREAGE OF JUTE—A STUDY OF THE CONGRESS POLICY *

By B. N. GANGULI, M. A.,

Department of Economics and Politics, Dacca University

RECENTLY the restriction of the acreage of jute was officially adopted as an item in the programme of the Bengal Provincial Congress Committee. It became a slogan for the time being and a campaign was started in the jute-growing areas to bring about a restriction in the supply of jute for the season 1928-29. In view of the importance of this question it is desirable to take stock of the present situation in the jute market from a strictly economic point of view in order to clear up the issues and to present the problem in its proper perspective.

Some of the fundamental facts of the situation will be clear to us if we examine the statements made by the two successive presidents of the Jute Mills Association about the position of the jute industry in 1925 and 1926. Reviewing the position of the jute mills in 1925 the President remarked that the high price of jute manufactures was due to the scarcity of the raw material, jute yield, it was pointed out, has remained stationary at about 80 lacs of bales, whereas the number of looms has gone up from 21,000 in 1905 to 50,000 in 1925. Even on the basis of current consumption by Indian mills the average output required would be 100 lacs of bales which represent the maximum consuming capacity of the world in 1913. Even then we neglect the extension of plant in other centres and we also suppose that the present consumption of 50,000 looms in 4 days is equal to that of 37,000 looms in 6 days in 1913. From these facts it was inferred that the lowest deficit would be something like 20 lacs of bales so that it was easy to see that the high prices in 1925 were due to the shortage in the supply of raw jute. The President then went on to say that the short supply was due to the

nervousness of the cultivators about the state of the market. But they should mark that there is a deficit of something like 20 lacs of bales so that there is no chance of slackening of demand and low prices.

Reviewing the position in 1926 the next president of the Association Mr. Sime of Andrew Yale and Co. had an altogether different story to narrate. He summed up the situation by saying that in 1926 in accordance with the short time agreement, 54 lacs of bales were consumed by the mills to produce 144 crores of yds. of Hessian and 50 crores of sacking bags. If they were to work 81 hours, the maximum permitted by the Factory Act, they would produce 216 crores of yds. of Hessian and 77 crores of sacking bags and to produce this 91 lacs of bales will be required. This will mean an increase of about 50 p. c in the production of manufactured goods and the amount of jute required and it will have an effect of swamping the market. The situation seems to have been transformed in the course of a single year. We find that the mills were working 54 hours a week under the shorttime agreement in order to restrict their output. There is no complaint about the scarcity of raw material this time. We can well imagine that the President of the Association for the previous year felt very uncomfortable in the face of the stubborn facts stated by Mr. Sime. What a pity! His prophecy was falsified so soon!

The plain economic fact is, that in 1925-26 when the average price of jute was Rs. 18-11 per md. and the jute yield was 91.1 lacs of bales there was naturally a feeling that the high prices of manufactured goods were due to scarcity of the raw material. But in 1926-27 there was a sharp fall in the prices of jute, Hessian and sacking. The total imports of jute into Calcutta were 121½ lacs of bales; the stock in local mills on the 1st of July, 1927 was about

* A paper read before the Dacca University Economic Association.

37 lacs of bales. This large carry-over was due to the fact that the local mills as well as the foreign spinners took advantage of the sharp fall of prices and purchased more than their requirements. Under the circumstances there can be no question of a scarcity of raw material and it is easy to see that a supply of 81 lacs of bales which was considered too short in 1925 should be considered sufficient to swamp the markets of the world in 1926.

Certain important facts emerge from this brief analysis of facts. Firstly, it is well to bear in mind that there is a combination of jute manufacturers which seeks to make its influence felt on the market for manufactures as well as on the market for raw material. This prevents cut-throat competition and increases the strength and efficiency of the mills by eliminating, to a certain extent, the wastes of competition. That the advantages of such a combination are real is evidenced by the threat which Mr. Sime, the President of the Association, held out in course of his presidential address to those who are thinking of starting new mills in the face of the glut in the jute market. Mr Sime said, "From the day any of these projected new mills start on the floor the present agreement (to work short-time) will cease to operate."

Secondly, it must be clear that the world-demand for manufactured jute is an uncertain factor which must be taken seriously into account when we consider the price of raw jute and its supply. There can be no sacrosanct figure such as the pre-war average of 100 lacs of bales which will represent the world-demand for jute. The fact that a supply of 81 lacs of bales was considered as insufficient in 1925 and the fact that the same supply was considered sufficient to swamp the markets of the world in 1926 can be reconciled with each other only if we admit that the world-demand for jute products as reflected in the prices of Hessians and sacking is an element which has its influence upon the demand for raw jute and hence upon its supply. A further illustration of this simple economic truth is to be found in the fact that the price of raw jute has been higher in a year of increased production. The production in 1922 was 51 lakhs of bales as against 39 lakhs in 1921. Yet the prices of First Marks in the season 1922-23 were roughly Rs. 15 higher than in 1921-22. In 1924-25 the total supply (including carry-over from the previous season) was 9,328,366 bales and the average price of First Marks in Dundee was £12-0-0. In 1925-26 the total supply was 9,560, 419 bales; and in spite of an increase the average price was £11-1s-9d. A similar illustration can be cited from the cotton trade. The production of Indian cotton dropped from 57 lakhs bales in 1919-20 to 36 lakhs in 1920-21 and the index number of total world production fell from 50 to 77. Yet the price of Omara in the Liverpool Exchange sagged from 1-4, to 8d. Moreover, the increasing consumption of jute for other than mere sacking purposes in recent times shows that the demand for jute has acquired a wider outlet and has become somewhat elastic. Before the war 10 p. c. of the Hessian imported into U. S. A. was devoted to purposes other than making bags; but at the present time the percentage has gone up to 30 or 35. Considering the fact that the two American

continents together took 87 p. c. of the Hessian exported from Calcutta in 1926 this recent change in the character of jute consumption must be taken seriously and it cannot be denied that an artificial restriction of supply will react upon the consumption of jute for other than sacking purposes without securing to us the full benefits of restriction.

So far as the supply of raw jute is concerned it is important to remember that the price is dependent not only upon the actual imports of jute into Calcutta but also upon the carry-overs from the previous season in the shape of stocks in the mills and in the hands of speculative dealers. The yield of jute is liable to fluctuations of rainfall; moreover official estimates of yield are highly inaccurate and misleading. In 1921-22 the actual crop exceeded the fore-cast by 38.57 lacs of bales, in 1922-23 by 9.03 lacs of bales, in 1923-24 by 9.14 lacs of bales and in 1924-25 by 9.91 lacs of bales. Hence it is that the supply of jute is highly amenable to speculative dealings so far as the carrying of stocks is concerned. It has been estimated that at the end of the season 1927-28 the market will be burdened with a carry-over of about 50 lacs of bales which is bound to have a depressing effect upon the price of jute, and it is but proper that there should be some restriction in the output of jute to prevent a further fall of prices. But at the same time it is well to take note of the fact that speculative dealings have a predominant influence upon the price of jute. The low price of jute in 1926 was due more to speculative dealings than anything else. Early in 1927 it was reported that shippers and bazaar operators had absorbed futures up to the end of December and that they were bound to manipulate for an advance in order to liquidate their holdings; and it is not unlikely that the heavy stocks outstanding are the result of speculative dealings. Moreover it is a significant fact that many of the speculative dealings, especially in the Loose Jute market, are no better than gambling transactions. In a memorial submitted to the Secretary of State for India the London Jute Association characterised the Bhitari Bazar of Calcutta as a 'gambling arena' and a 'menace to legitimate trade'. There is no representative organisation to control the dealers; there is no system of written and stamped contracts, no legal right to offer and demand delivery, no minimum amount of jute below which no transactions shall be allowed. Only the other day 28 Marwaris and up-country men were arrested at the office of the North Bengal Jute Association in Cotton Street on a charge of gambling. This sort of illegitimate speculation brings about an uneven distribution of supply and is a highly disturbing factor in the market.

Bearing these obvious economic truths in mind let us try to understand the present situation. As pointed out just now, the organisation which the jute mills have set up seeks to make its influence felt upon the market for raw material as well as the market for manufactured jute. It is obvious that the mills stand to gain when the price of manufactured jute rises and that of raw jute declines and they lose when it is otherwise. The year 1926 was a year of falling prices all round. The price of raw jute declined by 50 p. c. from Rs. 26 in January to Rs. 12 in December.

But the price of Hessian too declined from Rs. 20 12 as. in January to Rs. 14-12as. in December and the price of sacking declined from Rs. 70 in January to Rs. 49 in December. This situation is reflected in the declining profits of the Jute Mills. The total profits of the mills were Rs. 2,78,35,616 during the second half of 1925 but during the first half of 1926 the profits were Rs. 1,51,62,549 and during the second half of 1926 the profits were only Rs. 87,39,212. Throughout the year 1927 the supply of jute continued to pour in and the market for raw jute showed a bearish tendency. Between July 1926 and December 1926 the highest price of white jute did not fall below Rs. 13-8as., and fluctuated mostly in the neighbourhood of of Rs. 11-0as. But during 1927 the highest price was Rs. 10-1as. in January; Rs. 11-8as. in February; Rs. 13-2as. in March; Rs. 13-0as. in April; Rs. 12-12as. in May, and Rs. 11-12as. in June. But although the price of jute was at a low figure the prices of Hessians and sacking were not only not depressed as in 1926 but were at a distinctly higher level. Whereas the price of Hessians in 1926 declined from Rs. 20-12as in January to Rs. 14-12as in December, in 1927 there was a rise from about Rs. 15 in January to about Rs. 25 in December. Obviously this had the effect of increasing the output and profits of the jute mills. Exports of jute cloth from Calcutta were 57,065,487 yds. more in 1927 than what they were in 1926, whereas the exports of Jute bags were 13,180,991 more in 1927 than what they were in 1926. The improvement in the position of Jute mills is clearly reflected in the rate of dividend offered. The Anglo-India Jute Mills Co. Ltd. declared the following rates of dividend at the successive periods which we are reviewing:—50 p.c. in September 1925; 30 p.c. in March 1926; 10 p.c. in Sept. 1926; 50 p.c. in March 1927, and 55 p.c. in March 1928. These facts give us an idea of the exact situation at the present moment. The market for raw jute is facing the bearish fact of a heavy carry-over and the middlemen apprehend that if the supply of jute in the season 1928-29 remains unrestricted the prices will be still further depressed; so that on the one hand they will be unable to liquidate their holdings and, on the other, this situation will react very favourably upon the output and profits of the jute mills. In view of this contingency it is but natural that the programme of jute restriction initiated by the B.P.C.C. should be so warmly supported by the speculative middlemen.

What are then the facts of the situation? There has arisen a very wide disparity between the price of raw jute and the price of Hessian and this disparity has been increasing further owing to the bearish fact of a very heavy carry-over and the consequent fall in the price of raw jute and owing to a simultaneous rise in the price of Hessian. It has been explained how these conditions are working to the advantage of the jute mills and how output as well as profits have shown a steady upward tendency. Now the impression is that the mills have a whip-hand over the situation because of the monopolistic control of output on the one hand and because of large stocks of jute in their warehouses

sufficient for nine months' consumption on the other.

The question of combination among the sellers of jute would therefore arise as a matter of course in the face of the present situation. Recently the jute dealers of Calcutta formed an association called the Bengal Jute Dealers' Association with an influential and representative Executive Committee and with Mr. H. P. Bagaria as the Hony. Secretary in order to protect their interests. As soon as the Association was formed there was a tussle between it and the Bengal Jute Mills Association over definite standards of loose jute, the absence of which has rendered jute business almost a gambling transaction. The Association resolved recently not to enter into seasonal contracts unless the Mills could agree upon a definite standard. In this connection it is interesting to note that a strong plea for the creation of a central organisation for the control of the jute trade in Bengal was recently put forward by Mr. B. Kanoria in his presidential address delivered at the first annual meeting of the East India Jute Association. The object of such an organisation would be in the words of Mr. Kanoria, 'To avert crisis and enable the trade to present a united front and make a united demand.' (The Statesman, Dak Edition, 31-8-28).

But the point is that a combination of middlemen only cannot reasonably be a solution of the real problem which has arrested our attention at the present moment. Evidently we must have a combination of jute-growers which will be able to control the output judiciously in much the same way as the mills are doing not only to tide over the present period of over-production but also to be able to face the jute mills combine in future.

Thus the campaign of jute restriction may be considered from two points of view. It might be regarded only as an opportunist move in so far as it is the outcome of the present situation in the jute market and in so far as its object is to remove the temporary glut. But it might also be regarded as the beginning of a genuine attempt to keep production of raw jute permanently at a "pegged" level to counteract the monopolistic control of output and consumption of raw material enjoyed by the jute mills. In the second case it will not be merely a problem of restriction but essentially a problem of the judicious control of output by a representative organisation of jute-growers which would possess an expert knowledge of the complex conditions of the market. When we consider the problem of restriction we should carefully separate these two distinct points of view.

Moreover, it must be remembered that when we talk of a combination amongst the sellers of jute we should not complacently think that the interests of the jute-growers and the interests of the middlemen both of whom are sellers of jute are identical. It is well-known that owing to the interposition of middlemen the price of raw jute in Calcutta exceeds the price of the same jute in the villages by as much as 20 p.c. to 30 p.c. There is the financial grip of the middlemen over the jute-growers as a result of which they do not get a fair economic return in the sense that the prices at which they have to sell their crops do not bear a fair relation to the

prices in the world-market. Hence the interests of the middlemen and the interests of the jute-growers must always be clearly and unambiguously distinguished. We need to be reminded of those very plain issues because to all intents and purposes these issues have either been hopelessly confused or conveniently suppressed by those who have been advocating the policy of jute restriction in the nationalist press.

We will now examine the case presented by Mr. H. P. Bagaria, the Hony. Secretary of the Bengal Jute Dealers Association, in an article published in the *Forward* at the time when the jute restriction campaign was in full swing. Mr. Bagaria begins by saying that the policy of restriction is not an impracticable possibility. He gives examples of the British rubber restriction and the cotton restriction in U. S. A. Two years back the price of cotton came down as low as 12 cents a pound—a price which left little margin to the cultivators. The various cultivators' organisations in U. S. A. decided upon a 20 per cent reduction of acreage for the next year. The result was that prices rose as high as 26 cents per pound. He also points out how the acreage of cotton in Egypt is controlled by the Government according to changes in world-prices. It must be noted that Mr. Bagaria speaks of the cultivators' organisation in America; but he does not emphasise the point that in order that the farmers might get an economic return for their produce what is wanted is a judicious control of output by a representative co-operative organisation which will restrict or increase the output according to the necessities of the case. Restriction has not been impracticable in America because the farmers are organised in strong co-operative organisations. But it will be impracticable in the case of Bengal because there are no such organisations here. Restriction is a practical proposition when every one knows that every one else is restricting his acreage to a proportionate extent and that by combined action it will be possible to get higher prices. But this is possible only when there is a strong co-operative organisation which can inspire confidence in the minds of the individual farmers and has the proper sanction behind its policy of restriction. Moreover the existence of a co-operative marketing organisation on which, as explained just now, the success of restriction absolutely depends would also mean the elimination of middlemen. Can Mr. Bagaria who is the Hony. Secretary of a middlemen's organisation reflect upon this contingency with perfect equanimity? He ought to understand that the interest of the middlemen and the interests of the jute-growers are not identical.

is high and the output and profits of the mills are at a steadily higher level. If the output is unrestricted the middlemen will be unable to liquidate their holdings and will incur heavy losses. But if they were to wait for the growth of a widespread co-operative organisation it will be waiting till the Greek Calends. So the best thing was to bring about a restriction of the acreage for the season 1928-29 with the help of Congress propaganda in order that the present glut in the market may be relieved and the middlemen may be able to liquidate their holdings at satisfactory prices.

If that is the problem, why play the game of hide and seek? Why assume that the farmers will necessarily gain from a policy of restriction? Why don't the members of the B. P. C. perceive that nothing will avail in the face of the financial grip of the middlemen? Why forget that the conflict of interests is not directly between the jute mills and the poor jute-growers but between the jute-growers and the middlemen? Why not face the facts squarely?

Mr. Bagaria then proceeds to point out that the policy of restriction carries with it the essential condition that the country practising it must be in a "Commanding position in respect of the commodity." Of course, this is one of the truisms of economic theory. But before considering the question as to how far we have a monopoly of jute we should do well to turn our attention to the point of view from which Mr. Bagaria, as a representative of middlemen, is surveying the problem.

As we have already shown, at the present moment the market is over-burdened with a heavy carry-over to the extent of 50 lacs of bales and we hope we may be excused for reiterating the fact that unfortunately the advocates of restriction have their eyes only on the narrow problem of the depletion of accumulated stocks.

Mr. Bagaria says—"There is a considerable surplus of jute and reduction of output is sure to improve the price of jute." Then he goes on to say that if the crop in the present season is 110 lacs of bales the price will be possibly Rs. 50 a bale; but if the output is restricted to 90 lacs the price will be at least Rs. 90 per bale so that by means of restricting the output by 20 lacs the price of the total crop will increase by Rs. 12½ crores. Mr. Nalini Ranjan Sarkar, the Economist of the Swaraj Party in Bengal, also gave similar calculations of the benefits, which our poor cultivators will derive from a policy of jute restriction. In course of a speech delivered at a meeting of the Bengal National Chamber of Commerce. He was at it to show that if 10 lacs of acres now sown with jute are released for rice the farmers would get Rs. 42½ crores for jute only instead of Rs. 40 crores which they are getting now and in addition they would get Rs. 7½ crores for rice which will substitute jute; so that by the policy of restriction the country will be richer by Rs. 10 crores. The arithmetic is quite convincing but the economics is extremely unconvincing.

Both Mr. Bagaria and Mr. Sarkar do not consider the question whether the growing of rice on jute-lands would be an economic agricultural possibility or not. Moreover how far the restriction of acreage will go and what will be its reactions upon the price of Russian and the world-demand for jute are questions which are

left beautifully vague. Mr. Bagaria seems to be aware of this very important consideration when he says "I do not mean to say that the price of jute should be forced up to unprecedented heights. In spite of the fact that jute is our monopoly that may not ultimately prove beneficial." But what does he mean when he says that indiscriminate restriction will not be ultimately beneficial? Does he mean to say that forcing up prices to unprecedented heights will be temporarily beneficial to our country? As a matter of fact, Mr. Bagaria as a businessman is thinking only of the present glut in the jute market. He does not explain what he means by discriminating restriction and how far and under what conditions it will be ultimately beneficial to our cultivators.

Let us now take up the vexed question as to how far we can utilise our monopolistic position in regard to jute in the matter of getting as high a price as possible. The case has been sought to be proved by means of statistical evidence. It has been pointed out that—"Three years back when the crop was damaged and it was expected that the total supplies will fall short of consumption by more than a million bales the price of jute went up by more than 100 p.c. The very next year when the sowings were large and it seemed that the crop was to be a bumper one prices came down by as much as 40 p.c." But it must always be remembered that statistics often cut both ways. It is not difficult to show that prices have been higher in a year of increased production and lower in a year of restricted production. In 1921-25 the total supply of jute was 9,328,366 bales and the average price of First Marks in Dundee was £42. In 1925-26 the total supply was 9,560,419 bales; but in spite of an increase of output the average price was £53-1s 9d. In 1922 the output was 54 lacs of bales as against 39 lacs in 1921; yet the prices of First Marks in the season 1922-23 were roughly Rs. 15 higher than in 1922. How will Mr. Bagaria or Mr. Nalini Ranjan Sarkar explain these recalcitrant facts? Are we not unreasonably making too much of our monopolistic position with regard to jute?

As we have already seen we cannot, in the heat of the controversy, afford to forget the simple economic question of demand and supply. There is no denying the fact that we possess a commanding position in respect of jute. But we should remember that the demand for jute is not so absolutely inelastic as the advocates of jute restriction would have us believe. In the earlier part of this paper we have analysed the facts of the situation to show that fluctuations of demand have their reactions upon the price of jute in much the same way as fluctuations in the supply of jute. The President of the Jute Mills Association pointed out in 1925 that a supply of 31 lacs of bales was insufficient and in the very next year the same supply was considered by the next President as abundant enough to swamp the markets of the world. Here the main deciding factor seems to be the fluctuations in the world demand for jute. Moreover, as already said the demand for jute has acquired a wider consuming outlet and has become considerably elastic because it is wanted in increasing quantities for other than sacking purposes. 87% of the Hessian exported from Calcutta goes to America. Formerly only 10% of it was devoted to other than sacking pur-

poses; but now 30% or 35% is devoted to these purposes. Now, if as a result of the policy of restriction the price is bolstered up to a very high level it is bound to react upon the American jute imports and farmers will not be able to reap the full benefits of restriction. We state these facts over again because they bear repetition in view of loose thinking which the arguments of the advocates of restriction clearly betray. Allied to the question of monopoly is the question of substitutes. Mr. Bagaria says "We have seen jute selling at Rs. 140 per bale—a price double the present ruling prices. No substitutes came then". He means to say that the question of substitutes is nothing but a skeleton in the cupboard or rather a red herring drawn across the trail. If so, why not practise indiscriminate restriction? Why does he say then that "In spite of the fact that jute is our monopoly forcing up prices to unprecedented heights will not be ultimately beneficial to us"? As a matter of fact, price of Rs. 140 per bale which Mr. Bagaria mentions was the price which ruled under the abnormal conditions of the war-period. There was a phenomenal demand for sandbags which must be had at any price, moreover, high prices were due to a rise in the general level of prices throughout the world. Those were glorious days for speculators and middlemen like Mr. Bagaria. But if he thinks that it is possible to live them over again then he is seriously mistaken.

Mr. Bagaria then goes on to say 'So long as you can get in India a labourer to work at 6 annas a day in waist deep water under the most insanitary conditions there is no danger of any country becoming the rival of Bengal in the production of jute'.

Good heavens! Is the labourer to work at 6 annas a day even after the policy of restriction has been adopted on an expensive scale? If restriction does not improve their lot, is it then going to enrich only the *Dadandars* and loose jute merchants? We had thought that it was otherwise.

We cannot leave this question of monopoly without referring to the curious evolution of economic opinion on this problem. When the question of imposing a jute export duty was being debated in the press people connected with the jute trade raised a tremendous outcry against it. The arguments against the jute export duty were based on the ground that we do not possess the so-called monopoly in jute to a large extent and that the demand for jute is not inelastic so that the duty will not be shifted on to purchasers of Hessian. This view was also strongly expressed by Mr. Nalini Ranjan Sarkar in course of an article published in the *Modern Review*. But it is puzzling to find that these gentlemen are advocating jute restriction at the present moment on the ground that we do possess a monopoly of jute and that the elasticity of demand need not seriously be taken into account.

The policy of restriction has been sought to be supported by another argument which seems very plausible. It is pointed out that we need not bother our heads about the question of monopoly or of possible substitutes for jute. These questions arise when we enquire whether and how far higher prices of jute under the regime

of restriction will bring about a reduced consumption of jute. But it is argued the present margin between the price of Hessian and the price of raw jute is substantial so that the jute mills are making tremendous profits; and if the price of raw jute is bolstered up it will not have any effect upon the output and price of Hessian. The mills will have smaller dividends that is all that we can expect. Now the present accumulation of stocks and the fall in the price of raw jute as well as rise in the price of Hessian have increased the profits of the jute mills. Under the circumstances some amount of restriction is desirable in the interest of those who are supplying the raw material.

But the point is, are the cultivators to benefit from the policy of restriction even if it does not result in a reduced consumption of jute? The average cost of production of jute is something like Rs 7½ per maund and the average price realised by the cultivator during the last two years cannot be more than Rs. 8½ per maund. But is this poor margin going to increase as a result of restriction? Is it not a fact that so long as *Dadandars* and middlemen flourish like water-hyacinth the margin cannot be increased? Will not the policy of restriction merely enrich the middlemen?

Mr. Bagaria forgets that the interest of jute-growers and the interests of middlemen are not identical. What is sauce for the gander is not sauce for the goose. We find that he bursts into a righteous indignation against mill-owners and says—"The mill-owners may roll in wealth but the poor cultivator has no right to more than a loaf of bread (?) and a strip of cloth to cover his body." But Mr. Bagaria does not mention the link in the chain which connects the mill-owner and the cultivator. We all know what the link

is and against whom we should properly express our righteous indignation if at all.

Now the question will naturally arise—Why has the Congress thrown itself so suddenly into a whirlwind campaign of jute restriction. We all remember that one of the many unfulfilled projects of the late Deshbandhu Chittaranjan Das was to link up the jute-growers of Bengal into a vast sale and supply organisation in order to secure to the cultivator a proper economic return. Deshbandhu Das realised that it was a gigantic problem which can be solved through the efforts of the Congress. It might be remembered that he seriously thought of raising a large sum of money with which he could finance the project. As we have already said the wider problem is not one of restriction but of judicious control of output by means of co-operative organisation which will not only secure a fair return to the cultivator but will also rid the market of the pernicious influence of speculators. Deshbandhu Das had this wider problem in view when he thought of this project. But we do not know what the B.P.C. mean by taking a narrow view of the problem and rushing headlong into a spurious campaign of restriction. Moreover, don't they understand that a policy of restriction can never be successful without a strong representative organisation amongst the farmers and that if such an organisation ever grows up at all in Bengal the question of regulating the output will solve itself automatically? Then why did the Congress Committee commit itself to the policy of restriction? Moreover, have the members of the Congress Committee considered carefully whether the cultivators, in whose name the Congress really stands, are likely to benefit by the temporary policy of restriction or whether it is the middlemen who will be the real gainers?

BIRESWAR SEN

A Painter of graceful figures

By L. M. SEN. A. R. C. A. (LONDON)

IT is an established fact that without the intimate knowledge of human anatomy and the delicate and accurate perception of form, one cannot be a painter of the figure. The knowledge of the body beautiful requires the study of a life-time, but alas! how many of us have shirked the patient and devious way which alone can lead to the mastery of the art of figure drawing!

The works of Bireswar Sen have already achieved a great reputation for their fine sense of composition, richly decorative quality and beautiful eastern colours, which he

studied so intimately from his master Abanindranath.

Before I had the occasion of studying Mr. Sen's work so intimately, I was under the impression that the New School of Artists are perhaps always doubtful of their drawings and forms, and were consequently afraid of putting bright and cheerful colours, so that the bad drawings may not be too patent. With Mr. Sen, however, we have to deal with an artist who has firmly established his reputation to be regarded as one of the most skilful and accomplished draughtsmen of the

THORN

By Mr. Bireswar Sen

Prabasi Press, Calcutta

New Bengal School. His highly finished and delightful water-colour drawings have been, for some years, among the chief attractions of the exhibitions of the Indian Society of Oriental Art. An artist like Mr. Sen seldom produces a gloomy picture with dirty colours as a cloak to hide a bad drawing; when he does so, it is because it offers him an opportunity to express his forms in a new and delightful way. It is always a pleasure to see Mr. Sen's paintings, so full of accurate details, carefully drawn and balanced, with fresh and beautiful colourings, —and one cannot but wonder at the long hours of careful and patient labour with which he produces his little water-colour pictures. The chief feature of his work is that every bit of the composition, whatever it might be, the sky, trees, figures or even the smallest minor details, is very clearly defined with the magic touch of his brush. They gleam like jewels and are very rarely wrapped up in a shadowy and depressing haze. This shows how alert he is to notice and record faithfully every natural detail.

Though Mr. Sen's works are unlike that of any other artist, they cannot be labelled as representing any of the 'Isms,' for none of the others' work has influenced him at all. His pictures are individual expressions of an intensely sensitive and thoroughly sincere artist, who goes on in his own way, yet pursuing what is best in all the different Schools native or foreign. He is a person who feels very deeply the beauty and joy of the world of life and who tries to express it beautifully. People always say that the works of this New School are not realistic at all; this is hardly a drawback, for, in Art there will always be idealists.

Mr. Sen was born in Calcutta in the year 1897 of a well-cultured and educated Bengalee family. He was sent to Hare School at the early age of seven, where throughout his boyhood he had aims to be a painter. I have heard him say that the reproductions of Greek sculptures contained in the "Legend of Greece and Rome", one of his text books, influenced him a good deal at this early period, an influence which, to my mind, has produced its life-long impression on his

sensitive nature. During his school days he used to draw and paint with feeble and weak drawings, the vague artistic forms naturally stored in him, with a distinctly Hellenic touch.

In one of these days, when he successfully passed one of his School examinations, his grand-father presented him a copy of Edmund Dulac's Picture Book which re-

S. Bireswar Sen
Portrait by Mr. L. M. Sen

vealed to him a new world of glorious colours and form, and from this gifted Frenchman, as once he himself told me, he learnt to mix beautiful colours in that indefinable manner, which has at the present time been one of the most distinguished characteristics of his work. Although he has been influenced a little by Dulac's colours, he is seldom imitating the mannerism and tricks of technique of the French artist and usually takes the rhythmic impressions of nature and moulds it to his favourite decorative patterns,—a method which perhaps he has inherited from the older traditions of the Rajput and Moghul Master Painters.

During his College days, Mr. Sen luckily came in contact with Dr. Abanindranath Tagore. Abanindranath who chanced to notice some of the young artists' unaided work, saw at once the spark of genius latent in his work and encouraged him a good deal

by allowing him to work in his Studio under his personal guidance. Though untutored, the pencil drawings of Mr. Sen at this period bore a marked resemblance to the work of the late Aubrey Beardsley, and both Mr. Tagore and Mr. O. C. Ganguly directed that he should continue to work in the same style. This resemblance of Mr. Sen's work with that of the great English draughtsman is surprising, considering the fact that the artist had never come across Mr. Beardsley's work at this period. It was here in his studio that young Bireswar began studying the art of

such as could be led away with the mere imitation of the work of any other artist. Coming in contact with Abanindranath was the foundation-stone of his future artistic development. It was here that he realized that there was something more to be achieved than merely imitating his predecessors and contemporaries. The *Ustad's* art is valuable because it is the product of individual effort translating an individual outlook, but the copyist of any great master is usually empty of aim and barren of achievement.

I have already hinted that Mr. Sen, unlike the other artists in our country, excepting a very few, was a student of the Presidency College, Calcutta. Like most parents of our poor Bengali artists, his too did not regard the profession of art as lucrative or honourable enough as a future career, and as such Mr. Sen had to run the gauntlet of all the University examinations. He passed the M. A. Examination in English with a first class. It is not generally known that Mr. Sen is a distinguished scholar in English and Sanskrit, and this cultural background has stood him in good stead, in his artistic endeavours. The lyrical note in his paintings with their sunny charm is no doubt derived from the old and modern lyricists in verse, like Theocritus, Omar Khayyam, Shelly, Keats, Wordsworth, Magha, Kalidas, Bharavi and Rabindranath. Paintings like his famous illustrations of Omar Khayyam,* "To whom shall we offer our sacrifice?"* "Rama the Deer-slayer", "The Rill", "The Milkmaid",* (the only picture by an Indian artist which was sold at the British Empire Exhibition at Wembley) go to show the scholarly lyrical note which pervades most of his work.

The year following the University life, saw him in the Indian society of Oriental Art amongst his *Ustad* and friends. It was there that the writer first made acquaintance with this artist's work and he can still distinctly remember the impression created on his mind by pictures from Mr. Sen's brush. Some of his paintings excited a great deal of notice, and from this time onwards the artist established a solid reputation in the new school of painting, and his pictures found places of honour in the private collections of connoisseurs like Lord Carmichael, Lord Ronaldshay, the Countess

King Shibi and the Hawk
From a Colossal tempera painting on cloth
by Mr. Bireswar Sen

painting in the true sense of the term. He learnt all the secrets of the technique of water-colour, which is the favourite medium of the Indian artist, by seeing his Guru and others working; but his temperament was not

* Published in the *Modern Review* and Chatterjee's Picture Albums.

of Lytton, Rabindranath Tagore, O. C. Gangoly, Sir Dorab Tata, Sir Francis Stewart, and the Maharani of Cooch Behar, etc. His pictures are always satisfying and one is really very happy in front of the work of this young artist. His small water-colour "The Porcelain Palace," (in the possession of the Maharani of Cooch Behar), was very much appreciated by all true lovers of art. It still remains fresh in our memory as a thing of beauty and joy for ever. During these days, our Silpa-Guru Abanindranath once remarked, "Biru's hand is like mine of the earlier days," and expressed the hope that he would become a leader of the young generation of painters one of these days. He paints his figures with the native vivacity of the Rajput and Mogul masters, and his paintings are veritable feasts of colour; the orientalism of his reds and blues gives to Mr. Sen's art its special value and distinction, and the deft use of gold and silver in some of his pictures remind one of Bihzad. I imagine that in painting his pictures the artist's principal aim is to produce a decorative design, pleasing in line and sensuous in colour. This of course should be the primary aim in every picture of every Indian artist and it is evident that Mr. Sen has discovered the best way for the naturalistic treatment of decorative designs though it must be admitted that Mr. Sen has a distinct fondness for the more conventional treatment of old Indian masters.

"The artistic temperament is by its very nature erratic and uncertain. The artist is a rover, like a butterfly who sips nectar, where and when he can. A seeker after the new and beautiful, who refuses to be bound by time and place" This spirit of restlessness worked in Mr. Sen for some time and it was doubtful whether he would lean towards art or towards scholarship. Art, it is universally known, is the neglected Cinderella of our Educational Institutions and it is for this reason that most of the Indian artists have to lead a precarious existence depending solely on the sale proceeds of their pictures. Nearly every artist has thus been compelled to take up uncongenial duties, not because he particularly likes it, but because there is no other way to keep the wolf from the door. For this reason, Mr. Sen had to accept a Professorship of English Literature at Patna in 1923, far from his home and the centre of the new art movement. The dull life in an old town like Patna could not be very fruitful, so far

as artistic activities are concerned, and in spite of the production of some of his most beautiful water-colours "The Sea Maiden," "Rama the Deer-Slayer," "Damayanti," etc., the genius of Mr. Sen was not appreciated to the extent it ought to have been by the local connoisseurs.

Buddha Carrying the Crippled Goat
By Mr. Bireswar Sen

Sequestered living in a sleepy and lifeless town soon gave an introspective tone to Mr. Sen's painting and his technique was marked by a novel transformation, as is evidenced by his "Spring Flowers," "The Temptation of Buddha," etc.

In February 1926, he left off teaching in Patna and joined the Government School of Arts and Crafts, Lucknow, for the exposition of the beauties of the dry-as-dust works of English minor poets soon tired him. Naturally

* Published in the *Modern Review* and Chatterjee's Picture Albums.

averse by temperament to the dissection of the beauty of poetry for the benefit of the young hopefuls in Colleges his work as a teacher which failed to lure him with the beauty of light and shade and form and colour, the vividness of the paint, the fine tonality, the subtle colour-contrast and the masterly perspective, soon lost all its charm and finally the super-sensitive tendency towards art which he possessed made him come to Lucknow—the garden city of India. Here inspired with the beautiful colours and forms of the late Islamic art and architecture, he has produced some notable pictures like the "Sisters," (in the possession of T Chatterji, Esq., Calcutta), "Fruit Gathering," "Zebunnisa reading her divan to Aurangzeb" and "The Thorn" (reproduced as frontispiece), whose colours are fine, lustrous and vivid, yet not shrieking.

It is essential that an artist like Mr. Sen should be in a congenial atmosphere of art like the Government School of Arts and Crafts, Lucknow. He has already entered upon that settled productive stage in the career of an artist which must come to every artist, if he is to reap the harvest. Like every true Indian artist, he is never

content to paint merely what he has seen, but wishes to translate what he feels into glowing colours and flowing lines. With him the subject of his picture is comparatively unimportant, so long as it lends itself to the scheme of colour and the decorative form of design he wishes to present. It is doubtless he has been successful in his mission both as an artist and as an art-teacher. Short as his stay has been at Lucknow, he has produced pupils of whom a great future has been predicted. Mr. A. D. Thomas, whose work is already familiar to the readers of this magazine, is one of the first batch of his students and it is hoped that a long line of illustrious pupils will succeed Mr. Thomas.

Mr. Sen's work in the School of Arts and Crafts, Lucknow, has been prolific. He has designed brassware, furniture, wall-paintings and other large decorations and has shown his activity in manifold directions. Though of a retiring disposition, it is impossible for Bireswar Sen to hide his light under a bushel. I firmly believe that he is one of the unique Indian artists of the present day and that he is assured of a still more brilliant future.

SOME PROBLEMS CONNECTED WITH HARSHA

PROF. A. S. ALTEKAR, M.A., Benares

THE recent discussion about some problems connected with the age of Harsha has drawn public attention to a number of controversial points. A few of these will be discussed here:—

1. 'Kumaramatyā'—Prof. Mookerji interprets this term as 'counsellor for a prince' (*Marsya* p. 106). This interpretation seems to be natural, but the epigraphical evidence, I am afraid does not support it. For,

(i) Harishena who was directly serving under Emperor Samudragupta at Pataliputra in the military and foreign departments is designated as *Kumaramatyā*. Samudra Gupta was no longer a *kumara* at this time and so the title should have been *Paramahattarakumatyā* if we accept Mr. Chatterji's interpretation and *rajamatyā* if that of Dr. Mookerji.

(ii) From the Karamdanda Inscription (E. I. X p. 171) we learn that Sikharasvami was a minister to *Maharajadhiraja* Chandragupta and still he is designated as *Kumaramatyā*; similarly his son

Prithivishena was first a minister to *Maharajadhiraja* Kumaragupta I and was then made the Commander-in-Chief. If *Kumaramatyā* meant counsellor to a prince sent as governor then that title could not have been used with reference to these two officers who were directly serving under Emperor they should have been styled *rajamatyā*.

(iii) In the Damodarpur plates we find that the *Kumaramatyā* Vittravarman was a district officer appointed by the governor Chiradadatta (plate No. 1 & 2). It is on the strength of this passage that Prof. Mookerji suggests that *Kumaramatyā* was a counsellor for a prince appointed as a Governor. But there was no royal governor at Pundravardhana nor any royal district officer at Kotivarsha when the *Kumaramatyā* was appointed. If there was any royal district officer at Kotivarsha his name would certainly have been mentioned in plate no. 1 which enumerates all officers in the city, including *nagarasreshthin*, *sarharaha*, *prathamakulika* and *prathamakavyasika*. Plate no. 1 therefore makes it clear that a district officer

could be called a *Kumaramatya* although he was not connected with any prince appointed as Governor.

The above evidence makes it abundantly clear the *Kumaramatya* was not necessarily a counsellor to a prince but was a general official title applicable to officers of a certain rank. Prof. Banerji's theory that there were four ranks of *Kumaramatyas*, those equal in rank to the Emperor himself (*Paramabhattarakapadiya Kumaramatya*) those equal in rank to the heir-apparent (*yutarajapadiya Kumaramatya*) those equal in rank to the younger princes of the blood royal (*yutarajapadiya Kumaramatya*) and ordinary *Kumaramatyas* of the lowest rank presupposes that *padiya* means 'as reverential as' or equal in rank to. If the reading were *padiya* this sense may have appeared plausible. *Pada* or *charana* is used after the names of persons or offices to show the reverence in which these persons or offices are held by the speaker or writer of *talapada* or *tacharana* Sri-Govinda Bhagavat-pujapada, *shushrasya* Sri-Sankara Bhagavat. *Pada* is thus used to show reverence to the person after whose name it is used and not to show that the person by whom it is used is to be as highly respected as the person after whose name it is used. I hold that the four expressions in question do not indicate four ranks of *Kumaramatyas*. If this were so we expect that Harishena who was obviously a favourite of Samudragupta would not have been a mere *Kumaramatya*. Prithivishena was a mere *Kumaramatya* when he was made a Commander-in-Chief; one expects that a person who was translated to that high office should have been not a *Kumaramatya* of the lowest rank but at least of the third or second if not of the first. As a matter of fact Gupta inscriptions nowhere refer to any of *yutarajapadiya* or *Paramabhattarakapadiya Kumaramatyas* they are to be seen only in seal legends. Seal legends of the various offices would naturally use the most pompous phraseology, *yutarajabhattarakapadiya baladhikarana* or *kumaramatyaadhikarana* would simply mean the office of commander or minister attached to the heir-apparent; *padiya* is used after his name to show respect to him. Apart from this difference, I agree with Professor Banerji that a description of the Gupta system of administration while discussing administration under Harsha is irrelevant unless it is first proved that Harsha continued that system. Items of taxation, for instance, varied considerably with different kings and times. To proceed to determine sources of revenue of Harsha from the evidence supplied by the 6th and 8th century Valabhi grants would be hardly a flawless procedure. If this method is followed one can as well suggest that Harsha had imposed a tax leviable at the festivity of attaining puberty for a seventh century Chalukya inscription mentions such a tax [I. A. XIX p 145]. As it is the above suggestion can neither be confirmed nor contradicted for the simple reason that there is not sufficient evidence to come to any conclusion.

2. I agree with Prof. Banerji that the discussion of the Gupta art in a book dealing with Harsha is as irrelevant as the procedure to incorporate a description, extending over nine pages, of the land and sea routes connecting India with China, in a chapter of fifteen pages dealing with social

life under Harsha. I am further afraid that one cannot determine the nature of art under Harsha of which hardly any specimens are handed down from the art specimens belonging to Ellora and Badami, places never included in Harsha's empire. The art at Ellora besides shows greater resemblance to the Pallava than to the Gupta art.

3. With reference to the word *Dranga*, there is no doubt that most of the Sanskrit dictionaries assign to this word the sense of a town they all rely on Yachaspatya who says on the authority of Hemachandra IV. 37 that it denotes a kind of town, *pubhed*. The Koshas describe *Dranga* as *Karalad-adhamo drangah pattanad-uttama-sha yahi* the point at issue then is to determine the nature of town denoted by *dranga*. I think that Stein's able and exhaustive note [*Raydarangini*, II pp 291-2] makes it abundantly clear that *drangika* denoted an officer in charge of a frontier station. So that was the sense of the word at least in the 12th century and in Kashmir. It may be pointed out that Hemachandra, whom all the modern dictionaries follow does not go against this interpretation, he simply says that *dranga* was a kind of town, it may as well have been a frontier town or watch station. In this connection it may be interesting to note that even today in Sind *dang* is used, as my colleague Prof. Sipah Malani informs me to denote a boundary, and that *Drangiana* is the name of the boundary province that separated the Dravidian Brahuhs from the Aryans in Afghanistan I, therefore, think that we have to accept the conclusion that *Drangika* was an officer in charge of a frontier station rather than the current view reproduced by Prof. Mookerji that it denotes a city Magistrate.

Prof. Mookerji's description of the economic conditions under Harsha further raises a serious issue. He says (p 171) "The Brahmins had no part in the industrial life of the country but lived as non-economic men concerned only with the spiritual interests of life. The work of administration was taken over by the Kshatriyas."

I am afraid that such was not the condition under Harsha. Even as early as the time of the *Jatakas*, many among the Brahmins were following some of the prohibited professions. The long lists of Brahmanas that we come across in Smritis when they enumerate Brahmanas prohibited at Sraddha following forbidden professions shows the same thing. The Sungas and Kanvas were Brahmins and yet rulers of Kingdoms. Among Harsha's contemporaries, kings of Assam, Ujjayini, Chichito, and Maheswarapura were Brahmanas as we learn from Yuan Chwang. Inscriptions supply us with innumerable instances of Brahmins occupying the posts of ministers, district officers and provincial governors. We similarly learn from Yuan Chwang that many contemporary kings were Vashyas and some even Sudras. To say therefore that the work of administration was taken over by the Kshatriyas is inaccurate. In ancient as in modern India, all classes tried for posts in the administration and got them. I think that it is never a safe procedure to draw conclusions about the actual conditions of Hindu Society of a particular age from traditional dictums incorporated in Smritis written several centuries before.

[This Controversy is now closed.—Editor, M. R.]

Some Conquerors of the Atlantic

THE LESSONS THEY DRAW FROM IT

The western flight over the Atlantic has shown that an airplane can conquer the winds and that we have learned lessons that will be of great value in the future.

I believe that passenger service will not be made use of so much at first as the mail transport. However, if we are in possession of motors

which will enable us to cover 180 miles or more an hour, the dangers caused by changing weather will be lessened and the passenger service will gain favor in the public's eye.

I have no doubt whatsoever but that such motors will be constructed in a short time, and we can confidently expect successful developments in this direction in the next few years.

BARON VON HUENFELD

As a representative of the Irish Free State Flying Corps, says Captain Fritz Maurice, one of the world's youngest flying services, I welcomed the opportunity to come to America as co-pilot of the "Bremen" not only for the honor of helping fly the first plane across the North Atlantic from east to west, but because of the impetus our successful flight will give to aviation in my native land.

The location of Ireland as the nearest point in the Old World on the great circle course to the New World will make it the cross-roads of Atlantic aerial navigation in the future.

Capt. Kohl writes, The great lessons from the "Bremen" flight center around the combat of the atmospheric conditions with a rugged plane and proper instruments. That the day is not so very far off when many others will be following our trail from east to west over the Atlantic, there is

The Three of the Bremen

Miss Earhart the First Lady to hop the Atlantic

The Bremen

Friendship, which carries Miss Earhart

no doubt in my mind. The "Bremen" flight taught me that.

Rings of Trees that Solve Weather Mysteries

Light on the weather changes of the past is gained from a study of the rings of trees and furnishes a basis for forecasting the fluctuations

Rings of Trees that Solve Weather Mysteries

of the future, according to experts who have spent considerable time in reading the "language of the trees," as revealed in the annual rings. Dr. Andrew E. Douglas, of the University of Arizona, discovered that there was a striking correlation between the rings of a large number of trees he studied and the actual weather conditions as shown by government reports. Some

of the larger changes in the ring record appear to correspond with the sunspot cycles.

A Buddha Head ?

Stone Head from a mural decoration on a Yucatan Temple is presented here; many of the Mayan and Aztec carvings are striking works of art, despite the ravages of time.

A Buddha Head

The Potato-Tomato

By skillful grafting, one may obtain a plant that will bear tomatoes as fruit above ground and potatoes as tubers below it.

The plants which bear them are closely related, tomatoes and potatoes are very different in their development. The tomato is produced in the air, the potato in the ground. We can graft the shoots of one on the roots of the other.

"If, for instance, we take the buds out of a potato stem and replace them with buds from a tomato plant we will obtain such a freakish individual. The potato shoot has been cut back and the tomato buds, healed in place, have started to grow. If they continue, as did the plant in the picture, they will eventually produce a plant which will be like a tomato above the graft and like a potato below the graft. Two or three such plants are now on exhibit at the Missouri Botanical Garden and are a surprising sight with their

Potato-Tomato a week after grafting

Potato Tomato-in fruit

tomatoes ripening in the air and their young potatoes already visible at the surface of the ground.

"It is remarkable how completely the two tissues, that of the potato and that of the tomato, preserve their identity, tho so closely associated. There seems to be practically no influence of the one on the other. The potato roots remain like potato roots, and the underground stems produce perfectly ordinary potatoes as unconcernedly as if they had always been watched over by a tomato stepmother.

Literary Digest

'Mother in Art'

The price paid by Sir Joseph Duveen for the Desborough *Raffel* is declared by him to have been £875,000. Next autumn the picture will come to America and doubtless hang somewhere in one of the great private galleries. The painting, also known as the 'Niccolini Madonna,' or the 'Cowper Madonna of 1508,' was inherited by Lady Desborough from her brother Francis Thomas, the seventh Earl Cowper. It was purchased out of the Niccolini Palace, Florence, by George Nassau, the third Earl Cowper, then-

Whistler's Mother

the British Ambassador to the Court of Tuscany and taken out of Florence in the lining of his carriage. The Madonna wears a red tunic, blue mantle and a gauzy headress. The sky forms the background. The expression in the eyes of the Child which is chiefly produced by the strong shadows under the lower lids is particularly remarkable. The Virgin, on the contrary recalls in purity and elevation of expression the Canigiani Madonna and the Madonna with the palm in the Bridgewater Gallery.

Epstein's 'Oriental Madonna' for which an Indian lady acted as the model has been differently appraised by different critics, some bursting into eloquent praise, some condemning it with as

Epstein's Oriental Madonna

much fury. It, however, helps to show how the mother motive is being treated—and treated with conspicuous success as most of us would be inclined to say—by one of the greatest of the modern artists.

Whistler's 'mother' is celebrated—though not exactly a 'madonna motive.' The famous portrait of his mother, was exhibited in the Royal Academy in London, in 1872, was purchased by the French Government, where it hung for many years in the Luxembourg on its destined way to the Louvre. "Mr. Whistler called this picture an arrangement in Gray and Black," protested that the fact of the original having been his mother was no concern of the public. Mr. Whistler, however, did not realise how largely our feelings and emotions stimulate our power of appreciation, and it is a fact that the knowledge, of the relationship does add to our interest in a portrait which reveals, to use Mr. Swinburne's words, 'intense pathos of significance and tender depth of expression.'

Rafael's Madonna

Insect Musicians

A few of the grass-hoppers make sounds that are perhaps music in their own ears. *Chloacalis* is a fiddler and plays two instruments at once. The fiddles are his front wings and the bows his hind legs.

How the Grasshopper Makes Music

It produces the sound by scraping its toothed hind thigh over a sharp-edged vein (b) on the wing. (*Chloacalis conspersa*). A, the male grasshopper, showing stridulating vein (c) of left wing. B, inner surface of right hind thigh, showing row of teeth at a. C, the teeth more enlarged.

The katydids, Mr. Snodgrass tells us, show the highest development of the art attained by insects.

Ship That Ferries Train

A STRANGE INSECT SONGSTER

Notice this tree-cricket family. The male is singing with wings extended. The female is bending over him, doubtless attracted by the music, and is eagerly lapping up a clear fluid which she finds at such times just between the wings of the singer.

The katydids always fold the wings with the overlapping straight, and in this position the file of the former lies above the ridge of the latter. If now the wings are moved sideways, the file grating on the ridge or scraper causes a rasping sound, and this is the way the katydid makes the notes of its music. The tone and volume of the sound however, are probably in large part due to the vibration of the thin basal membranes of the wings.

OUR AUTUMN FRIENDS, THE KATYDID

Here is the true katydid. His music is the most familiar of all sounds in the country these early fall evenings.

The chirp of the cricket is considered by Mr. Snodgrass the most familiar note of all insect music. The unceasing ringing that always rises on summer evenings, that shrill melody of sound that seems to come from nothing but from everywhere out-of-doors, is mostly the chorus of the tree-crickets, the blend of notes from innumerable harpists playing unseen in the darkness. Next comes the cicada, which is the insect popularly the incorrectly known as the "locust." Its loud song is always a feature of the day time from midsummer till early fall, while the chorus of the seventeen-year species is a special event.

Ship That Ferries Train

Ants as Musician

With all the Accomplishments for which the ant has been famous since the days of Solomon,

The Musical Ant and his little Banjo

a is his head; b his thorax c his 'stalk' or petiolus; d his plectrum; which strikes e, the grooved 'lute,' and makes the music, f the abdomen.

it has hitherto not been celebrated for its musical gifts. However, certain species possess a stridulating instrument consisting of a finely ridged 'lute' upon the abdomen and a plectrum so situated that by rasping the surface it can produce an extremely delicate and high-pitched musical note. This phenomenon is described and commented upon by Dr. Robert Staeger in *Kosmos* (Stuttgart). In the course of a mountain expedition he came upon a nest of large red ants (*Myrmica Rubra*), and was puzzled by certain sounds.

"All of these little 'musicians' among the ants make use of a similar instrument, differing only in being attuned to a higher or lower pitch. This instrument consists of two distinct parts, which we will call the lute and the plectrum. The 'lute' is situated on the abdomen and consists of microscopically fine grooves; the plectrum is in the shape of a rod or pencil attached to the segment which unites the abdomen and the thorax. When the ant moves its abdomen rapidly up and down the pencil moves in brief intervals across the grooves of the 'lute'; there ensues a sort of a humming chirp which is perceptible by our ears only when great numbers of the little musicians unite in a 'symphony.'

Changing Sahara

Ten thousand automobiles in modern Tunis, of which five hundred are autobuses, touring far into the Sahara Desert, stimulate the mind to consider how East and West have met since the after years of the war. The blessings of urban civilization have "penetrated to the remotest oases."

THE KASHI VIDYAPITHA

By DEVAVRATA SASTRI

SOME educationists and nationalists of Benares resolved to start a national (educational) institution that may produce men of independent minds and means, who might realize the dignity of manual labour, regenerate the ancient Hindu civilization and cultivate in them a spirit of service and sacrifice.

Mahatma Gandhi wrote to Babu Bhagwan Das of Benares to start a national college at Benares. Finding this opportunity very suitable to their intentions and to the country, Babu Bhagwan Das and Babu Shiva Prasad Gupta decided to establish a national college there, and the institution named 'Kashi Vidyapitha' was established by:

Mahatma Gandhi on the tenth February, 1921. It was decided that the Vidyapitha would not be in any way under the present government or in future even under the 'Swarajya' government, but the 'Swarajya' government might recognise it, unconditionally. It was also decided that the medium of education would be 'Hindustani' the language and 'Devanāgarī' as the script

qualification, can be admitted into the first year class. Hindi, English and Sanskrit are compulsory subjects for the first year students and they have to choose one subject more, out of Sociology (History, Economics and Politics), Philosophy and Sanskrit as optional subjects; and after the first year, they have to specialise in that chosen optional subject along with English as com-

A Group of *Snatakas*, Professors and students at the Convocation of the Kashi Vidyapitha

and technical education would be one of its main objects. The world-famous Oxford and Cambridge universities are quite free from government control and there are many such independent universities in Japan and America, that are doing a great service to their countries. The Vidyapitha has got four departments, i.e., college, school, technical and publication.

COLLEGE

Any matriculate of a national or a government university or having equivalent

pulsory, through the remaining three years. Education is quite free and there is also provision for fifty scholarships of Rs. 10 each for deserving and meritorious students. The wearing of Khaddar and spinning half an hour daily are compulsory for the students.

There are two kinds of examinations in the Vidyapitha called 'Visharad' and 'Shastri.' The course of 'Visharad' is equal to the Intermediate standard of other Universities and 'Shastri' is equal to that of the M. A. Up-till-now nearly 400 students have passed

the 'Visharad' examination and 35 have graduated from the Vidyapitha. The degree of 'Shastri' is conferred on the graduates of the Vidyapitha at the convocation held each year. Four batches of graduates have completed their course and have received this degree. These four convocations were addressed by Acharya Bhagwan Das, Acharya Rajendra Prasadji, Acharya A. T. Gidwani and Acharya C. V. Vaidya. Graduates of this institution are leading a life of independent occupation. They are giving their services to the country under prominent political and social organization such as the Servants of the People Society. All-India Khadi Service, All-India Achhuto-Dhar Sabha and others. Many of them are professors and teachers in national colleges and schools and editors of newspapers. There are also good speakers and intelligent writers among them doing a remarkable service to Hindu literature. A few of them are learning French and German at Shantiniketan with a view to going to France and Germany for higher education.

SCHOOL

The Vidyapitha has got a high school like a collegiate school. In non-co-operation days there were many national high schools of U. P. and C. P. recognised and examined by the Vidyapitha, but gradually nearly almost all of them breathed their last and at present only a few are remaining.

TECHNICAL DEPARTMENT

As already mentioned, this department has been opened, that students of this institution may not wander from door to door in search of their livelihood, and may lead an independent life with the help of their technical training. There were six sub-sections of this department. But except carpentry, sewing and cane-work, others have been closed, as students were not so much interested in them. It is hoped that in future this department will get more importance and success.

PUBLICATION DEPARTMENT

The fourth is the publication department. It publishes a series of books called Jnanmandal Series. This is a well-known series. The department has published many use-

ful books, specially on history and politics. Every professor has to write a book each year in his subject and they are published in this series. It is well-known to all that this 'Jnanmandal' series is fulfilling a great need of Hindi literature, though with a very slow speed.

Sreejukt Babu Shriprasad Gupta

The Vidyapitha has got about twenty-five professors and teachers in all these departments. The professors are very learned and experienced, and are specialists in their subjects. They take small honorarium only to maintain themselves. Babu Bhagwan Das, M.A., the renowned scholar and philosopher, is the Chancellor, Sjt. Narendra Deva M.A. LL.B., is the Principal and Sjt. Sriprakash, B.A., LL.B. Bar-at-law, specialist in politics, is the Vice-principal of the Vidyapitha.

COMMITTEES

The Vidyapitha has got three committees—Supervisory (Nirikshak Sabha), managing (Prabandh Samiti) and the Senate (Shiksha Parishad). The Senate controls and manages all

the educational functions of the institution. Students also have got an assembly, named Vidyarthi Parishad (Students' Union).

HOSTEL

Almost all the students reside in hostels. No seat rent or anything of the kind is charged from them; moreover, they are supplied with furniture and all kinds of necessary medical treatments in case of their illness. Inter-dining is compulsory and professors too take their food occasionally along with the hostel students.

Sj. Babu Bhagwandas

Besides this, on the occasion of the Vidyapitha anniversary and convocation, as also on other important functions, a general feast has become a usual tradition of the Vidyapitha, joined by all the inmates and sympathisers without any distinction of caste or creed. There are two hostels at present and nearly fifty students along with some professors reside therein.

The Vidyapith life is a life of 'plain living and high thinking'.

The Kashi Vidyapitha is also a training institution for self-dependence. Students have to do all their work (except cooking) themselves. And because of this self-dependence and simple living, they are very much profited economically too. At present when government college-students spend 40 to 80 and 100 rupees a month, these students of the Vidyapitha spend only 15 rupees a month for their higher college education.

DAILY ROUTINE AND TEACHING

Classes begin with congregational prayer and the 'Vandemataram' national song. Classes are held in the morning throughout the whole year, so that students may be able to work in technical departments in the after-noon. The medium of education as mentioned above is Hindi. All the lectures are delivered in Hindi and examination-papers written in 'Devanagari' script. No doubt, students are profited by the Hindi medium, but they have to bear difficulties too because the books on history, economics, politics, philosophy and others, are only a few in Hindi literature and so they have to read books on every subject in English. Classes are held in the open pleasant airy ground and under trees.

There is an arrangement of popular lectures on different subjects for adding to the general knowledge of students and this has proved very interesting and beneficial to them, subjects like history and economics are taught with great care. Students from most of the provinces of the country such as :—U. P., Behar, Bengal, C. P., C. I., Maharashtra, Karnatak, Andhra, Madras and the Punjab, etc., come to the Vidyapitha, but the majority consists of Behari and U. P. students.

LIBRARY

Babu Shiva Prasad Gupta has given his whole up-to-date and well-equipped library, containing nearly 15 thousands of selected books in English, Hindi and Sanskrit, to the Vidyapitha. But at present as the Vidyapitha has not got a good building for such a library, only 2000 books have been brought from 'Seva Upavan' Babu Shiva Prasadji's residence. In addition to this, the Vidyapitha has bought nearly 1000 books, out of its own fund. There is also a reading room, equipped with many Hindi and English daily, weekly and monthly magazines.

PUBLIC ACTIVITIES

Teachers and students of the institution always play a prominent part in political and social works. At present, the institution has begun an admirable work in Benares city. It has arranged public lectures by its professors, on different useful and interesting subjects. Sjt. Narendra Deva and Sjt. Sri Prakash have finished their series of very interesting lectures on Buddhist India and political science, and lectures on 'Vedic religion' and other subjects are going on.

BUILDINGS.

Vidyapitha has bought about eight acres of land,—five minutes' walk from the Benares Cantonment station and two buildings have been constructed. Yet it has to hire a few more buildings.

NATIONAL EDUCATIONAL CONFERENCE

The Kashi Vidyapitha initiated a magnificent movement about national education in 1923. Babu Bhagwan Das, the then principal of the Vidyapitha, resolved to hold an educational conference to consider about the stability, shortcomings, reformation and improvement of national educational institutions. All the national and semi-national institutions were invited to send their representatives to the conference and 28 delegates of the Tilak Maharashtra Vidyapitha, Poona, the national medical college, Bombay, the Gujrat Vidyapitha, Ahmedabad, the Kashi Vidyapitha, Benares, the Behar Vidyapitha, Patna, the Komi Vidyapitha, Lahore, the National Art and Science College, Bombay the Tilak Komi Vidyalaya, Hyderabad (Sindh), the Tilak Vidyalaya, Bhivabham, the Satyabadi School, Puri, the Prem-maha Vidyalaya, Brindaban, the National Muslim University, Aligarh, the Hindu University, Benares, the Hindi Sahitya Sammelan, Allahabad and the Bengal National Education Board, Calcutta, assembled at 'Seva Utsav' Benares, from February 23 to March 6, 1923. This conference passed many useful resolutions about the improvement and reformation of national education. *

It was also decided to hold such a

conference every year at different places, but nothing more has been done from that day.

FINANCIAL CONDITION

Babu Shiva Prasad Gupta is well-known in India for his generosity and patriotism. This national university of northern India is the fruit of his love of national education. He has donated his property worth ten lacs, for the advancement of learning through the medium of Hindi. This fund is called 'Sri Harprasad Educational Fund (Sri Har Prasad Shikshavidhi)' in memory of his late younger brother Sjt. Hara Prasad. The trust deed of the donation has been registered. The members of the trust are Sjt. Shiva Prasad Gupta, Rai Bahadur Babu Mukunda Lal,

Principal Sri Narendra Deb

Sjt. Krishna Kumar, Sjt. Sri Prakash, Sjt. Narendra Dev, Pt. Jawahar Lal Nehru, Sjt. Purasottam Das Tandon, Pt. Ramakant Malviya and Pt. Hindayanath Kunjarn. Guptaji has written in the trust deed that the interest of this fund (nearly five thousand rupees per month) will be spent on national and technical education, and the institution taking this sum, will have to use 'Deranagri'

* The report of the conference is published in English, and it can be had from the Registrar, Kashi Vidyapitha, Benares Cantt.

script and 'Hindustani' language as its medium of education, without any government control; and technical education will be one of its main subjects. The interest of the donation is given to this institution at present. Besides this, the Vidyapitha gets as sum of Rs. 1200 yearly from Joshi Damodarji and something like that from Babu Bhagwan Dasji. Besides this, Babu Bhagwan Das donated a sum of Rs. 1000 for the hostel building and at the same time he with his son Babu Sri Prakash, works in the Vidyapitha without any honorarium. With these funds the Vidyapitha has spent nearly a lac of rupees in buying plots of land and

erecting buildings, etc., the remaining sum has been spent on professors' honorarium, scholarships, servants' salaries, etc.

This is a brief account of the Kashi Vidyapitha. No doubt the failure of the non-co-operation movement has affected the Vidyapitha, but as it has got a strong footing with remarkable aims and objects, it has no anxiety about its shining future and it can be said that, through the great enthusiasm and labour of the authorities, with proper sympathy of the public, a day will come, when this national university will prove itself to be one of the greatest universities of the world.

LIBERTY

LEILAMANI NAIDU

Why should I care for aught they say
What is their song to me?
No morrow knows nor yesterday
My dream of liberty,

I want no other's tongue to tell
Life's secret of sad tears;
Nor other's hand nor might to fell
Its canopy of fears.

I have a song none else may sing,
A deed none else may dare;
A hope-some sweet fantastic thing,
Some sweet ecstatic prayer.

There is a seed that I must sow
A harvest I must reap;
A secret no man else may know
A tear that I must weep.

It is my own, my liberty,
My life, my soul, my fate
And freedom to eternity
My Master and my Mate.

O, let them sing for aught they might,
What is their song to me?
No morrow bids nor yesternight
My dreams of liberty.

(From "The Indus")

BOUND

By LIZETTE WOODWORTH REESE

Could I shake you out of my heart,
As water out of a cup,
A little silver on the grass
The sun would soon dry up—

Would I be poorer for this thing,
Tho' wiser, too? I know
By all our days of ill or good
I dare not let you go.

You are to me, I am to you
Common, and found, and plain,
As is a window to a house,
As yarrow to a lane.

Too close to see each other else
Than earth-thick to the core;
So near there is nought left to us
But to love and love the more,

—The Literary Digest

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticising it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, *The Modern Review*.]

The Highest Mountain in the World

I am glad to find a colleague in the *Modern Review* for September commenting on my article "The Highest Mountain in the World" which appeared in the *Modern Review* for August, 1928. But my colleague has perhaps unwittingly done a little injustice to me. By "our ignorance" I certainly meant ignorance of the people of India—of course, excluding Nepal, and I am still of opinion that from the Indian side this peak was not known and consequently there was no name for it before it was actually discovered by the Survey of India—not a so-called discovery, as my colleague calls it.

The "Gauri-Sankar" was not unknown to me nor its association with Mr. Schlagintweit, but my colleague does not take into consideration the fact that the Survey of India definitely proved that what Schlagintweit saw was Gauri-Saakar no doubt—but it was never Everest. It was this mistake on the part of Schlagintweit that was responsible for the misnomer of Gauri-Sankar for Everest and its currency in the Indian and Continental literature of Europe. Mr. Freshfield's connection with the question is indeed a new one to me for the mention of which I am thankful to my colleague. But I have it on the authority of the Royal Geographical Society of London (their letter, dated the 11th March, 1925) that Gauri-Sankar is another peak than Mount Everest. This is also corroborated by the Survey of India. The long list of publications quoted by my colleague can certainly have no authority over the Royal Geographical Society of London.

My colleague has taken me to task for having supported the English people in their naming Mount Everest after Col. Everest. I might tell him for his edification that years ago I wrote an article in Bengali (*Prabasi*; *Magh*, 1925) wherein I hinted that Mount Everest could not perhaps be named after its actual discoverer, probably because the honour of having actually discovered the highest mountain in the world fell to the lot of an Indian whose name was thus thrown into oblivion. I also suggested an investigation into the matter with a view to finding out a suitable Indian name for Mount Everest. I also put the matter up to the *Bangiya Sahitya Parishad* for their consideration and necessary action in the

matter but practically speaking I got no response or sympathy from my countrymen. In the meantime on my enquiry to them the Royal Geographical Society of London let me know that Mount Everest was discovered in the course of routine work of the Survey of India in determining the heights of all the peaks visible from the plains of India. The observations upon which the discovery was based were made by different officers and so it is not possible to speak of any one man as the discoverer. This was also confirmed by the Survey of India. If after all this I am compelled to acquiesce in the name of Everest I hope I am not greatly to blame.

Lastly I must thank my colleague for having put in his views and knowledge before the public and I shall be glad if he can further enlighten me on these and such points.

Satya Bhusan Sen

Foundation of the Brahmo Samaj

An error has crept into Mr. N. C. Ganguly's article "Foundation of the Brahmo Samaj" published in "Modern Review" for September 1928. On page 293 of this issue, Mr. Ganguly says "A house belonging to Kamal Lochan Basu on the Chitpur Road in Jorasanko was selected and reated from its owner."

The name of the owner of the house referred to above is Ram Kamal Basu (better known as Feringee Kamal Basu) and not Kamal Lochan Basu as mentioned by the writer.

In my book (Puratony page 67) I have stated the reason why Babu Ram Kamal Basu was called Feringee Kamal Basu. His house on the Chitpore Road where the first meeting of Brahmo Samaj was held on the 20th August 1828 was No. 45 Chitpore Road as it appears from the Collector's receipt for taxes, (of the year 1813) some of which I had opportunity to get hold of. I know that this house is still standing on the Chitpore road, though it is no longer owned by the descendants of Feringee Kamal Basu.

Ram Kamal Basu and Ram Mohan Basu were two brothers. They were residents of Chander-

nagore. To distinguish one brother from the other they were perhaps called by the second part of their names—Kamal and Mohan. From Kamal Basu, Mr. Ganguly perhaps concludes that the full name of the man was Kamal Lochan Basu.

Harj Har Sett.

Professor Sarkar on the Ancient Hindu University

Professor Jadunath Sarkar, C. I. E. has said in the *Hindustan Review*, July as quoted in the Indian Periodicals Columns of the *Modern Review* September, that "the ancient Hindu University without being rigidly isolated, was kept at a safe distance from the noisy luxurious capitals and gave the purest form of physical, intellectual and moral culture possible in any age, if we leave out natural science and mechanics." With all my respect for Prof. Sarkar's scholarship and historical acumen I presume to point out one omission in his estimate of the ancient Hindu University. The omission is the non-mention of spiritual culture—Atmavidya, the knowledge of the Self being the ultimate goal to which every individual soul must press forward. This was the most outstanding feature of the Indian national educational system. On the secular side the theoretical instruction was supplemented by the Upavedas and also by the Vidya's and Kala's (sciences and arts). I am at a loss to understand why Prof. Sarkar thinks that the ancient Indian University entirely excluded "natural science and mechanics" from their curriculum. Is it not a fact, on the contrary, that the experts in machinery (Yantravidya), craftsmen, and metallurgists of the ancient Indian Universities discovered the fast dye, indigo extract, and the tempered steel leading to the secret of Damascus blade, the

earliest contribution to the scientific art of distinction?

DHIRENDRA NATH CHOWDHURY

"Raja Rammohun Roy at Rangpur"

I was interested to see a paper on the above subject, by Mr. Jyotirmoy Das Gupta, in the September number of the *Modern Review*. It is unfortunate that the letters as printed in his paper—the originals of which are among the Board of Revenue Records of the Bengal Government and copies of which I hold—are not only full of serious omissions, but also of errors that wholly nullify their value. I have no time to enumerate all of them, but I simply point out that the story, which he has taken so much pains to build up, that Rammohun Roy served at Rangpur "as Sherishtadar from the beginning of September to 3rd December, 1807" (i.e., the year in which he was made Diwan), goes to pieces, for the very simple reason of his misreading Rangpur for RAMGUR, in the following passage of Mr. Digby's letter to the Board of Revenue:—

"...Rammohun Roy, the man whom I have recommended to be appointed as Diwan of this office, acted under me in the capacity of Sherishtadar of the Foudzary Court for the space of three months whilst I officiated as magistrate of the Zillah of RAMGUR."

In the version printed by Mr. Das Gupta (see letter No. 2) Rangpur stands for Ramgur—an obvious mistake in deciphering. This has naturally led the writer to wonder "why there is no mention of the Raja's service at Rangpur—by Mr. Digby in letter No. 2..." Dr. Sir Devaprasad Sarvadhikari, in his Presidential Address, delivered on 29th July 1928, at the 11th Session of the Uttar-Banga Sahitya Sammilan, held at Rangpur, has published the correct texts of the letters.

No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

ENGLISH WORKS OF RAJA RAM MOHUN ROY, Vol. I. Published by Mr. H. C. Sarkar, M. A. Secretary, Brahma Samaj Centenary Committee, 210 6A, Cornwallis Street, Calcutta. Cloth, gilt letters. Rs. 3.

This is the first volume of the English works of Raja Ram Mohun Roy, published on the occasion of the Brahma Samaj Centenary. It contains twenty-one of the Raja's translations of the Upanishads, controversial tracts, the Trust Deed of the Brahma Samaj, Autobiographical Sketch, the *Brahmical Magazine*, &c. It is neatly printed and elegantly bound in cloth.

THE PEOPLE OF INDIA. THEIR MANY MFRITS. By Distinguished Europeans who have known them. Collected in 'India' with an introduction by Mr. Alfred Webb, President of the Tenth Indian National Congress. Reprinted and Published with an appendix, containing additional testimonies by H. A. Talcherkar, B. A. Barrister-at-Law, Veronica Street, Bombay. Pp. 54. Price Four Annas.

It is humiliating to have to vindicate and establish our national character by publishing the testimonies of foreigners. But as our people have been continually calumniated for more than a century and as the slanderers have recently redoubled their efforts owing to well-known reasons, the publication of this pamphlet must be considered quite timely. The testimonies here brought together are quite reliable, as they were unsolicited and occurred in various publications of various dates by authors of different ranks following professions far different in character from one another. Publicists and all other English-knowing Indians would do well to keep a copy of the pamphlet by them. It is of greater importance to circulate it in America and Europe than in India. But for that purpose some occidental publisher will have to

be chosen and the paper must be better, the type bigger and the cover more attractive.

We thank Mr. Talcherkar for the copy presented to us

ECONOMIC AND FINANCIAL ORGANISATION. Revised Edition. Information Section. League of Nations Secretariat, Geneva Pp 118 6d.

THE REDUCTION OF ARMAMENTS AND THE ORGANISATION OF PEACE. Information Section. League of Nations, Geneva Pp. 106, 1sh.

The Information Section of the League of Nations is to be congratulated on the publication of this series of pamphlets. They state in an interesting and non-controversial manner what the League aims to do, has done and has been doing in various directions. Principles, methods and organisations are also described.

WITH GANDHIJI IN CEYLON. By Mahadev Desai, S. Ganesan Publisher, Triplicane, Madras. Pp. 159. Nine illustrations Rs 1-0.

Like the first volume of Gandhiji's Autobiography, this is a book which I had kept for perusal, page by page, when I had leisure. But the leisure never came, and may not come so long as life or eye-sight lasts. So I notice it in the conventional manner without further delay.

Gandhiji had a very cordial and enthusiastic reception in Ceylon from all sorts and conditions of men. Though he described his visit as a 'mercenary' one with humorous and engaging candour, the people of that island refused to regard it in that light and understood it instead as a humanitarian one.

The first part of the book contains the Journal, consisting of five chapters. Part II contains 32 speeches in various places. Part III is an appendix giving an account of the Khadi collections.

We call below at random a few passages from Gandhiji's utterances.

From *Message to Ceylon Congress*: "Claiming as you do, allegiance to India and endorsing, you do, your connection with the story

Ramavara, you should be satisfied with nothing but Rama Raj which includes Swaraj. When the evil stalks from corner to corner of this enchanting fairyland, you must take up the question in first earnest and save the nation from ruin.

"Then there is the other thing, untouchability. You consider the Rodyas as untouchables and their women are not allowed to cover their upper parts.

"It is high time for the Congress to take up the question of the Rodyas, make them their own and enroll them as volunteers in their work. Democracy is an impossible thing until the power is shared by all, but let not democracy degenerate into mobocracy. Even a pariah, a labourer, who makes it possible for you to earn your living, will have his share in self-government. But you will have to touch their lives, go to them, see their hovels where they live packed like sardines. It is up to you to look after this part of humanity."

From *More Memories*: [At another meeting of the missionaries (at Jaffna) he developed this last thought, in reply to a question as to what he would wish India to be like in matters of religion. He reiterated his impatience with the missionary or the Musalman who thinks of getting hold of the untouchables for the sake of increasing his flock, and said that like the Dewan of Mysore he would ask them all to strive to make the untouchables better Hindus if they could]

"I should love all the men,—not only in India but in the world,—belonging to the different faiths,—to become better people by contact with one another, and if that happens the world will be a much better place to live in than it is today. I plead for the broadest toleration, and I am working to that end. I ask people to examine every religion from the point of the religionists themselves. I do not expect the India of my dream to develop one religion, i.e. to be wholly Hindu, or wholly Christian, but I want it to be wholly tolerant, with its religions working side by side with one another."

The book is clearly printed on opaque paper.

A WEEK IN INDIA (AND THREE MONTHS IN AN INDIAN HOSPITAL). *By Fenner Brockway. 1sh net. The New Leader Ltd. 14 Great George Street, London, S. W. I. Pp. 83.*

Mr. Fenner Brockway spent three months and one week in India, the greater part of which was spent in a hospital owing to an accident. This book gives the reader the experiences of his visit. It contains word pictures of Gandhiji, N. M. Joshi, the Ali Brothers, A. Jinnah, the late Hakim Ajmal Khan, Mrs. Sarojini Naidu, Sir Chimanlal Setalvad, Balubhai T. Desai, S. A. Brelvi, B. G. Horniman, K. Natarajan, the King of Afghanistan, Shuaib Quorochi, Sir Dushaw Wacha, Dewan Bahadur M. Ramachandra Rao, Dost Mahomed Peer Mahomed, Dr. Ansari, Dr. Annie Besant, S. Srinivasa Iyengar, and Jawaharlal Nehru. But it contains much besides these pen portraits. It is brightly written and describes the India he saw ("a minute fraction of the whole") and to give a human picture of the men and women he met. He begins by saying that "this is not an authoritative book on India." But it is quite worth reading notwithstanding.

HELL FOUND !! *By S. A. Dange, Author of*

"Gandhi vs. Lenin." Vanguard Literature Company. 2-1, European Asylum Lane, Calcutta. Price one Rupee, Pp 123 i.e. Red paper covers.

In this book, which is very clearly printed in big type on thick paper, Mr. Dange describes what he experienced and observed in the lock-ups and jail where he had to pass his days for more than three years. He has indeed found Hell. The rooms, the raiments, the food, the treatment received by the prisoners, etc. as described by him in this book, not unoften with grim humour, are all disgusting, abominable, horrible,.....

Says he:

"I have succeeded, if at all, in casting a mere furtive glance at the huge vaults where tales of oppression lie submerged. And I am sure no individual human power will be able to open them.

"The tale of the Bourbon oppression and the secrets of the Bastille could be unearthed only by the united and exasperated will of an oppressed French proletariat. The bones of the murdered people hidden under the polished marble pilases of Czarsim got new tongues only after the wrath of the workers and peasants had shaken the foundations of Imperialism. Therefore such attempts as mine have only a critical value and will remain incomplete without the complement of the determined action of a whole people to right its wrongs."

The author quotes in his preface the following article from the U. P. Jail Manual:—

"Art. 978 Labour in a jail should be considered primarily as a means of punishment and not of employment only; neither should the question of its being highly remunerative have much weight, the object of paramount importance being that prison work should be irksome and laborious and a cause of dread to evil-doers."

And then observes: "The picture that you see in the following pages will show how mild the above words are for what is being done in the jails.—Against this, see the law in the workers, republic. Art. 9 of the Soviet Criminal Code says, Measures of social defence may not pursue the aim of inflicting physical suffering or degrading human dignity, nor does it aim at vengeance or punishment."

R. C.

ANCIENT INDIAN CULTURE IN AFGHANISTAN: *By Dr. Upendra Nath Ghoshal M.A., Ph.D., Greater India Society Bulletin No. 5. Price Re 1 only.*

The history of India's cultural relations with her neighbours when fully written, will have two broad divisions: viz., her relations with the Western and with the Eastern nations. At present the accumulation of rich relics of this relation of India with Indo-China, Sumatra, Java, Bali, etc., has naturally produced the idea that Greater India meant India's relations with eastern peoples alone. But the epoch-making discoveries at Harappa and Mahenjodaro have forced us to look to the West for the earliest outside contact and this remains true down to the age of Asoka, who in his mission activities showed a marked preference for the Western neighbours. Dr. Ghoshal has done a great service to the Greater India movement by emphasising in this monograph the importance of this line of investigation, starting with Afghanistan, and

provoking other investigators to seek on similar lines, the relics of Indian culture in Iran, and in the further West as well in Africa, Madagascar and other lands to the west of the Indian Ocean. In the preface of his stimulating Bulletin Dr. Ghoshal very rightly observes :

"Situated at the gateway of the Indian continent whence it commands all the main lines of its inland communication with Western and Eastern Asia, Afghanistan has been the channel through which have flowed the numerous cultural and other influences that have shaped the history of India in the past. On the other hand, the Indian influences, especially under the urge of the great movement of cultural expansion associated with Buddhism, have overflowed the western frontiers of India, and the signs of their triumph are writ large not only in the existing monuments of Afghanistan, the stupas, images, cave-shrines, pillars and the like, but were abundantly illustrated in the prevailing forms of religion, language and social manners before they were engulfed by the advancing tide of Islam. Verily the history of Greater India would be lacking in some of its important chapters. If the story of India's cultural contact with its western neighbour were left untold."

The book should be read by every serious student of Hindu cultural expansion. It gives for the first time a faithful resume of the latest discoveries in the field made by the French and German scholars.

A HISTORY OF HINDU POLITICAL THEORIES : from the earliest times to the end of the seventeenth century A.D. By Dr. U. N. Ghoshal, M. A., Ph.D. Oxford University Press, Second Edition 1927.

To all those who want a sober and fully documented study on Hindu political theories, the new edition of Dr. Ghoshal's book will be welcome. Within the narrow compass of 250 pages the author has managed to condense and criticise almost all the important texts and theories relating to Hindu political science, and the beginners in this line of study will find the book a faithful and stimulating guide. In every discussion Dr. Ghoshal shows a remarkable spirit of fairness and a laudable solicitude for ascertaining the tenor of the original texts. In weighing evidence he displays a largeness of outlook that is characteristic of a historian and he puts the orthodox and heterodox schools of thought in the same scale, assigning as much importance to Brahmanical as to Buddhist and Jain speculations. Moreover, Dr. Ghoshal traces the progress of Hindu political thought from the early classical to the mediæval stage of its evolution as represented by the earlier *Niti* and *Smṛiti* texts, as well as in the *Dashabodhi* and *Vishnu Nataka* of the epoch of Marhatta and Sikh revivals. Some of the appendices and his concluding chapter, breathing a spirit of comparative study and sound evaluation, go to make the book a precious guide in the jungle of partisan theorisings. We congratulate Dr. Ghoshal on the publication of this second edition and recommend the book to all lovers of Indology.

K. N.

SEVEN MONTHS WITH MAHATMA GANDHI VOL. I : By Krishnadas. S. Ganesan, Triplicane, Madras, S. E. Pp. 449. 1928.

What Mahatma Gandhi is writing of himself in *Young India* week after week, can, by no means, be considered as the only materials with which one would build up a biography of his. The account of his examination of himself is bound to be inadequate for a biographer, for, it excludes many details and minor incidents of his life, which to a biographer is of essential value to paint a complete picture of his life. The book under notice portrays very nicely the daily life led by Mahatma Gandhi during the active days of the non-co-operation movement. Herein we find Mahatmaji in delight over his success some day, in extreme agonies over his failures, in the patience and endurance of a saint in the midst of overwhelming activities and in the purity and strength of a supremely spiritual mind. Mr. Krishnadas is a very keen observer and is fully aware of the possible curiosity of his readers. He leaves out no details as insignificant and paints Mahatmaji in his daily routine of life, in his habits and manners and in his friendly talks and humorous luts. This book will be of great help to a future biographer of Mahatma Gandhi. The book is so highly interesting that we have finished it with as much eagerness and pleasure as we do a good novel.

It is a history of the progress and development of the non-co-operation movement, as conducted by Mahatma Gandhi, the hero, the martyr and the saint.

The book is bound in Khaddar and its get-up is nice. It also contains a picture of Mahatma Gandhi.

P. SEN GUPTA.

BENGALI

NANA KATHA (Miscellaneous Essays) : By Upen-dra Kumar Kar, B.L. Publisher—Sitansh Choudhuri, Pleader, Chandpur. Typerra. Price Rs. 1.

However unpretentious and uninviting this volume of Essays of a little over two hundred pages, printed in an unknown Mofussil press, may seem at first sight the reader will be delightfully surprised to find that the letter press contains few errors, the writer has a wonderful command over his mother-tongue which he can wield so dexterously as to express the most abstruse thoughts, and that the thoughts themselves are of a high order, far above the parochial topics of a Mofussil station, and even worthy of serious consideration by the best minds of the country, minds engaged in our well-known centres of culture in voicing the problems that vitally affect us and in making suggestions for their solution. That thinkers of such wide culture are to be found here and there in the remote provincial towns augurs well for the future of the country.

The collection of essays under review may be broadly divided into two groups, philosophical and literary. In both these groups the writer reveals a remarkably clear grasp of basic truths. His wide reading in the Vedānta and the Upanishads on the one hand, and the best poetry of modern Bengal on the other, and his power to apply the problems of philosophy and poetry to the facts of our moral and social life, mark him out as a practical thinker of no mean merit. Through

these essays he shows an intimate acquaintance with the causes of our social ills, the hide-bound customs and traditional usages which have choked our freedom of thought and acted as a barrier to further progress, but what distinguishes his writing is the undercurrent of spiritual emphasis which runs through all the essays, so that we rise from their perusal refreshed and purified in body and mind, and with the biblical query rising like a perpetual refrain in the innermost recesses of our mind: What shall it profit a man, if he gain the whole world, and lose his own soul?

Where there is so much that is of a high order of excellence, one word of caution may be permitted. The author is above everything, sane and level-headed and yet on occasions we come across a faint note of indiscriminate admiration of the glorious traditions of India's past which, in the minds of the less thoughtful and less well read sections of the community, may easily be turned into an attitude of selfcomplacent inactivity, shutting the doors of the mind to every current of fresh air that blows from the bracing climate of the West. Michael Modhusudan Dutt's preference for Indrajit to Rama in his famous epic has been ably interpreted, but our author is not happy till he is able to say that by accepting Meghnad as his hero the poet was only accentuating our ancient Indian ideal. In his able exposition of Rammohan Roy's life and work the author says that the Raja regarded the Veda as infallible and as the revealed word of God. We doubt if this was actually so, * and even if it were, it certainly called for a word of comment instead of being accepted with uncritical approval, for the writer himself observes that the Raja stood for all-round emancipation, which must include above everything, the emancipation of the mind. Again the writer is an ardent admirer of Ramkrishna, whom he calls *yugavatara* or the Messiah of the modern age, and refers to his great work of religious synthesis and his profound message "Each religion is true—as many beliefs as there are paths". Now the science of comparative religion is responsible for the discovery of the generalisation that there is truth in every religion, but it is a far cry from this to the other generalisation associated with the revered name of Ramkrishna that every religion is true. It is no doubt a fact that to a really earnest and devout seeker after God religious forms offer no insuperable barriers, and that the follower of every religion, by practising the highest lessons it preaches, may attain the *summum bonum*. But to characterise the facile tolerance which finds every religion to be true and makes no discrimination between the higher and the lower elements of which it is composed as a religious synthesis of supreme importance for the discovery of which the world had to await the advent of an *Avatar* is to lose sight of that sense of proportion which is so habitual with the author in everything else he writes. One would be bold indeed who could say that popular Hinduism, by absorbing all the cults and rituals of non-Aryan origin, has gained in worth in any real or vital sense. The writer has rightly enough, nothing but contempt for mere catchwords and shibboleths of Western origin.

* Ram Mohun Roy did not believe in the infallibility of any scripture, Editor, M. R.

To be consistent, he should have the same contempt for catchwords of indigenous origin, and tread the middle path beloved of Lord Buddha, and pointed out in his *Heart of Aryavarta* by Lord Ronaldshay, whose activities on behalf of Indian philosophy the writer so admires, as the one which educated India should follow if she wants to make her own contribution to the civilization of the modern world.

We hope the present volume will be followed by other volumes of essays, replete with ripe wisdom, and revealing a deep culture and couched in language which the author knows how to make a worthy vehicle of his thoughts which the reader may peruse with equal pleasure and profit.

BOOK-LOVER

RAJA RAMMOHAN RAYER GRANTHADALI, PRATHAM KHANDA.—Published by Mr. H. C. Sarkar, M. A. *Brahmo Samaj Centenary Committee*, 210-6A, Cornwallis Street, Calcutta.

This is the first volume of the Bengali works of Raja Ram Mohun Roy, published on the occasion of the Centenary of the Brahmo Samaj. No student of Bengali literature can do without a perusal of Ram Mohun Roy's works. Those who wish to know all about the beginnings of the monotheistic movement and the social reform movement in India must also study his works. This first volume of his Bengali works contains the *Vedanta Grantha*, Sanskrit text and Bengali commentary; *Vedanta-Sara*, Sanskrit text and Bengali commentary; *Atmanatma-viveka* by Sankaracharya, Sanskrit text and Bengali commentary; the first chapter of *Vajrasuchi*, an ancient brochure by Mrityunjayacharya against caste, Sanskrit text and Bengali translation; and *Tulavakara Upanishad*, Sanskrit text and Bengali rendering.

The volume is neatly printed on antique laid paper. The cloth binding with gilt letters is quite elegant.

R. C.

SRI SRI DURGA: By Umesh Chandra Chakrabarti, Published by Suresh Chandra Chakrabarti 31-1 Ghose's Lane, Calcutta. Price Two annas.

This illustrated booklet contains a compilation of Durga Stabas (prayers) written by eminent Bengali writers, viz. Bankim Chandra, Bharat Chandra and others. The author has also attempted to trace briefly the origin and development of the worship of Durga. This is a timely publication and we hope this little book will be widely read in Bengal.

P.

SANSKRIT

THE NIGANTU AND THE NIRUKTA—critically edited from original manuscripts: By Lakshman Sarup, M.A. (Panji), D. Phil (Oxon.). Sanskrit text with an appendix showing the relation of the Nirukta with other Sanskrit works. Pp. 39+292.

FRAGMENTS OF SKANDASVAMIN AND MAHESVARA ON THE NIRUKTA. Edited for the first time from

original palm leaf and paper mss. with an introduction and critical notes : *By Lakshman Sarup, M.A. (Panj.)*, D. Phil. (Oxon.). Pp. 15+133.

It is full seventy-five years since the great pioneer scholar Rudolph von Roth first published the Nirukta of Yaska in Germany and now we have this, one of the most important works in the whole Sanskrit literature, in the edition of Dr. Lakshman Sarup. A single glance at these two editions is sufficient to tell how the science of Indology has progressed during this period. Dr. Sarup's is a work which we as Indians may well be proud of. It is the result of the collation of 37 manuscripts—it is difficult to imagine what a strenuous labour it means. Roth, on the other hand, had to depend merely on 7 manuscripts. During all this period many editions of the Nirukta have appeared; yet it is not exaggeration to say that they have all been replaced by the present fully scientific edition furnished with all important variants given but facultatively by Roth.

Apart from the not very few typographical blunders, from which this edition too unfortunately is not free, the chief defect in Roth's edition seems to be the lack of punctuation marks which renders the simple language of Yaska quite unintelligible in many places. The text in Dr. Sarup's edition is fully punctuated and the perusal of a few pages in the two editions side by side will convince every reader of the great improvement effected by Dr. Lakshman Sarup. This is the third volume of Dr. Sarup's works on the Nirukta. Instead of Roth's introduction which is a rambling disquisition about the Vedic literature—yet it must have been of great help in those days—we have now Dr. Sarup's valuable introductory volume; the texts have been already dealt with, and in the place of Roth's meagre "Erläuterungen" we have now a complete translation of the Nirukta. It is true that Yaska's Sanskrit is not very difficult to follow, yet Yaska has his own peculiarities just as Patanjali's apparent simplicity soon proves to be deceptive—and these peculiarities could not have been easily understood without the help of one who is fully acquainted with the mysteries of Vedic philology, this Dr. Sarup offers us through his valuable translation and notes.

In the first three volumes it may perhaps be said that Dr. Sarup has followed in the foot-steps of Roth; but in the fourth volume Dr. Sarup has given the lead. In this volume our author has published for the first time fragments of the commentary of Maheśvara-Skandasvamin—the mysterious joint authors whose interrelation has very probably been rightly indicated by Dr. Sarup. It is interesting to note the summary way in which the author in his introduction has sent the commentator *Ugra* back to his pristine non-existence. This volume is also enriched by an appendix constituted by extracts from Skandasvamin's work in Devanāgarī script's well known commentary on the Nighantu. We offer our heartiest congratulations to the learned editor and recommend his book to all students of Sanskrit philology and Vedic lore.

Sātibhāna.

HINDI

HINDUSTHANI SANGIT PRAVESIKA—*Parts I and II. By Mr. Murari Prasad, B. L., Advocate, High Court, Patna. Patna Law Report Press, Patna.*

The author has creditably supplied a great want and will be congratulated by all beginners of Hindusthani music. His primer is calculated to serve as a guide-book as regards both the theory and practice of music. The notations and their explanations are extremely helpful. The chapter on the various classes of Hindusthani music is informative.

ANARKALI—*By Umarao Sinha Karunkh, B. A., Jnanprakash Mandir, Meerut.*

Translation of a Bengali story by Dr. Rahindranath Tagore.

AKSHARA-TATVA—*By Mr. Gouri Shankar Bhattacharya, Masanpur, Cawnpur.*

The "geometrical" elements which go to the formation of the letters of the Devanagari alphabet are discussed and displayed with a number of diagrams.

KUNTI DEVI—*By Mr. Bhagavandas Kela, The Bharatiya-grantha-mala, Brindaban.*

The life sketch of a distinguished lady worker in the Prem Maha Vidyalay of Brindaban.

PUNARVIVAH VIDHANA—*By Pandit Mata Sena Pathak, Swadeshi Store, Sarsa, Dt. Allahabad.*

Remarriage of Hindu widows as approved of in the Sanskrit texts is the subject matter of this book. The author also repudiates early marriage.

RAMES BASU.

MALAYALAM

PULAKAMKURAM—*By Nalappat Narayana Menon. Edited with introduction by C. P. Govinda Menon. B. A. and L. T. Mangalodayam Press, Trichur. Pp. XXVI+51. Price as. 10.*

We had sometime ago the pleasure of commending in these pages, Mr. Nalappat Narayana Menon's beautiful poetical work entitled *Kannuruthullu*. Now we have before us another work of his, *Pulakamkuram*, containing ten short pieces of poetry, three of which are composed in the Sanskrit metres and the rest in the Dravidian. Some of the pieces written in the *Manjari* style in this little book have reminded us of certain songs of Tagore in the Crescent Moon and the Gitanjali. Mr. Nalappat's poems composed in the Sanskrit metres are equally elegant.

The printing and get-up of the book leave nothing to be desired. The lengthy remarks in the introduction regarding the poet's personal beauty, modesty and numerous other "qualities" might be felt as a burden by most of the readers!

GIRI-PRAKASHANAM—*By K. T. Lonappan. Bharatavilasam Press, Trichur. Price as. 4.*

This is a very faithful translation of the "Sermon on the Mount" composed in the *Manjari* style. We congratulate the young poet on his venture.

SWATANTRYA-MARGAM : *By K. Velayudha Menon. Sahadara Press, Cochin. Pp. 78. Price as. 12.*

This is one of the very few books in Malayalam which deal in detail with the conditions of labourers in India giving full and up-to-date statistics. Though one may not agree with the views of the author in all respects, the book as it is deserves very careful study. It contains also statements which are inaccurate; for instance, on page 49, in the chapter on exploitation the average income of an Indian is recorded as 1 anna 6 pies per year. We hope this and other inaccuracies will not be overlooked in the next edition. The book is well got-up.

A TREATISE ON TEXTILE INDUSTRIES—By C. Swaminath, L. T. M. (Bom.) Head Master, Govt. Industrial School, Cochin State. Published with the sanction of the Director of Public Instruction, Ramanuja Printing House Ltd. Trichur Pp. 212. Price Rs. 1-4-0.

We congratulate the author on his excellent production. There is no doubt that the book with the numerous illustrations it contains will be of great help to students who take up to weaving industry. We wish the author could have, however chosen a Malayalam title to his book which is written in Malayalam!

P. ANJAN ACHARYA

MARATHI

DR. SIR R. G. BHANDARKAR (a biography): By S. N. Karnatak, published by the author at 249 Haste Peth, Poona. Pages 438. Price Rs. 2-8.

The late Dr. Sir R. G. Bhandarkar was a scholar of world-wide reputation. A keen intellect, a large heart, strong convictions, as well as his deep faith and unimpeachable character have left a deep impression on thousands of his pupils and others who were fortunate to come into contact with him. Mr. D. G. Vaidya of the *Subodha Patrika* has already given us a true picture of the religious side of Bhandarkar's life. But a biography dealing with all its aspects was badly needed, and that want is in a great measure supplied by Mr. Karnatak's book, which is thoroughly well-written and thoroughly interesting. One draw-back, however, must be mentioned here. It is the want of an Index, a work common to a very large number of Marathi books.

BHARATWARSHIYA PRACHIN AITHASIK KOSH OR DICTIONARY OF INDIAN ANTIQUITIES: By the late Jagdishlal Bhaskar Godbole. Published by the Chitraghata Press, Poona. Pages 148. Price Rs. Three.

This is a mere reprint of the work published in 1876, when researches in Indian history had scarcely begun and the task of identification of countries, cities, mountains, rivers, etc., mentioned in old Sanskrit works was an extremely hard one. But no such excuse can be pleaded in these days, when the combined efforts of Western and Indian scholars have made available immense materials for such identification. For instance, now to say merely that who caught is a name of a province in India will hardly enrich the store of one's knowledge. It ought to be stated that it is the ancient name of the province which in later times came to be known as Magadha and now bears the title of Bihar. With this serious defect running throughout the

work, the dictionary surely supplies a want which was being keenly felt for nearly a quarter of a century.

VIDYUT-SWALAMBANA—or self-help in Electricity by G. K. Date. Published at Vidyut Karyalaya, Magadha, Bombay. Price as. six.

This brochure of 34 pages gives very useful hints to householders, who desire to have installed electric lights to illuminate their houses. The book is profusely illustrated.

V. G. APTE.

ORIYA

The Ganjam Store of Berhampore (GANJAM) has recently published a good number of good books. CHANAKYA, one of the series of the Promode Bharati Granthamala by Iswar Saha is a book of about 250 pages. It is both illustrated and elaborated. The style is in keeping with the subject, virile and somewhat Sanskritic. The last annexe giving the code of morals of Chanaka is valuable for the reader to understand the historical situation of the country at that remote period and the policy necessitated by it. It is a splendid book.

BEER BHARAT (12 annas): By Basudeb Mahapatra one of the life-workers of the Satyabadi school of late Gopabandhu Das. Basu Babu is an acknowledged virile Oriya prose writer and nothing remains to be said against the subjects or style chosen by him. The various subjects such as Panna, Prithwiraj, Kusumkumari, Chanda's promise, etc., etc. will no doubt inspire youthful reader.

NADA GITIKA OR NEW SONGS. It is a collection of national and devotional songs collected by Sarathi Sahu. Price twelve annas. Contains 156 pages.

HINDU RAMANI, (a drama): By Sri Aswinikumar Ghosh M. A. one Rupee.

Aswini Babu is a drama-writer of long standing and great fame. He has caught the staging side of the play very well. His pictures are, however, a little overdrawn. The style is moving and simple. But one defect in all his dramas is that he has freely introduced Bengali phrases into Oriya language. This should be guarded against, in future.

SUBHADRA By Dayanidhi Mishra B. A., L. T. (12 annas in prose, pp. 137).

Dayanidhi Babu is a well-known writer of old historical characters. He excels in delineating the characters he handles. The illustrations are not bad.

The Oriya Sahitya Prachar Sangha which is popularising lives of eminent people of India and outside has also been at times publishing books like PRANANATH PRAKASHI that is before us. The author, Professor Ratnakar Pati, M. A. of the Ravenshaw College is a Professor of philosophy. The essays he has written were written at different times as magazine articles. Philosophy has been naturally woven into his writings. The style is rather involved. The essays are thoughtfully written but the ideas do not grip the mind, they are not so clear. The subjects chosen are also responsible for the style and thought to some extent.

The Utkal Sahitya Samaj has published a kavva called *RASALAHARI* (price 12 annas) written by Maharaja Raghurath Bhanj of Mayurbhanj (1728-1750) in the old style of *Chhanda* and *Raga*. Page 138. The beginning is rather done with much effort, the latter *chhandas* are rather unaffected. There is no peculiar merit in this book except that historically it has a place as it comes after Upendra Bhanja and from the pen of a Raja. The preface written to this book by Sriyut Sasubhusan Ray, Secretary of the Utkal Sahitya Samaj, is worth reading.

ANIAR LIFE: By Samanta Sri Narasingha Pullanayak.

The book contains talk between the lover and the loved (Nayak and Nayika). Each poem again supplies the main thought of that poem from the first letters of each line. As an artistic piece, the poems deserve some credit.

PILA GITA: By Bidyadhar Mahanti.

A small book of poems meant for recital by children. Some of the sentiments are nice. Price six pice.

AME JANE: By Bidyadhar Mahanti.

It contains some satirical and ironical poems, in no way inferior to D. L. Roy's in *Kalki Abatar*. Price two annas.

L. N. SART

GUJARATI

NEW BAL POTRI: By Kanti Kahdai Joshi.

This is a text book for little children who are beginners in education. It is designed by an experienced teacher.

RUBAIYAT-E-OMAR KHAYYAM: By D. N. Patel. Printed at the Allen Press, Bombay. Paper cover, pp. 25. (1927).

This is a translation in Gujarati of the Quatrains of Omar Khayyam, as that peculiar vogue of versification called *Beitboy* which distinguished Parsi writers of the old school.

A CLARION CALL TO CASTES (Jhatone Padkar): By Nanji Lalji Farmar. Printed at the Dharma Vijaya Sthan Printing Press, Limda. Cloth bound, Pp. 128. Price Rs. 1-4-0. (1927).

The writer wants to preserve castes and not uproot them. With that view he has written this book in which he offers suggestions in animated and feeling language as to how to destroy those evils which have crept in and made them engines of oppressions instead of means of happiness.

A FEW SCATTERED FLOWERS: By Jayendrarao Bhag Vaneal Durkal, M.A. Printed at the Jnan Mandir Printing Press, Ahmedabad. Cloth bound, Pp. 194. Price Rs. 1-4-0. (1927).

The author is the Professor of Gujarati and English Literature in the Arts College at Surat, and has naturally to do a lot of thinking and observation. The result of both the processes is this book, which is a collection of his original writings on various literary and social subjects. They are all well presented and would repay exertions.

ANJO (a play): By Chandraradan C. Mehta, D.A. The life of this cold-smith metaphysician and poet of mediaeval Gujarat was never dramatized before. That has now been effectively done

and the play successfully staged through the fashion of the author.

TWO ALHYANS: By Gojendrasankar L. Pandya, M.A., B.T. Lecturer, Gujarat College, Ahmedabad. Printed at the Aditya Printing Press, Ahmedabad. Paper cover. Pp. 155. Price Rs. 0-14-0. (1927).

Vallabh, a well-known poet of Gujarat was distinguished as a "Thunderer". Mr. Pandya has a soft corner for him and has written out a play with him as his hero and called it Vallabh-Garjanakhyan. The other Alhyan is called Gurjan Prasannakhyan, and is written in the vogue of old Gujarati writers. They are both readable performances. K. M. J.

URDU

ZIKR E MIR (Persian) With a Foreword by Maulvi Abdul Haque B.A. Pp. 113+XX. Price Rs. 2. Publisher Anjuman Taraqqi Urdu, Aurangabad Deccan.

Mir Taqi Mir is the acknowledged father of Urdu poetry. This is his auto-biography written in an admirable style, and published for the first time after an oblivion of a century, and a half with a very able and interesting foreword by Maulvi Abdul Haque. Copious foot-notes and a detailed table of contents are useful additions.

HAMARI SHIKRI By Syed Masud Hasan M.A. Lecturer Lucknow University. Pp. VIII+60+124. Price Rs. 1. Publisher—Anjuman Taraqqi Urdu Aurangabad, Deccan.

The book may fittingly be described as an apology for Urdu poetry. Urdu poets and poetry have long been a target of ugly criticism and ridicule by the "western educated" Indians. A number of changes has been brought against Urdu poetry under the following main heads,—that it is unnatural, that it is immoral, and that it is narrow and barren, and the whole of it has been condemned outright. The author takes all such charges one by one and with a masterly analysis worthy of an eminent lawyer ruthlessly exposes the hollowness of these silly charges and smashes them once for all each and every one of them. His reasoning is sound throughout and his style is simply entertaining. Not a trace of bitterness, and yet his exposure of his opponents is merciless. His discourses on the nature of poetry, the proper value of poetry and the merits of Urdu poetry as distinguished from those of English poetry are illuminating. The author has done a distinct service to the Oriental literature and has admirably filled a long-felt want. The book supplements at a very opportune moment the great Hali's great *Muqaddama* and no one interested in Urdu or Oriental literature ought to miss reading it.

NABUTAT AUR NABATI KHOGREK: By Mr. Mohan Lal Sethi, M. Sc. Lecturer Botany, Govt College Lahore. Pp. 304. Illustrated. Price not given. Publisher: The Farnab Central Publishing House, Lahore.

An interesting treatise written in a simple style and as far non-technical as possible on plant life. His chapters on the evidences of plant life, seeds, fruits, flowers, manures, vegetables, vitamins, bacteria diseases of plants &c. Contains useful information about agriculture and horticulture. Can be used as a good hand book both by the student and the layman. A. JI

"MOTHER INDIA OR FATHER INDIA?"

A GERMAN CRITICISM ON MISS MAYO'S BOOK

Translation with Note by S. P. RAJU, B. A., B. E., A. M. I. E

[Note. Under the title "*Mutter Indien—oder Vater Indien?*" (Mother India or Father India?) has appeared a criticism of Miss Mayo's Book in some German papers, a translation of which I am giving below, as it would be of interest to readers in India, especially in view of the alleged attempt of the authoress to bring out a German edition of her book. The article has been published among other papers in the Literary Supplement of the "*Reichspost*" in Vienna, and the "*Ostasiatische Rundschau*" (East Asiatic Review, in Hamburg. The latter is a periodical published in combination by the "*Verband für den Fernen Osten*" (Union for the Far East) in Berlin, "*Ostasiatischer Verein Hamburg-Bremen*" (East Asiatic Association Hamburg-Bremen) in Hamburg, and the "*Deutsch-Ostasiatischer Klub*" (German-East Asiatic Club) in Leipzig; associations that interest themselves among other things with the cultural problems of the East, and as such supposed to give a lead to the intelligent public opinion in the country in matters pertaining to the Orient.

The writer of the article, Prof. Dr. J. B. Aufhäuser, is a German Professor of Philosophy and Comparative Religion in the University of Munich, who toured in most parts of India last winter, visiting the Poet Tagore and his School in Shantiniketan. This year also he has already left Germany for Sumatra, Java, Australia, etc., and circumstances permitting, he hopes to acquaint himself with the other parts of India, that he could not see in his last journey.]

TRANSLATION

It was evening in the middle of November after a fearful tropical thunderstorm, as I waited in the Refreshment Room of Madura Railway Station (South India) for the night train to Trichinopoly, when two Indians of high caste joined me, and very soon we fell into a lively conversation about the situation in India from the European and the Indian points of view. "What do you think of that

book, 'Mother India,' by Miss Katherine Mayo?" asked one of them, a distinguished advocate of the city. At that time I did not know of the publication of this book, and had the contents related to me. I could quite understand that both the gentlemen, one a Hindu lawyer and the other a Christian (Protestant) were greatly excited about it. At the earliest opportunity I bought a copy of the American illustrated edition of the book. The edition circulated in India, as I was told, represented a certain amount of toning down in many places. In view of the great interest that many sections of the German cultured Society take in Indian affairs in relation to the evolution of world politics of the present day, a short description of the nature of "Mother India" may perhaps be desirable.

In one word: Miss Mayo's work is a book with a politico-cultural purpose. Based on a painting of the land in the darkest possible colours, the proof is said to be made out, that India, i.e. its peoples and its tribes, on account of the cultural, sanitary, social and economical conditions of the land, are not in the least ripe for self-government, nay more, on account of the hygienic disparities form a sort of world-danger, against which perhaps even the League of Nations had to be invoked. The authoress, at whose disposal the India Office in London, and the official Anglo-Indian offices in India placed their materials, was warned by these offices not to generalise from special observations (Cf. Page 13). But she did not unfortunately stick to this well-meant advice. Some of her own personal observations during a winter sojourn of five months from North India up to Madras (1925-26), communications and opinions from official or friendly British or Anglo-Indian side, utterances of leading Indians taken out of their context*, or facts collected from newspaper articles, in hospitals or law-courts, make the American lady-tourist draw a one-sided,

*Among others Gandhi and Tagore also protest against the distortion of their statements.

dark and therefore an untrue and unjust picture of the Indian people, their civilisation, their spiritual culture and their social and economic conditions. True, many of the evils censured in the book are facts, and were known for a long time; and this book brings hardly any new observations. Only never before were they described in such a wickedly generalized way, as if it were meant to be a public showing up of a whole people in glaring colours by a mountebank with so much of journalistic advertisement for wide circulation. Sometimes one asks one's self involuntarily, "How is it then at all possible, that this nation, i.e., the Indian races, represented as physically degenerate, morally depraved and economically unproductive, could for 5000 years continually keep itself vigorous, especially when in addition to this such bad sanitary conditions prevail?" Miss Mayo has unfortunately failed to get into personal touch with the actual reformers, or the Social Reform Associations of Indian men and women, or with Societies, which long before she herself went there, have been insisting upon the removal of those social and sanitary evils. Even today educated Indians admit that much of what is said in the book is founded upon facts. But gross exaggeration and generalization paint these things in an unheard of fashion, and distort the whole of Indian culture into something coarse. In the whole of the book there is practically no word said, that is favourable to the Indian people. The picture drawn by it shows only the dark side and not the bright. The dedication "To the People of India" (See Book) is supposed to indicate that a "sincere friend" wishes to do something good to the country. But in reality is this people with its ancient culture only calumniated and degraded indiscriminately in the eyes of the English and American reading public. But educated leaders of India like Gaudhi among others, above all ill-temper and ill-will, hold this book before their people today as a mirror of their practices for the improvement of many social and hygienic shortcomings.

The book deals with the actual problems that are at present greatly discussed by the social reformers in India: the child and early marriages (e. g. the Census of 1911 showed 9,077,627 married and 335,015 widowed girls from 0 to 15 years of age, and in ages from 10 to 15 years 13 p. c. of the boys and 40 p. c. of the girls, and in

ages from 15 to 20 years 32 p. c. of young men and 80 p. c. of young women married), the problem of the widows (the Census of 1921 numbered 26,831,838 widows out of a total female population of about 152.6 millions) with all their alleged suffering, the impossibility of remarriage in orthodox circles, maternity in India with its grave hygienic evils, the life of the woman in zenana, the strictly closed apartments of women, temple prostitution in the provinces of Madras and Orissa, the question of caste, especially the lot of the 60 million despised out-castes (Panchamas). In addition to these cultural questions are discussed also the economic problems e. g. the unprofitableness of Indian cattle-breeding (out of 146,055,859 oxen and sacred cows about 50 p. c. are agriculturally unprofitable), the exploitation of land by cotton, wheat and tea culture, industrial and money problems, the national movement, the exploitation of the land by English industrial concerns through railway and other undertakings under English hands, the English army of occupation and civil service, relation between Hindus and Mohammedans, Pax Britannica, Anglo-Indian Reforms, and finally sanitary and health problems; epidemics like malaria, plague, cholera, smallpox as a kind of world danger, especially on account of the unhealthy conditions in the sacred rivers, wells and ponds, when they are visited by hundreds of thousands of pilgrims; sacred cities like Benares have only primitive drainage systems, and so on.

To the reader to whom in the beginning (page 13) is given the picture of young consumptive Indian students pouring over bolshevistic literature and gruesome repellent religious practices in Kali Temple in Calcutta, it remains quite a puzzle, how a people so degenerated, and physically and morally so sunk as Miss Mayo has described here (pages 16f, 21f, 56ff, 102ff, 201ff, etc) could live for hundreds, nay, thousands of years under such primitive hygienic conditions, and revive themselves again and again. Whoever accepts uncritically the picture given here, will, on account of the sanitary and economical conditions prevailing apparently as the effect of partial autonomy already granted to the Provinces, refuse an extension of the self-government demanded by the Indians. India is, so Miss Mayo wishes to prove, not in the least ripe at present for self-government.

Certainly he who travels in India without

taking the trouble to enter into the Indian mind and into Indian conditions without any prejudice at least, if not with sympathy, lacks the necessary independent view for an impartial judgment. He who looks at Indian conditions with European and American standards will and must judge harshly and unjustly. In spite of many failings the mixed variety of Indian life appears on real examination to have advantage in many respects over the attempt at making the world uniform, that is so much yearned for by the American lady tourist. Take the life of the Indian woman itself. For millions today is Sita the ideal wife, who has given herself up to her husband in indissoluble marriage and devoted loyalty. What a sharp contrast to it are the matrimonial confusions of America and Europe! The inexhaustible physical fertility of Indians makes us always wonder how the people there without the development of modern hygiene, without modern education, and without woman's emancipation have for thousands of years revived themselves and not lost their vitality in their struggle for existence. The selection of nature has certainly demanded the early death of many new born ones and weaklings, but has always given the survivors fresh vitality.

An enormous number of protests have been raised against Miss Mayo's book in the Indian newspapers and periodicals of all kinds and shades of opinion, not only from Indian communities but also from leading

individuals. It was not at all difficult in one reply* to emphasize that even the writers of the Far-East after travelling in the West could paint a dark picture of the European and American state of affairs. The author of the rejoinder throws light on the above-mentioned problems from the Indian point of view, and gives for comparison effective illustration of and parallel information about American conditions based on statements made by qualified Americans themselves. From the descriptions given there Miss Mayo will feel at any rate that she has been paid back in her own coin.

From the point of view of cultural exchange between the East and the West, or the bridging of the differences, or even the influencing of India through the Christian religion of the West, Miss Mayo's book is still more regrettable. She increases the aversion of Indians, already strong enough as it is, against the efforts of Christianity to displace or reform their own ancient Hindu religion, which offers wide scope for every religious sentiment. It is probable that the American missionaries in the first place may experience a certain amount of passive resistance. Sometimes at any rate during my visits to temples or sacred places the indignation of the Brahmans against Miss Mayo's descriptions was expressed to me. Injustice whether against an individual or a nation always produces bitterness.

* C. S. Ranga Iyer, Father India, a reply to "Mother India".

RAM MOHUN ROY, THE DEVOTEE

By PROF. DHIRENDRANATH CHOWDHURI, VEDANTAVAGIS

MANY brochures and booklets are published, lectures, and addresses delivered every year on Raja Ram Mohun Roy depicting him as a great man, a versatile genius—a pioneer and tribune, a patriarch, a rishi and prophet, a universal man, nay, even a hierophant moralising from the Eiffel-tower of the world's progress on the far-reaching vistas of human civilization. All this is very true, not a single epithet is misapplied to Ram Mohun. But they do

not indicate the source from which his greatness springs. The source is Ram Mohun's *Brahmo Sadhana*. Above all, the Raja was a *sadhaka*, a Bhakta, a Psalmist. The Raja appears different from all *Sadhakas*, so called, not because he was less a *Sadhaka*, but because he refused to cut himself off from all human interests as has been the wont of the "*Sadhakas*" all over the world in all times, our own not excluded. The Raja was cast in nature's regal mould not

only spiritually but physically also. His personality was not deficient in the emotional element; but his physical frame was immune to all attacks hysterical natures are liable to. It is because of this that Ram Mohun as a *tapasuin* does not so much impress the popular mind. Moreover, his earlier preparatory stages are never brought out in the ordinary delineation of the Raja's career.

In his early life the Raja was eager to adopt *sannyasa* from taking which step he was prevented by his mother. In his early boyhood he prepared bricks with the mystic syllable (*om*) imprinted on them and built a *vedi* (platform) with them on which he sat hours together in practising spiritual exercises. The austerities he had practised before he hurled himself headlong into the Titanic activities of the modern life will compare not unfavourably with those of the reputed *sadhaks* of old. Ram Mohun denied himself the luxury of the reputation of a medieval saint, though his *sadhana* was none the less exacting. This peer of Bentham and Voltaire was also the associate of Rishis and Tapasvis. His Biographers inform us that the Raja performed *purascharana* not once or twice, but twenty-two times, while a single performance means practice of austerity of the severest type for months together. *Purascharanas*, as enjoined in the puranas and tantras, are of different kinds. Ram Mohun, who later in life severely condemned some phases of tantric worship and described them as "horrible tantric practices", himself began as a tantric *Brahmajnani*. And it could not have been otherwise. In those days if *Brahmasadhan* was to be met with among any people in Bengal, it was surely among certain sects of *tantrikas*. And he tactfully managed to bring down Hariharananda Tirthaswami from Benares to be initiated by him. It may be presumed that Ram Mohun began with the pauranic form, as his family on the father's side belonged to the Vaisnava fold. But gradually he transferred his allegiance to the tantric cult. So far as the central idea is concerned, there is very little difference to be noticed among the *sastras*, differences arise as they go into details. The main point in a *purascharana* is to take a *mantra* the name of a God or an attribute of God for mental repetition and to concentrate the mind on the name in such a way that at every repetition the thing connoted by the name may be perceived as

present. If there is no perception, no mere recollection of the name is ceremonially valid. And one invalid recollection will mar the whole performance.

The devotee must rise early, and, taking his seat as the sun rises, he must go on mentally repeating the *mantra* in this way till the sun reaches the zenith. During this whole period he must not allow his attention to be diverted to anything else. If he does, the whole thing is marred and counts for nothing. He is to begin anew. Until the whole course is finished, the devotee is required to observe twelve austerities, prominent among them being the vow of silence, sleeping on the ground without a bed and *Brahmacharya* properly so called. In this way he will have to complete the prescribed number of the repetition of the name. And the prescribed number is ten, twenty or thirty thousand, culminating in thirty-two thousand of the Mahanirvan Tantra, which dispenses with the restriction of time and place as well as of eating and drinking but promises immediate deliverance.

Anti-idolatrous monotheist as he was, Ram Mohun could not take kindly to the Bengal Vaishnava cult. But his sympathies were all with the Sufis, in whom is found the synthesis of the Theosophy of the Upanishads and the ecstatic Bhakti of the Vaisnavas. Ram Mohun found strange corroboration of the *purascharana* from them. Such a practice was in vogue among them with all its paraphernalia—repetition of the name, austerities, and all. The name is to be repeated till the word ceases to be uttered and thought comes to a standstill. This is called *Dhikr* among the Sufis. However, this repeated performance of *purascharana*, and Ram Mohun did this twenty-two times, requiring a high degree of concentration of mind on a single point, technically called *abhyasa*, helped Ram Mohun in no small degree to prepare for *Atmasakshatkar* and *Brahma-samadhi*, in which, later in life, the Raja would be frequently found absorbed, all his distractions notwithstanding. Lesser minds retire from the world, thereby drawing the eyes of all on them, in order to be able to engage themselves in devotions, but Ram Mohun found room for *Samadhi* even in the midst of multifarious distractions of a supremely active life. For the Raja *Samadhi* is not an abnormal physiological change of the body that be effected at will, not generated as in sound sleep but

spiritual culture of perceiving Brahman in all and the habit of surrendering the self to the higher Self. *Atmasakshatkar* to him was not to deny the existence of the world and turn a deaf ear to the claims of humanity as illusion, but to perceive God in every bit of preception, in the *prapancha*. He could attain *Brahmi-Stithi* as soon as he desired it. It was not necessary for him to retire to the wilderness for the purpose. This fact, so challenging in the life of the Raja, is explicable only on the supposition that Ram Mohun was pre-eminently a *Sadhaka*. And the best that all these *Sadhanas* gave to his mind he retained to the end of his life. He never meant to die in harness, but entertained the fond hope that, after all his feverish activities had ceased, he would

retire from public life with Hafez and Rumi for his companions. This is most significant. A Vedantist in every pulse of his being, Ram Mohun failed not to perceive that the Upanishads were not sufficient to satisfy the Bhakti hankerings of the soul, nor was he able to side with the Bhakti cult of Bengal, as we have already pointed out. But the needs of Bhakti would be met by the Sufis, as he hoped. That hope was not to be realised in this mundane existence. He departed this life before his desire was fulfilled. But by the endeavours after the life spiritual as it was permitted him to undergo and realise in his individual experience, he has left us pregnant hints for the cultivation of that mystic life of the soul which for a hundred years the Brahma Samaj has sought and striven after.

Leaves of India

Ever since the holding of the first Exhibition of Modern Indian Painters in Paris in 1911 the French people are exploring the different departments of cultural activities on contemporary India. From Painting to Literature was a natural transition in this spirit of discovery innate in the French mind. Rabindranath Tagore through the transition of his Gitanjali by the famous French Poet Andre Gide, opened a new channel of aesthetic realisation and his actual visit to France intensified this movement of Franco-Indian rapprochement. A group of his admirers gathered round him in Paris during his second visit in 1920 and started a most fruitful line of collaboration. The Society of the Friends of the Orient (Amis de l'Orient), housed in their famous Oriental Museum of Paris, Musée Guimet, the Publishing House of Bossard, and the group of Pacifists and Internationalists led by the great French writer Romain Rolland, all helped, each in its own way to create a genuine interest in India of today. Andree Karpeles is a notable figure in this group and her ardent artistic sympathy forced her to visit India and spend sometime in Santiniketan. That direct contact with the creative artists of modern India, made her discover the fact that India was not simply a dead specimen in the museum of Past history but a living growing creative entity. She started publishing a series of delightful books on the art, myths and legends of India and Ceylon in the Bossard series and when she found a worthy partner of her life in Mr. Hogman who shared her ideals and aspirations, the husband and wife started a series named Chitra Publications of which *India and her Soul* is the first volume. With touching devotion she has decorated it with 40 of her exquisite wood carvings, and the book is printed with as much taste as it is prepared with rare judgment in selection. Opening with a short yet profound message from Mahatma Gandhi the book shows in succession

a series of papers, poems, songs, short-stories etc. that will certainly open the eyes of many Europeans as to the creative output of India's men and women. Rabindranath's "An Eastern University" and "The Meaning of Art" is followed by Sir J. C. Bose's "Unity of Life's Mechanism," and Abanindranath Tagore's delightful study on the "Chanchal" designs of Bengal. There is a series of interesting papers by Arthur Geddes on the songs of Tagore (some with notations transcribed by the author while in Santiniketan). The famous novel *Srikanta* of Sarat Chandra Chatterjee finds an honoured place, with a remarkable descriptive passage translated by that passionate friend of Indian lore and life—Madeleine Rolland, the talented sister of Romain Rolland. She had further contributed a wonderfully faithful and brilliant translation of Santa Devi's "Ugly Bride" which even in the French *zéro* looks as fresh as the Bengali original. Women writers and thinkers find a good place in this anthology of Indian thought. Mrs. Sarojini Naidu, Sarala Devi, Indira Devi, Anundita Devi, and others form a brilliant group not forgetting Sister Nivedita of holy memory who gave her all to Mother India revealed to her by her master Vivekananda. Of art critics Ivvell and Coomaraswamy are represented by short yet pregnant papers and there is a thoughtful and informing essay by Mr. K. M. Panikkar on the "Religious Movements of Medieval India."

When we consider that all these fragments had to be artistically rendered into French before being published—we cannot but be grateful to these far off Friends of India in France, who are devoting so much of their time and energy to vindicate the claims of the Indian people in the family (if not in the League) of Nations. We accord our best thanks to the organiser of this work and recommend the book to all interested in Indian culture and oriental renaissance.

K. N.

Rabindranath's Message

The *Star* official organ of the Order of the Star prints the facsimile of a message from Rabindranath:

Thy heart goes out to all those of whatever faith who are eagerly waiting for the dawn of a new age amid the darkness that overhangs the world of humanity today. Therefore, I send my greetings across the dark to those who have gathered to welcome the light.

Rabindranath Tagore

1928

Rabindranath on Baul Songs

Rabindranath contributes at illuminating Introduction to a collection of Baul songs by Md. Mansuruddin, which has been published in the July issue of the *Vista-Bharati* Quarterly. The poet begins by saying.

I still remember how, when I was young, I first heard a Baul, from the countryside near about Sheldah, singing in Calcutta to the accompaniment of his one-stringed instrument (the *ektara*):

Ah, where am I to find Him,
the Man of my heart?

Alas, since I lost Him,

I wander in search of Him
thro' lands near and far.

The words are very simple, but, lit up by the tune, their meaning was revealed to me with a clarity unfelt before. The same message was declared of old in the words of the Upanishad:

Tam vedyam purusham veda,
Ma vo mrityuh parivyathah.

Seth, thou to know Him who is to be known, else shall the agony of death be thine.

I then heard afresh, from one devoid of all learning, in his naive words, to his rustic tune that same message: *He who is above all to be known, above all is the sorrow of knowing Him not.* In the voice of this Baul was the cry of a child that in the darkness cannot see its mother. When the *antaratara padayama* (the innermost Spirit of our being) of the Upanishads found utterance in his words as *the Man of the heart*, it came on me with a shock of glad surprise.

Long afterwards, I have come across, in Khitmonan Sen's priceless collection, wonderful Baul songs which, in the simplicity of their words, the depth of their thoughts, the penetrating poignancy of their tunes, are beyond compare as

a blend of wisdom, poetry and devotion. I doubt whether the folk-lore of any other part of the world can yield anything so unique.

Then he traces the causes of antagonism between the Moslem foreigners and the people of the country.

The Moslem foreigners, who came sword in hand, made it difficult for the people of the country to commingle with them. The primary antagonism was due to property, inasmuch as it was concerned with rival claims to the ownership or enjoyment of the country's wealth. This is inevitable when the ruler of a country is a foreigner. During Moslem rule, however, this was gradually decreasing, because the conquerors had adopted the country as their own, and consequently, in the matter of its enjoyment had become co-partners with us. Moreover, the greater part of the Mussalman population of Bengal being Moslem only by religion, but Hindu by blood, they could claim an equal moral right to such partnership.

But amidst these differences and antagonisms arose great souls from amongst both communities.

Much more bitter was the antagonism, due to differences of religious creed and observance, that still remained. Nevertheless, from the very beginning of Moslem domination, great souls arose from amongst both communities who by their life and their teaching endeavoured to reconcile these differences. The more difficult appeared the problem, the more wonderful was the way they rose superior to it, for thus does God evoke the best in man by the rigour of the ordeal. We have repeatedly witnessed the manifestation of the Highest through successive periods of India's history, and we may surely hope that its working has not yet come to an end.

In the souls where the divergent streams of Hinduism and Islam found their confluence, there were formed permanent centres of pilgrimage for the Indian mind. These sacred centres are not limited by space or time, but are established in the everlasting. Such pilgrimages are to be found in the lives of Ramananda, Kabir, Dadu, Ravidas, Nanak and so many others. In them all differences and antagonisms, all the multitudinous clashes of variety, are found resolved in their united acclamations of the victory of the One.

Those of our countrymen who take pride in their modern education, are busy in search of devices for the bringing together of Hindu and Moslem; for they have learnt their history lessons in a foreign school. The real history of our country has, however, always borne its message of unity in the deepest Truth lying in the inmost

recess of its heart, not in any vehicle of expediency or necessity. Among the Bauls we see the fruit of such endeavour, in a culture that was alike Hindu and Musalman,—in which they came together, but did not hurt each other. This union of theirs did not give rise to platforms of public speech-making, but evoked songs of untutored sweetness in language and melody. In such uniting of the voices of Hindu and Moslem, there was no discord between Koran and Parān. In that union was manifest the true Spirit of India,—not in the barbarism of the latter-day communal rivalry. In the Baul songs we may see how, outside the ken of the modern schoolmaster or college professor, the inspiration of India's higher culture was at work, clearing a common ground on which both Hindu and Moslem could take their stand.

That is why I appreciate so highly the work that is being done by Md. Mansuruddin in gathering and publishing these songs,—not for their literary excellence, but in the hope that in them we may gain glimpses of the way in which the better mind of humanity has striven to express itself through the despised masses of our motherland.

The Jaipur Administration

The Feudatory and Zemindari India for August enumerates the following amongst others' grievances of the Jaipur State subjects.

The most important grievance is increasing cost of administration due to modernising process and importation of *Ghair Muklis* into the civil service of the State. The people however do not seem to have reconciled themselves to the present minority administration there. At any rate we are obliged to infer that there is something wrong in the State as an open letter is addressed to the Viceroy on behalf of the citizens of Jaipur. It is stated that the real wants of the people have been ignored that the State subjects have not been given their due share in the administration and that the different departments have been made top-heavy with imported Officers.

New Constitution for Ceylon

In the course of an informative article in *the Indian Review* for August Mr. St. Nihal Sing sketches some of the main features of the recommendations of the Donoughmore Commission as follows :

In four respects, the recommendations made by the Commission presided over by the Earl of Donoughmore for the reform of the Ceylon Constitution are epoch-making in the British Orient.

Firstly, they recognize that the possession of the franchise by certain communities upon a religious or racial basis is vicious in principle and disruptive in effect; and must therefore, be abolished.

Secondly, they abandon that supercilious attitude

which inclines many Britons and other Westerners to look upon the unlettered millions of the East as ignorant and, therefore, unqualified to discharge any political function, and have refrained from imposing any literacy test.

Thirdly, they have risen superior to the prejudice that actuates certain constitution-makers to limit the exercise of the franchise to persons possessing a certain minimum of income or property; and have asked for the abolition of all such qualifications prescribed by the Order-in-Council at present in operation.

Fourthly, they have not tried to evade the responsibility of deciding the question of granting the franchise to women. Councils of timidity have so far prevailed in that respect among those Britons who were assigned the task of reforming the constitutions of the Oriental units of the British Empire; and they have, without a single exception, followed the line of least resistance, and left the issue to be settled by Orientals, to whom, however, they refused to allot self determination in any other sphere.

Indian Education

Mr. K. S. Ramaswami Sastri apprehends in *the Indian Educator* for August that India's vitality of racial and cultural life is threatened from without and from within. If Indian Education is to be a successful defender of Indian culture, he says :

Our schools and colleges and universities must be in rural surroundings. Only then will there spring into existence again intensive thought and simple life in pure and lawful union. India has to remain largely an agricultural nation served by cottage industries and decorated by handicrafts and arts. Such higher culture must be based on *Bramacharya*. It must be through the medium of our languages. It must at the same time be modern and national. It must enable us to realise how India is the *Karna Bhumi*, the *Bhogra Bhumi*, and *Punya Bhumi*. Our boys and girls must be trained and taught to become modern without losing Indianness and to retain and glory in their Indianness without falling back in the modern race for wealth and power and glory.

Agricultural Research in Universities

Dr. Nares Chandra Sen Gupta, M.A., D.L., criticises the different aspects of the voluminous Report of the Royal Commission on Indian Agriculture in the July-September issue of *the Bengal Co-operative Journal*. With regard to agricultural research and instruction in our Universities the writer observes.

The Commission observe that very little attention has been paid by the Universities to agricultural research and instruction. They have not investigated the fact any further. If they

had, they would have found that this fact has a history behind it and that it was determined to a large extent by social and economic considerations and the futility under the present conditions of higher agricultural education. They would also have found that when efforts were made by some Universities to make some advance in this direction they not only failed to secure the sympathy of the Government but met with positive discouragement and obstruction from the agricultural department. The records of the Dacca University, for instance, would have given the Commission some idea of the reasons for this inefficiency on the part of the University.

But as I have indicated above, the promotion of research and a better endowment of the department are far from being the primary needs of agriculture at the present moment. Agricultural research, to be fruitful, requires what we sorely lack at the present moment—an economic organisation of the industry. A considerable transformation of the land system and the reconstruction of agriculture on the most up-to-date scientific lines would be necessary before the agriculturist can be really benefited by an elaborate scheme of agricultural research. In dealing with these problems the Commission was no doubt somewhat handicapped by the limited scope of its terms of reference. But in respect of the problems it was competent under the terms of reference to deal with, it has produced a most inadequate and unsatisfying report.

The Nature of Intelligence

Dr. A. S. Woodburne writes in the *Indian Ladies' Magazine* for August.

In the earlier days of mental testing, one of the criticisms that was levelled against the procedure was that we could not know what was being tested. We were working in the dark, and how could one measure something, the nature of which was unknown? The German psychologist Stern, gave the well-known answer that we measure electricity and pay our electric current bills, in spite of ignorance as to the real nature of electricity. Analogously, though we cannot define intelligence with the precision that we would like, we have learned a good deal about its functions, and many tests of intelligence have been devised. Not only so, but intelligence testing has enabled us to formulate a certain number of inductions, whereby our knowledge of the nature of intelligence is broadened.

It is hardly necessary to point out the complex character of intelligence. It is not only true that it involves abilities to do several different kinds of things but it is also true that the combinations of abilities in different subjects, whom we classify as intelligent, are different. Much argument has been devoted to the problem as to whether intelligence is general or specific. Is it a sort of reservoir into which we try to dip our testing vessels on successive occasions? Or is it a system of many strands from which we attempt to extract samples time after time? Some psychologists insist that the tests are methods of sampling specific abilities, that vary in different

subjects. Others warn us that the theory of specific abilities smacks rather of the defunct faculty psychology. If we remember our first observation, and guard against using the word too loosely as a substantive, much of the difficulty will be obviated.

One thing is quite obvious: No one test has been devised that is adequate, and most psychologists believe that none can be devised. The variety of human reactions is so great, and the possibilities for intelligent responses so wide, that many tests have to be used. The only way to discover whether a subject can respond intelligently to a given situation is to give him the opportunity of making that type of response. The tests succeed in so far as they typify the various possible reactions.

Banks vs. Insurance Companies

We read in *The Indian Insurance* for September

It has been the bitter experience of the Indian people that whenever they show restlessness to get freedom, vested interests at once get busy and do their best (in many cases successfully) to thwart such attempts. This has been prominently brought out in the 1919 Reforms and in the present constitution of what is known as the Simon Commission. This of course refers to the political domination of this country.

When we come to consider the industrial and economic condition of this country, here again the experience of every Indian business-man has been that he has always encountered not only difficulties but positive opposition from vested interests. Taking a concrete case, the general insurance companies of India are trying, against great odds, to build a steady business. In all countries outside India, banks and insurance companies are working side by side as one cannot exist without the other. It is only in India that banks not only do not co-operate with Indian insurance companies, but deliberately discourage their customers from taking out policies from Indian insurance companies. Merchants have necessarily to go to banks for accommodation. Money is advanced both on goods stored in a warehouse and on goods exported from this country. In both cases, insurance policies are required against fire and against the perils of the sea. These policies have to be assigned to the banks as collateral. It has been the experience of some of the Indian insurance companies that when their policies were handed over by parties, non-Indian banks have either refused to accept them or have in many instances given hints to the customer that all future policies should be taken from British companies. Whenever the matter was taken up with the bank direct, the invariable reply given had been that this was being done under instructions from Head Office. The banks do not evidently realise—probably do not care to realise—what a great deal of harm—perhaps unwittingly—their attitude is doing to Indian insurance companies. The customers, after all, are easily influenced by the opinion of the banks about the insurance companies and when incidents of refusal take place, they draw their own conclusions adverse to Indian insurance companies.

recess of its heart, not in any vehicle of expediency or necessity. Among the Bauls we see the fruit of such endeavour, in a culture that was alike Hindu and Musalman,—in which they came together, but did not hurt each other. This union of theirs did not give rise to platforms of public speech-making, but evoked songs of untutored sweetness in language and melody. In such uniting of the voices of Hindu and Moslem, there was no discord between Koran and Puran. In that union was manifest the true Spirit of India,—not in the barbarism of the latter-day communal rivalry. In the Baul songs we may see how, outside the ken of the modern schoolmaster or college professor, the inspiration of India's higher culture was at work, clearing a common ground on which both Hindu and Moslem could take their stand.

That is why I appreciate so highly the work that is being done by Md. Mansuruddin in gathering and publishing these songs,—not for their literary excellence, but in the hope that in them we may gain glimpses of the way in which the better mind of humanity has striven to express itself through the despised masses of our motherland.

The Jaipur Administration

The Feudatory and Zemindari India for August enumerates the following amongst others' grievances of the Jaipur State subjects.

The most important grievance is increasing cost of administration due to modernising process and importation of *Ghair Mulkis* into the civil service of the State. The people however do not seem to have reconciled themselves to the present minority administration there. At any rate we are obliged to infer that there is something wrong in the State as an open letter is addressed to the Viceroy on behalf of the citizens of Jaipur. It is stated that the real wants of the people have been ignored that the State subjects have not been given their due share in the administration and that the different departments have been made top-heavy with imported Officers.

New Constitution for Ceylon

In the course of an informative article in *the Indian Review* for August Mr. St. Nihal Sing sketches some of the main features of the recommendations of the Donoughmore Commission as follows:

In four respects, the recommendations made by the Commission presided over by the Earl of Donoughmore for the reform of the Ceylon Constitution are epoch-making in the British Orient.

Firstly, they recognize that the possession of the franchise by certain communities upon a religious or racial basis is vicious in principle and disruptive in effect; and must therefore, be abolished.

Secondly, they abandon that supercilious attitude

which inclines many Britons and other Westerners to look upon the unlettered millions of the East as ignorant and, therefore, unqualified to discharge any political function, and have refrained from imposing any literacy test.

Thirdly, they have risen superior to the prejudice that actuates certain constitution-makers to limit the exercise of the franchise to persons possessing a certain minimum of income or property; and have asked for the abolition of all such qualifications, prescribed by the Order-in-Council at present in operation.

Fourthly, they have not tried to evade the responsibility of deciding the question of granting the franchise to women. Counsels of timidity have so far prevailed in that respect among those Britons who were assigned the task of reforming the constitutions of the Oriental units of the British Empire; and they have, without a single exception, followed the line of least resistance, and left the issue to be settled by Orientals, to whom, however, they refused to allot self determination in any other sphere.

Indian Education

Mr. K. S. Ramaswami Sastri apprehends in *the Indian Educator* for August that India's vitality of racial and cultural life is threatened from without and from within. If Indian Education is to be a successful defender of Indian culture, he says:

Our schools and colleges and universities must be in rural surroundings. Only then will there spring into existence again intensive thought and simple life in pure and lawful union. India has to remain largely an agricultural nation served by cottage industries and decorated by handicrafts and arts. Such higher culture must be based on *Bramacharya*. It must be through the medium of our languages. It must at the same time be modern and national. It must enable us to realise how India is the Karma Bhumi, the Bhoga Bhumi, and Punga Bhumi. Our boys and girls must be trained and taught to become modern without losing Indianness and to retain and glory in their Indianness without falling back in the modern race for wealth and power and glory.

Agricultural Research in Universities

Dr. Nares Chandra Sen Gupta, M.A., D.L., criticises the different aspects of the voluminous Report of the Royal Commission on Indian Agriculture in the July-September issue of *the Bengal Co-operative Journal*. With regard to agricultural research and instruction in our Universities the writer observes.

The Commission observe that very little attention has been paid by the Universities to agricultural research and instruction. They have not investigated the fact any further. If they

ing article from the pen of Dr. W. C. Dalbey D.D. on Tooth Formation and Decay. The learned doctor says that tooth Decay can be prevented if the following rules are observed.

Tooth decay can be prevented by proper care—principally by keeping the mouth and teeth clean. It is a fundamental law that a clean tooth cannot decay. Regular visits for inspection to a reliable dentist are advisable, and if there is occasion for treatment, have it done and done right. If work is done in the first stages of decay, the filling is quite painless. A good rule is that when you think your teeth are all right visit your dentist. The longer a person waits the bigger the cavity becomes, and the nearer the nerve it gets the more painful the filling process is. A break in any other part of the body may grow up, but a break in a tooth constantly gets larger if not stopped. If it is not stopped, the nerve will eventually die: then you will have to look out for trouble sure enough.

The little invisible enemies—the microbes—are not the only ones that injure the teeth, however. There is another enemy, in many respects just as bad. This enemy is called salivary calculus, or tartar. This tartar, by a natural process, forms round the teeth, especially near the gums. While not so dangerous as the microbes, if allowed to remain, it sets up an irritation (as it is a foreign substance) within the free margin of the gum around the teeth, thereby causing the gums to recede. The gums become unduly inflamed, and later on the teeth loosen so much that it brings about a very bad order of things—pyorrhea, the most baneful disease of dentistry. In very bad cases the teeth literally fall out. This is not all: the whole system is badly deranged. Rheumatism, arthritis (gout), heart disease, stomach disorders, neuralgia, neuritis, and kindred ailments have been directly caused by, and are the result of, such a condition. All tartar should be removed.

Another enemy to good teeth preservation is an overindulgence in certain kinds of food. Too many sweets in general may cause havoc, because they are prone to ferment and manufacture acids quickly when left upon the teeth. Such food is the microbes' joy.

Teeth, as well as other organs of the body, must have exercise, and they cannot get this necessary exercise unless they are allowed to chew hard food. Of course, nuts should never be cracked by the teeth, as this puts undue strain upon them and is liable to crack the enamel. Neither should the teeth be picked with hard objects, as knife blades or nut picks.

The Ideal of Civic Life

In a small inspiring message to *The Indian*, the organ of The Indian Association of Singapore, the poetess Sarojini Naidu thus lifts up her voice in utterances of truth and beauty.

The thing which is very necessary for us to

remember is that as modern civilisation progresses, as the world becomes more and more international in giving and receiving enlightenment, we are absorbing from other countries as we are giving to other countries. With such ideas, such treasures of knowledge and experience of wider horizon and scientific thought, the responsibility of personal service becomes greater. Life is more complex. I ask: you to dedicate your life to this cause, to make your lights ready to be kindled at the flame of devotion, to serve your country worthily. I do not say to you to become teachers to preach or politicians by this or by that. Whatever your sphere in life is however small you are, remember, you are an indispensable unit in making up that vast social organisation which makes the country a nation. I want you all to remember that the greatness of a country will not be in its great men, but in its average good men, who realised the daily life of purity, truth, courage in overcoming such obstacles that stand in the way of progress by giving equal opportunities to all human beings, of all castes and creeds and not to withhold from any man or woman his or her God-given, inviolable right to live to the fullest capacity

Biologists and Life

Just at this moment when the scientists are claiming to have at last found a clue to the "Mystery of Life," it may be interesting to know how people, who are not scientists but all the same rational, look upon some of the much vaunted claims and assertions of the biologists. The Editor of the *'Prabuddha Bharat'* in a thoughtful and thought provoking contribution thus looks beyond the frontier, as he says

We have mentioned the biologists' argument that all their observations show that life is always associated with matter. In our opinion that proves nothing. They are simply making their ignorance an argument. Unless they try to see incarnate life, they will always find life associated with matter. By their own admission, the biologists know nothing of where life comes from. They know life only in its middle state, they know nothing of its origin or its ends, and from a partial knowledge no correct conclusion is possible. There are facts, on the other hand, which do show that life and consciousness can subsist without their usual material associations. The case of the Hindu monk, Handas, putting himself in a box and being interred in a grave which was carefully closed with earth and rising up from it after forty days, is well-known. His nostrils were closed with wax, so he could not breathe; and when he was taken out of the sealed box, an English physician carefully examined him—he was medically dead, there was no pulsation of the heart, the temples or the arm. He had remained in this "dead" condition for forty days; yet within half an hour of his disinterment he could talk freely with all. How did the monk's life subsist so long, if material association

In this way, not only a great deal of direct harm is being done to Indian insurance companies in driving away customers from their field, but even other classes of insurance business with which the bank has nothing to do are also affected.

Most of the exchange banks doing business in this country earn their profit from the people of this country. Is this the sort of reward that Indian concerns should get in their own country from non-Indian banks? We hope that the banks will seriously consider this aspect of the matter and will see to it that they do not place any embargo on the normal growth of Indian insurance companies. These companies never ask for any direct help from banks.

Kolar Gold-Fields

The Bengal-Nagpur Railway Magazine for September publishes an interesting article on the inner workings of the Kolar Gold mines.

The Gold Fields present the appearance of huge sandhills with giant shafts sticking out of them like masts. Around these sandhills lie clusters of red-tiled, squat houses of the mining staff. Further out are hives of *shaferi*-work huts of the coolies.

From the rough quartz to glittering gold is a magic transformation, but few people realise what amount of labour and industry goes to the production of that precious metal which is so dear to every one. That glittering little hoop on the finger of a young lady, the symbol of her romance, may thrill her heart as she presses her lips to it and conjures up visions of her lover, but it seldom reminds her of those who toiled in the bowels of the earth to obtain it.

Nature guards her treasures very zealously and those who want to wrest them from her have to delve deep. The quartz, a greyish and sometimes bluish rock, lies buried hundreds of feet below the surface and to get to it shafts are sunk. They are usually sunk about a hundred feet at first and then "drives" are made north and south. The miners then go down in shifts, sometimes as many as 500 men, armed with pneumatic drills and picks.

I had the thrill, though not without some misgivings, of going down a shaft—*facilis descensus Avernus!* My Virgil, an officer kindly lent by the Superintendent of the Mine, and I were shut in a "cage" a sort of an iron box with holes for ventilation. A touch of the button and the cage began to go down, down, past lit-up "plats" or stages, till we reached the working stage where operations were in progress. We found ghostly figures moving about with small points of light from their safety lamps. The drills and picks were busy.

On our upward journey, we stopped at one of the stages. Electric fans were in motion and swing-doors worked automatically to aid ventilation. In addition to these precautions, the stages which were buttressed with logs of wood, were also supplied with compressed air and in some places there were airholes or winzes. It was strange to hear a telephone bell tinkling so many hundred feet underground.

The quartz was carried up in "skips" or wagons which were worked by electricity. They ran automatically to a landing stage near the crushing mill which was pounding away like cannon shots. The powdered quartz passed through a funnel where it was mixed with a solution of mercury and acids, and then flowed over large trays with strainers. Small particles of gold that escaped with the overflow were caught in blankets, but even then some of the finer grains of gold escaped. To trap these elusive particles, the water and sand were again mixed with a stronger solution of mercury and acids.

In the melting department the miracle of science was completed. There were ventriloquist walls of gold bars which one's fingers itched to touch, though one feared it would all crumble away as in a dream.

The history of the mines has not been without some interesting incidents. On one occasion, a carpenter whose duty it was to pack gold bars in wooden boxes, cleverly concealed a bar of lead of equal size and weight in his tool box. In the process of packing he deftly substituted the bar of lead for a bar of gold. Shortly afterwards the packages were sent off to England and a little later the carpenter resigned his appointment and left the fields. When the fraud was discovered, inquiries were instituted by the police and the crafty carpenter was eventually brought to book. On another occasion, a sawyer of gold bars took to collecting secretly the fine gold dust which fell from the bars. In course of time he collected gold dust to the value of one thousand rupees, but he was afraid to take it away himself lest he should arouse suspicion, so he tied the dust round the waist of his son and sent him home. Unfortunately, for him there was a theft on the train and the police, suspecting the boy searched him and found the precious bundle which the ingenious father had tied round his waist.

Lowest Paid Employees in the E. B. R.

The E. B. Ry. Labour Review remarks editorially :

Rai Shahab B. C. Ghosh, Superintendent, Statistical Office, replied through the column of the *E. B. Ry. Supplement* to the *Indian State Railways Magazine*, to a query about the "lowest paid employees salary" by stating that "it is Rs 13." But is that the lowest level? Rai Sahib may find it difficult to climb down below the level of Rs. 13 a month. But that is no reason for supposing that a still lower level does not exist. Our information is that a "Box Bearer" in the Traffic Department has long been drawing an allowance of Rs. 11 per mensem. No one cares to know how that employee feeds and clothes himself on Rs 11 a month. To hundreds of railway employees he is hardly a human being with human requirements.

Prevention of Tooth Decay

The Oriental Watchman and Herald of Health for September publishes an interest-

the effort that now that the nation has committed itself all differences would cease till the crisis was over.

A not less noteworthy characteristic of Britishers is their love of orderly progress and hatred of all revolution.

Another great asset of England is the absolute freedom of her citizens from religious prejudices in matters political. In days gone-by Englishmen were far more intolerant than the Indians of today and with less justification as England had only sectarian differences and not such vast religious differences as exist between Hinduism and Islam. But now things have radically changed.

The thirst for knowledge and the desire to utilize it for the country's benefit is another predominant trait which should not be overlooked. Englishmen realize that the moment they become intellectually stagnant their greatness will be a thing of the past. So learning and research are encouraged both by the State and by private citizens. In experiments the Englishman is careless of loss of money or even life.

We are no anglophil; but we find more grounds to agree with the writer than to dissent from him.

Christian Missions and Industrial Problems

"The Gospel of Christ contains a message not only for the individual soul, but for the world of social organizations and economic relations in which individuals live." With this prefatory remarks the Jerusalem Council gives its opinions on industrial problems that rage through the Christian world. We learn from *The Youngmen of India* the following:

The Council advocates the abolition of all forms of forced labour. The following standard of legislative protection for the workers in industry was accepted:—

A limit of working hours and one day's rest in seven

A minimum wage.

Elimination of child-labour.

Protection of women.

Accident and sickness insurance.

Adequate inspection.

Freedom of association.

This standard is in harmony with that set by the League of Nations and the Council had the benefit of a member of the permanent staff of the International Labour Office with them in all their deliberations on this subject.

Of the foregoing provisions India has accepted all but the second. Elimination of child-labour below the age of 12 years has now been achieved by law in British India. The standard in all these matters is usually lower in Native States where the British Factory Act does not run. Protection of women is proceeding gradually. The question of eliminating women's work underground has now been taken up. In the

coal mines, where the largest number are employed, Government proposes to take 10 years to achieve this end. Accident insurance has been introduced. There is as yet no sickness insurance. There is a system of Factory Inspection, but inspectors themselves would be the first to declare that it is not adequate owing to the smallness of the staff. Freedom of association for workers was granted with the passing of the Act recognizing Trade Unions and providing for their registration.

It remains to be seen however, how the Christian people view these Christian conclusions.

Indian Labour Unrest

Under the above caption, Mr. N. M. Joshi M. L. A. discusses in *The Indian Labour Review* the cause and cure of the malady which nobody can ignore. Nor can any one afford to ignore what Mr. Joshi has got to say in the matter. Says Mr. Joshi.

The general unrest in the country gives us a clear warning that the conditions of work and life in organised industries in India require the immediate and sympathetic attention of the Government, the employers, and the general public. The condition of the workers, both as regards hours of work, wages and security of employment and provision against risk of sickness, unemployment and old age require to be substantially improved. The workers have suffered too long on account of conditions which should not be tolerated in any civilised country.

The several strikes and lock-outs that are at present going on are only an expression of the discontent that exists and that has been unheeded and unattended to so long. The fight in Bombay and Lilloah is against worsening of conditions, the fight at Jamshedpur, and on the South Indian Railway is against the impending unemployment. Nobody can blame the workers for putting up a fight to protect their interests. It is a natural corollary to the conditions which lie at the root of the present wide unrest.

No, I do not agree with you. The Communists could not have succeeded if there had been no real unrest. They may, and certainly do, exploit that unrest and the real grievances of the workers, but they do not create that unrest; the unhappy condition of the workers do that. I do not of course approve of extremists and Communists methods. But the extremists and Communists will not disappear so long as the workers are not convinced that they can improve their conditions quicker by other methods than those propounded by Communists.

And unfortunately the Government and employers do not appreciate milder methods; they will only give better conditions when they are coerced by a strike or a threat of a strike. It is therefore clear that the workers must resort to a strike when they can get their grievances redressed only by that method. The advice of mode to postpone a strike until all other methods

essential to its existence? During all those forty days, the monk had no air, no food, no water; his whole organism was at a standstill. Yet he lived!

The case of Sri Ramakrishna also is well-known. Often while in deep Samadhi, he would show all signs of death. Expert physicians of Calcutta sometimes examined him in that state, and found that the heart had stopped beating and there was a complete cessation of breath:—there was no sign of life anywhere in the body. This happened many times during his life. But though the body was dead, the mind and consciousness apparently existed.

Nor do we find the other argument of the biologists that if the soul were an immaterial spirit, death would have been instantaneous, convincing. They mention the fact that apparently dead persons can be revived by artificial means. But do they mean that all dead persons can be so revived? Has the process been found invariably effective? We do not think medical men go so far in their assertion, if then, there are many cases in which artificial means of revival have failed, why not consider that the cases in which they succeeded, were really not cases of death but of deep unconsciousness?

Imperialism or Satanism?

Writing in *Triveni* about 'The Self-Defense of India' Dewan Bahadur Mr. Ramachandra Rao thus concludes his able and well-balanced article.

The relation of empires to subject communities is, in fact, a great seed-ground for those states of mind which Professor Gilbert Murray has commendably grouped under the name of Satanism. The spirit of unmixing hatred towards world-order is increasing. It is felt to some extent against all ordered Governments, and Professor Murray thinks that it is chiefly directed against Imperial governments and it is directed more widely and intensely against Great Britain than against any other power. From the point of view of the British Commonwealth, the possible remedy for these evils is, in his opinion, that the British statesmen must first think carefully what their principles are, and secondly they must sincerely carry them out. The British have repeatedly said that they are in India, not for their own profit, nor to use Indians as food for cannons, but to enable India to govern itself. If this is their ideal, Great Britain must carry it out honestly and faithfully. Let there be no hypocrisy, conscious or unconscious, about the matter.

Why England is Great

"What are the secret of England's greatness?" asks A. S. Panchapakesa Ayyar, M. A., (Oxon) in *The Garland*, and he does not forget as he tries to answer the question that

The disgruntled and superficial Indian is apt to give the reason as mere possession of physical strength and the ability to thrust her yoke on others.

Mr. Ayyar is neither blind:

I do not deny that part of England's greatness is undoubtedly due to her great military, naval, and aerial strength. But these themselves are the result of certain qualities of her citizens which have little to do with fighting qualities proper.

But, he tries to be fair as he enunciates his aim in the examination of the question.

My aim below is to describe some of the most outstanding of those qualities.

There is in England a public spirit the like of which is not to be seen in India. Several thousands of people render services of the most valuable nature every day honorarily.

With this aim he begins his reply and the reply is presented here in brief excerpts:

Many fire brigades are manned wholly by such workers.

Almost all the hospitals of England are maintained by public subscription. India has the first hospitals maintained by citizens. The great hospital at Pataliputra was wholly maintained by the Municipality and the contributions of wealthy citizens and was the first thing of its kind in the world. There is a beautiful tradition which says that the hospital even refused with thanks the princely aid offered by the Emperor Asoka on the score that thanks to his Majesty's beneficent rule the citizens were able to run the institution themselves and so the money might be diverted to the purchase of medicines and drugs to be exported to the less fortunate neighbouring countries like Syria and Egypt. And so it seems was, done. Well, things are far different in modern India.

Englishmen exhibit their public spirit also in aiding the police in detecting crime.

A remarkable way in which the public spirit of Englishmen manifests itself is in the periodical searches for missing persons and rendering valuable assistance to the police in murder cases. It does one good to read that a fleet of cars scoured Dartmoor or some other desolate region free in order to trace out missing persons. When will such a thing be possible in India? Again, almost undetectable murder cases have been detected, sometimes after years owing to the co-operation of the citizens.

Another sterling virtue of the Britisher is his respect for the law and trust in the courts.

Unity in crises is another great civic quality of the Britisher. In times of crises when the country's honour or safety or prestige is at stake all disputes are postponed for the time being and a united front is shown towards the foreigner. Thus when Mustapha Kemal Pasha was threatening to fortify the Dardanelles and close the straits there were keen differences in the English press about the desirability of going to war for this. In the midst of this war of words the cabinet sent a stiff note to Kemal Pasha and despatched two squadrons from Aldershot to the Dardanelles.

I was surprised to find in all the morning papers photos of the troops sent and leaders to

the effect that now that the nation had committed itself all differences would cease till the crisis was over.

A not less noteworthy characteristic of Britishers is their love of orderly progress and hatred of all revolution.

Another great asset of England is the absolute freedom of her citizens from religious prejudices in matters political. In days gone-by Englishmen were far more intolerant than the Indians of today and with less justification as England had only sectarian differences and not such vast religious differences as exist between Hinduism and Islam. But now things have radically changed.

The thirst for knowledge and the desire to utilize it for the country's benefit is another predominant trait which should not be overlooked. Englishmen realize that the moment they become intellectually stagnant their greatness will be a thing of the past. So learning and research are encouraged both by the State and by private citizens. In experiments the Englishman is careless of loss of money or even life.

We are not anglophil; but we find more grounds to agree with the writer than to dissent from him.

Christian Missions and Industrial Problems

"The Gospel of Christ contains a message not only for the individual soul, but for the world of social organizations and economic relations in which individuals live." With this prefatory remarks the Jerusalem Council gives its opinions on industrial problems that rage through the Christian world: We learn from *The Youngmen of India* the following:

The Council advocates the abolition of all forms of forced labour. The following standard of legislative protection for the workers in industry was accepted:—

- A limit of working hours and one day's rest in seven.
- A minimum wage.
- Elimination of child-labour.
- Protection of women.
- Accident and sickness insurance.
- Adequate inspection.
- Freedom of association.

This standard is in harmony with that set by the League of Nations and the Council had the benefit of a member of the permanent staff of the International Labour Office with them in all their deliberations on this subject.

Of the foregoing provisions India has accepted all but the second. Elimination of child-labour below the age of 12 years has now been achieved by law in British India. The standard in all these matters is usually lower in Native States where the British Factory Act does not run. Protection of women is proceeding gradually. The question of eliminating women's work underground has now been taken up. In the

coal mines, where the largest number are employed, Government proposes to take 10 years to achieve this end. Accident insurance has been introduced. There is as yet no sickness insurance. There is a system of Factory Inspection, but inspectors themselves would be the first to declare that it is not adequate owing to the smallness of the staff. Freedom of association for workers was granted with the passing of the Act recognizing Trade Unions and providing for their registration.

It remains to be seen however, how the Christian people view these Christian conclusions.

Indian Labour Unrest

Under the above caption, Mr. N. M. Joshi M. L. A. discusses in *The Indian Labour Review* the cause and cure of the malady which nobody can ignore. Nor can any one afford to ignore what Mr. Joshi has got to say in the matter. Says Mr. Joshi.

The general unrest in the country gives us a clear warning that the conditions of work and life in organised industries in India require the immediate and sympathetic attention of the Government, the employers, and the general public. The condition of the workers, both as regards hours of work, wages and security of employment and provision against risk of sickness, unemployment and old age require to be substantially improved. The workers have suffered too long on account of conditions which should not be tolerated in any civilised country.

The several strikes and lock-outs that are at present going on are only an expression of the discontent that exists and that has been unheeded and unattended to so long. The fight in Bombay and Lilloah is against worsening of conditions, the fight at Jamshedpur, and on the South Indian Railway is against the impending unemployment. Nobody can blame the workers for putting up a fight to protect their interests. It is a natural corollary to the conditions which lie at the root of the present wide unrest.

No, I do not agree with you. The Communists could not have succeeded if there had been no real unrest. They may, and certainly do, exploit that unrest and the real grievances of the workers, but they do not create that unrest: the unhappy condition of the workers do that. I do not of course approve of extremists and Communists methods. But the extremists and Communists will not disappear so long as the workers are not convinced that they can improve their conditions quicker by other methods than those propounded by Communists.

And unfortunately the Government and employers do not appreciate milder methods: they will only give better conditions when they are coerced by a strike or a threat of a strike. It is therefore clear that the workers must resort to a strike when they can get their grievances only by that method. The advice of Mr. Joshi to postpone a strike until all other methods

exhausted is lost on the workers when they find by experience that a strike is the only method by which they can get something.

Technical Education in India

L. D. Coneslant thus concludes his article on the above subject in the *Calcutta Review*.

We should beware of the fallacy that teaching of mere craftsmanship is the whole, or even the most important, part of technical education, and should not allow it to be assumed that all that is wanted is a great multiplication of institutions teaching skill. India will ultimately have to take her place in the modern world, and as was explained in the beginning the direction of industrial development is away from skill.

If India refuses to accept the machine she may do one of two things. She may exclude the machine-made article by prohibitive duties, in which case the whole of the consuming public will be compelled to pay very high prices for an inferior article. Or she may open her ports, and see the producers in her own country ruined by a competition impossible to resist.

It will be of no avail that labour in India only costs a tenth as much as in the West. One man armed with power-driven machinery can do the work of a hundred artisans working with their hands. Besides, who that loves India can hope that labour will continue to be cheap? "Cheapness of labour" in this connection is only a euphemism for "misery of the working class."

Indian Medical Council

Calcutta Medical Journal discusses editorially the bill for the establishment of an All-India Council that is being sought to be introduced into the Central Legislature, and the points it makes out are instructive as the following excerpts show.

We are doubtful whether it is possible at present to lay down a uniform standard of qualifications in Medicine for the whole of India. The Universities and Colleges in a province are now part of the Medical Departments under the Control of Ministers in charge of transferred subjects. This provision in the Government of India Act of 1919 is meant to ensure that the administration of educational institutions in Medicine and of the hospitals attached thereto, should be under the control and guidance of a person who shall be influenced by public opinion. There can be no meaning in having this department transferred to a popular Minister unless the Act intended that the course of study, the control of examinations, the qualifications required to be possessed by medical practitioners before they are allowed to practise, should under the guidance of a minister, be adjusted to the peculiar needs of each province and that the people of the province should have a voice, however indirect it may be, in these respects.

There is a further difficulty in this matter of control of the standard of qualifications by a

Central Council. The standard of qualification, the courses of study pursued and the examination conducted in each province are controlled by the Universities or by the Provincial Councils of medical registration who enjoy statutory powers for this purpose. It is difficult to understand how a bill, even if passed by the Central Legislature, can take away the privileges and rights of these statutory bodies unless there are provisions in the bill repealing these powers so far as the Universities and the Provincial Councils of Registration are concerned. The present bill makes no mention that such procedure would be adopted. It therefore, comes to this, that the medical institutions would be controlled by two bodies, viz., by the Indian Medical Council and by the Provincial Statutory Bodies as mentioned above.

The bill before us gives no indication as to whether practice of medicine according to systems other than Allopathic will be affected by the provisions of the bill. If it is so, it would mean an undue interference with the indigenous system of medicine hitherto known.

The system of medical education based upon European methods is of a recent growth in many of the provinces in India. We do not consider that sufficient time has elapsed for each province to meet difficult situations and then only a centralised body would be of any use. We therefore, unhesitatingly condemn this bill.

Witness of the West

T. L. Vaswani returned to India, as he says in *The Kalpaka* to find no echo there of his own inward faith and strength. Says he in his characteristic way:

I know that Indian idealism is being trampled upon in India. Several years have passed since I returned to her shores with the new experiences and the new hopes given me in my lonely wanderings in the West. I have looked into the eyes of India's men and women buying and selling in the market-place. I have looked and found them busy with many things but not with the one thing needful. With mournful cry I have lifted up my voice, saying, "Where, O Lord, where is the song of the Rishis of the past?" I have gazed into the eyes of the youngmen studying science and arts at the schools and the universities. I have found them eager for intellectual attainment but not for self-renunciation. I looked into the temples, once honoured centres of the sacred light, and a sadness has entered my heart. I have looked into the faces of the poor, down-trodden, patient multitudes of the land, and I have cried with a sorrowful heart, "Where art thou, O Lord, and where the song of the Rishis of the past?"

Can it be that the ancient message is dead? Is the sacred song stilled forever? I cannot think so! Not yet are snatched the chords of our souls. For even in these days if someone pure and, devout, a teacher of idealism, a true *sadhu*, a bhakta of God comes to us, we are still able to offer him the homage of our hearts. We are

fallen from the heights, but under the merciful Providence that shapes India's life we are, I believe, being prepared to rise again and play our part in building a new civilization. Will the day come soon when men and women of East and West may glimpse the beauty of the Rishis' vision, and worship together in the Temple of Humanity the "One whom the Sages call by many names?"

As the darkness is deepening, I cling yet closer to my faith that India will yet be free and the Nations yet brothers be. For they all are His. And the world we live in is beautiful.

Jihad

'Jihad' forms the first instalment of a series of valuable studies. Pandit Champupati is contributing in *The Vedic Magazine*, and the following deduction and conclusion of the writer deserves attention:

If the behaviour of the Arab Muslim towards his non-Muslim fellow-countrymen, during the first century of Islam, when the sources of inspiration were not yet soiled by the contaminating expiry of time, be taken to be the nucleus round which all subsequent inter-religious jurisprudence gathered as a system of Islamic exclusive imperialism, the riddle of the Hindu Muslim troubles in India is immediately solved. It is *Jihad* pure and simple. That the process in progress here is desultory is no fault of the Mulla. The biggest of the Prophet's battles would seem skirmish by the side of present-day wars. Islamic law-books mention tiny weapons of warfare, such as missiles and swords, the place of which is today taken by brickbats and butchers knives, and the fanatic section of the faithful derives infinite solace from the present-day re-enactment of the drama of the Quran. Only, they do not call these *Saria* and *ghazas*, titles reserved for battles waged by the Prophet himself. Lying in wait and stabbing in the back, pillage and arson and brutal outrages on women are to a keen-sighted observer simply echoes of the din of the guerilla wars with which Islamic literature, beginning with the Quran, is full.

Paul Dahlke

We catch a glimpse of the great and devoted student of Buddhism, Dr. Paul Dahlke, from an informative study in *The Maha Bodhi*.

He was of opinion that there is already in existence all the books about Buddhism that we

need; perhaps too many. For already in their multiplicity they tend to become a distraction from Buddhist life, instead of a promoting towards it. He felt, in fact, that what the European world to-day needs, is not Buddhist books, but Buddhist Viharas,—places where men can retire awhile from the press and throng of every day life with all its clamant needs, and "come to themselves," collect themselves, find out just what they are and what is their position, and take the steps needed to improve it along inner lines, having followed too long already the so seductive, but so deceptive, methods of trying to improve it along merely outward paths. This latter method, he felt, Europeans had followed for long enough now, and the result was only what he called a "polished barbarism" whose blackness was not a whit any the less for the high degree of its polish.

The savage 'barbarism' of mid-war Germany and the financial crisis of post-war Germany failed equally to cool the ardour of this devoted worker for *ahimsa* and the translator of the Gospel of *ahimsa*.

He persevered, and quietly and unassumingly gathered together what was needed to purchase the land on which he eventually built his Buddhist House. But as most of the money so gathered was his own, the "House" was always his own, as also the land on which it was built. But it was always open for anyone whether they called themselves "Buddhists" or not, to stay there, so long as they observed the Rule of the House, for a period of three months free of charge, if they were unable to meet the cost of their food. But after that, if they wished to stay longer, they were expected to contribute towards their living expenses.

There were never more than a few inmates of the House at any one time, but quite a number of people—some of them, people of some eminence in the course of the few years since it was founded, passed through the discipline of the House, and doubtless some of them found it good for them, and received impressions which will stay with them throughout their lives. This fewness of residents did not surprise the Doctor. He quite recognised that only a very few people are "ripe enough"—his own phrase—for Buddhist life as apart from Buddhist doctrine. But he felt that such people ought to have waiting for them as soon as they were "ripe" a place to which they could go and live the life they wanted to lead; and he felt that he had done his part in providing such a place, and was quite satisfied to have done so; whether many or few took advantage of it, so he said, was their look out not his. He had done his share in the matter. It was now for others to do theirs, as soon as they were "ripe" for it.

Centenary of the Brahmo Samaj

The following interesting information imparted by *The Inquirer*, that many foreigners are coming to participate in the Centenary now lends support to the view that Brahmo Samaj stands for a Universal religion. The information runs thus :

The Delegation from England to the Centenary meetings of the Brahmo Samaj in India will consist of Dr. and Mrs. W. H. Drummond, Mrs. Woodhouse, Miss Ruth Nettlefold and Mr. and Mrs. F. W. Monks and Miss Monks. Dr. and Mrs. Drummond will leave London on September 8 by the S. S. *Mulbera* and proceed by sea to Calcutta, where they are due to arrive on October 11. The rest of the party will leave Liverpool a few days earlier by the S. S. *Oxfordshire* and will join the *Mulbera* at Colombo. The English delegates will proceed almost at once to Darjeeling for the celebration by the local Brahmo Samaj. Subsequently they will take part in a missionary tour to important centres of the work in other parts of India, prior to the large meetings which will be held in Calcutta in January. Dr. Drummond has been invited to lecture on behalf of the Hibbert Trustees during this Indian visit. The leaders of the Brahmo Samaj have requested that he should deal specially with the growth of liberal religious life and thought during the past hundred years (1) in Europe (2) in England.

Dr. and Mrs. Drummond have accepted an invitation from Herr Rohrer of Jerusalem to visit the Temple Colonies in Palestine on the return journey next spring. It is hoped that other members of the party will also visit Palestine.

The Changing Face of Islam

We read in *The Commonweal* the following :

Dr. Hans Kohn, in "Foreign Affairs" for June, writes on the wonderful change in Turkey. "Twenty years ago ... Turkey was a mediaeval theocracy ... the Ottoman Empire with its head, the Caliph, was an embodiment of Islam ... not only a religious creed, as present day Europe understands it, but a creed embodying a definite attitude and outlook on all things sacred as well as profane, public as well as private. ... The Caliphate has been abolished, religious service modernised and strictly regulated, the power and influence of the clergy broken, European dress and headgear made obligatory, and—the greatest revolution of

all—the Islamic Code of Law replaced by the Swiss Civil Code. ... Islam has no longer any official status in Turkey."

Indeeds Islam is not alone in this respect, as the *Commonweal* recognizes.

It is impossible that the great religions of the race can fail to be affected by the physical science of to-day, which undermines the conception of the physical and material world common to all of them; by the modern study and knowledge of human history; by the modern recognition of evolution, or development, or growth, as a law of life physical, mental, moral and religious; by the spread of education; by the growing intercommunication of the different races and nationalities to-day; by the spread of democratic ideas; by the new study and literature of Comparative Religion; by the decay of dogmatism (Religion based on external, miraculous authority; and by the growing recognition of the spiritual nature of man as the fountain of true religion of which Love is the supreme manifestation.

In Bahaiism and Sufism, the Brahmo Samaj, Modernism, Idealism, Religious Conference etc., we seem to see as it were a flowing tide that is gradually submerging the old world. Man, by virtue of the divine spark in him, is, we hope, emerging to a new level of physical, intellectual, moral and religious life. We must die to live.

East and West

Is Western Civilization Worth Saving?" asks Mr. Paul Arthur Schilpp in *The World Tomorrow* and concludes that the West cannot remain in exclusion from the East.

Whatever of hope there may be for western civilisation cannot be found in any belief in inevitable progress and certainly not in the vain arrogance of a nordic supremacy complex. We are no more the chosen people of any deity playing favorites than any other nationality or race, past or present. We are chosen as were the Hebrews only in so far as we lose ourselves in these activities and tasks which, in the nature of the world-process or, if you will, of the divine purpose, carry on the constant evolution of world-creation. In so far as we block the road of that process, we must expect it to overrule and overpower and, if need be, ultimately to annihilate us—not as the punishment of an angry God, but as the inevitable consequence of ignor-

ance, unwillingness or inability to learn the workings of the world-process.

The important thing for us at this time is the return to a new emphasis on the humanities which might stave off the debacle of western civilization a little longer. Nothing can be reached by a continued one-sided emphasis on the physical sciences but the impasse of a pure mechanism and with it the ruin of western culture. For the salvation of the western world there is needed a good dose of the quietistic reflection and self-control of the oriental mind, even as the oriental cannot hope to survive unless he adopts something of the mechanical achievement of the occidental. In other words, we need not merely respect the distinctive features and characteristics of the cultures which distress fundamentally from our own, but the realization that each must learn from the other and the acknowledgement that only by a reciprocal approach and a filling up of the gaps of our own character can we hope to "hang on." As Max Scheler and Count Keyserling have put it, what is needed is "a reconciliation between the occidental and the oriental cultural hemispheres." Thus, perhaps, the western man may once again find his soul and survive

The Future of Marriage

Selected passages from the sermon of Dr. John Haynes Holmes, reproduced by the *Birth Control Review* of America, throws light on the above interesting topic, which the greatest minds of the world are speculating upon. Says Dr. Holmes.

Marriage, like every other social institution will change because it must change. Nothing stands still in this unfolding world, not even the most firmly rooted of our social practices. But evolution is of two kinds. First, there is the evolution of progress, the change which moves onward and upward. This process operates in two ways; first by accumulating innumerable little changes which prove to be beneficial to life, and secondly by preserving these changes and building them into a permanent system of growing intricacy and beauty.

The second type of evolution the evolution of reversion or retrogression is the change which turns back and reverts to more primitive forms. Evolution social as well as biological, does not necessarily mean progress. It is the peculiar mission of man to control the onward sweep of cosmic forces. Man, if he will, may master evolution in himself and in the world at large, and drive it to ever onward goals. But evolution will not do this of itself. Change may as easily go backward as forward. Man must hold what he has gained, and gain still more if he would be saved.

Return now to the changes in marriage. Are we preserving the things gained with infinite labour and sacrifice, or are we wantonly throwing those things away and returning to where we started. It is not because I am opposed to change but because I fear the kind of change which seems implicit in the present tendencies in sex

relations, that I am opposed to much that is now sweeping down upon us. In present tendencies in marriage we see the forces of dispersion at work, biologically and sociologically the forces of rampant and anarchic individualism. Along these lines lies the way back to primitive man not forward to a more civilized and enlightened man of the future. The more I study the development inevitable in the marriage relations, the more sure I am that certain great achievements, infinitely favorable to man's higher life, will remain as fixed foundations upon which to build in years to come.

What are these achievements? Enumerates Dr. Holmes

First among these achievements destined to endure is the idea that sex relations between men and women are matters of public and not merely of private concern. The sex bond is a covenant, and it must be an open covenant openly arrived at.

Secondly, the union of husband and wife shall not only be public as a matter of knowledge but shall be bound by the social sanction as a matter of procedure.

Lastly, the union between men and women shall be a monogamous one and not a promiscuous one. Sexual love shall be restricted to one person at one time because we have learned through centuries that love is most potent and beautiful, as it flows through a single channel. In these conditions is a line or direction of progress along which we must move, unless we choose to return to those conditions of primitive barbarism from which we sprang. Within these bounds, however great and beneficent changes are certain to take place, as they are already taking place.

Thus it has already become manifest that in the future woman shall be wholly free, master of herself and her destiny. Man and woman, in other words will be equal partners in the central experience of their life, each giving and taking in the glad exchange of utter master and utter surrender.

Secondly, in the future, as gradually now in the present, children will be conceived and born in marriage only as they are wanted. Generations will hence forth be a matter not of accident but of choice.

Thirdly, divorce will more and more be recognized as the inevitable complement of marriage. Even today divorce is still regarded as an evil. This must disappear, as men come to recognize that mistakes in marriage are only more liable than they are in other less difficult relationships, and must be corrected by some established process of relief. The process will certainly be more dignified and reverent than what we know today, but it will be as freely at the disposal of those who love no longer, as marriage is now at the disposal of those who love.

These are mere suggestions of change in the marriage relation. They very fact that such changes are inevitable only proves that marriage is succeeding. Throughout the whole range of physical and spiritual life runs the passionate demand of men and women for one another. In spite of every adjustment and every noble sublimation, there is certain and tragic frustration in

the life that is denied union with the other sex. Marriage is today what it has ever been and it will be tomorrow, for all its inevitable changes, the best attempt that men have been able to make or even conceive, in the establishing of ideal conditions under which the basic hunger of life may be satisfied.

Women's Movements in Japan

In an informative article in the *Young East* M. Mita recounts the victories so far attained by the women of the far-east in some spheres.

To cite the most salient of instances where the movements of the women have by this time been duly rewarded, the following may be noted with no small interest:

Legal:

The women have practically succeeded in getting the attorneys' license act and criminal code so revised as to render the women eligible to the attorneyship, and also to share equally with their husbands the duty of chastity which has hitherto been unilateral with the fair sex. In this country in trying a fornication case the Court used to find the women alone guilty, but according to the Government bill introduced in the preceding session of the Diet, which unfortunately proved abortive on account of the dissolution, the man fornicator will in future be punished as much as the female fornicator.

Political:

The women have succeeded in passing through the Diet for enforcement by the Government in the near future their petition for investment of the fair sex with public citizenship, and also in asserting the women's liberty of participating in any political organizations.

Social:

The freedom of the factory girls to go out of their workshops at any time they want has been recognized by the Tokyo Mushin Company, although the factory girls have hitherto had to lead in their manufactories a practically imprisoned life for the terms contracted. The example will be followed by all the other factories in the near future. The general shipping companies have come to recognize the eligibility of women to ships' captainship, and as the first captain ever registered in this country has already been appointed Miss Tsuchiko Katapama.

Educational:

A success has been secured at length by the women movers in persuading the Government authorities to estimate the sum of ¥350,000 next year for the creation of the first Government Higher Technical School of Women.

A private women's college called Bunka Gakuin has been established by Dr. Yoshino and other scholars interested in the women's cause, for three years' economic course for graduates from the higher girls' schools, while the women's higher commercial school, the first of the kind in Japan has been brought into existence by Mr. Yoshiro Kojima, principal of the Hinode Higher Girls' School. The school authorities have been persuaded to entitle women as well to the right of

gaining the degree (scholastic), and already the Doctorship of Science has been conferred on Professoress Konoko Yasui, of the Tokyo Higher Women's Normal School, this being the first female Doctor in this land.

Nor are the daughters of Nippon resting on their oars.

They are going to push on the following still more important causes to be accomplished:

Social:

Abolition of prostitutes system.

Stricter temperance act.

Exclusion of the geisha from public assemblages of any nature.

No more licence to be granted for geisha girls dancers, and cafe-maids.

Patriotic savings movement among the women's associations and higher girls' school students to persuade them to save one sen per diem for six years to redeem the Empire's foreign debts.

Protection of women workers and juvenile workers.

Political:

Enfranchisement of the women.

Election of Mayors by citizens.

Legal:

To so revise the existing civil code as:

To make wife's consent essential to the legal validity of husband's recognition of his illegitimate children.

To give the legitimately born girls the right of precedence over illegitimately born boys recognized by the husbands later, in succeeding to the headship of a family.

To entitle women to the right of sharing the privilege of inheriting parents' estates with their brothers.

Educational:

Elevation of women's school status.

International:

Apart from peace movement, the women of Japan have come to take no small interest in the various international conferences of the fair sex and will always insist to send their delegates whenever any subjects of their own interest are to be discussed at such conferences.

Are the American Races Japanese?

Shujiro Watanabe in the August instalment of the series "The Japanese and the Outer World" that he is contributing in *The Japan Magazine* considers the relationship between the Japanese and American races. Considerable curiosity must be roused to learn the following from him:

When Kamper visited Japan in 1690-2 he saw a map drawn by a Japanese in which Kamchatka and the N. W. part of America was exactly depicted. He ascertained that America had been accidentally discovered by the Japanese who sailed the Pacific in ancient times. Another writer, Messman, referring to native traditions, remarks that the Japanese were the first discoverers of America. In a map published in France about 1710, the straits are described as "Detroits do

Iesso" or Straits of Yezo, and Alaska is called "Terro de Iesso" or land of Yezo.

Canada, according to European geographers, was discovered by Cabot in 1497. Its ancient history is obscure, but there are two traditions. One of these, current among the inhabitants of the Arctic Circle, is that a Norseman called Leif Ericson drifted in a boat to the coast of Labrador and was the first discoverer, while another is that in ancient times Asiatics came to the country, crossing the straits on the opposite coast. Concerning these traditions a Japanese who has travelled in the country remarks: "The inhabitants of the north insist that Europeans were the first discoverers, but this is quite out of the question. The tradition that Asiatics were the first may be considered to conform with the truth, for the face of the natives of British Columbia (called Siwashees) greatly resemble those of the Japanese, and armour, nearly similar to that of Japan, had recently been unearthed at Vancouver. The opinion is not, however, based on any further proofs, and but one thing is certain that in ancient times there were troglodytes in the country, as their caves and relics have been found in various places between the Bay of Mexico and Winnipeg. Their caves dug out in shady woods are of immemorial age. Most of them are now dilapidated and so have lost their primitive form, but their original state is clearly discernible. Their history, however, can not be traced, as the Indian natives have no traditions concerning them, and no account has been furnished by early visitors from Europe. The natives are long-haired, bare-footed and very stupid, worshipping strange gods and other objects. Their copper coloured faces and black hair resemble those of the labourers of Japan, so that it has been supposed that they are of the same race; but the inhabitants of the eastern portion of the country are considered of a different stock as they have skins of a deep red colour."

As stated above, the Siwashees or aborigines of America so resemble some of the Japanese in face, physique and general aspect that they are often mistaken for the latter. In British Columbia and Mexico the natives call a sandal *waratie* or *warazi* and a hoe *luuz*, which seem derived from Japanese words.

Japan and Manchuria

That China is not yet out of the wood, so far at least as her territorial integrity is concerned, will be evident from the reply of Baron Yoshiro Sakotani, "a former cabinet minister and one of the most prominent and active publicists in Japan at the present time," to Lloyd George. *The Japan Magazine* for September gives the reply the place of honour apparently to endorse it. We reproduce the reply of the Baron:

We are informed, according to a press despatch of July 30 that Mr. Lloyd George had expressed the hope that there would be no practical annexation of Manchuria by Japan. I am absolutely con-

silent that there is not a single statesman in this country who entertains any views opposed to his. At the same time, I wish to call his attention to the following points.

I. While no Japanese statesman harbours any such thought as the annexation of Manchuria, it must be remembered that it is quite different from any other part of China in its historical, economic, geographical and other relations with Japan. The Chinese people themselves have, in the past, paid little or no attention to it. In some respects, they looked upon it as a "white elephant" and never exerted any special effort for the welfare of its inhabitants.

Nor did China ever raise a finger to put an end to the Russian encroachment in the Far East. The fact is so well known in history that when Russia demonstrated her unquestionable design to annex Korea, Japan was forced to take up arms against her in 1904-5. It was she alone, however, who was called upon to bear the brunt of the task of driving Russia to the north.

At present due to the Japanese guards scattered along the South Manchurian Railway, the safety of the transportation of both passenger and freight is secured, and incidentally this has prevented the spread of civil strife to that section of China, thus giving untold blessings of peace to those otherwise unfortunate people. Nor should the fact that no less than 800,000 annually seek haven there be ignored.

Hence while Manchuria is nominally under the sovereignty of China all that the Chinese Government has done was to exact something from it giving nothing in return. On the other hand Japan afforded the people of this section, peace and prosperity and required nothing in the way of compensation. Although our neighbours to the west of us enjoyed their sovereign right over Manchuria they assumed no responsibility consonant to it. A large share of this burden, economic, security or otherwise, rests upon Japan's shoulders.

II. Since 1905 Japan has developed Manchuria by virtue of the treaties between the two countries. She has invested billions for the improvements of its harbours and railways; she opened its mines and increased the export of its agricultural products, thereby contributing, in no small measure, to the civilization of the world. That she has peacefully promoted the economic welfare of this district is universally recognized. Its benefits are being shared by the nations of the world under the principles of the open door and equal opportunity; and Japan entertains no such irrational and district idea as to monopolize them in the future.

III. Thus, that Japan has a great interest in the affairs of Manchuria goes without saying. Besides the vested interest above mentioned, the number of the Japanese subjects including Koreans scattered throughout this vast area, is well over one million. Hence its peace and order are absolute prerequisites to the safeguarding of Japan's existing interests as well as for the benefits of the Chinese themselves. The development of Manchuria is not only necessary for Japan and China alone, but it is a great concern of the whole world. We feel, therefore, the maintenance of peace there should be studied from a broader vision and world viewpoint.

How similar Imperialist arguments are all over the world !

To the publicist and ex-cabinet Minister we make a present of the following Editorial Comments of the *New Republic*.

The conflict between China and Japan over Manchuria grows steadily more serious. The Chinese revolutionists are seeking to win over General Chang Hsueh-liang, who has succeeded Chang Tso-lin as overlord of Manchuria. They know they have no chance in a war with Japan, but they wish to strengthen their influence in Manchuria in every possible way, pending an appeal to the public opinion of the world, or perhaps to the League of Nations. They have not forgotten that such an appeal caused Japan to relinquish the Shantung peninsula in 1922. In this case, however, Japan's position is quite different. Food and raw materials from Manchuria are essential to the maintenance of her crowded population; and, whether wisely or not, she feels that her military strategy demands control of the province. Baron Tanaka more than a year ago announced his country's "special interest" in Manchuria; and before and since then, Japan has acted as though she had annexed the territory. The excuse she now gives for objecting to the spread of Nationalist influence north of the Great Wall is that the Chinese government is still insecure, and has "a Red tinge." The first of these charges is no business of Japan's, and there is every reason to believe that the second is false. But if the Chinese government were like Gibraltar and as conservative as Poincaré, Japan would still fight to keep Manchuria.

Nanking—not Peking

Arthur De Sowerly thus considers the respective position of Peking and Nanking in the *China Journal*, the removal of the Capital of the Nationalist China giving him the occasion for it.

The decision of the Nationalist Party in China now, dominant throughout the country, to transfer the seat of government from Peking to Nanking will doubtless be received throughout the world with mixed feelings. To all those travellers who have visited the ancient city in the north, and have been charmed by the sights, life and atmosphere of this old-world capital, the news will come as something of a shock, while we could well imagine that the members of the various foreign legations and other foreign residents in Peking itself will receive it with feelings akin to consternation.

The Chinese, on the other hand, with the exception, perhaps, of the Chihli people, will undoubtedly hail the transference with satisfaction, for Nanking to them is much more the capital of China than Peking has ever been.

Nevertheless, Peking, or Peiping, as it is now styled by decree of the Nationalist Government, in many ways far surpasses Nanking as a capital city. Its numerous magnificent palaces, mighty temples and well laid out parks far out-rank any-

thing that the southern capital has to show; while the fact that for centuries, all through the period of Manchu dominance, as well as during the latter part of the Ming Dynasty, a period of high culture in many ways and picturesque ceremonial in court and official circles, it has been the seat of government, affording hospitality to the representatives of foreign governments in the Legation Quarter, has created an atmosphere of romance, a sort of glamour, an almost mediaeval remoteness, that has rendered it unique amongst the capitals of the world. Nanking, on the other hand, while it has had its history, and has seen days of glory, pomp and majesty, has practically nothing to compare with the palaces, temples and even modern government buildings of Peking. Nothing but crumbling ruins now exist, where once stood the palaces of princes, not even picturesque ruins, but mere flat heaps of rubble and crumbling brick.

Brains—How Come ?

Nothing can be more engrossing in interest and perhaps more baffling in ultimate solution than the above question which *Evolution* seeks to answer as follows :

His better brain makes man supreme over the other animals. The gap is wide between him and his nearest rival, so wide that even some scientists once took exception here to the theory of evolution. They admitted the probability of physical evolution; but surely that wonderful thing, the human mind, must have been specially created and implanted. Just how, they did not explain. Perhaps, at bottom, this reaction was not reasoned, but rather the prejudice of pride with demanded for superior man superior origins and graces. Nevertheless, there is a real problem here, the problem of how man got that way. The modern scientific answer is that man's hands made his brains.

Man's close relatives have all died out, but some second cousins, the anthropoid (man-like) apes still live. For mere animals, they have pretty good brains, stand almost humanly erect and have hands and use them. We shall find that hands make brains, so they might well be getting somewhere if man had not beaten them to it and crowded them off the high road. Now they haven't a chance.

But they do have the family look. Just compare them with some of the old family portraits we have dug up. We really had to dig for them, these portraits, for the family album is the earth itself and the portraits are the fossil bones we have found. It must be confessed that the earliest grandfather of them all, old *Pithecanthropus Erectus* of Java, was an unlovely low-brow. He was not an ape, oh no, but he certainly had the marks. In the scale of brains, he stood right between the ape below and ourselves above.

But just how did man get his brains? Well, he just happened to get the right training. Then too, Nature gave him several good boosts. His hands, however, can take most of the credit. With hands he handles things, examines them, does things to them. He always learns best by doing. He learned reality by doing, for it really works. Apply an idea and you test it. If it is true, it

works; if false, it fails. Man got his truths that way. As he does his doing with his hands, he got his truths through his hands.

Our Double Heredity

Jesse H. Holmes reminds in *Unity* the 'double heredity' of man—a rational side and a material or animal side of his existence:

In spite of pseudo-science and pseudo-metaphysics everyone knows that in some sense he is both mind and body and that at one time or another either may be the dominant partner. It is a pity we cannot stop here, but it is impossible, for another feature of this self-complex turns up in a capacity we have of evaluating the demands of mind and body. This demands a third person of the personal trinity who is by no means wholly impartial, but is, I think, on the whole a just judge. It pronounces for the claims of the body when hungry, thirsty, or tired, against it when experience shows that its demands are not for its own best interests. Also it decides for the mind in its search for understanding, in its struggle for clear vision, in its efforts to plan effective futures. Moreover it selects the mind as the more important element to which the body must yield in the cases where their interests conflict. It is not an infallible judge, for it may be overinfluenced and even carried away by bodily passions, or by exaggerated mind-vanities which condemn the body as essentially evil. This seems to me at least one way of helpfully viewing the "self" for practical purposes, and in considering this trinity I think there is much more danger of confusion in "confounding the persons" than in "dividing the substance"

Christianity and Evolution

Professor Lewis G. Westgate, writing in the *Current History*, does not forget the point of the above writer; but in evolution he sees a truer aid to the religious belief. Concludes the professor.

Science gives valued support to intelligent religious belief. Science teaches that we live in a world of law, in a dependable world. And we are coming to see not only that the world of nature apart from man is a dependable world, but that our human world as well is a dependable social and moral order. What a man sows that shall he also reap. This conception is fundamental to religion.

Science makes a second and not less important contribution to religious belief in evolution. Evolution is not only not in conflict with essential Christianity, it is the strongest support which science can give to the spiritual interpretation of the world and so to religion. Evolution includes plants and animals below man and man himself; not only his body, but his mind and spirit as well—his total personality. As body and mind evolve together (we know not how) in the development of

each individual, so they have evolved together (again we know not how) in the history of the race and of life. Through millions of years life has been developing, producing in succession the higher groups of animals. Through several hundreds of thousands of years mankind has been developing through half-human ancestors, through savagery and barbarism to civilized man at his best as we know him today; to Isaiah, Socrates, Paul, Savonarola, Shakespeare, to the countless men and women who in their limited spheres are living helpful, courageous constructive lives and aiding in the onward march of humanity. The whole process is a unity. It can be judged only when one sees the end, or enough of it to get some idea of the end. Different people will interpret in the different ways, and there is much about it that we cannot, perhaps never can, understand. Some are saying that it came about by the chance concurrence of atoms, in a purely mechanical way, with no intelligence behind it. Some of us cannot take this view of it, cannot look at this long result of time and believe that it took place without a directing intelligence behind it, an intelligence akin to our own but vastly greater, and conscious of the direction and meaning of the whole process. The stream cannot rise higher than its source. If at the end we find moral and spiritual values, they would seem to imply an intelligence caring for moral and spiritual values. But this is to make the universe spiritual and not material, to conserve religious values. I know perfectly well that this is faith, not knowledge, philosophy, not science. But no thinking scientist no thinking human being, can avoid becoming at times a philosopher. It is not a question of becoming a philosopher but of what kind of a philosopher one shall become.

The critical and pressing problem today is: Is this world spiritual? Does it conserve personal spiritual values, or is it indifferent to all that man holds dearest? The doctrine of evolution, proposed first in the field of biology to explain the origin of species and since extended to cover the origin of the earth and of the solar system, of the stars, and of man, both body and personality, offers a definite contribution to the solution of this problem in a way that can help religious belief.

How a German Servant Girl Spends her Money

It is interesting to learn from *Frankfurter Zeitung* (reproduced in *The Living Age*) how a German cook spends her money.

Some idea of what this 1928 German servant girl is like can be gained from a knowledge of how she spends her money. A correspondent sends to the *Frankfurter Zeitung* the following expense schedule of a twenty-old German cook:

| | |
|---|--------|
| One pair of silk stockings..... | \$1.36 |
| One chemise..... G | .23 |
| One pair horn-rimmed spectacles (without glass) | 2.02 |
| One comb | .17 |
| One pair knickers..... | |

| | |
|--|-----|
| Two detective stories..... | 42 |
| Monthly installment on cookery book..... | 30 |
| One ring with fancy stone..... | 36 |
| Lipstick, scent, and powder..... | 143 |

The German servant girl is modernizing herself according to what she believes from the American films she sees, to be the best American tradition. She put silk stockings on her legs, that they may be displayed to as good advantage as the legs of the film stars; she watches her appearance carefully, paints and powders, spends little on undergarments not exposed to the gaze of friends and passers-by; she is literary to the extent of reading detective stories in addition to cook books and, to increase the intellectual impression which is reported to have a strong effect on the German equivalent of the American boy friend, she wears horn-rimmed spectacles, even though in her case she does not go to the needless expense of having lenses put in them.

The cook seems to be no way worse off than many an Indian College boy.

Provision for the 'Teachers' Dependents

In considering the retirement system for the teachers in U. S. A. the *Monthly Labour Review* (July) offers to our teachers, who are organising themselves as well as to the employees of the other public-service department, some very useful suggestions which they may examine for their own benefit. Provision for dependents differs in the different States as follows:

Eight of the State systems—Connecticut, Maryland, Massachusetts, New Jersey, New York, Ohio, Pennsylvania, and Wisconsin—provide that at the time of retirement the employee may choose one of several options, either taking a straight allowance to be continued through his life, or choosing a smaller allowance, part or all of which is to be continued after his death to some selected beneficiary, or receiving some other actuarial equivalent of the total amount credited to him. In case of the death of a contributor before reaching pensionable status Maryland and Wisconsin give death benefits. The other 10 systems make no provision for dependents.

Among the city systems, New York, Minneapolis, and the New York Board of Education provide options at the time of retirement. Under the Minneapolis system if a member dies in service the amount of the city's deposits to his credit, with interest, is paid as a death benefit. New York gives six months' salary as a death benefit if the decedent had qualified for retirement, and the Board of Education system gives the same amount if a member dies in the service from ordinary causes. If, however, the death was due to injury received in the service, a pension of one-half the average annual salary for the last five years is given to the widow, dependent children, or dependent parent. The other systems make no provision for dependents of either contributors or pensioners, though in Milwaukee and in Washington if a pensioner dies before he has drawn benefits to

the amount of his own contributions to the fund the difference will be returned to his heirs.

The Eleventh International Labour Conference

The conclusions in brief of the Eleventh International Labour Conference that met at Geneva from 30 May to 16 June to consider the questions of minimum wage and industrial accidents are reproduced below from the *International Labour Review* :—

The Eleventh Session of the Conference may be said to have closed on a general note of optimism. There was every justification for this since the Conference brought its work to a successful conclusion. It adopted a Convention and a Recommendation on Minimum Wage-Fixing Machinery, thus laying down the lines of the future work of the International Labour Organisation on the question of wage regulation.

As far as the question of accident prevention was concerned, the Conference decided to place on the agenda of the 1929 Session the general problem of accident prevention and the special questions relating to the safety of workers engaged in loading and unloading ships. Here again the work was accomplished without any very serious difficulty. The incidents which arose during the discussion of the question relating to work in ports were closed by a compromise which left no room for misunderstanding. The solution adopted on the question of accidents due to couplings on railways is only an interim one, but it is nevertheless a solution accepted by the principal parties concerned. Moreover, the period of waiting will be passed in an active and not in a passive way, since the Conference proposes that a permanent committee representing all three groups of the International Labour Organisation shall be set up to follow the technical development of the question until it comes up for discussion again. Thus, the Conference arrived at definite solutions on all the subjects on its official agenda.

Sacco-Vanzetti—Crime

"The Nation" of New York (Aug. 22, 1928) in a call for action reopens the story of the lamentable crime of statecraft of which a year ago the two unfortunate persons were the victims. Particularly noteworthy and reprehensible is the following aspect of the affair:

Probably the aspect of the case which to most people seemed especially unjust was that in the entire six years that intervened between their trial and their execution, and in spite of the appeals to various courts, Sacco and Vanzetti were never able to obtain a reexamination of the evidence upon which the jury convicted them of murder.

All appeals had to be based on errors of law. A reexamination of the evidence was possible only through a new trial to be obtained by order of the judge who had presided at the first one. The obstinacy and prejudice of Judge Webster Thayer in refusing a new trial sent the prisoners to the electric chair without ever a chance for a re-investigation of a chain of testimony, some of which was outrageous nonsense and all of which was passed upon in the hysterical year of 1921 by a jury hot with passion against foreigners and cold with fear of radicals. After the execution of Sacco and Vanzetti Governor Fuller himself recommended amendment of the Massachusetts law so that in capital cases the right of appeal should carry with it the power to reexamine the evidence as well as the legal procedure. A bill was drawn which in this respect would have placed Massachusetts beside New York, but it was allowed to die.

—

Inventor of the Color Camera

The real inventor of some worthy attainment is hardly known to the public, who cheer the head or apparent leader. *The Nation* in examining the summer 'spasm of progress' cheers such an inventor.

Television by Radio, gas bullets that can be fired around corners, practical color cameras, three kinds of talking motion pictures, automatic repairing machines for silk stockings—we are dizzy with the multitude and variety of inventions that have been announced in the last few weeks. The summer of 1928 should be remembered in history as a continuous spasm of progress. The surprising thing about most of these inventions is the anonymity of the inventors. We remember Stephenson and Morse and Bell; our children will see their pictures in the school-books for many generations. But what name emerges from the brilliant summer of 1928 as immortal? The average American could not mention a single name as associated with any of the recent great inventions. Yes, perhaps he could mention one name, that of George Eastman in connection with the color camera. But who invented the color camera? Not Mr. Eastman or even the able head of his research laboratories, Dr. C. E. Kenneth Mees. The inventor was a man who spent ten years in the Eastman laboratories studying color photography. His name is John G. Capstaff. Three cheers for Capstaff!

—

Talking Robots

We learn from an interesting article reproduced by *The Literary Digest* August

18, that the mechanical man can now talk back. We read.

THE EVOLUTION OF THE MECHANICAL MAN has taken a further step, we are told by a writer in the *New York Times*. Formerly it could do nothing but hear and obey. Now it can talk back. The Televox was hailed as the perfect employee when it was first invented by R. J. Wensley of the Westinghouse Company, because it could obey orders, and do nothing else. It could not even speak when spoken to. Now, the writer says the inventor has endowed it with words. It continues.

"When it is hailed over the telephone it responds in a well modulated and deferential voice.

"Televox speaking."

"It can even imitate a conversation. If something goes wrong, for instance, at a power substation where the Televox is on duty, it can lift the receiver and say

"This is the televox calling for Main 5000."

"When the televox is connected with that number the conversation will continue in buzzer code. The man at headquarters will ask by interrogatory buzzes what is wrong and the televox will reply in the same form, one, two, or three buzzes, of a combination of buzzes, each meaning something different.

"In place of vocal cords the mechanical man has had a talking film introduced among its organs. The words to be spoken are recorded by photography on a film and introduced into the physiology of the man that was born in a laboratory.

"An English-speaking race of machines is now being reared by the Westinghouse Company to substitute for watchman in power substations where the information to be transmitted is not complicated. Adjustments are made so that a break in the electrical current in one place causes a set-up in the machine which reports that fact. A break elsewhere causes a different set-up and a different report.

"A particularly human touch was introduced by the inventor, who had started the talking career of his electrical young men by furnishing them with language in which to complain about the weather. They have adjusted so that they can call up headquarters and report. 'It's hot' or 'It's cold. This information is of value as a warning because too much heat or cold is dangerous to the engine.

"The first three members of the mechanical race—famously known as 'Adam,' 'Cain,' and 'Abel,' Eve being omitted because the automatic kingdom has not been divided into two factions—are on duty in Washington as employees of the War Department, assigned to report on the condition of the city's water supply. Adam, Cain and Abel furnish daily bulletins on the amount of water in each reservoir.

INDIAN Womanhood

The All-India Leaders' Conference at Lucknow has done well by nominating SRIMATI SAROJINI NAIDU as India's ambassador to America for replying to the vile and inspired propaganda by interested people against Indians in general, and India's womanhood in particular. Early in 1924 Mrs. Naidu

ed calumniators against Indians and dispel the ignorance of average Americans regarding India's culture and civilisation.

Mrs. Sarojini Naidu

went to South Africa on a mission on behalf of the oppressed Indians and rendered great service to the Overseas Indians. We think no better selection could have been made this time too, as by her culture and erudition she is the most suitable person to be entrusted with this noble mission. We hope she will give a smashing rejoinder to interest-

Mrs. Sriram Bhagirath Ammal

MISS AMIYA GANGULI of Dacca, a girl of ten, was awarded several special prizes for her success in the recent Two Miles Swimming Race at Dacca. His Excellency the Governor gave away the prizes.

Miss. MANORAMA, of Vizagpatam is the first Oriya lady to come out successful in the recent S. S. L. C. Examination conducted by the Madras government. She comes off a poor family and is now a student of the college classes in the Mrs. A. V. N. College, Vizagpatam. Her school career was

Mrs. Raghava Ammal

equally brilliant—she having won some certificates and medals of distinction in music, knitting, and for general proficiency.

Mrs. SRIRAM BHAGIRATH AMMAL has just been appointed as a member of the Chingleput District Educational Council (Madras Presidency).

Mrs. RAGAVA AMMAL and Mrs. AMRITH AMMAL (a lady belonging to the Adi-Dravida community) have been nominated as municipal councillors at Vellore and Chidamburam respectively.

distinctions we referred to in the *Modern Review* for August.

RAM MOHUN ROY ON INTERNATIONAL FELLOWSHIP

[The letters printed below have been sent to us for publication by Mr. Brajendranath Banerji, who is well-known for his researches among old records. In the communication to the Foreign Minister of France, the reader will find the principle underlying the League of Nations, with its international court of justice, anticipated by Raja Ram Mohun Roy. His belief in the unity of mankind, referred to by Rabindranath Tagore in his centenary address on the Raja, published in our last issue, receives a fresh illustration in this communication. All these show how much in advance of his age he was.—Editor, *The Modern Review*]

To
T. Hyde Villiers, Esq.,
Secretary to the India Board
Sir,
India having providentially been placed

under the care of the Board of Control, I feel necessarily induced to have recourse to that authority when occasion requires. I, therefore, hope you will excuse the intrusion I make with the following lines.

I am informed that for the purpose of visiting France it is necessary to be provided with a passport and that before granting it, the French Ambassador must be furnished with an account of the applicant.

Such restrictions against foreigners are not observed even among the Nations of Asia (China excepted). However, their observance by France may perhaps be justified on the ground that she is surrounded by Governments entirely despotic on

three sides and by nations kept down merely by the bayonet or by religious delusion.

In the event of my applying to Prince Talleyrand for a passport I beg to know whether I shall be justified in referring to you in your official capacity as to my character. All that I can say for myself is, that I am a traveller and that my heart is with the French people in their endeavours to support the cause of liberal principles.

Sir Francis Burdett, at Mr. Byng's, liberally and spontaneously offered to give me a letter of introduction to General Lafayette, but this will not, I think, serve my purpose on my first landing in France.

I have the honor to be,

Sir,

Your most obedient servant,

RAM MOHUN ROY.

London, 48 Bedford Sq.

Decr. 22nd, 1831.

To
Hyde Villiers, Esq.,
Secretary to Board of Commissioners
for the Affairs of India

Sir,
I have the honor to receive your letter of the 27th instant and I beg to offer my warm acknowledgements to the Board for their attention to my application of the 23rd of this month.

I beg to be permitted to add that, as I intimated to the Board my intention of eventually applying to the French Ambassador resident in London for a passport for France, I now deem it proper to submit to you for the information of the Board a copy of an intended communication from me to the Foreign Minister of France, the result of which I shall await before I apply to the French Ambassador.

Unless I have the honor to hear from you that such an address would be irregular and unconstitutional, I shall forward it to a friend in Paris to be presented in due form.

I have the honor to be,

Sir,

Your most obedient Servant,

RAM MOHUN ROY

London

December 28th, 1831.

[Endorsed]

28 December, 1831.

Rajah Ram Mohun Roy

Transg. copy of an intended com-

munication to the Foreign Minister
of France.

Private note from Mr Villiers to
Ram Mohun Roy, Jan. 1, 1832.

To
The Minister of Foreign Affairs of France,
Paris.

Sir,

You may be surprised at receiving a letter from a Foreigner, the Native of a country situated many thousand miles from France, and I assuredly would not now have trespassed on your attention, were I not induced by a sense of what I consider due to myself and by the respect I feel towards a country standing in the foremost rank of free and civilized nations.

2nd. For twelve years past I have entertained a wish (as noticed, I think, in several French and English Periodicals) to visit a country so favoured by nature and so richly adorned by the cultivation of the arts and sciences, and above all blessed by the possession of a free constitution. After surmounting many difficulties interposed by religious and national distinctions and other circumstances, I am at last opposite your coast, where, however, I am informed that I must not place my foot on your territory unless I previously solicit and obtain an express permission for my entrance from the Ambassador or Minister of France in England

3rd Such a regulation is quite unknown even among the Nations of Asia (though extremely hostile to each other from religious prejudices and political dissensions), with the exception of China, a country noted for its extreme jealousy of foreigners and apprehensions of the introduction of new customs and ideas. I am, therefore, quite at a loss to conceive how it should exist among a people so famed as the French are for courtesy and liberality in all other matters.

4th. It is now generally admitted that not religion only but unbiassed common sense as well as the accurate deductions of scientific research lead to the conclusion that all mankind are one great family of which the numerous nations and tribes existing are only various branches. Hence enlightened men in all countries must feel a wish to encourage and facilitate human intercourse in every manner by removing as far as possible all impediments to it in order

promote the reciprocal advantage and enjoyment of the whole human race.

5th. It may perhaps be urged that during the existence of war and hostile feelings between any two nations (arising probably from their not understanding their real interests), policy requires of them to adopt these precautions against each other. This, however, only applies to a state of warfare. If France, therefore, were at war with surrounding nations or regarded their people as dangerous, the motive for such an extraordinary precaution might have been conceived.

6th. But as a general peace has existed in Europe for many years, and there is more particularly so harmonious an understanding between the people of France and England and even between their present Governments, I am utterly at a loss to discover the cause of a regulation which manifests, to say the least, a want of cordiality and confidence on the part of France.

7th. Even during peace the following excuses might perhaps be offered for the continuance of such restrictions, though in my humble opinion they cannot stand a fair examination.

First: If it be said that persons of bad character should not be allowed to enter France: still it might, I presume, be answered that the granting of passports by the French Ambassador here is not usually founded on certificates of character or investigation into the conduct of individuals. Therefore, it does not provide a remedy for that supposed evil.

Secondly: If it be intended to prevent felons escaping from justice: this case seems well-provided for by the treaties between different nations for the surrender of all criminals.

Thirdly: If it be meant to obstruct the flight of debtors from their creditors: in this respect likewise it appears superfluous, as the bankrupt laws themselves after a short imprisonment set the debtor free even in his own country; therefore, voluntary exile from his own country would be, I conceive, a greater punishment.

Fourthly: If it be intended to apply to political matters, it is in the first place not

applicable to my case. But on general grounds I beg to observe that it appears to me the ends of constitutional government might be better attained by submitting every matter of political difference between two countries to a Congress composed of an equal number from the Parliament of each; the decision of the majority to be acquiesced in by both nations and the Chairman to be chosen by each Nation alternately, for one year, and the place of meeting to be one year within the limits of one country and next within those of the other; such as at Dover and Calais for England and France.

8th. By such a Congress all matters of difference, whether political or commercial, affecting the Natives of any two civilized countries with constitutional Governments, might be settled amicably and justly to the satisfaction of both and profound peace and friendly feelings might be preserved between them from generation to generation.

9th. I do not dwell on the inconvenience which the system of passports imposes in urgent matters of business and in cases of domestic affliction. But I may be permitted to observe that the mere circumstance of applying for a passport seems a tacit admission that the character of the applicant stands in need of such a certificate or testimonial before he can be permitted to pass unquestioned. Therefore, any one may feel some delicacy in exposing himself to the possibility of a refusal which would lead to an inference unfavourable to his character as a peaceable citizen.

My desire, however, to visit that country is so great that I shall conform to such conditions as are imposed on me, if the French Government, after taking the subject into consideration, judge it proper and expedient to continue restrictions contrived for a different state of things, but to which they may have become reconciled by long habit; as I should be sorry to set up my opinion against that of the present enlightened Government of France.

I have the honor to be,

Sir,

Your most obedient humble Servant,
Sd. RAM MOHUN ROY

By BENARSIDAS CHATURVEDI

Overcrowding on Board the 'Coolie' Steamers —

Newspapers have published to-day the following news from Durban. —

Durban, Sept. 25.
Twenty-four Indians died on board repatriation ship "Sutlej" which called here on a voyage from George Town.

The "Sutlej" has seven hundred and seventy-five Indians on board and these were employed at George Town as indentured labour on sugar plantations. — "Reuter."

It is a pathetic news, the full significance of which has not been understood by our papers. There is a barbaric rule—a relic of the old Indenture days—according to which so much space is allowed to the labourers on board the 'coolie' ships and though the indenture system has been abolished this rule still continues to hold good and consequently there is very much overcrowding on these steamers. Last time S. S. the Sutlej brought to Calcutta more than 900 persons from Fiji—all packed up like animals. I interviewed Honourable Badri Maharsaj and Mr. Gopendra Narayan, who returned by that steamer, about this question and they bitterly complained against overcrowding on board the Sutlej. Now comes the news that twenty four Indians returning from British Guiana have died on board the same Steamer. Who is responsible for these deaths? The Government of India or the British India Steam Navigation Company? Imagine the case of those poor people, who were deceived and sent away to British Guiana under indenture and who were returning to their Motherland after a long period but who died in the way on board the steamer. The cable has been sent from Durban and the Sutlej has still to make a voyage of 20

days more. We are therefore afraid that some more death may take place before she reaches her destination. It is the duty of the Government of India to enquire into

Prabhu Singh in S. Africa

this case, immediately after the arrival of the steamer. The inhuman regulations which allow this overcrowding ought

be removed from the statute book as early as possible.

The Successor of Right Honourable V. S. Srinivas Sastry

Mr. Sastry has decided to return from South Africa in the beginning of the year 1929. It is needless to say anything about his work there. Mr. Sastry has won the hearts of our people in South Africa by his great generosity, wonderful eloquence, perfect manners and above all his unaffected humility. A combination of these qualities of head and heart is very rare indeed and even India cannot produce two Sastris at a time. Now that he is coming away to the Motherland we have to consider the question of his

is we cannot find another man of Sastry's eminence to succeed him. Three names have been suggested by some papers, Sir Mohammad Habibullah, Mr. Jayakar and Kunwar Maharaj Singh. We do not intend to make any comparison of their respective qualifications. There is only one consideration which must outweigh others and that is, who will be able to serve the cause of our people most of all in South Africa at this stage.

From this point of view the choice of Kunwar Maharaj Singh will be decidedly the best under the circumstances. Kunwar Sahab was sent by the Government of India to Mauritius, British Guiana, Trinidad, Kenya, Uganda, Zanzibar and Tanganyika and he did his work in these colonies to the great satisfaction of our compatriots abroad. The dignified reply which he gave to Sir Edward Grigg's unfortunate utterance at Nairobi will not be forgotten by the latter for a long time to come. It was to a great extent due to the efforts of Kunwar Sahab and his friend Mr. Ewbank that our countrymen in East Africa could show a united front at the time of the Hilton Young Commission. Kunwar Sahab's speeches in Mauritius went a great way to bring about unity among our people in that colony and that gave an appreciable help in the election of two of our countrymen to the Legislative Council. His report about Mauritius was an admirable document. There is another gentleman in the Government of India whose services to our people abroad must be mentioned here and he is Sir G. L. Corbett. Sir Corbett's despatches about South and East Africa and his part in preparing the Fiji report, which has been suppressed by the Government of India, will always be remembered with gratitude by our people. He can certainly be expected to defend our rights in S. Africa and were it not for the reason that we want an Indian to go to South Africa at this time, Sir Corbett's choice would have been as good as that of any Indian.

Prabhu Singh as at present

successor. Unfortunately none of our first class leaders can be spared at this time and what is still more regrettable most of them do not take any interest in the problems of Indians abroad. One thing is certain and that

There is one thing more in favour of Kunwar Sahab. He is an educationist and our people in South Africa will receive great help from him in connection with their educational schemes. It is to be hoped that the Government of India will select him to succeed the Right Honourable V. S. Srinivas Sastry.

Indian Question in Kenya

In view of the fact that conversations were going on between some of our leaders in Kenya and some reasonable Europeans in that colony regarding some sort of settlement of the Indian question, we think it necessary to give some definite opinion on this subject. We should urge it upon our countrymen in Kenya to keep before their eyes the following fundamental principles affecting the Indian position there :—

(a) There must be no encroachment at all by any immigrant community upon Native Reserves or Native rights in land.

(b) There must be no racial segregation as between immigrant communities in any shape or form by statute or regulation. Where such racial differentiation exists steps must be taken, as occasion arises, to substitute for it legislation or regulations of a non-racial character. This involves, for example, that Indians cannot on principle recognise the reservation of the highland area for exclusively white settlement or of any portion of the lowland area for exclusively Indian settlement. In practice it is highly probable that almost no non-white settlers will desire to settle in the highlands and that almost no white settlers will desire to settle in the other non-reserved areas. Theoretically, there should be the right of any community, including the Natives, to acquire land for settlement purposes in any part of the non-native areas of the Colony.

(c) There can be no recognition of communal franchise. The common franchise is essential. If an agreement is come to, for a term of years, that there shall be so many seats reserved for Europeans and so many seats reserved for non-Europeans, it must be made clear that at the end of this agreed period the position is automatically reopened, so that the relative number of seats reserved to any community is kept elastic, and may be modified according to the then existing situation. It is especially necessary to avoid the setting up of any standardised numerical proportions, or the treating of such numerical proportions as may first be agreed upon as a precedent.

(d) The door must, so long as immigration is at all permitted to the Colony, be kept effectively open for Indian immigration.

(e) Nothing must be done to compromise

or jeopardise the position of Indians in the adjoining territories or the principles guiding Indian policy regarding the emigration and settlement of Indians abroad.

The Case of Prabhu Singh

The Indian public ought to be grateful to Swami Bhawan Dayal Sanyasi of Jacobs (Natal) South Africa for bringing to their notice the case of a Bihari gentleman who did very creditable service to the British Government during the Boer War, but whose services

The Choga presented to Prabhu Singh
by Lady Curzon

have not been properly appreciated either by the Indian public or by the Government up to this time. Here is an account of Prabhu Singh and his memorable work during the Boer War.

Prabhu Singh, is an inhabitant of Bhabna in the Province of Bihar. In the year 1896, owing to a quarrel with his brother he left home and got himself recruited as an indentured labourer and was sent to Natal. Here he was employed by the Dundee Company and served them nearly for the

years, when the Boer War broke out on 12th October, 1899. General Joubert advanced with a force of 20,000 men towards Ladysmith, the strong-hold of the British, and took possession of the Coal fields. The Indians that were serving there, were sent away towards Johannesburg in a railway train to serve the Boers. At night fall some 500 of them managed to escape under the leadership of Prabhu Singh and reached the town of Ladysmith before it was besieged. They were admitted by the late Colonel Sir George White and were given work. Prabhu Singh with 26 others was appointed to serve the Scotch Regiment No. 7, the work allotted to him being to guard provisions. By this time the Boers had besieged the town of Ladysmith and placed their heavy guns on the North and North-East of the Town. On the Umbulwana Hill was placed a huge gun which carried a 96lb shell and was named by the British soldiers "Long Tom." The pieces of this shell falling in the town created havoc. Sir George White, with all his troops, made a sortie from the town to dislodge the Boers from their possession on the hills but it proved unsuccessful. Bags containing earth and sand were heaped one upon the other and thus a shelter of some sort was made for the soldiers. One day while ration was being distributed and Prabhu Singh was on his watch duty, a shell came from the Hill. The sergeant and the soldiers went under the heap of bags crying to Prabhu Singh to do the same; but the fearless Rajput did not move from his post. The shell passing over his head went beyond the town and fell in the water of the river. The Sahab asked Prabhu Singh if he was not afraid of his life and he boldly replied "Why should I be afraid Sahab? I shall go to Baikunth (Heaven) with the shell if my death is come, otherwise I will throw off the shell with my stick." The matter was reported to the high military officer and Prabhu Singh was appointed to stand on a high place with the Union Jack in his hand and give timely warning to all to take shelter. This he did by waving the flag and crying aloud the word "Basab" in his peculiarly thrilling tone. The siege lasted for three months and provisions ran short. Horses and asses had to be killed for food and for a month Prabhu Singh had to live on four ounces of maize powder a day, but the brave man never shrank from his self imposed duties.

In the end the besieging army having been defeated and their General Cronjee, taken a prisoner, Ladysmith was released by Lord Kitchener. There was great jubilation and thanks-giving at the time and Prabhu Singh was recipient of all the praise and honour that he was so nobly entitled to. "The Review and Critic," the then leading weekly of Durban published articles eulogizing the brave deeds of the hero. The proprietors of the said paper announced two classes of awards, first and second, represented by silver and brown medals respectively to be called "Critic Heroes Medals." They were to be awarded to any two men who were found after due investigation deserving on account of conspicuous bravery and heroism. All classes were to be equally eligible for this. The fact of their decision was published in the paper dated 6th October, 1900 as follows:—

The Silver Medal
(First Class) is presented to
"Prabhu Singh"

"The Editor has decided that the first Critic hero medal for conspicuous bravery shall go to Prabhu Singh, his bravery is fully explained in the following extract from a contemporary.

"During the siege of Ladysmith, Prabhu Singh acted as a guard of property and on the firing of the big guns on Umbulwana he warned the garrison with a flag and enabled them to take cover. In this way he no doubt saved many lives. Prabhu Singh put himself in a position of danger and endeavoured to save white men as much as possible. So faithful was this brave man in his duty that not in a single instance did he fail to warn the garrison of the firing of the enemies' guns.

"The Editor thinks that all the readers of the Critic will agree that this man has nobly earned by his conspicuous bravery and devotion to duty the first Critic Hero's Medal. If it is possible the presentation will be made in public. The inscription on the Medal will be 'Presented to Prabhu Singh in recognition of his bravery during the siege of Ladysmith, when he signalled, from an exposed position, the firing of the Boer Guns on Umbulwana'. The clasp will bear the date '1899-1900'."

The Medal was not ready when the hero left the colony hence it could not actually

THE SIGNAL TO SEEK SHELTER

A Hindoo, on a heap of flour bags, announcing what a big tin flag or a wall from "Love & Truth" is getting into shelter

be presented to him, nor has it been handed over to him up to now.

Sir George White specially mentioned Prabhu Singh's name in one of his speeches in England which attracted the notice of Lady Curzon, who was graciously pleased to send a Choga to be presented to him.

Prabhu Singh came out to India in December 1900 with a letter of introduction from Mahatma Gandhi to Shriyut Surendra Nath Banerjee. In this letter Mahatma had asked Mr. Banerjee to make an arrangement so that Prabhu Singh might pay his respects personally to Lady Curzon and also to the Viceroy.

Swami Bhawani Dayal writes :—

"Prabhu Singh left the Colony in December 1900 and reached Calcutta but as ill-luck would have it, he was not aware of the contents of Mahatma's letter to Babu Surendra Nath Banerjee and did not know that it had been arranged that he could see the Viceroy and

place his case before His Excellency. He had no friend with him who could guide him in this matter. The result was that he came home with 90 guineas only, a major part of which was his own earning in the coal fields. He married and led the life of a simple cultivator. He is a little over 60 years now and a penniless man. He has to support a family of 5 or 6 souls with very little income from cultivation. Prabhu Singh, who was highly applauded and admired both by the Government and his fellow subjects (Indians and Europeans) for his fearless courage and selfless service, is now reduced to the condition of a miserable wretch for want of proper food and clothing for himself and his children.

This is in short the story of the saviour of Ladysmith, the siege of which lasted for 3 months."

We draw the attention of the Government of India to the case of Prabhu Singh and request them to help him in his hour of need. It is their duty to do so.

NOTES

New Marathi Historical Records

Vinayak Lakshman Bhawe, who died on 12th September, 1926, was best known as the author of the standard History of Marathi Literature and editor of the most scholarly text of the saint Tukaram's hymns. He was also a keen student of Marathi history, as his pamphlets on various episodes of the Shivaji period and his edition of the *Shedgaonkar Bhonsle Bakhar* show. We are glad that his son L. V. Bhawe of Talabpali, (Thana P. O.) has just published the last work on which this scholar was engaged, under the name of *Marathi Daftar, Runtal third* (Rs. 2-8). It contains a detailed chronology of Shivaji and 230 historical letters,—out of which 23 belong to Shivaji's times and 204 were addressed mostly to Ali Bahadur, the founder of the Nawab family of Banda (Bundelkhand), who died in 1802. They are invaluable for the light they throw on the political and social conditions of Poona between 1786 and 1800.

"O' Dwyer is Murderer"

London, Sept. 24.

Uproarious scenes were witnessed at Brotherhood Church in North London when Sir Michael O'Dwyer rose and attempted to give an address on India. Members of the audience stood up, shouted and unfurled placards bearing the words, "O'Dwyer is murderer." "Murdering English workers." Sir Michael O'Dwyer realised the futility of proceeding and left the platform.—*Reuter*.

Among Anglo-Indian and British diehards Sir Michael O'Dwyer enjoys the reputation of having been the saviour of the British Empire in India. Has he now earned the honorific title of 'murderer' for his work in India, or for his anti-Labour opinions in England?

Public Safety Bill

In the Legislative Assembly, there were 61 votes for and 61 against the Government motion for consideration of the Public Safety Bill. It was defeated by the casting vote of President Patel, who observed:—

"If any individual member seeks to place such an extraordinary measure on the Statute Book, he must convince the House and get the majority in his own favour. The Home Member has failed to secure a clear majority in his favour and cannot expect the Chair to give his casting vote in favour of the motion for consideration."

Even *The Statesman* supports his action by observing:—

It is not to be imagined that the PRESIDENT rejoiced in the responsibility that accident had placed upon him. His decision was determined for him by convention and tradition. A Speaker or President uses his casting vote to maintain the *status quo*, so that the matter at issue may be brought before the House again. Legislation by casting vote would be an anomaly; it is too much to expect of one man, placed in an office of which impartiality is demanded, that he should by his own word make changes in the rights of citizens or visitors. Mr. PATEL was loyal to the proprieties of his office.

"Warm and eloquent tributes are paid by the party leaders to the unofficial whips, especially Mr. Satyendra Chandra Mitra and Mr. Rafi Ahmed Kidwai, to whose untiring zeal and energy the unofficial victory is largely due."

Regarding the consequences of the rejection of the Bill, the *Chowringhee* paper writes:—

So as legislators have refused to give Government the power of simple deportation over undesirable Englishmen, it will have to take other measures. Under the Foreigners' Act of 1870 it already possesses full powers where foreigners are concerned, but it is understood that the particular Red agents it has in mind at present are British. There seems nothing left to do but to accept the advice tendered by the Opposition and proceed under Regulation Three of 1818. In that case those proceeded against will hardly feel grateful to their Simla champions. Discretion is the better

part of valour and if we were the evangelists in question we should take the next boat.

Indians regard both Britishers and other aliens as foreigners. But it seems the Foreigners' Act of 1870 is meant for the special benefit of non-British foreigners. Hence, according to the Chowringhee paper, the Public Safety Bill was proposed for the summary removal from India of undesirable Britishers. But the same paper says that they can be proceeded against under Regulation Three of 1818. Therefore, by taking action under either the Foreigners' Act of 1870 or Regulation Three of 1818, foreigners hailing from any country can be removed summarily from India. Where, then, was the necessity for a new law? under whatever law brought about, deportation is deportation. So why should British deportees not feel "grateful" for being proceeded against under Regulation III of 1818?—Perhaps British white men would consider it derogatory to their whitemanly to be dealt with according to a Regulation which has been usually resorted to to punish men of a subject race!

"Colour Bar after Death!"

The Week, Roman Catholic organ of Bombay, writes:—

The length to which racial animosity can go is proved by an occurrence which we would have deemed unbelievable, had we not the authority of the *St. Louis Centralblatt* (of April) for it. It appears that in a place of Georgia, called Meldrim, an old servant, Marie G. Underwood, "a colored woman," died and that her remains were buried in the White cemetery in compliance with a dying request that she be buried in the lot of the Mattox family for whom she had worked twenty-two years. A petition that her request be granted was circulated and generally signed by White citizens. The funeral services were held in a White church with a White pastor officiating and a White choir furnishing the music. Only a few Negroes attended the services. After the body had remained in the White cemetery for five days, a petition appeared asking that it be removed. The request was not granted but on February 21 an open grave was found on the Mattox lot and a new grave in the Negro cemetery; a group of unknown men had removed the body at night and reinterred it in the cemetery for Negroes.

An Eminent Scientist on Prof. Bose's Work

Professor H. Molisch, the eminent plant physiologist of Vienna, has contributed an

article to *Nature* on Sir J. C. Bose's work, which begins thus:—

After the conclusion of his recent lecture at the University of Vienna, Sir J. C. Bose was kind enough to lend me his instruments for the repetition of some of his more important experiments in the Institute of Plant Physiology of the University. As this is the first time that his experiments have been successfully repeated in a European laboratory, the following results which I obtained will be of interest to readers of "*Nature*."

Of Prof. Bose's Infinitesimal Contraction Recorder Dr. Molisch writes:—

This ingenious apparatus records the cellular contraction in the interior of the plant under external stimulation. The principle of the instrument is extremely simple; the extreme delicacy of the apparatus bears testimony to the extraordinary skill of the Indian mechanicians trained at the Bose Institute. The stem or other organ of the plant is placed between a fixed and a movable primary lever. The diametric contraction of the plant under stimulation is indicated by the movement of this primary lever which is further magnified by optical means, the total magnification produced being a million times. The indication of the instrument is not affected by mechanical disturbances.

The Vienna professor's experiments with Dr. Bose's apparatus to prove the sensitiveness of ordinary plants were equally successful. His experiments to test Dr. Bose's theory of the movement of sap have convinced him that the Indian scientist is right.

As regards the similarity of plants and animals in certain respects Dr. Molisch observes —

The pulsatory activity is greatly increased by drugs which enhance cardiac activity in the animal; it is enfeebled or arrested by depressing agents. Extracts from certain Indian plants have a potent influence on the propulsive activity of the plant and the cardiac activity of the animal. This aspect of the investigation has roused considerable interest in the Medical Faculty of Vienna.

"I have seen," writes the Vienna professor in conclusion, "Sir J. C. Bose carry out the experiments described above and can confirm, since I have repeated some of them with Sir J. C. Bose's apparatus, that the results are as he has described."

Government Attitude towards Social Reform

The following letter addressed by a non-British Christian missionary to the *Ind. Daily Mail* throws additional light on Government attitude towards social re-

The matter of the demand which the Government make of every non-British mission is seriously hampering our work. It gives every missionary an anti-Indian bias before he comes to the field, and many never overcome it. I will refer to my own experience to show you how seriously the Government take this undertaking, which Foreign Mission Boards have given on behalf of every missionary, that they will loyally co-operate with the Government. This summer, I received a communication from Government to the effect that if I did not cease attending political meetings, they would complain against me to my Board and would withdraw the Government grant, which is being given to the high school with which I am connected. They said that they had no charge to make against me other than that I had attended such meetings, but they considered this to be a violation of the Board's undertaking. *They even objected to my having attended such meetings as have to do with widow remarriage, the removal of caste restrictions and Hindu-Muslim unity, on the ground that these all have political implications.* I called attention to the fact that the meetings which I attended dealing with these matters, were addressed to the people and not to the Government, but evidently the Government make no distinctions. (Italics ours).

This letter gives the same impression of the official attitude towards social reform as the following passage from a speech of Mrs. Wood in America published in our last issue, page 282 :—

Three times representative bodies of Indian women and men in 1925, 1926, and 1927 have demanded the raising of the age of marriage, and each time the Government of India has turned down the application.

Councils and the Simon Commission

The elected members of Councils represent the country to some extent, though not at all completely. But the official and nominated members do not at all represent the country. It is mainly with the votes of the latter that the Government has succeeded in getting some provincial Councils and the Council of State to appoint committees to co-operate with the Simon Commission. Therefore, the cry that 'India has given up her resolve to boycott the Commission and will in the main co-operate with it has no foundation in fact.

Irrigation in Bengal

Sir William Wilcocks, the irrigation engineer of Egyptian fame, who was criticised by some British and Indian supporters of official neglect of irrigation in Bengal, sticks to his assertion that the so-called 'dead rivers

of Bengal are really neglected canals. Says he, in part, in *Indian Engineering* :—

Mr. Thompson says that my ideas have been formed in the delta of the Nile which flows into a useless sea and has a greater slope than the Ganges; and that in consequence, I was misled. I surveyed, levelled and worked for three years in the Tigris-Euphrates delta, where the rivers have a gentler slope than the Ganges and flow into the Persian Gulf with its 11-foot tide. I made no mistake. He says that I fell into the hands of Dr. Bentley and was led about by him. Dr. Bentley kindly accompanied me to places fixed by myself. I know my profession and did not waste my time in futile studies at the tails of the rivers but spent it profitably at the head of the canals. We have a saying in Egypt: "Does a fish begin to go bad at the head or at the tail?" It is a saying worthy of the typical irrigated country of the world. Oau has only to compare the ordered alignment of the Bengal canals with the tangled mess south-east of Faridpur and east of Barisal to see that the Bengal canals were originally artificial and that that funny mess where Mr. Thompson wished me to waste my time is natural.

I talked about no "permanent ribs". I have never heard of such things. Rennell's maps lay on my table and were always referred to by me. They support me. There is as much chance of the Jelengi having been the main stream of the ancient Padma or Ganges as there is of the Ganges having once flowed up the Damodar river. I can assure Mr. Thompson of that. He possibly thinks I did not go deeply enough into the Puranas. I quoted the Mahabharat. I shall now quote, from memory, the Ramayan. This old classic tells us that when 50,000 of the King's subjects, working with their hands, could not bring the Ganges southwards, his grandson Bhagirath working with his brain brought it down all right. All these so-called dead rivers are as surely neglected canals as they will one day be life-giving streams.

So long as British predominance lasts "the so-called dead rivers" of Bengal will not be "life-giving streams," because British exploiters do not expect to get wheat and cotton from this part of the country.

Coastal Traffic Bill

Two years ago Mr. K. C. Neogy introduced the coastal traffic bill in the Legislative Assembly. This time he allowed Mr. Sarabhai Haji to move it there. This Mr. Haji did in a masterly and comprehensive speech, meeting all objections. The Bill has been referred to a Select Committee. In the course of the debate on the bill, Sir James Simpson, representative of the Associated Chambers of Commerce in the Assembly, said :—

Mr. Haji was only a paid servant of the Scindia Steam Navigation Company, which would benefit mostly by the Bill. It would have been preferable that the Bill should have been sponsored by a less interested person.

Sir James also said that "Scindia" was a member of the Conference of Shipping Companies participating in coastal trade and it was not for Mr. Haji, a paid servant of that Company, to decry the existing monopoly. It was an ill-bird that fouled its own nest.

Mr. Haji's Bill would not encourage Indian Shipping any way. Dispassionately analysed it boiled down to represent the cupidity of Indian capitalists to gain unfair advantage at the cost of European traders. Finally he asked the House to play the game.

Following Sir James Simpson, Mr. K. C. Neogy gave a spirited reply.

Mr. Neogy said that he looked to the Indian Year Book to find who this Simpson was. There was one Simpson, C. L. E. who got a Police medal. The previous speaker did not answer to that description. He next consulted Thacker's Directory, but there were forty-five Simpsons.

The President—Order, Order. What has that got to do with the Bill?

Mr. Neogy:—I am referring into them because personal factors have been brought into the argument in this House. I find there is one Sir James Simpson serving in certain European firms who are agents of four or five Shipping Companies. To my mind this paid servant is the particular gentleman in the House. He represents the European Chambers in which is represented that British Shipping Company, the Inchcape gang.

Continuing, the speaker said that he himself brought the Bill in the House two years ago and it was also ballotted but in order to oblige the Government he did not pursue the measure, because the Government wanted to know where they stood. This time he allowed Mr. Haji to move it, because he knew of it better than the speaker. They were in the House in a representative capacity and what they were in private life, had got nothing to do with the question they had to deal with in the House (hear, hear). Continuing, the speaker said that he had been in the House for more than seven years but he never heard such a disgraceful speech as that which was delivered with reference to Mr. Haji. "Play the game, said Sir Simpson", went on Mr. Neogy. "What game? The British game? Let us see what the spiritual fathers of Sir James Simpson did in the past in reference to the question."

The speaker then read extracts from the reports of the Directors of the East India Company in which they declared their uncompromising opposition to the employment of Indian ships for carrying goods to England. This is the British game, this is the game to which the Hon'ble gentleman refers" (cheers).

Talk of Equal Rights

In the course of his speech Sir James Simpson claimed as a "British Indian National

no special privileges but equal rights with the sons of the soil. I claim nothing more and will accept nothing less."

Sir James next read from the report of the Nehru Committee that the British community need not be apprehensive of their legitimate interests and appealed to Pandit Motilal Nehru as the author of the report to redeem the promise contained in the report. The vote of the leader of the opposition on the Bill would be a test of the genuineness of the assurance extended to the British community in the Nehru Report.

Pandit Motilal Nehru said in reply:

The Hon'ble Member for the Associated Chambers has paid me the compliment of quoting from the Constitution Report and inviting me to go into the lobby with him. I am prepared to make him a sporting offer. I am prepared to consider his invitation if the Hon'ble Member's constituency is prepared to accept here and to-day the report of the Constitution Committee and accept Dominion Status (cheers).

The Hon'ble Member, Sir, spoke of the glory of India. It would be more appropriate to call it the glory of Anglo-India. I use it in a large sense the term. I saw what this glory means when I went to Gauhathi up the river Hooghly. I came across palatial residences of jute kings on the one hand and only a few miles further across the misery of the Indians who work for them. They were ill-fed, ill-clothed and ill-protected from wind and rain.

HOW BRITISH RIGHTS WERE ACQUIRED

Sir James talked of British rights in coastal trade. How was that right acquired? No reply had been given to the long indictment of Mr. Haji as to how Indian Shipping had been ruthlessly strangled. Sir James talked of British rights in coal, jute, coffee, tea and oil industries. That was a tragedy of the situation that in all these industries the non-Indians dominated. Sir James also talked about equal rights and equal opportunities. I would ask the Member "Had we any opportunities?"

Sir James: Yes

Pandit Motilal: No. What about the hundred and more tales which we can tell of the ruthless repression of industries and commerce of India? These taunts of discrimination have no application under the present constitution under which there is any amount of discriminatory legislation. Have members of the European group ever stood by the Indian Nationals when laws were passed forging fetters on the Indians or when attempts were made by sections of this House to have those laws removed from the Statute Book? On every possible occasion the Indians have been discriminated against in all conceivable walk of life without a word of protest from the European group.

NEED OF NATIONAL MERCANTILE MARINE.

Continuing Pandit Motilal said that Sir James had claimed national rights. National rights went with citizenship. If and when the British subjects now exploiting India attained full rights of British citizenship under Dominion Status if they would be able to claim national rights

And what were national rights? They did not exclude creation of a National Mercantile Marine. Mercantile Marine was a second line of naval defence. It was therefore, essential that a merchant fleet of the country must be entirely national. He was reminded of Col. Crawford's taunt that the Indians were not capable of national defence when the Indians had been disarmed and emasculated under the Government's action. Similarly after the Indian shipping had been throttled by all means they talked of competition and open fight. Indian opinion only wanted that after Indian shipping had been ruthlessly suppressed it should be put on its feet so that it might also be able to function.

NOT A RACIAL MEASURE

Continuing Pandit Motilal said that he did not consider the Bill to be racially discriminatory. No single section of the community had a right to say that they wanted perpetuation of sectional monopoly to the detriment of the entire national interests. The Legislature must legislate for the greatest good of the greatest number. If in making legislation in national interests one section of the community suffered it was inevitable and unavoidable.

Prof. C. V. Raman's Latest Discovery

According to a contribution published in *The Statesman*, which contains some non-scientific adjectives,

Physicists throughout the world are deeply interested in the discovery, at Calcutta, of a new radiation-effect. The Raman-effect, as it is called after its discoverer, is the most-discussed question in physics to-day. Numerous papers and reports dealing with it have already appeared in the scientific journals and the foremost centres of research in Europe have taken up the study of the new phenomenon. The degree of interest aroused by the discovery is indicated by the fact that a leading German scientific periodical devotes some twenty columns to a report on the new Effect.

The discovery made by Prof. Raman is that when light falls upon molecules of matter and is scattered by them, a remarkable change occurs, which is most readily perceived by observing the scattered light through a prismatic spectroscope.

EFFECT EXPLAINED

For the purpose of these experiments it is most convenient to use as source of light, a mercury-vapour lamp. This gives a very intense white light which, when examined through a prism, appears resolved into a spectrum containing a few bright lines of different colours, a bright indigo line, a blue line, a green line and two yellow lines. When the light from such a lamp passes through a transparent liquid or solid such as water or ice, the light scattered within the substances when observed through a prism is found to show a number of new lines not present in the light of the mercury arc itself.

This strange phenomenon is exhibited by all transparent bodies, the position and the number of the new lines being different for different substances.

As regards the field of research opened up by this discovery, the writer says :—

Apart from the fundamental interest of the radiation-process revealed by the discovery of the Raman-effect, the study of the new spectra thus produced opens up a wonderful field of research for the investigation of the constitution of molecules and of matter generally, and of its optical properties. So great is this field that Prof. R. W. Wood, a very distinguished Foreign Member of the Royal Society of London, in cabling to the Editor of *Nature* confirming the Raman-effect, characterizes it as "a surprising and brilliant discovery with immense potentialities."

The State of Scientific Knowledge in India

When Western scientists confirm and accept the conclusions of Indian scientists, Indians are naturally gratified. The practice of mutual testing and recognition exists also among Western scientists themselves. Owing to the pre-eminence of the West in science, it is necessary in the case of India to have our scientist's original work being tested and confirmed by occidental men of science. But this necessity cannot be a source of pride to us, nor increase our self-respect. Even small European nations, like the Danes, the Dutch, the Norwegians, do not depend entirely on the approval of scientists of other nations for confidence in their own work. The case is otherwise with Indians. The backward state of scientific education and knowledge in India accounts for this difference. Next to the achievement of universal literacy, both the state and the people in India must make the widest spread of scientific knowledge, from the primary stage upwards, one of the main aims of the Indian educational movement. The habit of observation and experiment, and of research at the proper stage, must be sedulously fostered. Then in course of time may India expect to be as self-reliant in science as other civilized countries.

Mrs. Sarojini Naidu's Mission

For political and economic reasons, those who are interested in keeping India politically enslaved and economically backward and unorganized have long carried on a libellous propaganda against this country themselves or by paid agents. Latterly this propaganda has become particularly venomous. Indian journalists and authors have been trying

to counteract the effects of this continuous campaign of calumny. It is necessary to do this work abroad in person by word of mouth also. By her gifts of oratory and poetry, by her courage, and by virtue of her position as an ex-president of the Indian National Congress, Mrs. Naidu is fit to do this work. She herself is an embodied refutation of many of the worst things said of India concerning the position of women here. It is not contended that their position is all that it ought to be. They have still many disabilities and are sometimes subjected to cruel wrongs. But their position is not as bad as it has been painted. Mrs. Naidu's example shows that it is feasible for an Indian woman to rise to the highest non-official civic position, to become a distinguished orator and a recognised poet, to successfully play the role of reconciler between races and creeds and to be offered the highest academic distinction *honoris causa*, which she declined.

She will not, of course, enter into any controversy with any slanderer of India. Her speeches and her poems, recited by herself, will suffice to give an idea of what Indian society stands for, and thereby make her motherland respected.

Mrs. Naidu has declared that she is going abroad, not as mendicant, but to assert India's national honour.

Bureaucrats as Defenders of Indian Faiths

One of the funniest arguments advanced from the official side in support of the Public Safety Bill was that it was intended to protect the Hindu and Islamic faiths from the onslaughts of Bolshevism. So even the Anglo-Indian bureaucracy can, for their own purposes, raise the mob cry of religion in danger!

If these defenders or would-be defenders of Indian faiths be sincere in their protestations, why do they not deport the army of foreign Christian missionaries before seeking to expel some stray communists from the country? For, it is the openly avowed direct object of these foreign missionaries to undermine the faith of Hindus and Moslems in their religions in order to convert them to Christianity, whereas Bolshevism has no such object. It must not be understood that we want Christian missionaries to be deported. Their work in India has benefited

directly and indirectly. They have as much right to be in every country as the followers of other faiths have though the right of Hindus, Moslems and Indian Christians to go to and live and work is denied in many a Christian land.

Lala Lajpat Rai gave utterance to some home truths on the love of Indian religions professed by the bureaucracy and Sir Hari Singh Gour, when he said in the course of his very telling speech—

I am quite prepared to admit that communism and imperialism stand at two opposite poles. I have absolutely no doubt that the success of communism in this world will mean the destruction of all empires. I am, therefore, satisfied that this effort on the part of this Government and on the part of my capitalist friends is perfectly natural. They want to suppress communism. But why should they say that they are doing it in the interests of this country? Why import into this discussion matters which are not included in the Bill itself? My friend the Hon. the Home Member and also Sir Hari Singh Gour waxed eloquent upon the protection of religion.....

Sir Hari Singh Gour talking of religion! That was quite a surprise to me, because only a few months ago I read a document signed by that gentleman in which he framed the constitution of a league for modernising India which asked all Indians to adopt all western methods and do away with religion altogether. I know he will deny it, because he is accustomed to doing that.

Sir Hari Singh Gour. Can my friend produce that document?

Lala Lajpat Rai. Yes, I will, just as I produced a telegram which he sent to me in favour of the boycott of the Simon Commission and the sending of which he denied when I quoted it from memory. He has got into that habit and we on this side of the House have ceased to take him seriously, either when he opposes or when he supports us. Therefore, it is a surprise to me to hear Sir Hari Singh Gour pleading for this Bill in the name of religion. I do not know what his religion is. There is a religion known as Mammon worship; there is a religion of God worship, which, of course, pious Hindus and Mussalmans follow. I do not believe that he follows any God worship. He follows Mammon worship. And then again, the British Government talking of the protection of religion in this country! Why, they have destroyed the very foundations of religion in this country by their very existence and by allowing forces to work in this country which are anti-religious. Religion has different meanings. Even communists believe and allege that Bolshevism is a religion. If that is the meaning to be attached to religion, then perhaps my friend is perfectly religious and I am prepared to apologise for saying he has no religion. Religion has different forms. What form was meant when an appeal was made to the Hindus and Mussalmans of this House to rouse their passions on behalf of religion because the communists attacked their religion? Well, Sir, if the communists attack

any religion they attack the conventional Christian religion. They do not attack religion altogether, and as I have said, they do not attack every organized form of government.

Mr. Lajpat Rai concluded by suggesting the deportation of all exploiters.

We wish all foreigners to leave this country and leave us free. We will always welcome them as friends, except when they want to come here as exploiters; then we would wish them to leave and would be willing to pay their passages and something more. We are prepared to give them any money they want if they will leave us free to fight out our own battles. You talk of protecting these labourers. We don't want any of your protection. All we want is freedom to develop ourselves on our own lines, even to fight among ourselves, if necessary. Give us that freedom and go away. We do not want your protection. You have come to make money, money, Sir, money. You have come to fill your pockets with our hard-earned money. Our hard-earned money all goes into the pockets of foreign capitalists and foreign exploiters. We understand all these tactics, we understand all these disguises and devices.

Indian Boys and the Sea

The attention of Indian parents and other guardians of boys is drawn to the fact that, like last year, a batch of boys is to be selected for training in the *Dufferin*, the first training ship of the Indian Mercantile Marine. It is a very small beginning. But advantage should be taken of it in order that in future Indians may own sea-going vessels manned entirely by their countrymen. Last year 30 cadets were selected from all over India. Candidates for training must be between the ages of 13 and 16 on September 15, 1928, and must have received school education up to the lower secondary standard, i. e., three standards below the matriculation. There is a qualifying examination in English and a medical examination with special reference to eye-sight. The course of training lasts for three years and the fees payable are Rs. 50 a month for each month of training on the ship. The last date for receiving applications is the 5th of October, 1928. The qualifying examination will be held about the first of December. If any further information be required, it may be obtained by sending for a prospectus to the Captain Superintendent, I. M. M. T. S. *Dufferin*, Mazagaon Pier, Bombay, together with a remittance of one rupee.

Appointments on the Railway Board

In answer to a question asked by Mr. Jamnadas Mehta, Sir George Rainy, the Commerce Member, is reported to have said :

"Appointments on the Railway Board are not reserved for Indians. At the time of appointing the successor of Sir Austen Hadow the claims of Indian officers will be fully considered, but the final choice must be guided by the consideration of fitness alone, irrespective of race or nationality."

If anybody says that appointments to high posts, in the Railway or other Departments, have been made, are made or will be made (during British predominance) according to fitness alone, irrespective of race or nationality, he says what is not true. As regards the Railway Board, the patent fact is that no Indian has up till now been appointed on it. It is not true that this has been due to the utter absence of qualified Indians.

As regards fitness, the abstract principle laid down by Sir George Rainy that the fittest must be appointed, irrespective of race or nationality, is not acted upon in any country so far as foreigners are concerned. There are many vacancies every year and month in every Western country for which the fittest men may belong to foreign nations. But generally each country chooses some fit men from its own nationals, though they may not be the fittest considering mankind as a whole. It is only when no man sufficiently qualified for some particular kind of work can be found among the nationals of a country that some qualified foreigner is appointed in European countries, American countries, Japan, etc. The practice in India should be exactly the same. If an Indian is competent to discharge the duties of some office and is the fittest among Indians for doing such work, he should be appointed to it, even though he may not be the fittest in the British Empire or in the world. In the abstract, the ideal thing would be to ransack the whole world for the fittest man, every time a post falls vacant. But no nation pursue or can pursue this ideal. So, there is no reason why an abstract principle should be used in India as a cloak to hide the ugly naked fact that the Anglo-Indian bureaucracy want all the fat jobs for themselves to the exclusion of the permanent inhabitants of the country, as far as they can.

Racial Discrimination in Railways

It is not merely as regards appointments on the Railway Board that Indians are discriminated against.

Racial discrimination exists throughout all grades of appointments, except those in which the pay is such as will not attract the least qualified Anglo-Indians and Britishers. The attention of the Government has been drawn to such discrimination and it has been officially admitted more than once; but it has not yet been knocked on the head. A few figures from the railway administration report for 1926-27 will show the nature and extent of the evil.

As many as 78.8 per cent. of the higher posts are occupied by Europeans and Anglo-Indians and only 21.2 per cent. by Indians. In the subordinate services 70.4 per cent. of the posts are held by Europeans and Anglo-Indians and 29.6 per cent. by Indians. Yet the number of qualified Indians for both the higher and the lower services is vastly greater than the number of Anglo-Indians and Europeans in India having the same qualifications.

Racial discrimination exists in the appointment of guards, for example. The general practice is to appoint Indians to grade II and Anglo-Indians and Europeans to grade I initially. Similar discrimination is made in the appointment of ticket collectors, engine drivers, firemen, charge men, electricians and permanent way inspectors.

Racial discrimination exists as regards the arrangements and grants for the education of the children of Anglo-Indian and European employees and of those of Indian employees. For example, the East Indian Railway makes a grant of Rs. 1,34,000 to the Oakgrove school alone, meant for Anglo-Indian and European children; but the highest grant made by it to any Indian school is Rs. 4,500, and the total grant made to all Indian schools taken together is Rs. 14,700. There is provision for the education of Anglo-Indian and European girls, but none for that of Indian girls.

As regards medical relief, separate blocks are provided for the two classes of patients, the senior officer attending to the Anglo-Indians and Europeans, the junior to Indians.

Most of the fines are paid by Indians but the proceeds are spent mostly on European institutes for recreation. Christmas

passes are issued only to Christians. Passes are occasionally issued only to ministers of the Christian religion but not to Hindu and Muslim religious teachers.

Dr. Sudhendra Bose on the Hindu University

Dr. Sudhendra Bose has seen much of the world, much of educational institutions, and is himself a lecturer in a State University in America. His opinion on universities is, therefore, worthy of attention. In the course of an article on the Hindu University, sent by him from Naples to *The East Bengal Times* of Dacca, he says

During my recent visit to India, the one remark which I heard from the Government officials and Anglo-Indians more frequently than another was that Indians lack the power of organization and administration. Are these critics always right?

Men of great administrative gifts are seldom to be found in unlimited quantities in any country, and they can hardly be looked for in a subject country with its many inhibitions and restricted opportunities I can, however, point to the Hindu University, which I visited not long ago, as an eloquent refutation of the charge that all Indians lack administrative abilities. This great educational enterprise at Benares, which marked an epoch in the history of Indian education, was organized by Indians and administered by Indians. It shows what Indians are capable of doing when they have half a chance.

As a member of the instructional staff of one of the largest State Universities of America, I have had considerable opportunities during the last fifteen years to come in contact with many of the leading American educators. It is, however, my opinion that Pandit Madan Mohan Malaviya, the present Vice-Chancellor of the Benares Hindu University, will rank high in any group of American educational statesmen. His passion is for education, but he is not a mere visionary. A talk with him will convince even a hardboiled Anglo-Indian how vigorously and incisively and sensibly he has dealt with every situation and problem arising out of the Hindu University during the past few years. He is a far-sighted, warm-hearted, and lovable man. Malaviya, to my mind, stands at par in diplomatic and administrative ability with the best captains of education that America or Europe can show.

As regards the education the students, all of whom are not Hindus, receive here, Dr. Bose says:—

The Hindu University, which is attempting to combine the ancient and honored culture of India with the modern science of Europe and America must go on. It grants B.A., M.A., M.Sc., degrees in almost all the Arts and Science subjects taught at other Indian Universities. Perhaps that is not saying a great deal. But the high standard

has maintained in applied Science—Technical and Electrical Engineering, Metallurgy, Mining and Industrial Chemistry demands special recognition.

The laboratories, workshop and colleges, particularly the new women's college, which are doing such a vast amount of good to bring India in line with the rest of the progressive world, should not be crippled for lack of sufficient funds.

Chinese Nationalist Programme for the Development of Army and Navy

On July 18th Marshal Chiang Kai Shek in an address to the Chinese students in Peking emphasised the need of abolition of unequal treaties between China and other nations. He exhorted the Chinese students that "in order to free the country from Imperialist aggression they should prepare themselves and take up military training." It is the ambition of the Chinese nationalists that "in 15 years China will have an Army and Navy equal to any in the world."

Chinese nationalists are determined to spread military education among the students. This is evident from the following despatch :

Shanghai, June. 1 The Students' Union has decided to hold a review of the Military Cadets Corps in Shanghai shortly, when military authorities at Shanghai will be invited to give instructions. Up to the present about 40,000 students have joined the Military Cadets Corp and they are receiving rigid military training every day.

The Chinese Nationalists have the programme that within 15 years their national army and navy will be second to none, whereas the British masters of India are content with spreading the lie that the Indian people are not able to develop military leadership to undertake the responsibility of Indian National Defence. While the Chinese Nationalists are doing their best to rouse the martial spirit of the nation and spreading military education, the British authorities have refused to carry into action the meagre recommendations of the Skeen Committee towards the nationalisation of the Indian Army.

T. D.

An American Estimate of the Activities of the League of Nations

The Nation (New York) of June 20th, in its editorial notes, makes the following comment on the activities of the League of Nations —

"As a sort of loud-speaker for little nations with a grievance the League of Nations is a success. As a machinery for settling bitter international disputes it serves chiefly as an electric fan, cooling heated disputants and blowing off some of the vapour. The recent session of its Council afforded a whole series of examples of its talents and shortcomings. For five years Hungary and Rumania have been making faces at each other over the question of compensation for the Hungarian 'optants'—the Magyar landlords who retained both their Hungarian citizenship and their Transylvanian landholdings when that province was transferred by treaty to Rumania. They object to the Rumanian law dividing up the great estates. The League has proposed solution after solution—every one of which either Rumania or Hungary has turned down. Again the League has failed to solve the problem, and now invites the disputants to settle it face to face. On the other hand, the League machinery has aired the question before all Europe and given both sides a chance to calm down.

It is when one of the parties to a dispute is clearly stronger that matters are worst. Poland by sheer brute force defied the League seven years ago and seized Vilna; she is still in possession, and strong enough to retain possession. So Austen Chamberlain and the other high priests of the League direct their reproaches against intransigent little Lithuania. Similarly in the question of the arms seized on the Hungarian frontier. They were shipped, in plain violation of the Treaty of the Trianon, by Italy, which is not reprimanded or even mentioned, to Hungary, which gets off with a mild slap on the wrist in the form of a not-guilty-but-don't-do-it-again verdict. If the Little Entente, which fears an armed Hungary, had been stronger, the rebuke would, we suspect, have been sharper."

There is much truth in the above statement. T. D.

A Curious Comparison between Dominion Status and Independence

The following is the Week's contribution to the controversy relating to the goal of independence and dominion status :

If a man like Mahatma Gandhi, whom no one can accuse of weakness, can accept and approve of the Nehru scheme with all its implications, we need not worry about what the Shaikat Alis or even Srinivasa Iyengar may be saying. We are not of those who barter the substance for the shadow. Why be slaves to words? Egypt is supposed to have an independent status. Canada is but a dominion. But is there a man in his senses who would prefer Egyptian independence to Canada's dependence? Dominion status is independence for all practical purposes with security thrown in—security which is of no small importance during the transitional period when India will be engaged in consolidating her defences. But apart from motives of expediency, we hold that India by remaining in the federation of the British Commonwealth will be more in line

with the normal development of world polity, which increasingly tends to co-ordination,—not the isolation—of the peoples and nations of the world.

Serious notice need not be taken of the Catholic journal's personalities;—every opinion held by Gandhiji is not necessarily to be preferred to every opinion held by persons of lesser celebrity. Let us attend to its argument. Why does it take Egypt as the type of an independent country? It is not really independent. Had it taken France or Japan for purposes of comparison, could it have said, "Is there a man in his senses who would prefer French or Japanese independence to Canada's dependence?"

For ourselves, we certainly prefer the goal of independence to that of dominion status. But as dominion status *like that of Canada* is equivalent to independence in most matters, and as it must ultimately either lead to independence or be exactly equal to it, we do not quarrel about words with those who are for dominion status. Nor do we think the argument from security and the normal development of world polity entirely negligible. At the same time, no one should shut his eyes to the fact that the argument from security may breed a sense of false security and keep the Indian nation weak by taking away the main incentive to developing its full strength for self-defence. Dominion status, if properly used, may be good for "the transitional period," but there would be no need for it afterwards. As for "co-ordination," are even the small independent nations of the world dying to be included in the British Empire?

—

The Bengal Students' Conference

In this country the success of conferences is judged by the number and emotionalism of the audience, the quality of the presidential address and other speeches, the nature of the ideals and objects indicated in the resolutions, and the degree of orderliness which marks the proceedings. Judged by all these standards, the Bengal Students' Conference was a great success, if the newspaper reports of its meetings are correct. But a conference can be called a real success only if it bears good fruit. So for the present judgment must be reserved.

It was a good idea to get the Conference opened by the Rev. Dr. Urquhart, Vice-

Chancellor of the Calcutta University, who said in the course of his speech:—

You are here to prepare yourselves for life, to be ready to take your places as leaders of the community. Do not too hastily bring that period of preparation to an end, and rush into actions which you have not had the opportunity of sufficiently considering. This is your time for pondering over problems, and discovering the best means of solving them. It is not the time for you to rush into action before you have found the solution. Nor should any others condescend to make use of you before you have arrived at independent and free judgment for yourselves. If you cherish this spirit you will without doubt arrive at a solution of your problems, but only if you cultivate this spirit you may find ways of activity which are at present hidden from the eyes of those who are older, and I would say that when, under the guidance of God and in the exercise of your own power of deliberation, you do discover these ways it should not be the part of your seniors to create obstacles to your entering on these hitherto untrodden ways. Meanwhile, in all freedom of thought, in all discipline of spirit, in all respect for the past consideration of the present and loyalty to the future, prepare, prepare, prepare for the days of action which will come to you at a later stage of your life, when you will be sent out from this University to become the responsible leaders of your country in its progress towards all that is true and beautiful and good. Prepare, I say, with open mind. Prove all things and hold fast to your souls that which is good. "Whatever things are true, whatever things are honest, whatever things are just, whatever things are lovely, whatever things are of good report—think on these things"—think about them calmly, but also with enthusiasm for individual and social ideals, deliberate upon them, make them your own and so live according to them that your country will be the better for your conferring together.

No exception can be taken to these words, of wise counsel and none has been taken even by those papers which have ridiculed discipline and the idea that the life of students is a period of preparation. Public memory is said to be proverbially short. Still some may remember what showers of abuse were poured on the devoted head of Professor Jadunath Sarkar for laying due stress on discipline and preparation for the work of life lying ahead for students, in his convocation address. And Professor Sarkar was adversely criticized for his views on these points even by some of the papers generally friendly to him.

What are the reasons?

Mr. Pramod Kumar Ghoshal was chosen chairman of the reception committee. In a students' conference this honour should be reserved for some one who is distinguished as a student and as a public worker.

at least as either. We are not aware that Mr. Ghoshal is the best qualified among Bengal students in these respects. His part in the Presidency College disturbances is well known. But that ought not to have made him a hero. In the course of his speech he laid down the following duties for the Students' Association :—

The Association should carry on a ruthless war against the appalling ignorance and illiteracy of the country and make strenuous attempts to spread free primary education in the country. The Association should help in the spreading of sanitary knowledge in villages and improving their sanitary condition. It should organise co-operative measures for the betterment of the economic conditions of its members, develop a spirit of adventure and enterprise amongst them and desire to deviate from the beaten track in search of better avenues to happiness and prosperity. It should attempt to inculcate discipline, sense of duty and an esprit de corps amongst its members by organising and training a volunteer corps. It should organise and run on proper and up-to-date lines, gymnasiums for physical culture and libraries, debating societies, extension lectures for intellectual culture. It should organise a new type of journal to propagate its ideas and encourage new lines of thinking.

It is an ambitious programme, though a good one. The students' resources are limited. If they mean business and not mere talk, they must begin with a few small things. What problem or problems will they tackle first?

There is unconscious humour in Mr. Ghoshal's address in the words, "It should attempt to inculcate discipline."

Mr. Ghoshal is right when he says "that the attempts to portray the students as a band of political agitators working under the hidden hand of Moscow, are but the products of some unbalanced imagination." But he is not correct in asserting that "the recent strikes in some colleges were due to a genuine desire on the part of students to get redress of some legitimate grievances." They were the first to offend and subsequently became tools in the ill-concealed hands of some Bengali agitators.

Pandit Jawaharlal's Address at the Students' Conference

Pandit Jawaharlal Nehru delivered a fine presidential address at the Bengal Students' Conference. He "declared himself in agreement with Dr. Urquhart in counselling students not to rush into action," for which counsel

neither of the speakers was howled down, or criticised in the press. Professor Jadunath Sarkar received different treatment for giving the same advice in different language.

The Pandit rightly characterised the differences between the inhabitants of the different provinces of India as comparatively unimportant.

Strong are the common bonds that tie us, the bonds of a common legacy from the past, of common suffering and the hope of building up a great future for this country of yours and mine. And indeed you can carry this comparison a little further, across the artificial frontiers that separate country from country. We are told of vital differences of race and character. Such differences there undoubtedly are, but how many of them are purely accidental due to climate and environment and education and how liable to change they are? You will find that the common bond is greater and more vital than the differences, though many of us may not realise the fact.

He went on to say :—

Youth can think and is not afraid of the consequences of thought. Do not imagine that thought is an easy matter or that its consequences are trivial. Thought is not or should not be afraid of the wrath of the heavens or the terrors of hell. It is the most revolutionary thing on earth. And it is because youth dare think and dare act that it holds out the promise of taking out this country and this world of ours from the ruts and mire in which they have sunk.

Are you, young men and women of Bengal, going to dare think and dare act? Are you prepared to stand shoulder to shoulder with the Youth of the world, not only to free your country from an insolent and alien rule but also to establish in this unhappy world of ours a better and happier society?

Youth can, no doubt, think. But do most of the young men and women of Bengal, or even a considerable minority of them, really think? Or do they merely repeat shibboleths, parrot-like?

Properly equipped, youth, and even age, can free India from an insolent and alien rule and also establish in this unhappy world of ours a better and happier society. It is no use flattering youth—and we are sure Pandit Jawaharlal did not want to do it. And, therefore, we feel bound to utter the unpleasant truth that men and women whose only asset is their youth cannot do great things. Nor are those hardworking servants of the world useless whose only disqualification is that they have been in this world a good many years.

According to Mr. Nehru, National independence and perfect freedom to develop on lines of our own choosing is the essential requisite of all progress. Without it there can be no political or economic or social

freedom. But national independence should not mean for us merely an addition to the warring groups of nations. It should be a step towards the creation of a world commonwealth of nations in which we can assist in the fullest measure to bring about world co-operation and world harmony.

He added :—

You cannot have a purely political ideal, for politics is after all only a small part of life, although, situated as we are under alien rule, it dominates every branch of our activity. Your ideal must be a complete whole and must comprise life as it is to-day,—economic, social, as well as political. It can only be one of social equality in its widest sense and equality of opportunity for every one. It is notorious that we have neither of these to-day.

We, too, stand for social equality, equal opportunities for all, and an equitable distribution of the products of labour. But we are not sure that any of the forms of socialism advocated by theorists can bring about such a state of things. Of communism and the communists Mr. Nehru says that personally he does not agree with many of the methods of the communists and he is by no means sure to what extent communism can suit present conditions in India. "I do not believe in communism as an ideal of society."

Russia has many faults, as other countries have.

But in spite of her many mistakes she stands to-day as the greatest opponent of Imperialism and her record with the nations of the East has been just and generous. In China, Turkey and Persia, of her own free will she gave up her valuable rights and concessions, whilst the British bombarded the crowded Chinese cities and killed Chinamen by hundreds because they dared protest against British Imperialism.

In the city of Tabriz in Persia when the Russian ambassador first came, he called the populace together and on behalf of the Russian nation tendered formal apology for the sins of the Tsars. Russia goes to the East as an equal, not as a conqueror or a race-proud superior. Is it any wonder that she is welcomed?

Some of you may go in after years to foreign countries for your studies. If you go to England you will notice in full measure what race prejudice is. If you go to the continent of Europe, you will be more welcome, whether you go to France or Germany or Italy. If any of you go to Russia you will see how racial feeling is utterly absent and the Chinamen who throng the Universities of Moscow are treated just like others.

Some of his final words were:—

The Avatars of to-day are great ideas which come to reform the world. And the idea of the day is social equality. Let us listen to it and become its instruments to transform the world and make it a better place to live in.

Live dangerously. Let our elders seek security and stability. Our quest must be adventure but adventure in a noble enterprise which promises to bring peace to the distracted world and security and stability to the millions who have not.

Should Students be Everything but Students?

Infants, boys and girls and young men and women do not live in airtight compartments separated from the rest of the world. According to their capacity for understanding and being interested in passing events and pressing problems, they become interested in things, get excited by some events, depressed or elated by some others, and so on. For this reason, there cannot be and ought not to be an "atmosphere of pure study" anywhere. It is natural for students to want to know all about what is taking place around them and even to be actors among other actors. They should not be blamed for this natural desire, rather should they be encouraged to be up-to-date in their general information. But to be well-informed about current events and problems and things in general is an ideal meant for all, not for students alone. Students have their main and special work just as other kinds of people in society have. Peasants, artisans, mechanics, craftsmen, traders, merchants, teachers, lawyers, engineers, physicians, artists, scientists, philosophers, litterateurs, etc., have all their special work to do. This they generally do, and in addition they acquire information regarding the world of to-day and do their duty as citizens. Also there may be and are statesmen and politicians whose main work lies in the field of politics. But they are not *in statu pupillari*. Are students the only class of people who have no duties which entitle them to be called students? Is it because they have not got to earn their bread and are maintained by others that they are to be called upon to be everything else but students? Is the book of nature a useless superfluity? Are existing libraries, laboratories museums, demonstration farms, botanical gardens, etc., useless lumber?

It has become necessary to repeat these questions, because whenever students are reminded of their main duty, agitators at once place before them the supreme duty of freeing the country. But in what sense is it *their* supreme duty and not of every

one else? We are old-fashioned enough to believe and assert that the proper duty of students is to study. And, of course, like other people, they have other duties, which are subsidiary. When they leave their schools, colleges or universities for good, let them, if they choose and are fit to do so, devote themselves entirely to politics or other kinds of social service.

It is very far from our thought to suggest that students as students are not all to be social servants. They are certainly to be social servants as part of their training but study must be their main and special work. Why else do they call themselves and allow others to call them students? If they do not want to study or if they want to give their studies a subordinate place in their scheme of life, they should call themselves simply boys or girls, young men or young women.

We have glanced over the speeches delivered and the resolutions passed at the Bengal Students' Conference. With the exception of the speech of Dr. Urquhart, all these might have been quite appropriately delivered and passed at any other gathering of young people; and some parts of the speeches and most of the resolutions might have been appropriately delivered and passed at any other political gathering. What one misses is anything having a direct bearing on the proper work of Bengali students. No doubt, in the programme outlined in Mr. Ghoshal's speech the *running* of libraries and debating societies, and extension lectures were mentioned. But there the matter ended. Are the students of Bengal the intellectual equals of the students of other parts of India and of other countries in various fields of intellectual work? If not, how can their intellectual achievements and status be made equal to those of other students in and outside India? These and similar questions were neither asked, pondered over or attempted to be answered in this *students'* conference. Youth assembled there wanted very much to do good mainly to others, but not so much to themselves. It was very altruistic, no doubt, but unsatisfactory all the same.

The literature of Bengal, the scientific, philosophical and historical achievement of Bengal, should have received some attention at this conference. But politics monopolised almost all the attention instead, as if the main work of students were political.

Age is generally blamed as *laudator temporis acti* (a praiser of time past). At the risk of being sharply reminded of this failing, one may draw the attention of the present generation of Bengali students to many of their predecessors who were good students first and political workers afterwards. Their achievements both as students and political workers are not unworthy of the consideration of their venerable juniors.

Ancient Ruins at Paharpur

"The contribution of Paharpur to the cultural history of Bengal in regard to *religion, art and architecture is unique and unrivalled*," said Mr. K. N. Dikshit, Superintendent, Archaeological Survey of India, Eastern Circle, in the course of a recent Indian Museum lantern lecture.

The Paharpur temple, the lecturer observed, supplied an architectural missing link between the earlier monuments of India and the later exuberance of Indo-colonial art as exemplified in Java, Cambodia and Burma. The art of Paharpur supplies the first indications of a prosperous school of sculpture in Bengal in the golden age of the Guptas. Besides exhibiting the well-known characteristics of broad intellectualism common with the other contemporary schools, the Bengal masters show their individuality in their peculiar refinement and emotionalism. The terra cotta plaques, of which no fewer than three thousand specimens have so far come to light, represent probably the most well-defined provincial folk art, in which Bengal is prominent to the present day.

Ahorizines clad in leaf aprons, ascetics reduced to skeletons, acrobats and dancers, represented the lighter side, and illustrated vividly the sense of humor of the Bengali artist 1500 years ago.

On the whole, the terra cotta artists were very successful in delineating in plastic materials the moving world of men and animals in which they lived. The discoveries would thus prove invaluable to students of early art in Bengal.

Among small antiquities of historical importance discovered were several copper plates of the 5th century recording grants of land to the early Jain temple on the site of the excavations.

Ram Mohun Roy on Passports

In the prefatory note to some letters of Ram Mohun Roy which have been printed in this issue under the heading, "Ram Mohun Roy on International Fellowship," attention has been drawn to the fact that the Raja anticipated the principles underlying some of the organisations and activities of the League of Nations. It is also to be noticed that he

gave therein reasons for suggesting the discontinuance of the system of passports. In this respect also his views were in advance of his age. It is only recently that in some European countries it has been seriously proposed that the practice of demanding passports from visitors from foreign countries should be discontinued.

—

Ram Mohun Roy and His Persian Paper

Those acquainted with the biography of Ram Mohun Roy know that he conducted for some time a Persian weekly named *Mirāt ul Akhbar* or "The Mirror of Intelligence". Not much is known about its contents, nor why it ceased to appear. Mr. Brajendranath Banerji has been able, by his researches, to remove our ignorance on the subject partially. He has published in the *Calcutta Municipal Gazette* an article, entitled "An Unknown Chapter of the Calcutta Press" which throws some light on the subject. Mr. Banerji says that

"Certain remarks of Ram Mohun on the doctrine of the Trinity, published in the *Mirāt* in August, 1822, were considered highly offensive. On 10th October, 1822, Mr. W. B. Bayley delivered in Council a lengthy minute regarding the tendency of the Native Press which gives full details about Ram Mohun's *Mirāt* and those of his articles to which objection was taken."

Mr. Banerji reproduces in the *Gazette* that portion of the minute which has been permitted by the Government of India to be publicly used by him. After publishing that portion he writes :

Lord Hastings sailed for England on 9th January, 1823, and the Acting Governor-General, J. Adam, who did not share his Lordship's liberal views on the subject of the Indian Press, passed, on 14th March, 1823, a rigorous Press Ordinance which was duly registered by the Supreme Court on 4th April, in spite of a memorial, signed by Ram Mohun Roy and five other distinguished gentlemen of Calcutta, protesting against the new regulations as putting an end to the freedom of the Press.

One effect of the new regulations was the closing of Ram Mohun's *Mirāt*, immediately after these regulations had been registered by the Supreme Court. In the last number of his paper, he declared his inability to go on publishing, under, what he would represent as to him degrading conditions and he laments that he, "one of the most humble of men," should be no longer able to contribute towards the intellectual improvement of his countrymen."

After the Supreme Court had rejected the memorial against the new ordinance, Ram Mohun, as a last measure, sent an appeal to the King

in Council, which was signed by him and many other respectable men of the city, but it met with no better success.

On account of the excellence of the diction, style and arguments of this Appeal to the King, it has been called by Miss Sophia Dobson Collet, the Raja's English biographer, the *Ascopagtica* of India.

In the last issue of the *Modern Review*, pp. 368-369, a letter of Professor H. H. Wilson was printed in which it is stated : "Mr Sandford Arnot, whom he had employed as his Secretary [in England], importuned him for the payment of large arrears which he called arrears of salary, and threatened Ram Mohun, if not paid, to do what he has done since his death, claim as his own writing all that Ram Mohun published in England." This Arnot did in the *Asiatic Journal*, September—December, 1831, first by supplying materials for the Raja's memoir in it written editorially and subsequently in a signed letter to that journal in reply to Dr Lant Carpenter's "A Review of the Labours, Opinions and Character of Raja Ram Mohun Roy."

Some people were similarly inclined to think that the memorial to the Supreme Court and Appeal to the King were not written by Ram Mohun. But, writes Mr. Banerji,

The following extract from the East India House Debate, held in July, 1824, on the banishment of Mr. Sikk Buckingham, corroborates the general belief that Ram Mohun was its author, and testifies to his wonderful power of English composition —

"Sir John Malcolm:—We have heard a petition said to be written, and I have no doubt it is, by that respectable native, Ram Mohun Roy, whom I know and regard. I was one of those who earnestly wished his mind could have been withdrawn from useless schemes of speculative policy, and devoted to giving us his useful aid in illustrating the past and present history of his countrymen; for that knowledge of which we are yet imperfectly possessed must form the basis of every national plan of improvement". (9th July, 1824)*

Capt. Gouan next rose to address the Court, but we regret that the confusion which prevailed during the time the Honourable Proprietor was speaking, prevented us from hearing him distinctly.

We understood him to say, that he rose principally for the purpose of bearing his testimony to the competency of Ram Mohun Roy to write the Memorial which had been so often referred to in the course of the discussions. He had received a letter from that individual relative to

*Speech delivered at a General Court of Proprietors of East India Stock on 9th July, 1824. Malcolm's *Political History of India* (1826), cxlix

a subject which he (Captain Gowan) had much at heart, namely, the foundation of some schools in India, which was written with extraordinary talent, which letter he would read to the Court." (23rd July, 1824)

All-India Women's Conference Report

The honorary secretary's half-yearly report of the All-India Women's Conference on educational reform, 1928, makes encouraging and interesting reading. Besides its other activities,

The Conference has as usual shown keen enthusiasm in dealing with the problem of child marriage. Public meetings have been organised by the Conference in every nook and corner of the country condemning the custom of child marriage and supporting Har Bilas Sarda's Child Marriage Bill and Hari Singh Gour's Age of Consent Bill, but demanding that the legal age in the first Bill be raised to 16 and 21 for girls and boys respectively, and in the second the age of consent to 16. It was in pursuance of the Conference resolution on this subject that the All-India Child-Marriage Abolition League was started by H. H. the Rani of Mandi, and a resolution in support of this demand was carried through the Madras Legislative Council by Dr Muthulaxmi ammal. A similar resolution is expected to be moved in the C. P. Legislative Council by the lady member of the Council.

Muslim Opinion on the Nehru Report and Lucknow Settlement

On account of the adverse manifestoes issued by some Musalman leaders, it was feared that Muslim opinion would be worked up to oppose the Nehru Committee's report and the Lucknow settlement which followed. But there have been signs which show that there is a fair chance of Muhammadans generally accepting the conclusions of the All-Parties Conference. Take, for example, the largely attended meeting of the Punjab Musalmans which was attempted to be broken up by hired hooligans. The chairman sat calm and unmoved in spite of the throwing of missiles and other disturbances. The result was, some ten thousand persons voted in favour of the Lucknow decisions and only 20 against them.

paper after the annual St. Andrew's Day dinner, that as the Bengalis and the Scots were both subjects of Englishmen, the Scots in their annual celebration of that day ought to invite the Bengalis instead of the English. And sometimes some serious-minded son of Caledonia protested against Motilal Babu's insinuation that the Scotch were a subject people. But it seems he was right after all. For in a report of the proceedings of the inauguration demonstration of the National Party of Scotland, held in King's Park, Stirling, on the anniversary of the battle of Bannockburn (June 23), it is stated by Compton Mackenzie that the object of the Party is "the achievement of Scottish Independence without bitterness against England." R. B. Cunningham-Graham, J. P., D. L. said at the meeting :—

We have substantial grievances. Scotland, to-day, is the most highly taxed per capita of all the nations of Europe. In proportion to the population we have more unemployed to-day in Scotland than there are in England. Every Autumn you see the sad spectacle of the emigration of the best bone and sinew of the Western Isles. And why? Because Scotland lies to-day legally under the heel of England, and every measure for the alleviation of Scottish grievances is legislated for, debated on, and decided by men who know no more of Scotland than I do of the Emperor of Korea. We must change all that. We must do something to wipe away the National disgrace under which we lie in regard to matters such as these. We want a National Scottish Parliament in Edinburgh in order to deal with Scottish measures under the eye and pressure of a Scottish electorate. (Applause.)

Another speaker said :—

We see in our own country here that over two millions of our population are condemned to live in houses of not more than two rooms. We see that unemployment in our own country is higher than in any other European country, and we ask ourselves, are any of the political parties, with their set doctrines and their policies prepared before they attack their problems, are any of these political parties doing anything whatever to alter those conditions? And the answer is most certainly "No."

The resolution passed at the meeting claimed "such powers of self-government as will ensure to Scotland independent National Status within the British group of Nations."

All this will suffice to show the viewpoint of the disinherited Scottish people who want to recover their birthright of freedom. On the other hand, Englishmen complain that they are really governed by Scots—and that not only in politics but, what is of greater importance, also in business. Whatever may be the case in other parts

The National Party of Scotland

It was one of the oft-repeated jokes of the late Babu Motilal Ghosh, printed in his

of India, in Bengal the Jute Kings mostly hail from Caledonia stern and wild, meet nurse not so much nowadays for poetic children as for chiefs who prefer pelf to poetry.

In India the people are under the heels of Englishmen, Scots and the Irish equally. Without any discrimination against or in favour of any of them, they have all been allowed to rule and exploit the country. So Indians are unable to sympathise with the downtrodden Scots from any direct ocular or other evidence. All the same, they wish all success to the National Party of Scotland

God save the King

On the Friday afternoon, the last day of the Lucknow All Parties Conference, the *Pioneer* sent the following telegram to Dr. Ansari, the President of the Conference:—"As the Conference has now accepted Dominion Status will you close proceedings by singing 'God Save the King?' Dr. Ansari replied:—"When India attains Dominion Status your suggestion might be considered. Meanwhile I hope you will join us in singing 'Bande Mataram.'" This reply is instructive. It goes far to prove that much of the talk of Indian politicians about Dominion Status is neither honourable nor honest nor sincere. The acceptance of the principle of membership of the British Commonwealth of Nations should be based almost entirely upon a whole-hearted belief in loyalty to the Crown. To refuse to sing "God Save the King" savours of the seditious.

Thus the *Pioneer*.

The question naturally arises. Were the Boers and Irish Free Staters required to sing "God save the King" before or even after obtaining internal autonomy? It is not known that they were. Why then this insolent suggestion, equivalent to a demand, in the case of Indians?

The utmost that may be expected of a people ruled by aliens is that they will be law-abiding. To demand more is to put a premium on hypocrisy and servility.

The *Pioneer's* demand has its droll side, too. Among the many accomplishments of Dr. Ansari, Pandit Motilal Nehru, Pandit Madan Mohan Malaviya, Lala Lajpat Rai and other leaders, the ability to sing an English song in chorus is not believed to be one. So if in a fit of sweet obligingness they had sung the British national anthem, the noise would probably have been fit for the gods to hear, not human beings.

Residences for High Officials

Questions asked in the Legislative Assembly by Mr. Gaya Prasad Singh relating to official residences in Simla have elicited the information that officers drawing salaries of Rs. 4,000 and 5,000 a month reside in furnished houses with tennis courts kept at the Government expense and free of house and ground taxes at rents between Rs. 1,150 to Rs. 1,430 per season of seven months, whilst subordinate officers have to pay much higher rent for inferior unfurnished houses. That is the way of the world. Friends of the poor, ill-housed, ill-fed railwaymen at Lalcoah who struck, could not obtain any promise from the Government railway authorities that decent sanitary rooms would be provided for them at a fair rent. But higher railway employees have sometimes free quarters and sometimes furnished dwellings at moderate rents. The rule is to "pour oil on only heads." These "small" grievances produce cumulative effects, sometimes called by the name of bloody revolutions.

Musical Education in Bengal

We have received the following communication dealing with the question of musical instruction in Bengal which has given rise to so much controversy of late in the Calcutta Press.

To the Editor, *The Modern Review*
Sir,

You must have noticed in the daily press the intensive campaign that is being carried on against the Vishnupur musicians of Bengal by certain persons who presume to be experts in classical Indian music. The Director of Public Instruction, Bengal, at whose initiative these musical experts have come together to discuss the future policy of musical education in Bengal, is, like most English officials, practically innocent of indigenous cultural matters, and, as such, is likely to be bamboozled by anybody whose knowledge of classical Indian music may be nil but ability to use cultural technicalities with indiscriminate abandon great. Just as those who are the worst at business and shop-keeping are the ablest in "talking shop," so it is in music, in which the ablest in talking music are the greatest infliction when it comes to the practice of music. Unsuccessful artists have a knack of becoming great

critics The nature of the present controversy points to the shallowness of those who are taking a leading part in it. Let me explain.

The question has been raised whether in Bengal one should follow the Vishnupur style or the classical Hindustani style of music in the matter of school education. In this connection the names of Pandit Vishnunarayan Bhatkhande and Srijut Gopewar Banerjee have been brought in, the first to be boosted to the skies and the second to be defamed in the worst fashion. I have taken a good deal of interest in classical Indian music for many years and have studied a little its theory and practice. I fail to understand what our learned musical talkers at the Writers' Buildings mean by differentiating the Vishnupur and the Hindusthani styles; for these styles are fundamentally and, also superficially in most respects, absolutely one and the same. Vishnupur, like Gwalior, Mysore, Lucknow or Hyderabad, is merely one of the centres of classical Hindustani or Indian Music. Of course, there may be points of mannerism and execution in which musicians of certain centres may show certain characteristics; but if the question of musical theory or education is raised, it is utterly imbecile to think that there are differences, worth the name, and the ink that is being spent to create the same. Mr. Dilip Kumar Roy, who is taking a leading part in this controversy (propaganda?), and his disciples are probably mixing up their likes and dislikes of individual musicians with differences of musical style. Style is too great a word to be used where one prefers the singing or the looks of one musician to those of another. Any one who has read the books of Bhatkhande and Banerjee would notice the great similarity between the method and theory followed by the two musicians. As to style of singing, Bhatkhande has none, for he does not sing very much and is only a theorist. Banerjee, on the other hand, is a finished singer, the Doric grandeur of whose execution of the great *Ragas* and *Raginis* has ever been a source of inspiration to the younger school of Bengali *Dhrupad* and *Kheyal* singers, to whom the contortions, shrieks, and *Sinhanada* indulged in by non-Bengali and some Bengali *Ustads* and pseudo-*ustads* have been a nightmare and a torture. Srijut Gopewar Banerjee has written many books which have been acclaimed as scholarly and thorough, and the lessons

contained in his books are easily followed by all students. His pupils number in hundreds and though they may not come up to the expectations of Mr. Dilip Kumar Roy, they are bringing about a revival of *Dhrupad* and *Kheyal* in the field of Bengali music which has long been occupied by whining and long drawn *Kirtans*, rustic *Bauls*, *Ramprasadis* and *Bhatialis* and the songs of the modern stage dramatists of Bengal, which approached more the English Rag-time than the Indian *Raga*. By his ceaseless efforts and untiring school work S. J. Gopewar Banerjee has kept the flame of classical music alive in Bengal. No one has greater knowledge of the musical *forte* and *foible* of the Bengali youth. I am surprised to see how insanely ungrateful we can be in Bengal. Instead of paying his due homage to S. J. Gopewar Banerjee we are enjoying the sight of musical urchins pelting him with cheap insults, thereby injuring him and his art in the eye of the public of Bengal, who, unfortunately, take their cultural tips from the columns of certain rabid dailies in English and vernacular whose ignorance in all matters is surpassed only by their audacity. Among the critics of S. J. Banerjee, we find some whom we noticed singing out of tune and competing for school prizes only the other day. Them we shall leave on one side and proceed to the leader of the clique, Mr. Dilip Kumar Roy. Few men within recent memory have rivalled Mr. Roy in making indiscreet grabs at cultural *gurus*. His wise dissertations on European music, etc., which invited such merciless snubbing from Mon. Romain Rolland in *Current Thought* and *Prabuddha Bharata*; his dignified silence when mistakenly referred to in the Press as B. Musc and Doctor of Music, though he holds not even a diploma of any good, bad or indifferent musical institution; the slimness with which it has been made to appear that the article, entitled "The Function of Woman's Shakti in Society," published in *The Star* for July last, is "by Dilip-Kumars Roy"; etc; all go to militate against any view of Mr. Roy as an impartial, unbiassed and frank assessor of social and individual values. I should also like to point out here that, judging by either his career or his musical ability, one has no reason to accept Mr. Dilip Kumar Roy as an authority on styles of Indian Music. I have often listened to his singing, in which he

displays an amazing attachment to the easiest of *tals* and the cheapest of decorative melodies which are half *thumri* and half *kirtan*. If one day I could hear him execute a perfect *Alap* in *Sri Rag*, *Lalit* or *Multan* or sing faultlessly in *tal* to *Surfacta*, *Dhamar*, *Ayatheka* or *Madhyaman* in pure *Dhrupad*, *Kheyal* or *Tappa-thumri* style, I should probably die of surprise and shame: surprise for reasons obvious and shame for having misjudged him.

Lastly, one word to the D. P. I., Bengal.

Vixere fortes ante Agamemnona
Multi; sed omnes illacrimabiles
Urgenter ignotique longa
Nocte, carent quia vate sacro.

Bhatkhaunde is no doubt great; but let not those who have also served die unsung and unlamented; because a blind man does not sing of them.

Yours, etc.
Gra. shopper

Black hole in the Punjab

Shriyut Sundarlal of Allahabad has contributed an article on 'Black Hole' in the

Baba Jagatsing aged 100 years
An eyewitness

Kalyan-da-khub, Ajnala the well in which
282 dead bodies of Indian
soldiers were thrown

Kalyan-da-Burz, Ajnala where 45 Indian
soldiers died of suffocation due
to want of air

Punjab' to the August number of *Vishal Bharat*. He has given extracts from Frederick Cooper's book 'The Crisis in the Punjab', which describes the awful tragedy in detail. The article is illustrated with the portrait of Baba Jagat Singh, who was an eye witness

of this terrible incident and two other photographs which are reproduced here.

Professor Levi's Lecture at Madras

The lecture which Professor Sylvain Levi delivered at Madras under the auspices of the Sanskrit Academy contained a suggestion and an exhortation, indirectly conveyed, that Indian students should go to Japan, Java, Bali, etc., to study the cultural achievements of their ancestors. Some sentences from his lecture are quoted below.

He began his Sanskrit studies in 1881, and read some parts of *Mahabharata*. It happened, just as he was a beginner, some inscriptions came to be discovered in Cambodia and Indo-China. There were stones with enigmatic figures. It was found that they were Sanskrit words and not only Sanskrit, they were beautiful pieces of a Sanskrit Kavi. He had never heard that Indian Civilisation spread so far away from India. It was a work of poetry which was evidence of the intensity of Indian Culture in that far away Indo-China.

Regarding Japan he said :—

Last year, he visited the oldest temple in Japan and he heard there Buddhistic music with Sanskrit texts in Chinese characters. It was a beautiful stanza. He heard that that song had been sung in the 8th century by a Japanese monk who had been to China to learn a little of Sanskrit. In Japan, they could still find perhaps the oldest Indian song preserved.

The learned Professor added :—

His wonder was that, in visiting many countries in the East, he never met any Hindu student anywhere there. He noticed so many Indian students going to Oxford, Cambridge, London, etc., for studies. On the other hand, there was a side of Indian activities where India of a thousand years ago had been doing wonderful work, about which so few of Indians know anything. If some Indians would go there and start some research, they would get unexpected results. In Java, they found in the remotest villages statues of old Indian *murtis* such as Siva, Parvati and Ganesa. Even Muslims went there and offered puja every day with flowers exactly as in India. They had something like 250 images out from the *Mahabharata* and the *Ramayana*. Rama and Sita were as familiar to them as to Hindus here. The old Javanese writings were written in a particular language called *Kavibhasha*, full of Sanskrit words. What they knew of Bali was very little. The Dutch became masters of the Southern part of Bali only thirty years ago. A Dutch scholar went there for a short time in 1876, and he wrote a kind of Sanskrit literature in Bali, which was published in a Dutch paper, and then translated into English. He (the lecturer) went to Bali and found most cordial help from the Dutch authorities, who invited the local scholars to talk with him (the lecturer) and gave him information. In that small island with a population of about a million, they had the same four castes as in India. They had two religions, one *Saiva* and the other *Bauddha* living in harmony. The *Pandits* there were respectable people who knew not a word of Sanskrit. They had

forgotten Sanskrit for over a thousand years, but still they had translations of Sanskrit works. The morning service—*Sandhya*—was performed just as it was performed in India. They were Sanskrit verses, written fairly well, but in complicated metres. He (the lecturer) found a lot of scope for research in that small island Bali.

It is indeed to be regretted that Indian students have not yet done any research work in the countries and islands of Asia where there are evidences of the intensity of Indian culture in ancient times. Professor Levi has done well to draw the attention of the Indian public to this field of work, though it is not one of which all Indian students have been entirely ignorant. Among the younger generation of Indian students of history Dr. Prabodh Chandra Bagechi, Dr. Bijan Raj Chatterjee, Dr. Suniti Kumar Chatterjee and Dr. Kalidas Nag have visited these Eastern lands. But they could not, in the absence of State, University or private research fellowships, stay anywhere long enough to start the work of independent research in right earnest. They have, however, given the benefit of their visit to the public by their speeches and writings. The poet Rabindranath Tagore has long felt the need of Indian students studying and doing research work in Indo-China, Java, and Bali in order that a complete history of India and Greater India may be written some day. It was in his company that Professors Kalidas Nag and Suniti Kumar Chatterjee travelled in some of these regions. If funds had been placed at his disposal by munificent lovers of Indian history and culture, he could have sent competent young scholars to study and work there for years. He has not given up his cherished project yet. It is just possible that with the help of a liberal patron of learning a competent scholar may yet be enabled to proceed to and stay in Java and Bali for a number of years.

So far as his own institution of *Visva-bharati* is concerned, all that may be learnt about Indian cultural enterprise and penetration abroad from Chinese and Tibetan sources is being slowly studied here in a small way by Indian students, as far as funds will permit. The small sum of Rs. 30 per mensem suffices to keep a student of Chinese or Tibetan here. There are surely Indians who can each found at least one such scholarship. Will they not do it ?

Rangoon Ramakrishna Mission Sevashram

The Ramakrishna Mission Sevashrama at Rangoon has published its report for the year 1927. Having visited its charitable hospital, we can testify to its efficient management and great usefulness. The monks of the Ramakrishna Mission are devoted and competent workers and will be able to use all contributions received, however large or small, for the service of suffering humanity. They receive regular help in their work from highly qualified medical practitioners.

During the year 1927 the total attendance of patients at the Sevashram was 1,13,507. This exceeds the total of the previous year by 10,000. All these patients did not belong exclusively to the city of Rangoon; a considerable number of them came from the suburbs and from some remote districts of Burma. This fact goes to show the popularity and usefulness of the institution and to plead for further development of its resources in the future.

The activities of the Sevashram are not limited merely to medical treatment and nursing of the patients. They extend also to spreading among the people elementary principles of sanitation and hygiene by trying to instil into their minds the beneficial effects of prevention rather than the cure of diseases.

The number of patients admitted in the in-door department during the year under review was 1,616. The aggregate of the daily totals of attendance came upto 21,876, and the average daily attendance was 60. The average period of stay in the hospital in each case was 14 days. Some chronic cases, however, had to be kept for months.

At the Out-patients' department the total number of attendance came upto 91,631, including men, women and children.

Some Indian States

According to *New India*, "it is well-known that some of the most leading States in India like Hyderabad, Mysore, Travancore, Cochin and Baroda have decided completely to stand out of the ring formed by Their Highnesses the Maharajas of Patiala, Bikanir and some others. The position of these dissentient states would seem to be that it is unwise and inexpedient for the Indian States to raise any such thorny question as has been raised by Sir Leslie Scott and re-echoed by Sir Manubhai Mehta." It may be interesting to note the population and revenues of these states.

| State | Population | Revenue |
|------------|------------|-----------|
| Hyderabad | 12,471,770 | 768 lakhs |
| Mysore | 5,859,952 | 339 " |
| Travancore | 4,006,062 | 221 " |

| States | Population | Revenue |
|---------|------------|---------|
| Cochin | 979,019 | 71 " |
| Baroda | 2,126,522 | 237 " |
| Patiala | 1,499,739 | 128 5 " |
| Bikaner | 659,685 | 91 5 " |

One of the questions raised by the paid advocates of the Patiala group and the princes of the group is whether their states are in direct relations with the British Crown or with the Government of India. It is easy to see that it would be prudent for the British authorities to avoid giving a definite opinion on this point. If they were willing or, in any case, felt certain that they would have to accede to the demand for dominion status, they would no doubt be inclined to the view that the Indian states were in direct relations with the British Crown. For, by upholding this view they would be able to have a grip over a large part of India even after the passing of the government of British-ruled India into Indian hands. But if they do not feel that they *must* transfer power in India from English to Indian hands, they would not feel called upon to give any decision on the point and disturb the *status quo*, whatever that may be. And after all, as in British India, the police constable is the defacto master, so in the Indian States the princes are as a matter of fact, the heels of the local political officers of the Government of India,—whichever theory one may accept.

The Patiala group are unnecessarily working themselves up into something like fury and acting in such a way as to create bitterness in the minds of Indian leaders where none exists. For, the Nehru Committee's report has been very considerate and courteous to the Indian Princes. Its criticism is directed, not against them, but against Sir Leslie Scott, the counsel engaged by them. As the princes of the Patiala group are not fools, it should be easy for them to understand that no British bureaucrat, advocate or monarch can protect them from the working of world forces. The people of British-ruled India and the people of the Indian States, under the guidance of their leaders, have been trying to move with the times, whilst some Indian princes, represented by the Patiala group, are trying to stem the tide of the world forces. Those who have read history know what the result would be.

Sir Tej Bahadur Sapru's Reply to the Maharaja of Bikanir

Sir Tej Bahadur Sapru's reply to the Maharaja of Bikanir's elaborate attack on the Nehru report is polite, dignified and effective. In concluding his reply,

Sir Tej Bahadur regretted that the perfectly friendly attitude of the Nehru Committee should have been misunderstood by His Highness. His Highness had failed to discriminate between friend and foe, allowing his mind to be affected by visions of disaster looming ahead or by suspicions wholly unfounded. Members of the Nehru Committee did not desire to encroach on the States' liberties or autonomy. On the contrary, they had been over-anxious to leave them absolutely intact. Unlike many critics of the Indian States, the Committee had not even suggested the introduction of democratic institutions, trusting to the growth of public opinion and the interplay of moral influence to have their natural effect. A sheltered existence, either for the Government of India or for any prince, however exalted, was becoming impossible in these days. Sir Tej Bahadur Sapru hoped that when His Highness reviewed the recommendations in the proper perspective, he would realise that he had been somewhat precipitate and ungenerous in the expression of his opinion.

Mr. M. Ramachandra Rao's Reply

Replying to the recent statements made by His Highness the Maharaja of Bikaner and Sir Manubhai Mehta, Dewan Bahadur Ramachandra Rao, President, All-India States Conference, made a statement to a representative of the Associated Press which begins thus :

There is no justification whatever for the complaint made by His Highness that "that political memories are notoriously short and that the services of himself and other princes in supporting the legitimate claims of India towards constitutional advance have not been sufficiently recognised in British India." This is not at all correct. We are aware of the great part played by him and other princes in the Imperial Conferences, the League of Nations and other world gatherings as representatives of India. In my speech as President of the All-India State People's Conference held in Bombay, I made specific reference to their services and to their patriotic advocacy of the cause of India's freedom and her status in the sisterhood of nations, as also to their speeches on various occasions pleading for the constitution of India as a self-governing dominion in the British Empire. The charge of ingratitude made by His Highness is, therefore, altogether baseless and after all, as he himself points out, every man has to do his duty to his country, gratitude or no-gratitude. It is a matter of gratification, therefore, to learn from His Highness that to his dying day it will be a matter of pride and gratification to him that he discharged his duties to his countrymen by help-

ing India in the direction of self-government. He further tells us that the princes had in their hands the opportunity to put a very real spoke in the wheels of political progress in India in 1919 and in the years following. That they abstained from doing so is a matter on which they are entitled to take full credit.

Mr. Ramachandra Rao makes a good hit when in reply to His Highness's demand for specific guarantees for the Indian States he says :

His Highness asks for specific guarantees in the declaration of rights as laid down in the Nehru Report, and I would suggest for his consideration and the consideration of others of his order, the desirability of issuing a declaration of rights for the people of the states. He will then realise what magic effect it will have in securing the support and loyalty of the people to their rulers and their causes.

Professor Sylvain Levi in Calcutta

After a short stay in Rabindranath's Santiniketan, Professor and Madame Levi proceeded to Nepal, and, spending about a fortnight there, returned to Calcutta towards the beginning of September. During their short stay in Calcutta, Prof. Levi visited several academic and cultural associations of the city, and his friends and pupils also had the rare joy of meeting him on the eve of his return home.

RECEPTION AT THE INDO-LATIN SOCIETY

The members of the Indo-Latin Society assembled at the hall of the Asutosh Building, Calcutta University, to receive the distinguished guests, and the Vice-Chancellor, Rev. Dr. Urquhart, accorded them a warm welcome. Dr. Subodh Chandra Mukerjee, M. A., D. Litt. (Paris), delivered a neat speech in French on the value of the cultural relationship between India and France as the representative of Latin culture. Prof. Levi in reply delivered a profound discourse on the universal basis of human culture and pointed out how a nation's contribution is finally evaluated in terms of the services it has rendered to Humanity. From this point of view Latin genius and its modern representative France had played a grand role in history and he was happy to find that Indian scholars were beginning to appreciate the same. He felt that India was growing on diverse new lines of great possibility and he paid in that connection a glowing tribute to

RAJA RAM MOHUN ROY,

The Father of Modern India. Ram Mohun-

said Prof. Levi, was one of the most remarkable personalities of his age. While representing all that was best in Indian tradition, he showed his special genius in a line where the Indians of to-day are weakest—in translating into practice by the force of will the dictates of idealism. Not satisfied with merely ascertaining the ideal, Ram Mohun fought, with phenomenal heroism against desperate odds, to realise his ideal. If India to-day wanted any model to shape her present destiny and future history Ram Mohun should be that model. He was really the first to bring modern India abreast of universal history. A profound scholar in Sanskrit and Brahmanical lore, the Rajah's unbounded intellectual curiosity and insatiable thirst for the discovery of the fundamental unity of the human mind, drove him to study the ancient Hebrew, Arabic and Persian literatures. Ever drawn towards France and a finished scholar in Persian as he was, Ram Mohun might have come in touch with the great French Orientalist Eugene Burnouf (search should be made into Burnouf and other French archives) and also with those who were editing the Avesta at that time. His philological acumen, the rare universality of his outlook and the courtesy he showed towards his Indian as well as European contemporaries opposed to his views, go to make him a great man "in the real sense of the term."

LEVI ON GREATER INDIA

Prof. Levi then described his recent tour through Java and Bali just before coming over to India. The most striking achievement of Ancient India was the building up of Greater India. Even after over eight centuries of separation and nearly five centuries of Islamic domination, these cultural colonies are still retaining their Hindu character and it was high time that Indian scholars paid their best attention to this department of history. He could within the short time that he was in Bali transcribe many of the mantras (in corrupt Sanskrit) uttered by the *Pdandas* or Brahmin priests of Bali and he found the Balinese boys in the schools playing the question and answer game relating to the Mahabharata! Unexpected questions like "Who was the Father of Pandu?" etc., were asked and it had to be replied to promptly. Prof. Levi expressed his hope that historical and archaeological missions would be sent to those parts

regularly from Indian universities and learned societies.

PROF. LEVI AT THE GREATER INDIA SOCIETY

The evening previous to his departure from Calcutta, there was a representative gathering at the invitation of the Greater India Society, Calcutta. Pandit Durgacharan Samkhya-Vedantatirtha, the President of the Sanskrita Sahitya Parishad, presided over it and in the absence of Mr. Jadunath Sarkar, M.A., C.I.E., the President of the Society, Sir Brojendra Lal Mitter, the Advocate General of Bengal, welcomed Prof. and Madame Sylvain Levi. Mr. Van Manen, Secretary Asiatic Society of Bengal, Dr. D. R. Bhandarkar, Prof. Taraporewalla, Mr. P. Chowdhury and others spoke eloquently on the achievements of Levi as an Indologist, and Mrs. K. N. Chowdhury, representing the ladies of Bengal, paid a warm tribute to Madame Levi whose exemplary devotion and constant watchfulness alone enabled the Professor, said Mrs. Chowdhury, to do so much work of enduring value. Mrs. Priyambada Devi, the talented poetess, then offered the humble presents of the Society—Murshidabad silk and a few utensils of Bengal—to the guests and a Sanskrit address was presented to the professor under the joint auspices of the Sanskrita Sahitya Parishad and the Brihattara Bharata Parishad followed by eloquent extempore speeches in Sanskrit.

The Honorary Secretary finally explained the origin of the Greater India movement and showed how much it owed to the inspiring examples of Prof. Levi, whose whole life was consecrated to the reconstruction of Greater Indian history and that it was a rare fortune for the members of the Society to have that chance of entertaining Prof. and Madame Levi in their midst.

Prof. Levi in reply, a polyglot that he was, spoke first in French, then in English and finally in Sanskrit to the great joy of the audience. He thanked the ladies and gentlemen for their kind words and blessed the young band of workers of the Society who were trying to awaken the interest of the world in the history of Greater India. He assured all help, as the President of the Asiatic Society of Paris, and wished all success to the Greater India Society. He was presented with the publications of the Society and was elected its Member.

Professor and Madame Levi left.

for Colombo and will resume their activities in Paris after two years of strenuous work in Japan and the Far East.

The Patiala Interview

The following are extracts from an interview "granted" (or sought) by His Highness the Maharaja of Patiala to Reuter's representative at Montreux:—

They were profoundly convinced that the paramount and uniting influence of Britain was the one link between British India and the Indian States.

The Princes, he declared, did not desire to add to the difficulties of the progress of British India towards self-government, and wished nothing more than to live in harmony with British India and to co-operate with its Government in promoting the progress of the whole of India.

"It is most regrettable," he said, "that the All-Parties' Conference did not reciprocate our attitude of friendliness, but went out of its way to settle our future without consulting us. The time has, therefore, come for us to make clear what our political relations are with the British Crown, with which our ancestors entered into engagements which we are proud to honour, and that we and our people will never submit to be governed by British India over many parts of which our States formerly held sway.

"The proposals of the All-Parties' Conference have only strengthened our unalterable determination to safeguard at the cost of any sacrifice our separate political existence.

"While we offer friendly co-operation with British India we and our people will not tolerate for an instant British-Indian dictation.

"The great majority of Indian States are appealing to Britain to rectify the present position before it is too late and recognise in any future scheme of governance of India that British India and Indian States are two entirely different entities between whom it is the responsibility of Britain to see fairplay."

The Maharaja added that the Princes were entirely unanimous in holding that the present system invariably, in the last resource, sacrificed the interests of States to the interest of British India. They had yet to arrive at complete unanimity in regard to the best remedy for the difficulties. Very many of them believe that the solution would be along Federal lines.

They were endeavouring to devise a scheme which would secure the participation of States in All-India affairs but which would leave the States and British India alike free to pursue their own lines of development in domestic affairs.

The Maharaja will get a reply from the All-Parties leaders. In the meantime it may be asked whether the bonds of race, language, religion, country and culture are not connecting links between the Indian States and British-ruled India. When Britain did not exist as one entity, when Britons

roamed in the woods in a state of savagery, when the civilized traders from Britain had not set foot on Indian soil, when these traders had not become rulers of India—during all these periods there were links between the people of different parts of India. But, in the opinion of the Maharaja at present none of these links exist; the one only link is British paramountcy or India's bondage. It is much to be regretted that this potentate is not free from the snobbery and servility from which many plebeian Indians are free and that he does not possess the national pride and national self respect which they possess.

The leaders of British India also wished to live in harmony with the princes and people of the Indian States.

The All-Parties' Conference knows that it has no power to settle the future of the Indian States. It has only drafted a scheme. The objections and wishes of the princes and the people of the States are sure to be noted and proper action taken. The conference did consult representatives of the people of the States. Had it asked the princes to send their representatives to it, would they have condescended to do so? We trow not.

The Maharajas and their people will, of course, never submit to be governed by British India over many parts of which their States formerly held sway. But the people of British India and their leaders have never desired to govern the Indian States. So, so far as these people are concerned, the Maharaja's bravado was superfluous. But British India also means the white men who constitute the Government of India. The princes have to submit to be domineered over by the white residents and political agents appointed by the Government of India. Such submission must be taken to increase the political stature of the princes.

As to the arrogant reminder that the princes held sway over many parts of British India, that must be taken by us as meant to be a great compliment. We may return the compliment by reminding the Maharaja that men of his class have often to be greater slaves to Britishers than the direct subjects of Britain.

No responsible Indian person in British India has sought to destroy the "separate political existence" of the Indian States or subject them to "British Indian dictation." Uncalled for bravado again, therefore:

The Maharaja wants Britain to have for ever the responsibility (and the power) to see fairplay between the Indian states and the British provinces. This exactly echoes the wish and opinion of British and Anglo-Indian diehards. If His Highness had not been a Maharaja, he would have been made a Rai Sahib for the resonant quality of his mind.

"Federal lines" have not been dismissed by the All-parties' conference, nor are they inconsistent with its report.

The leaders in British India also want to devise a scheme which would secure the participation of States in All-India affairs but which would leave the states and British India alike free to pursue their own lines of development in domestic affairs. But the Maharaja should understand that the people of India cannot agree to the participation of autocratic Princes in all-India affairs. The princes should come as the freely chosen representatives and servants of their people. When a really independent king like His Majesty Amanullah Khan has called himself the servant of his people and has conferred civic and political rights on them, the non-independent rulers of the Indian states should be able to see the wisdom and propriety of being the real servants of their people.

Indian States Subjects Deputation to England

The Indian states' subjects deputation to England is a timely move. The government and people of Britain ought to know their case. The Maharajas' case is different from theirs.

Jaipur People's Open Letter to Viceroy

A printed copy of "an open letter to His Excellency the Viceroy of India" has been sent to us from Jaipur, Rajputana, by Mr. A. K. J. Lall. "I need not tell you," says he in a printed covering letter, "how much the people of Jaipur are oppressed and harassed by foreign officials of the State who have no stake in Jaipur." The very first words of the letter proper are, "We the oppressed and humble subjects of the Jaipur State"

This open letter, dated August 3, 1928, enumerates many grievances and prays for enquiry and redress. It complains of un-

employment and depression in all branches of trade, and "non-safety of the lives and properties of the people." Representations have gone unheeded. Vast sums are spent on roads, electrification, polo grounds, etc., but no care is taken to improve the condition of the agriculturists, or to develop trade and industries. State banks, agricultural banks and co-operative societies do not exist. About half the total revenues of the state are swallowed up by the Public Works Department, but no amount worth the name is spent on compulsory education. The Administration Report is kept confidential. Comparatively cheaper Jaipur talent has been ignored and less competent non-Jaipurians with exorbitant salaries have been imported. What is worse, poorly paid and efficient Jaipurians have been turned out to make room for costly outsiders, of which fact an example is given.

Jaipurians are not taught or given any chance to utilize the abundant mineral resources of the state. P. W. D., Excise and other contracts are given to outsiders.

During the time of His Highness the late Maharaja (the present one is a minor) state money was utilized by local businessmen. But under the present British administration a branch of the Imperial Bank has been opened, into which all state monies thus becoming unavailable to local business pass. The establishment of a state bank would have been the proper thing to do.

Though the expenditure of the police department in salaries alone has gone up four times, crimes have increased abnormally. "The number of goondas has greatly increased and the honour of women and children of respectable citizens is without any protection."

"No draft legislations are placed before the public." The condition of the bar is pitiable.

These are some of the grievances narrated in the open letter. The memorialists want a legislative assembly with three-fourths of the members elected by the public, presentation of the draft budget to it for sanction, the city municipality to consist of elected members only, a regular scheme of revenue boards and municipalities for districts and towns with elected bodies, immediate separation of revenue, judicial and executive functions, Jaipurians only to be taken into the State service, removal of the bar on printing presses and public meet' establishment of a state bank, appoi:

of a public commission to enquire into trade depression and unemployment, and the making of primary education compulsory throughout the state.

It is not known whether this open letter reached His Excellency the Viceroy and what action, if any, he took on it. The grievances stated therein are serious enough to deserve a thorough enquiry.

By way of elucidating the state of things in Jaipur, a recent appointment in the Jaipur Maharaja's College may be mentioned. It is said that, more than one first class M. A. in two subjects, besides other holders of Master's degrees, (for example, Professor M. R. Oak, a first class M.A. in philosophy and also in English) have been serving for years with credit and efficiency. But the principal's post having recently fallen vacant, a gentleman has been imported from outside to fill this office who passed his B. A. in the second division and his M. A. in the third division and served as professor in the Dera Ismail Khan D. A.-V. Intermediate College. He gets Rs. 500 as principal and Rs. 150 as officiating Director of Public Instruction. If our information be correct, the appointment of this gentleman is a mystery.

Abhoy Ashram

The creed of the Abhoy Ashram, given in its annual report for 1927, is "self-realisation through the service of the Motherland," and its seven vows are, those of fearlessness, of truth, of love, of non-stealing, of activity, of purity, and of patriotism. The report gives the history of the Ashram, its constitution and the creed. It has adopted the following programme of work :—

1. To preach the gospel of nationalism all over the country, absence of this spirit being the main cause of our political serfdom.
2. To promote Hindu-Muslim unity based on the consciousness of common nationalism.
3. To remove untouchability, hereditary caste distinction and other social evils, as are irreligious and opposed to the growth of Indian nationhood.
4. To develop hand-spinning and hand-weaving with a view to remove mass unemployment and chronic poverty; to stop foreign exploitation and economic slavery; thus preparing the country for the struggle of Swaraj.
5. To spread education on national lines, with a view to awaken mass consciousness and train up a band of national volunteers.

In pursuance of the above programme its activities have been classified under the heads of Charkha and Khaddar, medical work, removal of untouchability and hereditary

caste, national education, dairy and agriculture, and other correlated activities.

To show that *Khadi* adds to the income of and carries a message of hope to the poor, the report gives the following figures of distribution of remuneration during 1927 :—

| | | |
|--------------------------------|-----|-----------|
| (a) Weavers | ... | Rs 28,500 |
| (b) Spinners | ... | 27,000 |
| (c) Ladies for embroidery work | ... | 1,736 |
| (d) Washermen | ... | 3,233 |
| (e) Tailors | ... | 6,036 |

Total Rs. 66,525

The *Khadi* department of the Ashram has 63 whole-time workers in 20 production and sale centres.

During the year under report the Dyeing Department has been successful in bringing about further improvement in dyeing and printing. The Department has now under construction a Chemical Laboratory. With its completion and necessary equipment, Ashram dyeing and printing is sure to achieve further and rapid progress. In the rich variety of the stuff, its growing adaptability to varied tastes and in the improvement of dye and print, is amply demonstrated the potentiality of Bengal *Khadi* to be well nigh immense.

Its medical work is carried on by means of an out-door dispensary, an indoor hospital, a medical school, and a Seva Samiti. The medical school is residential. Its object is to train up a band of national medical missionaries, who, after the completion of a four years' course, are expected either to become members of the Ashram or to settle in different parts of the country. The number of students is at present 20 and they are all kept free. In admitting students preference is given to candidates belonging to the so-called depressed classes.

The members of the Ashram, giving up the special privileges due to the accident of birth, have abjured caste both in practice and profession.

The eradication of the evil of untouchability and caste, eating into the vitals of the Hindu society and a blot upon its fair face, has been an article of faith with the Ashram; and unrelenting are the efforts of the Ashram at its removal. Apart from the Ashram itself, scrupulous non-observance of caste is enforced even in the Indoor Hospital. There patients, at meal time, irrespective of castes, are seated in the same line and partake of the food cooked and served by a Namasudra. With a view to remove hereditary caste distinction, inter-caste dinners are occasionally arranged in which Brahmins and the lowliest of the lowly, the Methars, are seated side by side in the same line.

With the same end in view Primary Schools are being started in villages among the so-called depressed classes.

In addition to the Sikshayatan in the

Workers of the Comilla Abhay Ashram with Sri Rabindranath Tagore

Ashram premises in Comilla, its headquarters, there are at present seven primary schools, mostly in adjacent villages.

At present it produces about half its requirement of rice in its own fields, and some vegetables in its gardens hardly sufficient to meet its needs. It has also the nucleus of a dairy with 9 milch cows. Friends of the institution can greatly facilitate its work by helping it to buy more land and more milch cows.

It has a library in the town of Comilla and another in the Ashram premises with a free reading-room. It held monthly meetings for discourses on religious, political and literary subjects in the Mahesh Prangan, a spacious covered quadrangle given to Comilla by Babu Mahesh Chandra Bhattacharya, the richest and most public-spirited merchant of that town.

For carrying on its work in various directions, the Ashram requires pecuniary and other kinds of help, which it richly deserves.

Sanguinary Riots at Khargpur, Godhar, Etc

Not unoften has it been observed that successful efforts made by the different

communities in India to compose their differences have been followed almost immediately by bloody riots between some of them. These are generally ascribed to the innate cussedness of our people or to Accident. If these hypotheses be correct, there must be great method in our cussedness and in Accident. Perhaps Accident is a deity like the Greek deity named Nemesis. In that case it would be prudent to propitiate this deity by offerings like those made at the shrines of the goddesses of small pox, cholera, influenza, etc. But the previous question is, where are the Accident temples to be built and who are to be its priests? Should they be located in or away from the imperial and provincial capitals? Should the priests have nothing to do with those entrusted with the duty of maintaining law and order?

Contribution to League of Nations

GENEVA, SEPT. 28.

Lord Lytton, speaking at the Assembly, protesting against the increased League expenditure, said there was nothing in the present circumstances to justify an exceptional expenditure. Increase was caused by inadequacy and defective nature of method of controlling and limiting spending.

found it very difficult to justify the increased contribution.

There was a widespread view in India that the League was not of much value to the Eastern countries and its tendency was definitely in the direction of strengthening the European interests at the expense of other countries and races.

He reminded the Assembly that the question was often discussed in India whether the membership of the League was really worth the price and feared that time might come when the Government of India would find it impossible to answer in the affirmative. He felt bound to protest on behalf of the Indian delegation which was profoundly dissatisfied with the year's budget.—"Reuter."

In the views expressed in the above telegram Lord Lytton has voiced the opinion of India.

Afghan Independence Day

Ten years ago, on the 26th of August, Afghanistan won complete independence. The anniversary of that great day was recently celebrated at Paghman, the summer capital of Afghanistan. In reply to an address presented to King Amanullah Khan, His Majesty made some observations, from which some sentences are culled below.

"I wish all of you to be independent externally as well as internally. I cannot here repeat the assurances I have already given you that I would sacrifice my very life in your service and in keeping Afghanistan independent."

Indians should ponder deeply over the words we have italicised above.

Addressing the Afghans assembled in front of him, King Amanullah observed:

"Independence has to day raised your status not only in this world but also in the next."

Amanullah's Reforms

The *Jirgha* or grand assembly convened by King Amanullah has arrived at certain decisions under his guidance. All ceremonial uniforms and dress are to be abolished, and all officials, including the King and Queen, are to be addressed in correspondence as "My dear—." Possessors of medals can keep them as souvenirs, but are not to be allowed to wear and flaunt in public medals other than those awarded for military service. Deoband in North India is a noted centre of Islamic theological teaching. His Afghan Majesty has evidently found men trained there undesirable specimens of humanity. So it has been decided that "all Deoband Ulemas should be turned out of the country and

not allowed to re-enter Afghanistan, owing to the likelihood of there being 'foreign propagandists among them.' Afghan Ulemas returning from Deoband are to be kept under observation for a period. Government servants will not be eligible for election to the Afghan National Assembly, and perhaps will not be nominated to it. Amanullah has adopted a good plan for preventing corruption among officials. When they enter Government service, lists are to be made of their property, and accounts are to be kept subsequently of their income and expenditure. Perhaps what is aimed at is that, if an official's accumulated wealth be found inordinate according to these lists and accounts, he may be prosecuted either for misappropriation of public funds or for accepting bribes, or both.

It may be stated here incidentally that several years ago a high officer of a certain department asked the present writer to publicly challenge a certain Minister to state the amounts of his debts and his bank balances, (1) at the time of his appointment and (2) on the date in question when the officer had been in service for an appreciable period, and to explain how he had been able to wipe off his debts and amass so much wealth, his salary and other legitimate incomes being what they were.

Our November Number

Owing to the ensuing Durga Puja Holidays, our November Number will be published and mailed earlier than usual, that is, on the 20th. of October current.

Our Durga Puja Holidays

Our account of the Durga Puja Holidays the office of *The Modern Review* will remain closed from the 22nd October to the 4th November, both days inclusive. Orders for the magazine and our other publications, letters communicating changes of address, literary contributions, etc., received during this period will be dealt with after the re-opening of the office.

Dr. CHARLES F. DOLE

An Eminent American Religious Teacher and Writer

By J. T. SUNDERLAND

[Editor of *The Modern Review*.]

I send you the following article about, or written in appreciation of the Reverend Doctor Charles Dole, one of our noblest Americans, who died in Boston a few weeks ago. It will show your readers that some Americans are not materialists or money worshippers, but are in sympathy with the highest ethical and spiritual ideals of your noblest Indian religious teachers. Certainly it will show you that not all Americans are like Miss Katherine Mayo. J. T. S.]

Wrote Philip Gilbert Hammerton:

I compare the life of the Intellectual to a long wedge of gold—the thin edge of it begins at birth, and the depth and value of it go on increasing till at last comes death which stops the suniferous process. O, the mystery of the nameless ones who have died when the wedge was thin and looked so poor and light! Oh, the happiness of the old men whose thoughts go deeper and deeper, like a wall that runs out into the sea!

Charles Dole lived past eighty, truly a golden life, the "depth and value of it" increasing till death came. Happily the end did not arrive until he had written and published the beautiful story of it, "My Eighty Years."

What a story it is! A New England boy, reared in a religious home where duty and love ruled; a graduate of Harvard

and Andover; professor of Greek for a year; pastor of an Orthodox Church for three years; forty years minister of a Unitarian Church in a suburb of Boston; eleven years free from church responsibilities a minister at large; and during all the long adult years of his life a fearless seeker for truth, a devoted lover of men, and an ethical and spiritual teacher giving forth constantly by voice and pen a message as high and fine as that of Channing.

When the end came, how did he go?

He went down
As a kingly cedar, green with boughs,
And leaves a lonesome place against the sky.

Who shall fill his place?

As I think of Mr. Dole, he seems to me above all else to have been four things—a Thinker, a Humanist, a Worshipper, and a Fighter.

What a Thinker he was! A few months ago I put the question of one of the most brilliant to your younger Unitarian ministers, who had had fine training at Harvard and elsewhere: "Who in our ministry or in that of any of the other churches, do

regard as our best religious Thinker today—I mean the man whose thought seems to you the freshest, the most alive, the truest, the deepest, the most worth while?" He answered: "Dr. Dole." Would I have answered the same if the question had been asked me? Yes.

Charles Dole seldom quoted though a wider reader. He seldom mentioned the thought of others, either to approve or disapprove, but if for either it was almost certainly for commendation, not for criticism. He never posed as one who had a philosophical or theological system to propagate or defend, much less as one bent on overturning the theological or philosophical system of somebody else. He was less an echo than almost any other man in the American pulpit. First, last, and all the while, he was simply a thinker of his own honest thought; and whether you liked his thought or not, you had to confess that it was as fresh as morning sunlight, as fresh as the water from a deep well. And if you listened to it or read it in a really candid mood, you generally found yourself compelled very soon to like it, it was so candid, so sincere, so genuine, so penetrating, illuminating and appealing, so modest and yet so profound, and so true to the truest and deepest in your own soul.

What a Humanist he was! Not a Humanist of a negative kind; not of a kind that drops out any of the great, deep ethical or spiritual realities of the past, calling that progress; but of the kind that keeps every faith, every hope, every ideal, every incentive that ennobles humanity and comforts the deep heart of man,—a mighty Humanist of the type of Channing, Theodore Parker, Jenkin Lloyd Jones, and, if I may add poets, Frederick Hosmer and Samuel Longfellow—a kind, of which, from the first the Unitarian movement in this country and England has been so gloriously full. No man ever lived that was more deeply interested than was Dole in everything calculated to benefit humanity, to cure the ills of humanity, to lift up humanity to its finest, strongest and best. Every sermon he ever preached showed this; so did every book he wrote; so did all his splendid work in the Boston Twentieth Century Club, and other lines of public activity. Nor was his humanism confined to Boston, or New England, or America, or the white race; it was big as the world—

it reached out to all men everywhere who suffer or are wronged.

What a Worshiper he was! It seems to me I never saw any other man to whom God was so near and so real—so much the joy and inspiration of his every day and every hour, so truly the very life of his life—the upper sky of all his dreams, of all his thoughts, all his hopes and faith,—the splendid meaning of his own life, and humanity's life and of the world. The glorious thought which makes man a child of the eternities, not a mere insect of a day, and which makes the universe not a blind idiot's dream, but a living Cosmos, full of infinite significance from the smallest electron to the vastest sun in space. He looked so deep, so deep, into the heart of things, as to see that

There is enough of God
In the heart of a rose.
In the smile of a child.
In the dewy blossoms of dawn,
To prove

That Beauty is the Soul of Him.
That Love is His Sceptre,
And that all things created by Him.
Face not the night,
But Eternal Morning.

What a Fighter he was! A physical fighter a brute fighter, a fighter to kill or wound or injure men? Never! Never! Only little men, moral cowards, men who are only half men and the other half beasts yet fight in that way. Dole was a moral fighter,—and it takes bravery infinitely greater than that of beasts to do that kind of fighting. When the whole nation had gone insane with fury to go across the sea and kill Germans, he had the intelligence, the patriotism, the honor, the almost superhuman bravery quietly to say, "No!"

Killing Germans is wrong—just as wrong if we kill millions of them in war as if we murdered them one by one with pistols and knives. Furthermore it can accomplish no possible good for France, or Britain or ourselves, or the world; but only evil, evil, evil to everybody.

Dole had the superb, the almost unbelievable courage to keep his sanity and say just that, while the multitudes around him, many of them his dearest friends, called him "Red," a "Bolshevik," "a traitor to his country" and other names the bitterest that they knew. It was a terrible experience; it was a crucifixion like that of Calvary. But he no more shrank than did Jesus. Such men are the greatest possible heroes, who shine like stars in the history of the world.

And Dole was that kind of a hero, not only in opposing the futile and horrible war of 1914-18 but all war as unnecessary in this twentieth century, and every other evil that afflicts humanity. Wherever there was a man-fight as distinguished from a beast-fight that is, wherever there was a fight for freedom, for justice, for right, for truth, for striking chains from human bodies or human souls, in a word, wherever there was a fight that asked men to carry it on with love and not with hate,—there was Dole, always, and in the front rank. And he was as mighty as he was brave. He did not shout and swing a big battle-axe and make a great commotion; but he pierced the armor of his foes with the lance of his keen and irresistible thought and thus was wonderfully effective in winning the battle.

I think we may look upon Dr. Dole as in a sense our American Mahatma Gandhi or, upon Gandhi as India's Dr. Dole. Dole is not so famous as Gandhi; I am sure it would be for the world's spiritual enriching if he were. I think we may regard the religion of the two men as essentially identical. While Gandhi is the child of Hinduism, he draws his faith not alone from the Bhagavad Gita and other Hindu sacred literature, but also from the Christian Sermon on the Mount and all other inspiring religious books. While Dole was the child of Christianity, he drew his faith not alone from the Bible, but also from the literature of all the religions of the world and all humanity. The world is amazed and electrified at the absolute sincerity and moral fearlessness of Gandhi. Dole was hardly less sincere or fearless. Gandhi is a pacifist. Dole was the same. That two such men should be called by that name ought to lift it up to be one of the most shining and honoured names in all the world. Gandhi believes that love is the greatest of all forces, and that sometime, men will find it out and it will rule the nations. This was Dole's splendid faith too. This proclaims them both true brothers of Jesus.

I remember reading a fine story about Rev. Frederick W. Robertson, of Brighton, England, that most chivalrous knight of the spirit, that Lancelot, that King Arthur, among Church of England preachers. A tradesman

of Brighton who had sat for years under his magnetic words and felt all their mighty uplifting power, tells us that after Robertson's death he placed a fine picture of him in the back room of his store and for years whenever he felt a temptation in his business to do anything that was not in the strictest sense right, he made himself go back and take a look at that strong face and into those pure eyes; and at once the temptation was gone, and he found it impossible to stoop below high honor. Dole was another Robertson. His influence was just the same. It always seemed to me that in his presence it was impossible to think a sordid or low thought, or to have a feeling that was other than fine and sweet, or to be a coward, or to hate anybody, or to be indifferent to any human interests. If ever in his presence you were tempted to say a mean word or think a mean thought, his clear, pure eyes looked straight down into your soul and said to you with infinite tenderness, "No! No! No! Life is too high and beautiful for that." And then all the little devils of low thought flew out of your mind, ashamed and bright angles of good thoughts came in their place. I am sure Charles Dole though no longer seen in the flesh, will go on and on and on, longer than any of us know, putting integrity, purity, sanity, sincerity, honor and moral strength into all who personally knew him, and also into thousands who only knew of him, or read his words of simple beauty and spiritual penetration so marvellously like the words of Jesus.

Thank God for that daring, that luminous son!
Who "saw things straight and saw them whole"
Whom with pride we call our Charles F. Dole!
With conscience sound
As the world is round!
With love as wide
As the ocean's tide!
With courage true
As the sky is blue!
A glorious knight
Of love and light.
Of manhood's worth
And reason's might!
God give us men like Charles F. Dole!
And then, and then
As the seasons roll,
They shall nearer bring the shining day
When war and hate shall pass away.
When Love shall over the nations brood
And earth become the Kingdom of God.

PROGRESS IN THE CHEMISTRY OF COLLOIDS AS APPLIED TO MEDICINAL AND INDUSTRIAL PURPOSES

By DR. R. ZSIGMONDY

*Professor of Chemistry at the University of Goettingen.**

MOLECULES of sugar are able to diffuse through parchment paper; so, too, when dissolved in water, can kitchen salt, soda, permanganate of potash and a number of other soluble chemical compounds. By evaporation, solutions of sugar and salt form crystals or crystalloids, which, in turn, dwindle away and become absorbed on introduction into a solvent.

Opposed in nature to crystals, there exists a series of substances which, in solution, do not diffuse through parchment. These substances were named by Graham, who was the first to recognise the significance of their characteristics colloids (from the Greek Kolla, glue) because glue, gelatine, gum arabic etc., are typical examples of this class of compounds. Before dissolving, colloids swell in the presence of a solvent, the fluid penetrating into their substances. Hence, the interstices in colloids are greater than in crystalloids.

Colloids play an important role in medicine and in technology. All living beings consist mainly of colloids, protoplasm, cellulose, haemoglobin etc., being fundamentally colloids: It is, therefore, readily comprehensible that the study of colloids is frequently of decisive significance in dealing with the problems of biology and medicine. Coagulation of the blood, for instance, as well as of egg albumin under the influence of heat, is a colloidal phenomenon: so, too, in essence, as the well-known Wassermann reaction. One result of research in connexion with colloids is Lange's discovery that the characteristic coloration of gold dissolved in colloidal water and mixed with spinal fluid provides clear evidence of the existence of certain diseases. Colloidal silicic acid is employed in making pharmaceutical preparations. Colloidal silver is used for various medical purposes, e. g., for intravenous injections, for ointments etc. Finely

pulverised "silversol" (a colloidal solution of silver) impedes the growth of bacilli.

The most important of the natural colloids is caoutchouc; consequently, as might be expected, the caoutchouc industry has recently come under the influence of colloid research, the substances added in the manufacture being selected according to the teachings of the new science.

The various artificial silks are particularly successful products of colloidal research. The leading description is, at present viscous silk, which aggregates 85 per cent. of the total production. Colloidion silk is manufactured in the following way; the colloidion—produced by treating cellulose with nitro sulphuric acid is dissolved in a mixture of alcohol and ether; and from this mixture the silk is spun. Acetate silk is made by the acetyl-cellulose process; it lends itself admirably to dyeing and, in appearance etc., comes nearest to real silk; it is accordingly also the dearest of the artificial products. The latest development in artificial silk manufacture is the cellulose-ether process; it is, at present, in the experimental stage, but there are interesting signs of approaching success. The consumption of artificial silk is now only 1.65 p. a. as compared with 8 p.c. cotton and 17.5 p. c. wool; if it proves possible to better and to vary the features of this silk surrogate, its consumption will rise very considerably.

Another important branch of industry in which colloidal chemistry has now begun to play a role is asphalts and tars. These substances are themselves colloids; and the object of the research is to increase their applicability and their durability. Considering the importance of road-building in these days of motor-cars, this research is a matter of very particular interest.

Again, in the production and working of the raw materials used in ceramics, in the forming and melting of the various constituents, the colloidal processes are of

* Professor Zsigmondy was awarded the Nobel Prize for Chemistry in 1926.

great significance. As, however, the manufacture of earthen-ware has been practised for thousands of years in the Old World and has consequently been brought empirically to a high state of perfection, the new colloidal methods find it difficult to make headway in Europe. On the other hand, in North America, where tradition and prejudice do not stand in its way, the new science, assisted by publications of German colloidal ceramics, has made considerable progress and, having got into close practical touch with the industry itself, has performed achievements greater than almost anything which the old science of ceramics could boast; still more important results may be expected from an extended application of the knowledge acquired through colloidal research.

New light, too, is being shed by colloidal research on the cultivation of the soil

and the manufacture and use of fertilizers. It has been discovered that it is the numerous colloids present in the soil which hold and carry to the plants the soluble inorganic foods necessary for their growth and sustenance. Armed with this knowledge, scientists are about to create a partially new basis for the practice of manuring and of soil cultivation, which will mean a very considerable advance in agriculture and kindred industries.

It is not possible to discuss here all the technical uses of the colloids. Sufficient, however, has already been said to give some idea of the importance of the new science. Besides the industries mentioned in the foregoing, there are many others destined to receive stimulus and improvement from the discoveries of colloidal chemistry, among them being metallurgy and the manufacture of dyes, cement, glass-paper and margarine.

SCULPTURE IN ORISSA

BY SARAT CHANDRA GHOSH

ORISSA'S pride is her ancient sculpture. The very existence of the fine temples of Bhubaneswar, Jagannath and Konarak a few miles off from Puri deserve mention as the best specimens of ancient sculpture in India nay even in the world. The art of carving figures on stone is entirely dying out of Orissa. In fact, it has died out so to say. This art brought our famous ancestors at one time to a unique position among the citizens of the world, but alas those days are gone, and I think gone for ever. Our sculptors were no way inferior to the sculptors of the European countries. The sculptures of the famous Hindu Temple of Orissa are very similar to those of the Gothic structures. The carving of beautiful life-like pictures on stone, viz.—male and female figures, soldiers and dancers with dresses on, lions, tigers, war-chariots, musical instruments, birds, and the like, can be well seen in the beautiful engravings on the Temples of Bhubaneswar especially in those of the Goddess Annapurna, and at the Temple of Konarak too. The workmanship

reached its climax in the Temple of Konarak. This Temple was designed for the Sun-God, but at present there is no diety within it, and it is in a dilapidated condition, singing the sad tale of its former greatness. An observer who happens to go there cannot but shed tears at the sight of this ancient glory of India being reduced to dust from day to day. The British Government has tried its best to preserve the ancient glory from ruin, and has arranged a museum there to satisfy the curiosity of visitors. My words fail to picture the fine engravings on the Temple of Konarak. The closer one sees the more he will be charmed with it. It must be admitted on all hands that this old industry is dying.

Several times I had been to Bhubaneswar, one of the ancient places of interest. Hardly can I find a sculptor now who can even repair the old broken stone figures. There is one man Bairagi Maharana by who knows something of this. With the death of this man the art is to an end, and is sure to die.

several times by the side of this sculptor and saw him carving beautiful figures of Hindu gods and goddesses on black *Mugni* stone and the like. If anyhow this industry be encouraged and improved, the ancient prestige of Orissa will be preserved along with it. In this connexion I humbly suggest that Training classes may be opened with this man at the head, or one such steps be taken as the authorities think fit.

Four miles off from the Bhubaneswar Railway Station to the east, we find the inscriptions of Maharaja Asoka on the Dhoul Hill, which are of great interest as affording model rules of morality and the like. The inscriptions are in Pali character and some of the letters have really been effaced owing to inclemencies of weather. The whole of the inscriptions would have been effaced in course of time had not Lord Curzon, the father of the Ancient Monuments Preservation Act come to its rescue. It was Lord Curzon who kindly visited the place, took steps to construct a roof over these inscriptions to save them from wearing out by rain and sun-shine, and thus preserved the valuable writings for ever. A short trip to the locality will make everyone think that there was once a man who made these rules of morality carved on stone for the future guidance of us one and all, and gave these such a lasting shape, but there are none at the present day, who can even preserve them far from doing such useful deeds at present. It is Asoka who can be well said to be ever living and not dead. I think I shall leave a gap here if I do not say what these inscriptions mean. The principal points in the valuable inscriptions containing the eleven Commandments of Asoka when translated run thus :—

1. Animal slaughter to be stopped.

2. Trees to be planted and wells sunk by the road ; charitable dispensaries to be opened.

3. Missionaries to be sent all round to preach the religion.

4. Every fifth year a Buddhist Council to be held to take steps for preaching the doctrine of Buddhism.

5. Spies to be engaged to inquire into the customs, manners and morality of the subjects

6. Discourses on Religion to be encouraged as affording real solace to the mind.

7. Apathy towards material prosperity and eagerness for spiritual attainments to be fostered.

In this connexion the writings on the caves of Khandgiri and Udaygiri Hills are also worth mentioning. These two Hills are about six miles to the West of Bhubaneswar. The caves were actually carved out by the orders of King Aira during his reign in the fourth century B. C. These caves were fit for human habitation, and many Buddhist monks lived and comfortably continued their silent meditations there for days together. The writings on the caves contain the principal events during the reign of King Aira of Kalinga. He was at first a Hindu but subsequently became a convert to Buddhism. A student of History, will derive incalculable joy by visiting these places of rare interest.

In conclusion, I hope that if proper step be taken to improve this art of sculpture referred to above, it will not only provide food for the millions of our poor brethren, and will enable them to earn a decent sum and thereby live comfortably, but will at the same time preserve the ancient glory of Orissa nay of India.

THE TEMPLE OF THE SACRED TOOTH

A WORLD FAMOUS RELIC

By E. L. WATTS

A building that contains the relic sacred to the largest number of devotees of any faith must, of necessity, have many sacred associations. The fact that the Temple standing by the side of the pic-

turesque lake of Kandy, in the centre of Ceylon, contains what is believed by millions of Buddhists to be the actual tooth of the great Enlightened One, Buddha, cannot fail to appeal to the imagination of even the

most prosaic mind. This relic, guarded with every care, holds a place in the affections of Buddhist followers all over the world, which the westerner can conceive. It is unchallenged in its supremacy. There may be other teeth for which a claim is made, but every true Buddhist will readily acknowledge that the Tooth in the Dalada Maligawa in this Ceylon town, holds a unique place, and to it is due all reverence and worship. Nevertheless, it requires a very highly developed faith to believe that the relic so jealously guarded was once a part of the dental apparatus of a human being. Even Sir Edwin Arnold, whose sympathies with Buddhist life and thought are well-known, writes in his "India Revisited" that it is not the least like a human tooth, and more resembles that of a crocodile or large pig. But the point is that the devout Buddhist still believes it to be genuine, and holds it to be the most sacred thing in the whole world. It is a relic for the possession of which bloody wars have been fought and incredible sums offered. Its safe arrival in the town of Kandy in the sixteenth century has changed what was a well-nigh inaccessible village into the mountain capital of Ceylon. Year by year the abiding place was visited by thousands of pilgrims from all over the East. They braved the dangers of the road, they climbed into the mountain fastness in order that they might see this relic. Here they offered their gold and silver, and precious jewels as a token of gratitude. Legend says that one of the Ninety Kings who ruled Ceylon offered six millions of blossoms in one day to this rapacious tooth, and that another daily offered one hundred thousand blossoms all of one sort, and a different flower each day. The tooth itself is an oblong piece of discoloured ivory, tapering to a point, and about one and a quarter inches in length, and half an inch in diameter at the base. On rare occasions this relic has been exposed to public gaze, as on the occasion of the visit of the Prince of Wales in 1875 and his two sons in 1882. When funds are required for the repair of the temple and exhibition of the sacred tooth is arranged for, and during the time of its exposure, thousands flock to gaze upon it. Miss Gordon Cummings was privileged to see the relic on one of these occasions, and she has recorded her impressions of the scene in the temple. "Within the temple the scene was striking in the extreme, both

as regards its human interest and as an artistic study of rich colouring. For crowds of most reverent worshippers, men, women and children, almost all bringing flowers as well as more enduring gifts of jewels, money, and pieces of silk were all pressing toward the further end of the temple, which was now arranged as a sort of chancel, hung with rich draperies and curtains which could be drawn at will, and there on a slightly raised platform were grouped a phalanx of brown-shouldered yellow robed priests of all sizes and ages, from those who might have been gray-headed had they not been so closely shaven, down to quite small boys. With them stood the great laymen associated with them in the charge of the temple and its property, all in rich dresses of Kandyan nobles, with the large-sleeved jacket and jewelled hat. The greatest of them was dressed in the same style, but his clothes were white and gold.

All these were grouped around a temporary altar—really a silver table supposed to represent a lake on which the golden-lotus floats. There on stood an octagonal cupola of solid silver and gold, supported by slender pillars. In front of these were three miniature crystal dagobas or bell-shaped relic shrines, each resting on a square base, and two candlesticks of gold with lighted candles. In the small dagobas on either side were displayed priceless jewelled objects—royal gifts. But all eyes were riveted on the central shrine, of purest crystal, within which lay a large golden lotus-blossom, from the heart of which, upheld by a twist of gold wire, was upraised the worshipful piece of ivory, which to the unquestioning eye of faith actually passes for a human tooth.

Though the tooth is exposed to view on very rare occasions, it is annually brought out in its casket, for a procession round the town in the month of August. This historic festival which has been held for upwards of two thousand years, takes place at night and forms "one of most weird sights to be seen in this or any other country." There is a large stud of elephants in connection with the Temple and on this occasion they are all gaily caparisoned with gorgeous trappings quite covering the heads and bodies. The finest of these elephants is taken into the Temple by the main entrance. The shrine of the tooth is removed and placed within the howdah, the whole being

surmounted by a huge canopy supported by rods which are held on either side by natives. Two other elephants are then brought, and after being gaily dressed are mounted by several headmen, whose servants sit behind holding gold and silver umbrellas. "Between each section of the procession are rows of other headmen in gorgeous dresses, and groups of masked devil-dancers in the most barbaric costumes, dancing frantically, exhibiting every possible contortion, and producing the most hideous noise by the beating of tom-toms, the blowing of conch-shells, the clanging of brass-cymbals, the blowing of shrill pipes and other instruments devised to produce the most perfect devil-music that can be imagined. Nothing more *ecerie* can be pictured than this procession, about a mile long, consisting of thousands of dark brown figures, gaily dressed, intermingling with hideous groups of devil-dancers, all frantically gesticulating around the forty elephants by the dim red light of a thousand torches." It is a curious combination of the Hindunism and Buddhism, for the Hindu deities and relics form an important part of this procession.

Before giving a brief history of this wonderful relic, something may be said of its present home, the Dalada Maligawa. The Temple, and the Pattirippuwa which is the name given to the octagonal building on the right of the main entrance, are enclosed by a very ornamental stone wall and a moat. The temple itself is concealed by the other buildings within the enclosure. The chief characteristics of the buildings is the low square-cut pillars, the lavish display of grotesque carvings and mythological frescoes painted on the walls. As we pass into the building we notice on the lower portal a beautifully sculptured semi-circular stone; then past two wonderful stone beasts. In the outer temple are various objects of interest gaudily painted images of Buddha, gigantic drums and tom-toms, rich draperies, curious great honorific sunshades etc. We pass inside and soon stand before the door leading into the little sanctuary where the sacred tooth is kept. Within this chamber, in dim religious light, is a solid silver table, behind which the huge silver gilded dagoba, or bell-shaped shrine, with six inner shrines protecting the tooth, is usually visible through thick metal bars. On great occasions this nest of priceless value is brought forward and the tooth displayed.

The shrines surrounding this relic are all of priceless gold, ornamented with magnificent rubies, pearls, emeralds, and catseyes. In addition to these treasures there are many valuable offerings and gifts of kings, including an image of Buddha carved out of one great emerald, about three inches long by two deep.

When the Tooth was returned to its place many ceremonies had to be performed, and one who was fortunate in seeing this ceremony has given us the details. "First the Tooth was laid in a case resembling a richly jewelled thimble case, but, as no human hand might touch the sacred ivory, it received the honours of the white cloth; in other words, it was tilted off its perch above the golden lotus, on to a fair linen cloth, from which it was dexterously slipped into its case. The tiny jewelled case was next enclosed in a golden dagoba, encrusted with gems which was formally locked by one of the chief priests, who retained possession of the key. Then it was deposited within a third reliquary, and was looked after by the Dewa Nilame, the great lay authority of the temple. Finally, the strong iron cage with open bars was locked and sealed with much ceremony by the three great authorities, each with his own signet. Then the metal doors of the inner sanctuary were locked by one of them, and the downstairs door by some one else."

The priests very jealously guard the tooth and on no consideration will they permit it, on the rare occasions on which it is exposed, to be touched by human hands. It is recorded that some fifty years ago the Siamese sent an embassy to Ceylon, offering to pay a sum of £50,000 for permission to remove the Tooth to their own capital. The offer was rejected with scorn. It was only after the British Agent had appealed to the priests that they were even permitted to look at the relic. When the treasure was brought out the embassy produced a small piece of rag and rapidly rubbed it over the holy relic and quickly dropped the rag into a small phial of oil. Thus the oil was consecrated and endowed with sufficient virtue to consecrate tons of oil wherewith to sanctify the whole kingdom of Siam. The priests were furious, but the ambassadors returned to Siam full of joy on account of their great possession.

In the temple precincts there is an interesting Oriental Library, in which are gathered together a great number of manu-

scripts of considerable antiquity, written in Pali and Sanskrit characters. We have said "written" but the characters are really pricked with a stylus on narrow strips of palm-leaf about three inches wide and sixteen or twenty inches long. These strips form the leaves of the books, and are strung together between two boards which form the covers. Many of the covers are elaborately decorated with embossed metal, and some are even set with jewels. Sacred and historical writings, together with works on mathematics,

Entrance to the Temple of the Sacred Tooth

The Library Connected with the Temple

astrology, etc. make up the collection. From the gallery of this octagonal tower one is able to get delightful views of the Kandy lake.

We naturally expect that such a relic as the sacred Tooth has a history of some importance, and we find from the records that many interesting incidents are recorded if not of this one, at least the one it is presumed to be. The original article is supposed to have been one of Buddha's four eye-teeth, rescued from his funeral pyre when he was cremated in

B. C. 543 about a hundred miles north of Benares. The king of Kalinga secured three of the teeth and these were immediately taken to his own country where they were received with great enthusiasm. Thence forward his capital was called Danta-Poora, the City of the Tooth. All went well till one of the Buddhist kings determined to dismiss all the Brahmins from his State. They fled to the Imperial Court whereupon the Emperor sent orders for them to overthrow the king and to bring back the relic. We are told [that the] invading army was

Modern Monks in Ceylon Monastery

at once converted on beholding the Tooth, but they escorted it with all reverence to the throne of the imperial king. Orders were given for the destruction of the tooth, but all the efforts of the Brahmins were of no avail. "They cast it into the fire" says the old chronicle "but it reappeared from amid the flames safely folded within the leaves of an exquisite lotus-flower; they tried

The Temple of the Sacred Tooth

to grind it to powder on an anvil, but the most crushing blows left it safely embedded in the hard iron. Then they made elephants trample on it, that it might sink into the earth, but once more it rose from its burial, enthroned in the heart of a lotus blossom, the petals of which were of fine gold, and its heart of silver".

The Emperor was so impressed he embraced the Buddhist faith. It was restored to Kalinga, but when he was beset by his foes he bade his daughter, the princess of Kalinga, conceal this treasure in the coils of her thick long hair, and make her way to Ceylon. In 311 A. D. it was received at Anuradhapura, by the King and a fine temple was built for it. It remained in Ceylon till A. D. 1313, being carried from place to place, in each town a large temple was erected for its protection and honour. Then came the Malabar invasion when this Tooth was carried off to Southern India. It was at length recovered through the personal negotiations of the King of Ceylon. It was carried back with great pomp. Then came the Portuguese in 1560 A. D. and among the spoils they captured was the sacred tooth. They took it to Goa, their capital, and though large sums were offered by Buddhist rulers, the authorities did not succumb to the temptation. The influence of the clergy was exerted and we are informed that the little piece of ivory in its golden setting was brought forth in solemn state by the clergy and placed in a mortar, where with his own hand the Archbishop, Don Gaspar, bruised it to powder in the presence of the Viceroy. But of course, it was not destroyed, else how could it now be in Kandy safely housed behind all those strong doors? True believers declare that the holy tooth was miraculously reformed in the heart of a lotus blossom—and was ultimately recovered by the Ceylon king. One wonders why they did not attempt to replace the destroyed tooth by a human tooth instead of the article that now forms the object of worship of millions of people. There is not the slightest similitude between the present Tooth and a human tooth, but human credulity is wonderful. There it is housed today, and only those who have witnessed the enthusiasm shown when it is exposed have any idea of the devotion accorded to it. It may truly be said that this relic is worshipped by a larger number of devotees than any other relic in the world.

HAMBURG AND THE OVERSEAS COUNTRIES

Hamburg's Share in International Cultural Co-operation

By DR. G. KURT JOHANNSEN

"**L**IBERTATEM quam peperere maiores
digne studeat servare posteritas"—
these are the words inscribed above
the main portal of the Hamburg City Hall,
the magnificent edifice that now takes the
place of the former municipal building which
had to be blown up during the great con-
flagration of 1842. And indeed, if
we take up a position under the
Arcades and allow our eyes to rest
on the solid, yet beautiful structure
that rises beyond the small basin
formed by the Alster, we cannot
but feel that the exhortation contain-
ed in these words is thoroughly
justified. Great though the heritage
is which the present generation has
had bequeathed to it from its
forefathers, the duty to maintain
and to enlarge it is greater still.

The term "liberty" must not
only be understood in its external
application, but must also be taken
to include the liberty of decision
and of action. Nine years have
passed since the most devastating
of all wars came to a conclusion
and since the country was forced
to subscribe to the terrible terms
dictated at Versailles, but during
this short time Hamburg has rapidly
become once more the genuine
counterpart of her former self. She
still is the second largest city in
Germany and one of the biggest
seaports on the Continent. Her power
of reasserting herself so completely
is not entirely due to the immense
economic efforts she has made, but
also to her endeavours in the
cultural domain. The task she
has to fulfil is not merely to
serve the interests of Germany's
commercial and economic activities,
but also to act as the intermediary
in the great process by which the
cultural and intellectual goods are

interchanged between the countries of the
old Continent and the new countries beyond
the sea.

The duties incumbent on the ancient
Hanseatic city in this capacity cover a very
large ground indeed. Economic necessities
had compelled her to build enormous docks

Wasserturm im Hamburger Stadtpark

and harbour installations intended to render possible the carrying of material commodities from one country to another and to accommodate them temporarily within the buildings provided for such purposes. In like manner she was forced, on account of her cultural duties, to create a public institution capable of serving the needs of the interchange of intellectual goods between the nations of the world. The earliest form in which this duty took practical shape was the establishment, in 1895, of an organisation for systematic courses of lectures open to the public. Subsequently, in 1908, this organisation was merged with the newly founded Colonial Institute, and finally, in 1919, the latter was converted into the University of Hamburg, a novel institution with definitely marked objects and duties.

It naturally follows from the special circumstances that led to its foundation that this university is on a different pattern from the great majority of other German institutions described by the same name—institutions which were intended in the first place, to serve the needs of the humanities and of classical learning. Principal stress had to be laid on the fact that innumerable ties connect the economic life of Hamburg with that of the world at large, and it is these overseas relations that the new university was chiefly required to cultivate. The programmes fixed for several of its faculties were to a considerable extent determined in accordance with this principle. It is quite true that other universities, too have their faculties of jurisprudence and national economics, but there is none that devotes so much attention to lectures on commercial and marine law, on the law of foreign countries, and on comparative jurisprudence as does Hamburg. Other special and permanent features are the institution of a system of lectures given by professors from other universities and that of the so-called Examining Board for a Knowledge of Foreign Countries and Institutions ("Prüfungsausschuss für Auslandskunde") entitled to issue special diplomas to successful candidates who are examined as to their knowledge of the countries selected by them. The list of such countries includes practically every one carrying on trade intercourse with Germany. The teaching supplied at the School of Art is largely supplemented by the valuable exhibits possessed by the ably managed Ethnological Museum whose European, Asiatic-Indo-Oceanic

African and American departments contains no less than 150,000 specimens of the art of the nations concerned. Similar purposes are served by the Arts and Crafts Museum which enables students to obtain a comprehensive view of the development of arts and crafts from the time of the ancient Egyptians and Greeks to that of the Islamic and South American cultures and civilisations and to the flourishing period of Far Eastern applied art. Other schools affiliated to the University and forming integral parts of it are those devoted to the study of languages. Their number includes, among others, the Schools for the Language and Civilisation of China and Japan, the School for African and Polynesian Languages which is exceedingly well-equipped with material and which specialises in the study (including comparative study) of the numerous dialects spoken in those parts and civilisations that have grown up there and the Ibero-American Institute which was actually founded when Germany, during the war, was entirely isolated from the rest of the world and which cultivates the intellectual interests that link together Germany and the Spanish and Portuguese speaking countries.

Another university institution, viz., the Hamburg Institute for Foreign Politics, is devoted to research work in connection with topical questions of foreign politics. It is of great importance both to Germany and to foreign countries and is being used more and more by visitors from abroad. Similar institutions are possessed by New York, London and Paris only, and its establishment must be described as an event that is certain to promote the cause of international understanding and collaboration. It works in close co-operation with the Hamburg Archives of International Economics ("Hamburger Welt-Wirtschafts-Archiv") founded for the purpose of collecting and disseminating information relevant to the economic and political conditions of all countries and of every branch of economic activity, and found extremely helpful to numerous economists from overseas countries.

No one is likely to deny that the Hamburg Station for Seismic Research ("Hauptstation für Erdbebenforschung"), the Nautical Observatory ("Seewarte") and the Astronomical Observatory ("Sternwarte") are all links in the intellectual co-operation of different nations, although it may perhaps be contended with more or less justification that

their immediate contribution to international amity is but slight. Matters, however, assume a different aspect when we turn our attention to the Hamburg Institute for Marine and Tropical Diseases ("Hamburgisches Institut für Schiffs- und Tropenkrankheiten") whose fame has penetrated to every quarter of the globe and is still constantly spreading.

This institution, under the direction of its founder, Professor Bernhard Nocht, the present Rector of the University of Hamburg, is dedicated to research, teaching, and healing, and it is scarcely possible to overestimate the benefits that result from its activities, more especially to the advantage of all those countries which, like a beautiful belt, encircle the equatorial regions of the globe. It has investigated and successfully combated every kind of tropical disease. Every suggested remedy for malaria, sleeping sickness, dysentery, scurvy, and black-water fever is tested, checked, and improved on its premises. Hundreds of medical practitioners from all over the world have there received their special training in the treatment of tropical diseases.

Hamburg, indeed, has given numerous proofs of her desire to assist in making the cause of international co-operation as workable as possible. If particular evidence is needed, we may refer to her imposing harbour facilities open to the ships of every seafaring nation, to her wonderful system of guiding the immense traffic passing through her port, to the careful scrutiny of the incoming and out-going merchandise, to the watchful activities of her Committee for Trade, Shipping and Industries, to the energetic steps taken to prevent the trade in smuggled opiates (as for instance, in the

Hamburg Monchebergstrasse
mit Blick auf das Rathaus

establishment of a special court dealing with such offences) and by her unique Experimental Station for Shipbuilding Research which is of equal benefit to every shipbuilding country and is not, as might be thought, of special advantage to the particular interest she has in furthering the progress of shipbuilding. The three institutions, however, that may be said to be appreciated by a larger clientele than any of the great number of those established by the city authorities, are undoubtedly the Institute for Marine and Tropical Diseases, the Institute for Foreign Politics and the Archives for International Economics. These various organisations may be relied upon, each in its own sphere, to promote the great cause of effecting the gradual pacification of the world, both in the material and in the ideal sense.

THE PSYCHOLOGY OF TRANSLATION

By HETTY KOHN, B.A. (Lond)

INTRODUCTORY. THE GENERAL IMPORTANCE OF
GOOD TRANSLATIONS

THOUGH the international and literary value of a good translation can scarcely be sufficiently emphasized, the turning of books from one language into another

ranks as one of the mechanical and thankless branches of literary labour. This, as we shall show, is a fallacy, or at most only a half-truth.

Apart from purely scientific books, a large percentage of the great works of literature would remain out of our reach, if

and harbour installations intended to render possible the carrying of material commodities from one country to another and to accommodate them temporarily within the buildings provided for such purposes. In like manner she was forced, on account of her cultural duties, to create a public institution capable of serving the needs of the interchange of intellectual goods between the nations of the world. The earliest form in which this duty took practical shape was the establishment, in 1895, of an organisation for systematic courses of lectures open to the public. Subsequently, in 1908, this organisation was merged with the newly founded Colonial Institute, and finally, in 1919, the latter was converted into the University of Hamburg, a novel institution with definitely marked objects and duties.

It naturally follows from the special circumstances that led to its foundation that this university is on a different pattern from the great majority of other German institutions described by the same name—institutions which were intended in the first place, to serve the needs of the humanities and of classical learning. Principal stress had to be laid on the fact that innumerable ties connect the economic life of Hamburg with that of the world at large, and it is these overseas relations that the new university was chiefly required to cultivate. The programmes fixed for several of its faculties were to a considerable extent determined in accordance with this principle. It is quite true that other universities, too have their faculties of jurisprudence and national economics, but there is none that devotes so much attention to lectures on commercial and marine law, on the law of foreign countries, and on comparative jurisprudence as does Hamburg. Other special and permanent features are the institution of a system of lectures given by professors from other universities and that of the so-called Examining Board for a Knowledge of Foreign Countries and Institutions ("Prüfungsausschuss für Auslandskunde") entitled to issue special diplomas to successful candidates who are examined as to their knowledge of the countries selected by them. The list of such countries includes practically every one carrying on trade intercourse with Germany. The teaching supplied at the School of Art is largely supplemented by the valuable exhibits possessed by the ably managed Ethnological Museum whose European, Asiatic, Indo-Oceanic

African and American departments contains no less than 150,000 specimens of the art of the nations concerned. Similar purposes are served by the Arts and Crafts Museum which enables students to obtain a comprehensive view of the development of arts and crafts from the time of the ancient Egyptians and Greeks to that of the Islamic and South American cultures and civilisations and to the flourishing period of Far Eastern applied art. Other schools affiliated to the University and forming integral parts of it are those devoted to the study of languages. Their number includes, among others, the Schools for the Language and Civilisation of China and Japan, the School for African and Polynesian Languages which is exceedingly well-equipped with material and which specialises in the study (including comparative study) of the numerous dialects spoken in those parts and civilisations that have grown up there and the Ibero-American Institute which was actually founded when Germany, during the war, was entirely isolated from the rest of the world and which cultivates the intellectual interests that link together Germany and the Spanish and Portuguese speaking countries.

Another university institution, viz., the Hamburg Institute for Foreign Politics, is devoted to research work in connection with topical questions of foreign politics. It is of great importance both to Germany and to foreign countries and is being used more and more by visitors from abroad. Similar institutions are possessed by New York, London and Paris only, and its establishment must be described as an event that is certain to promote the cause of international understanding and collaboration. It works in close co-operation with the Hamburg Archives of International Economics ("Hamburger Welt-Wirtschafts-Archiv") founded for the purpose of collecting and disseminating information relevant to the economic and political conditions of all countries and of every branch of economic activity, and found extremely helpful to numerous economists from overseas countries.

No one is likely to deny that the Hamburg Station for Seismic Research ("Hauptstation für Erdbebenforschung"), the Nautical Observatory ("Seewarte") and the Astronomical Observatory ("Sternwarte") are all links in the intellectual co-operation of different nations, although it may perhaps be contended with more or less justification that

their immediate contribution to international amity is but slight. Matters, however, assume a different aspect when we turn our attention to the Hamburg Institute for Marine and Tropical Diseases ("Hamburgisches Institut für Schiffs- und Tropenkrankheiten") whose fame has penetrated to every quarter of the globe and is still constantly spreading.

This institution, under the direction of its founder, Professor Bernhard Nocht, the present Rector of the University of Hamburg, is dedicated to research, teaching, and healing, and it is scarcely possible to overestimate the benefits that result from its activities, more especially to the advantage of all those countries which, like a beautiful belt, encircle the equatorial regions of the globe. It has investigated and successfully combated every kind of tropical disease. Every suggested remedy for malaria, sleeping sickness, dysentery, scurvy, and black-water fever is tested, checked, and improved on its premises. Hundreds of medical practitioners from all over the world have there received their special training in the treatment of tropical diseases.

Hamburg, indeed, has given numerous proofs of her desire to assist in making the cause of international co-operation as workable as possible. If particular evidence is needed, we may refer to her imposing harbour facilities open to the ships of every seafaring nation, to her wonderful system of guiding the immense traffic passing through her port, to the careful scrutiny of the incoming and out-going merchandise, to the watchful activities of her Committee for Trade, Shipping and Industries, to the energetic steps taken to prevent the trade in smuggled opiates (as for instance, in the

Hamburg, Monckebergstrasse
mit Blick auf das Rathaus

establishment of a special court dealing with such offences) and by her unique Experimental Station for Shipbuilding Research which is of equal benefit to every shipbuilding country and is not, as might be thought, of special advantage to the particular interest she has in furthering the progress of shipbuilding. The three institutions, however, that may be said to be appreciated by a larger clientele than any of the great number of those established by the city authorities, are undoubtedly the Institute for Marine and Tropical Diseases, the Institute for Foreign Politics and the Archives for International Economics. These various organisations may be relied upon, each in its own sphere, to promote the great cause of effecting the gradual pacification of the world, both in the material and in the ideal sense.

THE PSYCHOLOGY OF TRANSLATION

By HETTY KOHN, B. A. (Lond)

INTRODUCTORY. THE GENERAL IMPORTANCE OF GOOD TRANSLATIONS

THOUGH the international and literary value of a good translation can scarcely be sufficiently emphasized, the turning of books from one language into another

ranks as one of the mechanical and thankless branches of literary labour. This, as we shall show, is a fallacy, or at most only a half-truth.

Apart from purely scientific books, a large percentage of the great works of literature would remain out of our reach, if

rather "Germany is to be foremost" i. e., in the thoughts, that is to say, of Germans themselves.

"Germany our dearest object, dearest in the world shall be. If for hearth and home we Germans hold together, brotherly: From Memel east to western Meuse, from southern Alp to northern sea, Germany our dearest object, dearest in the world shall be.

"German women, German faith, German wine and song. In the world shall still in honour and acknowledged worth be strong, while to us're inspiration all our happy lives along German women, German faith, German wine and German song.

"Unity and law and freedom for our German Fatherland! These to win we'll strive together brother-wise, and heart and hand. Freedom, unity and law as source of social blessing stand: In the glow of all such blessings may'st thou flourish, Fatherland"

III

THE PITFALLS OF THE INCOMPETENT TRANSLATOR

Many are the pitfalls, familiar to every student of languages, which lead to more or less serious misunderstandings, or to unconscious humour! Experience teaches how unsafe it is to *joke* in a foreign tongue over which one has not perfect mastery, or in one's own language with a person who is not absolutely familiar with the intricacies of it. False impressions are much easier given than effaced, and insult is often inferred where none is meant. Neither are people always as tolerant as they might be, in forgiving unintentional rudeness!

The cases where a word in a foreign language, which is similar in spelling to a word in our own tongue has not the meaning we should expect it to have, are a source of trouble. Englishmen with but a slight acquaintance with French tackle, French commercial correspondence, and become involved in complications. The French verb *assister* means "to be present" not "to assist" but an English journalist translating a news telegram announced that a certain actor "died this morning, assisted by his wife and family." Fr. *actuellement* means not "actually" but "at present." The verb *noter* means "to make a note of" but in commercial usage, "to book an order,"—a vast difference! During the European war the British War Trade Intelligence Department, on the look-out for "fictitious firms" on the Continent, held up for investigation during six months all communications of

a firm in London with a Russian house because the note-paper of the Odessa branch bore the initials "H. S." whereas those of the Petrograd branch were "G. S." A glance at a Russian Grammar solved the mystery, namely that 'h' and 'g' are identical in Russian.

In the translation of correspondence we meet with peculiarities as regards the form of address, and persons are liable to put their own original interpretation on any abbreviations in a foreign language. It is surprising how many good (?) English scholars in India wrongly append 'Esq.' even to the names of women. Originally, of course, the title was used exclusively for real esquires (squires), but in modern times it has become the ordinary form of written address to *any man*. This leads us to other English abbreviations and forms of speech. The Englishman never abbreviates his compliments, and if he sends "best regards" he sends them in full. On landing in India, he is however mystified at reading B. R. or B. C. (best compliments) in letters, or even engraven on walking-sticks and gold watches which could not possibly have been made before the Christian era! It is apparently quite a current notion among Indian students that "P. S." stands for "please see," but, after all, this is the message of a post-script.

The French word "lecture" is not the equivalent of the English 'lecture,' but means reading matter, or literature in the broad sense, whereas the French for "lecture" is *discours* or "conference." Confusion sometimes arises, even in reliable newspapers from the wrong translation of the word "professeur," which may mean either a university professor or a school-teacher.

The German language affords many opportunities for mistranslation. German scholars will appreciate some instances. The pronoun *sie* means either "she" or "they," or, if spelt with a capital letter, "you." If the word stands at the beginning of a sentence, it is of course spelt with a capital letter anyway; thus misunderstandings easily arise unless the context makes the sense perfectly clear. The above *sie* difficulty already affects the Germans themselves in the use of their mother-tongue, quite apart from any question of translation.

A standard anecdote illustrating the wilful misinterpretation of this troublesome pronoun is the following: "A professor asked

a student at an examination: 'How many islands are there in the Atlantic Ocean, and what are their names?' The second part of the question could, in spoken German, be understood to mean: 'What is your name?' The student therefore replied: 'There are many islands in the Atlantic, and my name is Meier!'

The Direct Method of teaching languages, by encouraging students to speak, read and write in the language they are learning, and not asking them to translate *into* that language in the early stages of instruction, but only later, when they are to some extent familiar with the language, is now-a-days doing much to foster the understanding of the true meaning and use of the foreign words, and the avoidance of wrong and ridiculous translations on the part of learners, such as the following "howler" on the part of a student of German. In order to translate into German the sentence "What is the matter?" he looked up "matter" in his dictionary, and produced "Was ist der Stoff?" i.e. What is the material, or substance?

The next mistranslation is culled, not from a beginner's exercise-book, but from a standard English edition of Grimm's Household Tales. In one of the tales, the sentence occurs "Sie boten einander die Zeit," the correct meaning of which is "They greeted one another," though the actual words mean "They offered one another the time." Now, this has been translated as "They asked one another what time it was," which is meaningless in the context. If the translator had thought of the Irish expression "I wish you the top of the morning," that is, a greeting, he would not have been guilty of such a silly mistake.

A journalist was to translate into German the English expression "the common people," i.e. the mass of the population. He wrote "der gemeine Pöbel." However, "gemein" means "common" in the sense of base or ignoble, and "Pöbel," though etymologically the equivalent of "people," has come to mean, in modern German, mob or rabble. Scarcely democratic!

The following case of misinterpretation was a joke during the war. A gentleman stayed the night at a cottage in a small English village. He was surprised to see a card hanging on the wall, with the words "Ici on parle français." "Do you speak French?" he asked the old landlady. "Oh no" she replied, astonished at the strange

question. "Then why do you hang up a notice saying "French spoken here?" The good lady then explained that a soldier had given her the card, and had told her that the words meant "God bless our home."

So much for isolated instances of the pitfalls of the would-be linguist—and his victims. The difficulties dealt with in the next section, are of a more serious character.

IV

INHERENT DIFFICULTIES IN TRANSLATION WORK

Certain words in certain languages are absolutely untranslatable, and defy every effort on the part of the translator. In some instances, of course, a language takes the untranslatable foreign expression, and incorporates it into its own vocabulary. In this way, the Ital. "dolce far niente," and the French "raison d'être," "un je ne sais quoi" (an indefinable something) and many other words have found their way into English. It is, however, not always possible to leave these ticklish words conveniently in their original form.

We find a goodly number of such words in the German language, a rich language, in which it is possible to express the finest shades of meaning. The exact idea expressed by the word "*Langeweile*" (lit. long while) cannot be rendered in any one English word; the nearest is "boredom," or "tedium," and the French "ennui" is generally used; but the German word suggests, not only the lack of interest, but all the weariness and oppressiveness of the slow passing of time—for when one is bored, time hangs heavy on one's hands, and the clock seems to make but imperceptible progress. "*Stimmung*" (lit. tuning) is often translated by "mood," but it really means "true of mind." "Humour" would be suitable in some contexts. "*Weltschmerz*" (world-sorrow) is a most distressing poser to the translator. It means the oppressive sense of mingled pity and despair which we experience when we reflect on all the woes to which humanity is subject. There is absolutely no equivalent for this term in English. "*Jenseitigkeit*" (lit. other side-ness) must be rendered by the clumsy "other-worldness" or "other-worldliness" for there seems to be no abstract noun in use corresponding to the adjective "ultramundane": the German word is used in describing, for instance, the character of saints, i. e. the thoughts of the

saint are in the world beyond, and averted from terrestrial things. "*Sprachgefühl*" (language-feeling) means the instinct which leads us to use the right expression in a foreign language, as apart from our book-knowledge of that tongue. "*Mitgefühl*" (feeling with) finds its exact equivalent in the English "sympathy" but whereas the English frequently limit the connotation of "sympathy", to feeling with a person in sorrow only, the Germans differentiate between "*Mitfreude*" (sympathy in joy) and "*Mitleid*" (sympathy in sorrow, i.e. pity) and in addition, have "*Mitgefühl*" i.e. "fellow-feeling" to embrace both ideas. "*Einmaligkeit*" (einmal—once, einmalig—which happens only once) is an abstract noun which English is incompetent to render. It means the quality of happening once and once only. For instance, in the title of a book, "*Die Einmaligkeit der Geschichte*" (the uniqueness of history) the author's theme is the opposite of "History repeats itself." "The uniqueness of historical events" is perhaps a slight improvement on "The uniqueness of history", but the word "uniqueness" is ambiguous, and does not catch the meaning. Exact equivalents for some of these terms are to be found in Sanskrit.

It is not only abstracts which present difficulty; many other neat German words require entire phrases in English. An instance from a book on Muslim Art, by E. Kuhnelt. Its very title, "*Islamische Kleinkunst*" (klein, small; Kunst, art) is a poser. Without seeing the book itself and glancing at the table of contents, one is at a loss even to know the precise meaning of "*Kleinkunst*" (for the dictionary fails to enlighten), much less how to render it in English. Now the word "*Kleinmalerei*" which means "miniature-painting" might give a clue, but "miniature art" would mean nothing at all. "The minor arts," or "the lesser arts" does not seem correct. Is it a question of inferiority, or of restriction of space? The chapters deal with such branches of Islamic art as calligraphy and the illumination of MSS. the production of beautiful books, art-pottery, ivory-work and inlaid metal-work. The best rendering which suggests itself is, therefore, "Islamic Arts and Crafts".

The uninitiated, who imagine that the involved style, the "fearful and wonderful" periods of the German savants are a thing of the past, should tackle the translation of some of the recent books on

Oriental Art, by such authors as Kuhnelt, K. With, H. Goetz, E. Diez or Alf. Salmons. "The Awful German Language" is no less awful to-day than when Mark Twain poked fun at it in his incomparably amusing essay of that title, in "A Tramp Abroad". Indeed, the third decade of our century seems to be contributing a fresh element of awfulness, in the shape of new and fantastic, though expressive, words.

An obstacle to lucidity in making an English translation is the lack of separate nouns to mark the distinction between the action and the state, e.g. the word "generalisation" can mean (i) the progressive action of generalising, (ii) the state, i.e. the accomplishment of the act of generalising. This lack must also prove a hindrance to the translator from English. When a person translates from a language with which he is not perfectly familiar—and most people engaged in translation work are called upon to try their hand at various languages—the fact that one word may have more than a dozen different meanings, is often very perplexing, for sometimes two or three of the meanings are equally likely in the context!

Imagine a Chinaman to whom English is a new language, confronted with the word "translation"; he consults his dictionary, where he finds the following:—

Translation: The act of translating; a removal or motion from one place to another; the removal of a person from one office to another, especially the removal of a bishop from one see to another; the removal of a person to heaven without subjecting him to death, the act of turning into another language; that which is produced by turning into another language, a version.

Then, incidentals like mysterious abbreviations, are sent to try the translator. He may search dictionary and grammar in vain, and finally tumble to their meaning by sheer ingenuity or inspiration!

A Dutch essay which recently passed through the writer's hands, contained the word "huis" obviously a contraction of "te huis" (at home), but the fact of its being a contraction only became evident from the requirements of the context, after a fruitless search in the dictionary.

Not infrequently there are (uncorrected) misprints, and it is up to the translator to guess that the seemingly meaningless Dutch word "eerlingen" requires an initial "L" to make it "leerlingen" (pupils).

V

TECHNICAL TRANSLATIONS

Provided that the translator has a good and comprehensive technical dictionary by his side, he will *some times* find that a purely technical passage presents less difficulty than a prose passage of general content written in an obscure style. The translation of highly technical matter is a more mechanical and arduous task, because constant reference to the dictionary is necessary, and it is less interesting, because the translator cannot possibly be an expert in all the branches of science with which his translations deal.

As far as the translation of commercial correspondence is concerned, once a translator has familiarised himself with the commercial terminology of the languages concerned he can proceed with comparative ease to translate business letters, for the main terms in constant use can be learnt within a few weeks.

The translation of legal matter, for instance, Memoranda and Articles of Association, deeds, affidavits or contracts, is "tricky" and exacting, but even here, the stock of technical terms is not inexhaustible, and can be acquired by practice. Many commercial men who have no linguistic training, greatly under-estimate the care and precision which the translator has to use in order that his work may be reliable and readable; and they unreasonably expect a secretary who has a general knowledge of, for instance, French, to be able to turn out an elaborate translation of this nature in a couple of hours amid the click of typewriters and the bustle of a busy office. As a matter of fact, even a quick and competent translator may require a week or more, working all day, to translate a long descriptive catalogue, or the Articles of Association of a Company.

Scientific treatises need not necessarily be translated by one who is himself a specialist in the particular science in question; but such treatises, and books and essays on philosophy and kindred subjects, in which the translator does not happen to be an expert himself, are most difficult to translate well. The translator must be as literal as possible, see to it that every sentence at least expresses some complete thought (though one which he does not quite understand) and trust to luck that his production

will be intelligible to the scientist who is to use it.

When these treatises are in German, there is special difficulty: this is the combination of the strangeness of the ideas with the inherent intricacy of construction of German sentences. Not only is the translator like a traveller wandering in a strange land of new notions, but he finds himself in a dense jungle of verbs, participial phrases and lengthy subordinate clauses forming long sentences, one of which frequently covers more than half of a printed page. Thus there are two distinct difficulties. When they exist separately, they can be overcome. Very literal translation, as we have seen, is a way of avoiding mistakes in matter of a highly technical nature. In German prose, generally speaking, the translator has always to make some intelligent use of his imagination, in order to produce a readable translation. Now when the whole subject of the treatise is beyond the translator's comprehension, it is a risky thing for him to try to read between the lines. His one safe expedient therefore namely that of a word for word rendering, fails him, for a German sentence can practically never be translated thus nor can the clauses composing a German complex sentence be translated in the same order as that in which they originally stand. Moreover, it is not always clear (unless one grasps the whole context) whether a certain subordinate clause refers to a certain word or to some other word. In the event of real ambiguity it is always better for the translator to state frankly in a "Translator's Note":—....., "may mean, but it might also mean" rather than risk a wrong meaning. The specialist, who will understand the context will probably have no difficulty in seeing the meaning. Nevertheless, it is surprising what can be achieved by the translator in this truly diabolical field when he really gives his mind to it. The writer was once congratulated by members of the Royal Microscopical Society on her ability in this direction. The German treatises in question were about Violet Rays, phosphorescence, and other matters, about which the translator had not then, and never has since had, even the most elementary notions. Work of this type is a great tax on the brain, and presupposes practice and skill, and it is justified in commanding, as it does, a high scale of remuneration.

VI

TRANSLATIONS OF FAMOUS BOOKS

Many of the English versions of books by notable foreign authors have been made by men and women who are themselves famous writers. George Eliot translated Strauss's "Life of Jesus", and in a letter referred to her "soul-stupefying labour", which, including the correction of the proofsheets, took three years instead of the one year in which it had been hoped to finish the task. Alfred Sutro and Alexander Teixeira de Mattos have translated the works of Maeterlinck. Carlyle translated practically all Goethe's work. As far as European literature is concerned, translations appear remarkably quickly after the publication of the original book. Loti's "Iceland Fisherman" was published in English by Cadot two years after its first appearance in France. A propos of this novel, the mistranslation which occurred in the advertisement column of a publisher's trade journal is too good to be consigned to oblivion. The title was translated as "Fisherman's Island." "Les Désenchantées," a story of life in a Turkish harem, by the same author, appeared in English, by Clara Bell in 1906, the year of its publication in Paris. The works of Victor Hugo appeared in London very shortly after their publication in Paris.

Mrs. Constance Garnett translated a large number of the monuments of Russian literature into English. Russian poets, such as Pushkin and Lermontoff, are at best only accessible to the English-speaking reader in French or German versions. D. G. Rossetti was responsible for translations from the Italian, and Longfellow has to his credit some very happy renderings of short poems from the most varied languages of Europe.

Works containing much local colour, dialogue and slang, are the most difficult to render in another tongue, yet the complete works of Dickens are read and enjoyed in many countries. "David Copperfield" appeared in French, Italian and Danish many years ago: "Mr. Pickwick" was introduced to Germany as early as in 1837 by H. Roberts, to France a year later, to Holland, Sweden, Poland and Hungary in the sixties, and to Denmark in 1833! Spain had its version of "A

Tale of Two Cities" in 1879 and of "Oliver Twist" (as 'The Parish Boy' in 1883). In Italy Oliver was already popular in 1840.

In connection with the translation of masterpieces, J. H. Newman in his essay previously quoted, has the following to say:—

"If languages are not all equally adapted even to furnish symbols for those universal and eternal truths in which Science consists, how can they reasonably be expected to be all equally rich, equally forcible, equally musical, equally exact, equally happy in expressing the idiosyncratic peculiarities of thought of some original and fertile mind, who has availed himself of one of them? A great author takes his native language, masters it, partly throws himself into it, partly moulds and adapts it, and pours out his multitude of ideas through the variously ramified and delicately minute channels of expression which he has found or framed. Does it follow that his personal presence (as it may be called) can forthwith be transferred to every language under the sun? It seems that a really great author must admit of translation, and that we have a test of his excellence when he reads to advantage in a foreign language as well as in his own. Then Shakespeare is a genius because he can be translated into German, and not a genius because he cannot be translated into French. Then the multiplication is the most gifted of all conceivable compositions, because it loses nothing by translation, and can hardly be said to belong to any one language whatever. Whereas, I should rather have conceived that, in proportion as ideas are novel and recondite, they would be difficult to put into words, and that the very fact of their having insinuated themselves into one language would diminish the chance of that happy accident being repeated in another."

As regards *Oriental literature*, there is still a wide field for the translation and popularisation of Indian, Persian and Chinese literature in European languages. In this respect, Germany has been ahead of England. The Leipzig firm of Philipp Reclam include no less than thirteen works of ancient Indian literature in their "Universal-Bibliothek" edition. Before the War each volume, pocket-size, cost about 3 annas, and now about 4 annas. The thirteen works are:—

Bhāvabhūti's "Malati and Madhava", Buddha's Life, after Asvaghosa's Buddha-Carita Buddha's Speeches, Hitopadesa (in 3 vols.), Kalidasa's "Malavika and Agnimitra", "Sakuntala" "Urvashi", Ksemisvara's "Wrath of Kausika", "Nala and Damayanti", "Savitri", "Indian Aphorisms", Sudraka's "Vasantasena," and Visakhadatta's "Mudraraksasa".

It is to be hoped that Reclams will not

* This is not, of course, to be taken literally. There are French versions of Shakespeare, but his plays do not appeal to France,

stop here, but in the meantime no English publishing house has achieved anything approaching this. Even before the war the "Everyman" edition, was far more expensive than the "Reclam", hence the few Indian works included in the edition remained out of the reach of the ordinary person unable to buy many books at a shilling each.

The wanderings of some Oriental writings are most intricate. Ancient Indian works translated into Persian, were rendered from Persian into Latin, and found their way into German at the beginning of the 19th century. Friedrich Ruckert was eminently successful as a translator of Oriental poetry into German verse.

There is no doubt that those European Sanskrit scholars who, from William Jones H. T. Colebrooke, and the brothers von Schlegel downwards, have produced version of Indian masterpieces, have been greatly instrumental in dispelling the mist of ignorance which enveloped Europe on the subject of India and her literature. Once version's

of masterpieces are obtainable in one's own particular language, it is up to the publishers to make them accessible to the general reading public, as the Germans have done, in cheap editions. Prohibitive prices cause the enjoyment of these masterpieces, written for all, to remain the monopoly of the few.

As has been said at the outset, the translator is worthy of his hire. There is many a one amongst us who is no genius, but who may yet have liking and aptitude for literary work. Why sigh for the original ideas which never come our way, or for the talent with which Providence has not endowed us? For, if we undertake the translation of the works of those who have genius or scholarship, we shall never regret the energy we put into such work. All honour, then, to *bona-fide* translators. But the translator must bear in mind the responsibilities of the task he has undertaken, not underrating the far reaching influence for good or evil of that two-edged weapon, the printed word.

EVACUATION OF AFGHANISTAN AFTER THE SECOND AFGHAN WAR

By MAJOR B. D. BASU, I. M. S. (Retired)

CAVAGNARI'S murder was now avenged. The people of Afghanistan had to pay very dearly for the misdeeds of a few soldiers. They lost, it seemed, as if for ever, their cherished rights and privileges and the independence of their country. The proclamation of the 28th October, 1879, was hailed with unbounded satisfaction by the British jingoes, because the only nation which had ever successfully resisted the extension of the British power in the East was now fully brought under control, if not subjugation. Lord Lytton's threat to Shere Ali as to wiping out Afghanistan from the map, seemed to be carried into execution. It was no longer

"A repetition," to quote the words of the *Pioneer's* correspondent, "of the old shilly-shally policy which has had such disastrous results. The Government has now committed itself to a distinct

policy which can be proclaimed throughout Afghanistan, and our duty now is to wait until the principal Sirdars, tribal chiefs and others representing the interests and wishes of the various provinces and cities have been made aware of what has occurred. It is no longer a question of the 'wishes' of the Viceroy of India, but a distinct assertion of our newly acquired power in Afghanistan."

But the English did not know the true character of the people of Afghanistan. The Afghans were not to be so easily cowed into submission. They were not going to lose their independence so soon and so easily. The Proclamation of the 28th October made them desperate. The Afghans saw that the humiliation of their country was now complete. Their capital was now in the hands of "the Christian dogs" their sovereign an exile in foreign lands, and stripped of all his wealth and private property; their countrymen hanged

in numbers with the farce of a trial and the mockery of justice; their chiefs ill-treated and their women-folk even not free from the insults of 'Kafir' invaders. It is no wonder, then, that they thought death was better than their present lot.

According to Lord Roberts, the above-mentioned occurrences

"touched the national pride to the quick, and 'were being used by the enemies of the British Government to excite into vivid fanaticism the religious sentiment, which has ever formed the prominent trait of the Afghan character.'"

The deportation of Yakub Khan was the last straw which made the Afghans break out into hostilities against the British. The mother of Yakub Khan was still alive and she would have lacked in her love for her son had she remained idle at this critical moment. She saw her son imprisoned and his private property taken over by the 'Kafir' invaders. She appealed to the people against the injustice and the high-handed proceedings of the British authorities and her appeal was responded to by the people.

The priests of Islam also were very busy in exciting the fanaticism of the masses of Afghanistan against the "Kafirs" who had turned their country into a desert. They were reminded of their success in 1841, when they annihilated the British troops and made the 'Christian dogs' leave their country. Under these stimulating influences, the Afghans took the field against the British in December 1879, a few days after the deportation of Yakub Khan. The different tribes of Afghanistan forgot for once their mutual jealousies and united to turn out the invaders from their common fatherland.

Several actions were fought between the Afghans and the British. In these fights the so-called savage Pathans gave a very good account of their military genius. In many a pitched battle they defeated the highly disciplined troops under British officers. In the operations in the Chardeh Valley on the 10th and 11th December, 1879, the British met with a reverse which had the effect of making all those tribes of Afghanistan who had hitherto befriended the British troops leave the standard of the enemy. The English officers were now beaten in their game. They were outmanoeuvred by the Afghans under the able leadership of Mahomed Jan. The result of all these operations was that General Roberts had to retire within the cantonment of Sherpur,

allowing himself to be besieged by the Afghans. Cabul once more passed out of the hands of the English. The Afghans were the masters of the situation. Their priests encouraged them by continuing to prophesy a repetition of the victory of 1841-42. Their victorious leader Muhamad Jan opened negotiations with the English general Sir Frederic Roberts. He offered such propositions as that the British troops should at once retire to India, after having entered into an agreement to send Yakub Khan back to Cabul and that the British should leave two of their officers of distinction as hostages for the faithful carrying out of their contract, and that they should agree never again to concern themselves with Afghan matters. Of course, General Roberts could not accept such humiliating terms. He looked for reinforcements from India to relieve the besieged garrison of Sherpur. The reinforcements arrived on the 24th December, 1879, when the Afghans raised the siege. The Military Commission was again ordered to re-assemble, for it was necessary to execute a few of those 'patriots' whom the English General called 'rebels'. But it does not appear that many men were hanged this time. A few days afterwards General Roberts proclaimed "that all who come in without delay will be pardoned."

The British troops had been now over one year in Afghanistan, but they could not say that they had succeeded in crushing the independent spirit of those sturdy Highlanders. The last siege of Sherpur, when known in England and India, made the members of the Tory ministry consider whether it was not advisable to retire altogether from Cabul. They had to give up the idea of annexing Afghanistan.

There were other reasons also which induced them to leave Afghanistan as soon as possible. The chief consideration was the 'financial' one. The war was undertaken with a very light heart. The amount it would cost was never calculated by those who advocated it. India had to contribute every farthing to the prosecution of this unjust and unjustifiable war. This war cost something like twenty-one millions of pounds sterling, and India could ill afford it. At the time when the British Government were carrying fire and sword into the country of the independence-loving Pathans, the meek and mild inhabitants of India were dying by hundreds of thousands, nay millions, for want of the ordinary necessities of life. The famine, which did not leave India as

long as Lord Lytton was its Viceroy, had considerably reduced the revenues of the country. The Government Treasuries were almost empty. The winter of 1879-80 was a trying one for the Indians in Afghanistan and they were unable to pursue the dispersed forces of Mahomed Jan. This is attributed to, first, want of sufficient number of troops in Afghanistan, secondly, difficulty in marching through the enemy's country with its sunken roads, irrigated tracts, walled fields, and innumerable water-courses which formed such a network of obstruction that pursuing the enemy was laborious and dangerous in the extreme. Referring to the failure of the First Afghan War Sir Henry Durand wrote:—

"Everything in the expedition was a matter of the greatest uncertainty, even to the feeding of troops: for Afghanistan merited the character given to Spain by Henry IV of France: 'Invade with a large force, and you are destroyed by starvation; invade with a small one and you are overwhelmed by a hostile people.'"

The same difficulties also were experienced in the present campaign. The occupation of Cabul and Kandahar did not mean that the English were the masters of the whole of Afghanistan. Their power only extended just as far as the rifles could shoot.

The chiefs and sirdars of Afghanistan and specially those of Ghazni whom General Roberts consulted as to the future government of their country, told him that Afghanistan would not be quiet unless Yakub Khan was recalled and re-installed on the throne. They looked upon his abdication as compulsory, for they argued that, had the abdication been voluntary, a successor would instantly have been placed on the throne, whereas nothing had yet been done to show that the Christians did not mean to occupy their country permanently. The Christian Government had become so unpopular that placards were posted on the walls of the city of Cabul, the tenor of which was to point out how much better off the people were under the old Amirs than under General Roberts.

Important events were now rapidly developing which left no other alternative to the British Government than to raise some puppet Amir and place him in charge of the northern and eastern portions of Afghanistan. While the capture of Cabul and Kandahar by the British troops caused the *moolahs* to preach *jihad* against the Christian invaders, and the people were rising once

more to shake off the hated yoke of the *Kafirs*, rumors were current as to the invasion of Afghanistan by Abdur Rahman.

The name of Abdur Rahman appears now for the first time since the English actors commenced their play on the stage of Afghanistan. It is necessary, therefore, to refer to his antecedents. He was the grandson of the Amir Dost Mohamed. His father Afzul Khan was the eldest son of the Dost. The Dost, who was a very good judge of human character, nominated Shere Ali to succeed him, thus passing over the claims of his eldest son. Afzul Khan was a debauchee and a man of no stamina or character. On the death of the Dost in 1863, Shere Ali did not ascend the throne without a struggle with Afzul Khan. The war between these two claimants to the Afghan throne lasted for nearly five years. As was natural, Abdur Rahman took the side of his father. It is not necessary to enter into the labyrinth of intrigues and fights which these two claimants indulged in. Suffice it to say that on the death of his father and the succession of Shere Ali, Abdur Rahman saw safety in flight from Afghanistan. He took refuge in Russian territory. The Governor of Russian Turkestan received him very hospitably and he was assigned a pension of £ 5,000 a year. The Russian Governor-General, Kaufman, however, did not comply with his request to visit St. Petersburg to represent his case to the Czar, or aid him with troops to subdue Shere Ali. But Abdur Rahman was an astute prince. He saved nine-tenths of his pension, for the purpose of raising and equipping an army and thus succeeding some day in making himself master of Afghanistan. He was a source of danger to the Europeans occupying Cabul. Sir Richard Pollock, the Commissioner of Peshawar, writing before the commencement of hostilities with Shere Ali, said:—

"Abdur Rahman ** without help as to money and arms, could do nothing. If supplied with money by Russia or Bokhara, and promised a backing, he might attempt to recover his position. Probably, such an attempt would be unsuccessful, if made in the Amir's (Shere Ali's) time. If later, after the Amir's death, * the issue might be in Abdur Rahman's favor, as far as Turkestan is concerned. On the Amir's death such an attempt may be looked upon as likely *"

Abdur Rahman was thus biding his time. In Shere Ali's death and the imbroglio in which the Government of India was entangled in Afghan affairs, he saw his

opportunity for the rise to power. In the beginning of the year 1880, it was given out that he had succeeded in raising an army and crossed the Oxus and was at Balkh. It was conjectured that Russia had secretly helped him with money and arms in preparing to make good his claims to the Amirship.

The news of the activity of Abdur Rahman greatly alarmed the Government of India. Knowing how the people of Afghanistan hated the presence of the English in their country, Lord Lytton and his colleagues thought, and very rightly too, that the appearance of Abdur Rahman would be hailed with great joy by all the different tribes, for they would look upon him as their deliverer from the hated *Kafirs*. Abdur Rahman's success would mean a triumph for the Russians, for that prince was a pensioner of Russia, and then the British ascendancy in Afghan affairs, for gaining which so much trouble had been taken, would become a thing of the past.

The situation was a very critical one. All the previous arrangements as to the future Government of Afghanistan were upset. The appearance of Abdur Rahman was a disturbing factor in the Afghan problem. After due consideration, the Tory Ministry came to the conclusion that the only way to maintain the British prestige, for the time being at least, would be to conciliate the people of Afghanistan by placing some one as Amir on the throne of Cabul, and thus not to assume the direct Government of that country. It appears to us that at first the British Government never thought of recognising the claims of the exiled prince Abdur Rahman. Indeed, it seems that they tried to checkmate his movements by nominating one of the candidates of their choice as a puppet Amir and thus alienating the sympathies of the people of Afghanistan from Abdur Rahman.

Mr. (afterwards Sir) Lepel Griffin, at that time Secretary to the Government of the Punjab, was sent posthaste to Cabul to settle the Afghan affairs. He was vested with the powers of a king-maker. He arrived at Cabul on the 19th March, 1880. In order to impress the Afghan sirdars, who had turned out in great force, with a sense of Sir Lepel Griffin's dignity, Sir Frederic Roberts paid him the unusual honor of an escort of a

guard of honor. Another reason of Sir Lepel Griffin's coming posthaste to Cabul appears to be that the Tory Ministry was anxious to settle the Afghan affairs as soon as possible. That Ministry suffered greatly in the estimation of the British public from the effect of this unjust war. On the 24th March, 1880, Parliament was dissolved. Beaconsfield appealed to the country. He imagined that the country still had confidence in him, for two or three elections, which had occurred, resulted in favor of the Conservatives. Sir Lepel Griffin, according to the instructions he had received from Lord Lytton's Government, made known to the sirdars what was to be the future of Afghanistan. He told them that the hostilities against the British were due to the fact that the people of Afghanistan believed that Yakub Khan had been wronged by the British Government, and that by their demonstrations, the people supposed that they would succeed in getting the Ex-Amir restored to power. They were told that this was impossible. Yakub Khan would never be allowed to resume power, and they were, therefore, asked to nominate some other Amir. He also declared that Kandahar and Herat would no longer appertain to the future Amirs of Cabul, as it was decided to curtail their power, by removing from their jurisdiction those two provinces. Kandahar would be made into a British Province and Herat placed under a prince independent of the Amir of Cabul, but under the protection of the British Government. When these views were known, none of the Durrani chieftains cared to accept the Amirship on these terms, for to them the idea of disintegration of Afghanistan was a hateful one. It was, therefore, necessary to turn to Abdur Rahman and ascertain if he would accept the Amirship on these terms. It was not considered politic to leave him in the hands of Russia, for he might then be a source of danger to the British Government. Every attempt was made now to buy him over with this object in view, negotiations were opened with him and two Pathan officers in the employ of the Government of India were despatched with a letter to Abdur Rahman. In the meanwhile, the Ministry over which Disraeli *alias* Beaconsfield had presided for the last six years, came to an end. The Liberals, under the leadership of Mr. Gladstone, came into office. Lord Lytton had to resign the Viceroyalty of India. So

the authors of those mischiefs which brought dire calamities on India and Afghanistan, sunk into insignificance. But it does not appear that Mr. Gladstone's Government, at first, had any intention of upsetting the arrangement formulated by the Tory Ministry as to the future of Afghanistan. Mr. Gladstone and his followers while out of office criticised the proceedings of the leaders of the opposite party; but no sooner had they come into office than they approved of all the acts of their predecessors. *Politics hath no conscience*. Candahar was still to be retained and Herat placed under a separate ruler.

The southern portion of Afghanistan, that is, the country round about Candahar, was not at this time giving any trouble. So it was decided to withdraw the Candahar field force * under the command of Sir Donald Stewart for the purpose of occupying Ghazni and Cabul. Northern Afghanistan was not quiet, on account of the activity of Abdur Rahman. There was great excitement and commotion throughout Kohistan and Bamian. Abdur Rahman was an astute man and he was playing his cards very well indeed. It was arranged that on the arrival of Sir Donald Stewart's division in Cabul, General Roberts would proceed to the North and operate in the direction of Kohistan. Sir Donald Stewart left Candahar on the 30th March and reached Cabul on the 2nd May, 1880. † There was a few skirmishes on the way, but these were not of any importance. But on the arrival of the Division under Sir Donald Stewart in Cabul the idea of an expedition in the direction of Kohistan was given up. Negotiations with Abdur Rahman had been then set on foot. Moreover, the beginning of May was not a happy one for the British jingoes locked up in Afghanistan. In his 'Forty-one Years in India,' Roberts writes :—

"Sir Donald reached Cabul on the 5th May. On the same day we heard that the Beaconsfield Administration had come to an end; that a new Ministry had been formed under Mr. Gladstone; that Lord Lytton had resigned, and was to be succeeded by the Marquis of Ripon; and that the Marquis of Hartington had become Secretary of State for India.

* Candahar Field Force was replaced by Bombay troops from Quetta.

† In his 'Forty-one Years in India' Lord Roberts writes that "Sir Donald reached Cabul on the 5th May." This is a mistake. The *Pioneer* Correspondent wrote on May 2nd 1880, that "Sir Donald Stewart arrived at about 10 O'clock (to-day)".

"* That 5th of May was altogether not a happy day for me. Lord Lytton's approaching departure was a source of real sorrow. * * I had hoped that he would have had the gratification of seeing while in office, the campaign in which he was so much interested satisfactorily concluded, and with the prospect of permanent results; and I dreaded that a change of government might mean a reversal of the policy which I believed to be the best for the security of our position in India."

So there was crying and wailing in the camp of the jingoes. On his arrival in Cabul, Sir Donald Stewart took the supreme command of the troops from Roberts, who had now to play the second fiddle, which he did not like.

When the people of Afghanistan came to know that the exiled prince Abdur Rahman was going to be thrust on them as their Amir by the British Government, there was much disaffection and discontent in the country. The adherents of Yakub Khan tried to give much trouble. Those of the sirdars who had helped the British in many ways, were, on the mere suspicion of being in league with Yakub Khan and his family, imprisoned and deported to India, at the instance of Sir Lepel Griffin. Amongst the sirdars thus deported to India, was the Mustaufi, Habib-Ullah-Khan. These proceedings greatly strengthened the hands of Abdur Rahman. Regarding the deportation to India of the Mustaufi Habib-Ullah Khan Lord Roberts observes :—

"I looked upon his removal as a misfortune, for it broke up the only party that could possibly be formed to counterbalance Abdur Rahman, who was astute enough to see that the weaker our position became, the more chance there was of his being able to get his own terms from us."

The two Pathan officers who had been sent to Abdur Rahman, had an interview with him and returned to Cabul with his reply. But his attitude was considered 'by Sir Lepel Griffin and others as very disappointing. Abdur Rahman had eaten the salt of Russia, and it was not to be expected that he would easily sever his connection with his late benefactors.

The Correspondent of the *Pioneer* writing from Cabul, on the 4th June, 1880, said :—

"He (Abdur Rahman) has given no promise whatever on any specific points connected with the Amirship. He seems to be fully aware of our awkward position in the country, and is not at all anxious to aid us in extricating ourselves. * * Secure in his retreat beyond the Hindu Kush, he is working rather to make the British, and not himself, the grateful party in the current negotiations. * * There is no spontaneous outburst of gratitude, no eager acceptance of our offer of

the Amirship: but, on the contrary, a cool, self-possessed tone of inquiry as if the writer felt himself master of the situation, and meant to dictate his own terms. This is the more unfortunate, because there is no longer a strong power to back our efforts to settle the question with the hand of conquerors. The change of front in English politics has reacted upon us here with tremendous effect, and we are appearing in the eyes of the people rather as suppliants than dictators to Abdur Rahman."

Abdur Rahman was so obstinate in his demands that at one time "the question was seriously discussed whether it might not be necessary to break up negotiations with him, and re-instate Yakub Khan, or else set up his brother, Ayub Khan, as Amir.* But with threats and promises, Sir Lepel Griffin succeeded in inducing Abdur Rahman to accept the Amirship of Afghanistan.

Abdur Rahman's relations with the Russians may be judged from a letter written in May, 1878, by the then Governor of Afghan-Turkestan, named Shahgasi Sherdil Khan, who says:—

"Mirza Salahuddin, whom I deputed towards Samarcand and Tashkend to collect news from these directions, has returned and made a statement, to the effect that the Russians intend to induce Abdur Rahman Khan to submit to them a petition, setting forth that he has been putting up there a long time under the protection of the Russian Government; that he has often petitioned them to help him in securing the restitution of his ancestral territory from the Amir of Cabul but his prayer has not been acceded to; and that he has now heard that the Russians are preparing to fight against the British Government; that they have sent envoys to wait upon the Amir to request him to allow passage through his country to the Russian troops going to India and returning therefrom, should a necessity arise for such a passage and that such being the case, he offers his services in case His Highness refuses to grant the request of the Russian Government to capture Balkh with a small assistance from the Czar, and then subdue the whole of Afghanistan, which is not a difficult task."

His reply to Sir Lepel Griffin clearly shows that he did not care to be under the sole protection of the English.

Translation of the letter from sirdar Abdur Rahman Khan to Lepel Griffin Esq., dated 15th April, 1880:—

"Whereas at this time I have received your kind letter. In a spirit of justice and friendship you wrote to inquire what I wished in Afghanistan. My honoured friend, the servants of the Great (British) Government know well that throughout these twelve years of exile in the territories of the Emperor of Russia, night and day I have

cherished the hope of revisiting my native land.

"Now, therefore, that you seek to learn my hopes and wishes, they are these; that as long as your Empire and that of Russia exist, my countrymen, the tribes of Afghanistan, should live quietly in ease and peace; that these two states should find us true and faithful, and that we should rest in peace between them (England and Russia), for my tribesmen are unable to struggle with Empires, and are ruined by want of commerce; and we hope of your friendship that, sympathizing with and assisting the people of Afghanistan, you will place them under the honourable protection of the two Powers. This would redound to the credit of both, would give peace to Afghanistan, and quiet and comfort to God's people.

"This is my wish for the rest it is yours to decide."

The Government of India was anxious that the Afghan affair should be settled as soon as possible, for it imagined that the objects for which the troops re-entered Afghanistan in September, 1879, had been attained. These objects were two, viz—

"First to avenge the treacherous massacre of the British mission at Cabul, the second was to maintain the safe guards sought through the Treaty of Gundamak by providing for their maintenance guarantees of a more substantial and less precarious character. These two objects have been attained: the first by the capture of Cabul and the punishment of the crime committed there, the second by the severance of Kandahar from the Cabul power."

"Our advance frontier positions at Kandahar and Kurram have materially diminished the political importance of Cabul in relation to India, and although we shall always appreciate the friendship of its Ruler, our relations with him are now of so little importance to the paramount objects of our policy that we no longer require to maintain British agents in any part of his dominions."

The Government of India has no longer any motive or desire to enter into any fresh treaty engagements with the Ruler of Cabul.

"The territorial and administrative arrangements already completed by us for the permanent protection of our own interests are not susceptible

* The reasons for retaining Candahar are thus stated by Lieut Yale who served with the Afghan Boundary Commission in 1884-85:—

"It might restore affairs to see a British force occupying Kandahar by the orders of a British Ministry. This seems a step sadly needed both for the safety of India and the due control and reformation of Afghanistan. From Kandahar a salutary influence and judicious control might well be established on the arbitrary exercise of power of the Amirs, on the turbulence of the tribal chiefs, and on the uncivilized condition of the populace. It is quite time that this control, similar to that exercised among the feudatory princes of India, should be established in Afghanistan. An independent is inconsistent with a subsidised Afghanistan."

Travels with the Afghan Boundary Commission, p. 1, 377.

* Roberts "Forty-one years in India." Vol. II, p. 327.

of negotiation or discussion with Abdur Rahman or any other claimant to the throne of Cabul."

The above extracts from a letter written to Mr. Lepel Griffin by Mr. (afterward Sir) Alfred Lyall, Secretary to the Government of India, Foreign Department, toward the end of April 1880, will show the terms on which the Government desired to place Abdur Rahman on the throne of Cabul. But the course of events made the Government modify these terms, and Abdur Rahman was also, as said before, very obstinate.

In the beginning of July, 1880, Sir Donald Stewart sent a message to Abdur Rahman, requesting him to come to Cabul to discuss the terms of a settlement. He complied with the request. Sir Lepel Griffin was closetted with him when all the terms on which he was to accept the Amirship were discussed. He seemed to have agreed to all the conditions which the British Government imposed on him in recognising him as the ruler of Cabul. On the 22nd July 1880, a Durbar was held at Cabul when Sir Lepel Griffin proclaimed to the sirdars, chiefs and gentlemen of Afghanistan assembled that the Government of India had, formally, acknowledged sirdar Abdur Rahman Khan, grandson of the illustrious Amir Dost Mahomed Khan, as Amir of Cabul. Towards the end of July, Abdur Rahman entered into Cabul and ascended the throne of his grandfather.

Preparations were now being made for the evacuation of Cabul; and General Roberts had actually left Cabul for India.

"But, suddenly, to quote his words" "a presentiment which I have never been able to explain to myself, made me retrace my steps and hurry back towards Cabul—a presentiment of coming trouble which I can only characterize as instinctive.

"The feeling was justified when, about half-way between Butkak and Cabul, I was met by Sir Donald Stewart and my chief of the staff who brought me the astounding news of the total defeat by Ayub Khan of Brigadier-General Burrows' brigade at Maiwand, and of Lieutenant-General Primrose (who had succeeded Sir Donald Stewart in command of the troops at Kandahar) with the remainder of his force, being besieged at Kandahar."

Preparations were immediately made to retrieve the disaster and relieve the besieged garrison at Kandahar.

Ayub Khan was the brother of the ex-Amir Yakub Khan. He succeeded in raising a large army in Herat and Kandahar. When he saw that Abdur Rahman was made Amir of Cabul, and Kandahar turned into a British province, he instigated the people of Herat—those very men who were instrumental

in murdering Cavagnari—to rise and expel the 'Kafirs' from their country. With his large following, he was advancing on Kandahar and Ghazni. When his movements became known, General Burrows was ordered to proceed against him. On the 27th July, Burrows engaged Ayub Khan at a village called Maiwand. Here Ayub Khan inflicted a crushing defeat on Burrows' force. The Maiwand disaster had its parallel only in the defeat of the British by the Sikhs at Chillianwalla. The British loss was estimated at about 2000 killed and wounded. General Burrows with the remnant of his force retired to Kandahar, where Ayub Khan besieged them.

When the news of the disaster reached Simla, the Government of India at once decided to send a large force to Kandahar for its relief. At first they thought of sending the force from Quetta, but there were not sufficient troops at that place and moreover, transports were wanting. So on the recommendation of General Roberts, an army consisting of 10,000 fighting men with the same number of camp followers and General Roberts in its command, left Cabul for Kandahar on the 8th August, 1880. The distance between Cabul and Kandahar is over 300 miles. The march which Roberts performed is a historic one, for he reached that place on the 31st August, doing the whole distance in a little over three weeks. That a large army consisting of 20,000 fighting men and followers with some 8,000 baggage animals accomplished a march of more than 300 miles in three weeks time, was a great credit to the commander who performed it.

On the approach of the British army, Ayub Khan raised the siege, and Roberts marched triumphantly into Kandahar. The besieged garrison were, to use a slang word, in a "funk". Lord Roberts writes:—

"I confess to being very greatly surprised not to use a stronger expression, at the demoralised condition of the greater part of the garrison. * They seemed to consider themselves hopelessly defeated, and were utterly despondent; they never even hoisted the Union Jack until the relieving force was close at hand. * The walls which completely surrounded Kandahar were so high and thick as to render the city absolutely impregnable to any army not equipped with a regular siege-train; * for the British soldiers to have contemplated the possibility of Kandahar being taken by an Afghan army showed what a miserable state of depression and demoralization they were in."

Ayub Khan with his army moved out a few miles from Kandahar on the arrival of General Roberts. On the 1st September General Roberts fought him a battle, known as the battle of Kandahar. This was the last battle fought in Afghanistan by the British. Ayub Khan was defeated and Roberts added another feather to his cap. There is reason to believe that Ayub Khan's defeat was, to a large measure, due to the desertion of his men, who had been bribed and bought over by the British. This is hinted at by the *Pioneer* correspondent. He writes in his letter dated Kandahar, 20th September, 1880.

"The Kizilbasas and Kohistanis being already in treaty with Colonel St. John to desert him, he, Ayub Khan, at short notice."

Thus it was not all courage and valor and good generalship which gained Roberts the victory of Kandahar on the 1st September, 1880.

The disaster at Maiwand and the siege of Kandahar proved to demonstration the impossibility of Kandahar ever becoming a British province. Hence Mr. Gladstone's government decided that Kandahar was not to be separated from the Amirship of Cabul. Abdur Rahman's position was thus greatly strengthened. He was a lucky man. He got all that he wanted. The British troops evacuated Cabul and Kandahar and the beginning of October 1880 did not see a single British soldier on the soil of Afghanistan. Thus terminated the Second Afghan War, the memory of which still rankles in the breast of every native of Afghanistan.

What was the net gain to the British after they had evacuated Kandahar and Cabul? If there was no gain, at least the Second Afghan War did not cause England any loss. It was India which greatly suffered from the calamities of the war. The Marquis of Salisbury on a certain occasion said, "India must be bled." India was bled, both literally and figuratively, by the War. It was India's sons who died fighting for England on the bloody fields of Maiwand, Kandahar, Ali Musjid and in the ill-fated Residency at Bala Hissar. It was they who died by hundreds, if not by thousands, from diseases contracted on field service, for while the British soldiers were sumptuously fed, warmly clothed and comfortably accommodated, the Indian troops and camp followers, as is usual

in all campaigns, did not even dream of sharing half the luxuries provided for a handful of British soldiers. While the British soldiers fought in a country, the climate of which was not far different from that of their own, it was quite otherwise with the Indian troops.

The war cost India some twenty-one millions of pounds sterling. This, too, was at a time when India was in the grip of a dire famine. The government which spent so many millions of pounds on the war, never thought of spending one half of that sum in alleviating the miseries of the famine-stricken people. In fact, the fund which was raised by taxing the already famine-stricken inhabitants of India, to insure against future famines, was misappropriated and spent on the war! Such were the notions of justice and philanthropy of the Government of those days.

England benefited from the war. All the honors, distinctions, high offices with princely salaries attached to them, went to those who were natives of England. It enabled many a British officer to earn distinctions which they could not have otherwise dreamt of. It was this war which brought Roberts a peerage. Knighthoods and Baronetcies and other distinctions and promotions fell to the lot of the natives of England. No Indian, for his services in connection with the war, received any high distinction.

The war was undertaken with the object of forcing a British envoy at Cabul. But this object was not secured, on the eleventh hour it was discovered that

"Our relations with him (the Amir) are now of so little importance to the paramount objects of our policy that we no longer require to maintain British agents in any part of his dominions."

Kandahar and Herat, which were to provide India with the scientific frontier, could also not be retained but had to be made over to the Amir. Colonel Haana has truly observed that the war has

"secured none of the objects for which it was waged; neither British officers either at Cabul or on the Afghan frontier nor British influence paramount in Afghanistan nor even a weaker sovereignty on the throne of Cabul."

But this war has left to the inhabitants of Afghanistan a legacy of ill-feeling and hatred against the British, for vengeance sleeps long but never dies.

* Extract from Mr. A. G. Lyall's letter to Mr. Lepel Griffin, dated Simla, April 1883.

THE GARDEN OREEPER

By SAMYUKTA DEVI

(8)

GOPAL could not remember when he had been taken out of the bullock-cart and deposited in a third class compartment of a railway train. The varied sounds in this compartment failed to disturb his sound sleep. He sat up with a mighty start as night merged into dawn and stared at the strange scene before him. He had never been in a railway train before. What a crowd! Nearly all the peoples of India were represented in it. And what an uproar!

But Gopal had not the opportunity of gazing at them to his heart's content. The carriage stopped very soon, and Krishna pulled him out of it. Gopal found himself in the largest building, he had even seen. The noise and crowd were terrifying to the small country boy. He had never seen so many people together, not even at the village fair. After a time they came out of the huge building and got into a hackney coach. It went on and on. The roads were very big and broad, with large houses on both sides. But nowhere did he see a field or a water tank. All the houses belonged to rich people, Gopal concluded, because they were gaudily furnished, and had many pretty things arranged by the windows. He thought he saw trains going along the roads, only they were smaller than the one he had been in during the night.

At last their carriage stopped before a large house. It had a beautiful garden all around. Krishna got down, and pulled down all his luggage from the roof of the coach, in a great hurry. Then ensued a furious discussion about the fare to be given to the coachman. Krishna would not give more than a rupee, while the man wanted two annas more. Gopal stood and stared at them in dismay, with his small bundle clasped in his arms.

Suddenly, a gentleman in English dress came out of the hall in front, and stood at the head of the stairs. With his appearance, the scene changed as if by magic. Up to this, Krishna had been waving his hand, in

close proximity to the coachman's beard and giving him an example of his eloquence. The coachman, though deficient in language, made up by the power of his lungs. But as soon as Shiveswar appeared, both the combatants became mute as stone statues. Krishna went and bowed down at his master's feet, while the coachman stood silent, with a dumbfounded expression.

Gopal understood from Krishna's manners that the gentleman before them was the master of the house. So, he too went and bowed down to him.

Shiveswar pulled up the boy with a jerk, saying angrily, "Bearer, have I not told you a hundred times, not to start a row before my office room? Pay off this man at once."

Krishna's militant attitude had disappeared completely. He meekly took out a rupee and some change and handed these to the cabman. He could not help casting a look of sorrow at the money, before he parted with it.

As the hackney carriage drove out of the gate, Shiveswar turned his attention to the boy. Up to this, he had been holding him by the hand, but his eyes were engaged with Krishna and the cabman.

"Is this the boy?" he asked Krishna.

Krishna folded his hands and began, "Yes, sir, he is an orphan, sir; so I thought, if you would be kind enough—"

His master cut him short, "All right, all right," he said. "Is he from your native village?"

"Yes, sir, he is well born, of a good caste—" but his master had gone off, before he could finish, and Gopal had gone with him. Krishna felt defrauded somehow, and went off to his own quarters with his bundles.

Shiveswar had taken the boy to his office room: He sat down in a chair and pointed at another, saying, "Sit down there. What's your name?"

Gopal hesitated to take the chair. But he sat down, after a moment, and replied, "Gopal Chandra Roy"

Shiveswar frowned and said, "The country

seems to be overrun with Gopals and Rakkhals."

Gopal could not understand his anger and stared at him in amazement. True it was that nearly all the people, he knew, felt angry with him. But this was the first time, he had seen any one getting angry at the mere sound of his name.

Shiveswar was thinking of something. After a while, he asked again, "Do you know how to read and write?"

"Yes, sir," the boy replied, "I used to read in the first class of the village school."

Shiveswar was glad to hear it. Though he loved the idea of training up children, he was relieved to find that he would not have to do any spade work.

"I will have you admitted in a school here very soon," he said to Gopal. "Go now, wash yourself and have something to eat. You look very tired." He drew a huge book towards himself, and became immersed in it.

Though the master of the house had given him permission to go, Gopal did not know where to go. He really wanted to wash and eat, but where? Though the gentleman had spoken very kindly to him, he did not dare to question him.

Suddenly, a carriage drove up and came to a standstill before the stairs. As the syce opened the door, a little girl darted out and up the stairs and stopped before the door of the office room.

The girl was very beautiful. Though Gopal was nothing but a child, yet he could not help noting this. He had never seen such a beautiful and well dressed child in his village.

The girl carried a small bundle in her arms. She was as fair as the master of the house, whom Gopal had at first taken for a European. But the father was white as marble, whereas the daughter looked like a blushing rose. Her eyes shone like stars and her black hair hung on her shoulders in wonderful curls.

Mukti had probably rushed to her father, in this way, in order to give him some important information about Aparna, or Krishnadasi, but she was taken aback, finding a strange boy sitting in her father's room. As she could not impart her secrets in his presence, she shouted for her grandmother and ran for her room.

Shiveswar looked up from his book, at the

sound of his daughter's voice. He did not find her there, but found the boy, still sitting in the chair. He was surprised. "Why don't you go?" he asked.

Gopal was frightened and asked in a timid voice, "Which way shall I go?"

"Oh, to be sure, I forgot. Bearer!" called Shiveswar.

Krishna rushed up at once. He took away Gopal, according to his master's orders, and led him upstairs.

A small room by the side of Shiveswar's bedroom, had been got ready for Gopal. He was surprised at its beautiful decorations and furniture. He did not dare to touch or sit upon any of them. "This is your room," said Krishna. "The bath-room is on this side. Will you have a bath now?"

Gopal forgot to answer him, so busy was he looking around. No boy has ever been born who had not imagined himself, sometime or other, to be Haroun Al Rashid or Aladin with his wonderful lamp. And if by chance, the dream came true, even very partially, who could fathom its joy and surprise?

Krishna asked the same question again. Gopal came down from the skies and replied, "Yes, I will wash now."

In the bath-room, too, the poor boy was in a fix. He had only bathed in tanks of green slimy water before this. He did not know the use of taps or shower baths.

Krishna came to his rescue mercifully. As they were half through the ceremony, a boy came up and said, "Breakfast has been served. Master sends for this boy."

Krishna hastily dried Gopal, and sent him down. Gopal was clad only in a small dhoti, the end of which he had wrapped round his shoulders. He still wore an amulet round his neck.

Shiveswar nearly jumped at the sight he presented. He was dead against these indecencies. "Bearer," he ordered, "Go and fetch a coat or, anything from my dressing room, and put him in it. And take off that dirty string from around his neck. He is not an animal."

Krishna obeyed with alacrity. Then he went out of the room and returned in about five minutes with a shirt. Gopal put it on obediently. Its collar nearly rose above his cheeks, and its sleeves hung a foot down his fingers. He felt highly amused, but he was feeling too nervous in the presence of the master to laugh.

THE GARDEN CREEPER

By SAMYUKTA DEVI

(8)

GOPAL could not remember when he had been taken out of the bullock-cart and deposited in a third class compartment of a railway train. The varied sounds in this compartment failed to disturb his sound sleep. He sat up with a mighty start as night merged into dawn and stared at the strange scene before him. He had never been in a railway train before. What a crowd! Nearly all the peoples of India were represented in it. And what an uproar!

But Gopal had not the opportunity of gazing at them to his heart's content. The carriage stopped very soon, and Krishna pulled him out of it. Gopal found himself in the largest building, he had even seen. The noise and crowd were terrifying to the small country boy. He had never seen so many people together, not even at the village fair. After a time they came out of the huge building and got into a hackney coach. It went on and on. The roads were very big and broad, with large houses on both sides. But nowhere did he see a field or a water tank. All the houses belonged to rich people, Gopal concluded, because they were gaudily furnished, and had many pretty things arranged by the windows. He thought he saw trains going along the roads, only they were smaller than the one he had been in during the night.

At last their carriage stopped before a large house. It had a beautiful garden all around. Krishna got down, and pulled down all his luggage from the roof of the coach, in a great hurry. Then ensued a furious discussion about the fare to be given to the coachman. Krishna would not give more than a rupee, while the man wanted two annas more. Gopal stood and stared at them in dismay, with his small bundle clasped in his arms.

Suddenly, a gentleman in English dress, came out of the hall in front, and stood at the head of the stairs. With his appearance, the scene changed as if by magic. Up to this, Krishna had been waving his hand, in

close proximity to the coachman's beard and giving him an example of his eloquence. The coachman, though deficient in language, made up by the power of his lungs. But as soon as Shiveswar appeared, both the combatants became mute as stone statues. Krishna went and bowed down at his master's feet, while the coachman stood silent, with a dumbfounded expression.

Gopal understood from Krishna's manners that the gentleman before them was the master of the house. So, he too went and bowed down to him.

Shiveswar pulled up the boy with a jerk, saying angrily, "Bearer, have I not told you a hundred times, not to start a row before my office room? Pay off this man at once."

Krishna's militant attitude had disappeared completely. He meekly took out a rupee and some change and handed these to the cabman. He could not help casting a look of sorrow at the money, before he parted with it.

As the hackney carriage drove out of the gate, Shiveswar turned his attention to the boy. Up to this, he had been holding him by the hand, but his eyes were engaged with Krishna and the cabman.

"Is this the boy?" he asked Krishna.

Krishna folded his hands and began, "Yes, sir, he is an orphan, sir; so I thought, if you would be kind enough—"

His master cut him short. "All right, all right," he said. "Is he from your native village?"

"Yes, sir, he is well born, of a good caste—" but his master had gone off, before he could finish, and Gopal had gone with him. Krishna felt defrauded somehow, and went off to his own quarters with his bundles.

Shiveswar had taken the boy to his office room: He sat down in a chair and pointed at another, saying, "Sit down there. What's your name?"

Gopal hesitated to take the chair. But he sat down, after a moment, and replied, "Gopal Chandra Roy"

Shiveswar frowned and said, "The country

seems to be overrun with Gopals and Rakkhals."

Gopal could not understand his anger and stared at him in amazement. True it was that nearly all the people, he knew, felt angry with him. But this was the first time, he had seen any one getting angry at the mere sound of his name.

Shiveswar was thinking of something. After a while, he asked again, "Do you know how to read and write?"

"Yes, sir," the boy replied, "I used to read in the first class of the village school."

Shiveswar was glad to hear it. Though he loved the idea of training up children, he was relieved to find that he would not have to do any spade work.

"I will have you admitted in a school here very soon," he said to Gopal. "Go now, wash yourself and have something to eat. You look very tired." He drew a huge book towards himself, and became immersed in it.

Though the master of the house had given him permission to go, Gopal did not know where to go. He really wanted to wash and eat, but where? Though the gentleman had spoken very kindly to him, he did not dare to question him.

Suddenly, a carriage drove up and came to a standstill before the stairs. As the syce opened the door, a little girl darted out and up the stairs and stopped before the door of the office room.

The girl was very beautiful. Though Gopal was nothing but a child, yet he could not help noting this. He had never seen such a beautiful and well dressed child in his village.

The girl carried a small bundle in her arms. She was as fair as the master of the house, whom Gopal had at first taken for a European. But the father was white as marble, whereas the daughter looked like a blushing rose. Her eyes shone like stars and her black hair hung on her shoulders in wonderful curls.

Mukti had probably rushed to her father, in this way, in order to give him some important information about Aparna, or Krishnadasi, but she was taken aback, finding a strange boy sitting in her father's room. As she could not impart her secrets in his presence, she shouted for her grandmother and ran for her room.

Shiveswar looked up from his book, at the

sound of his daughter's voice. He did not find her there, but found the boy, still sitting in the chair. He was surprised. "Why don't you go?" he asked.

Gopal was frightened and asked in a timid voice, "Which way shall I go?"

"Oh, to be sure, I forgot. Bearer!" called Shiveswar.

Krishna rushed up at once. He took away Gopal, according to his master's orders, and led him upstairs.

A small room by the side of Shiveswar's bedroom, had been got ready for Gopal. He was surprised at its beautiful decorations and furniture. He did not dare to touch or sit upon any of them. "This is your room," said Krishna. "The bath-room is on this side. Will you have a bath now?"

Gopal forgot to answer him, so busy was he looking around. No boy has ever been born who had not imagined himself, sometime or other, to be Haroun Al Rashid or Aladin with his wonderful lamp. And if by chance, the dream came true, even very partially, who could fathom its joy and surprise?

Krishna asked the same question again. Gopal came down from the skies and replied, "Yes, I will wash now."

In the bath-room, too, the poor boy was in a fix. He had only bathed in tanks of green slimy water before this. He did not know the use of taps or shower baths.

Krishna came to his rescue mercifully. As they were half through the ceremony, a boy came up and said, "Breakfast has been served. Master sends for this boy."

Krishna hastily dried Gopal, and sent him down. Gopal was clad only in a small dhoti, the end of which he had wrapped round his shoulders. He still wore an amulet round his neck.

Shiveswar nearly jumped at the sight he presented. He was dead against these indecencies. "Bearer," he ordered, "Go and fetch a coat or, anything from my dressing room, and put him in it. And take off that dirty string from around his neck. He is not an animal."

Krishna obeyed with alacrity. Then he went out of the room and returned in about five minutes with a shirt. Gopal put it on obediently. Its collar nearly rose above his cheeks, and its sleeves hung a foot down his fingers. He felt highly amused, but he was feeling too nervous in the presence of the master to laugh.

It was a hard job to use knife and fork in this dress, as he was a beginner and nervous too. Anyone else would have noticed his extreme embarrassment. But Shiveswar, as usual with him, was in the clouds already. He was already thinking over all the newest methods of education, trying to select the most suitable for this boy. His hands played with his knife and fork mechanically.

Gopal was very hungry, and the sight and smell of the delicacies before him whetted his appetite still more. So he tucked away the superfluous portion of his shirt sleeves and began to eat with the help of a spoon. Suddenly light and quick steps were heard outside, and next moment, that beautiful child in a wonderful dress rushed into the room, like a small tornado, and flinging herself upon Shiveswar, began to laugh.

Shiveswar forgot all about modern methods of education. He took her upon his lap and asked, "What's it, my little mother? You are very early this time."

"So you have forgotten, have you?" cried the child. "Did not I tell you last Saturday, that we were to have a holiday on next Friday, too, and I should be home for three days? And did not you promise to take me to the Zoo, in your new motor car?"

"All right, all right," said Shiveswar, "we shall go. But look here, what a nice boy! Won't you play with him?"

Mukti looked Gopal up and down with close attention. Then she began to laugh inordinately.

"What's the matter?" asked her father.

Mukti was nearly choking with laughter. "What a big shirt he has put on!" she gasped.

Shiveswar smiled as he looked at Gopal. "It is my shirt, so it is rather big for him," he said. "But to-morrow you will see so many nice things will come for him."

Poor Gopal blushed to his ears at the amusement of the bright and beautiful little lady. He wanted to tear that big shirt into pieces, in the excess of his mortification.

(9)

Next morning Mukti was found before the doors of Shiveswar and Gopal, eager to make friends with the newcomer. She had escaped from her grandmother's custody early and was seeking a pretext for entering her father's rooms. Suddenly Shiveswar came out dressed for going out.

"What do you want, my little mother?" he asked.

"Father, where is the boy, in that big shirt?" she asked. "Will he live with us? Won't he speak to me and go to read in a school? And won't you buy him good clothes?"

Shiveswar picked her up in his arms, saying, "Yes, yes he will, and I shall. Go and put on a clean frock, then we shall go for a drive. We shall take that boy along, too."

Mukti jumped down from his arms and ran to change her dress. As she entered her grandmother's room, the old lady asked, "Why are you running about like this early in the morning?"

Mukti had got a clean frock on, over the soiled one, which she had not thought of taking off. Now she was struggling with the buttons and replied shortly, "I am going to make friends with the boy in a big shirt."

The old lady was surprised. She frowned, and asked, "What on earth do you mean?"

"Father said so," replied Mukti. She did not waste any more time on her grandmother, but ran off, all the while trying to hide her dirty frock, which unfortunately was longer than the clean one. Mokshada wanted more information and she called "Mukti, come here for a moment." But in vain. By that time Mukti was half-way down the stairs.

Mokshada had been looking on at her son's doings ever since yesterday. But she was too angry and hurt even to ask Shiveswar the meaning of these goings on. She went on as if nothing had happened. She knew that it was usual for a man to desire children. So she had been trying these five years to get him to marry again. But he had very little respect for his mother's wishes. Instead of settling down again, he sent off even the only child he had to a Mem Sabib's school. If she insisted upon his remarriage, he would answer, "You, too, became a widow in your youth, with but one child. If you can remain without marrying again, why can not I?" Now, had anyone ever heard the like of it? Was there no difference between a man and a woman? A woman can surely suffer everything but not so a man.

Besides, Shiveswar had to think of his family. He should not allow it to become extinct. What was the use of his earning so much money, if there was no one, on

whom he could spend it? The memory of a departed spouse was enough for a woman, but not so for a man. If he had married he would have been the father of a son by this time, and would not have been driven to adopt a low-caste brat. Shiveswar's mother was getting more and more anxious. Perhaps some day, he would bring home some Christian bride. But Mokshada hoped, he would not, as he evinced very little interest in the fair sex. But why did not he give his daughter in marriage to a well-born boy, and bring him up? It would have been a sound business proposition and would have satisfied his desire for a son. But what was the use of talking? Her son was a headstrong fool, and would not listen to anyone.

But she could not help thinking and thinking. What if this boy should turn out to be a Brahmin's son? She wanted to make sure. But how to do it? She could not ask Krishna. She could have got the information from Mukti, had not the little imp escaped. Mokshada almost made up her mind to go away to her countryhouse. When her fury reached its climax, this determination always gave her consolation.

Suddenly the maid-servant Nitya broke through her thoughts, crying, "I say, grandma, you have not put out the stores, nor have you ordered the dinner. The cook is shouting down the roof of the kitchen."

Mokshada got up hurriedly and rushed to the storeroom. For the time she forgot all about her countryhouse.

Shiveswar returned with the children, when the morning was advanced. The car was loaded as on the day when Mukti went marketing for her sojourn to the boarding house. But there was no sorrow on this occasion. Mukti had nearly talked herself hoarse, having got such a good listener. She liked this friend, more than her classmates, more than the coachman and the gardener. This boy was of a different type altogether; so Mukti had almost fallen in love with him.

But the poor boy was feeling a bit dazed. This sudden transformation had been too much for him. His home, his dress, his surroundings, even his very name had been changed. He had never seen such wealth, had never had so many things to call his own, and had never been called Jyotirmoy. This handsome gentleman had changed everything like a magician.

As Shiveswar came in, his mother asked sharply, "Have you lost all sense? Where have you been with the child, in this terrible sun? She must be dying of thirst by this time."

"I am rather late," admitted Shiveswar. "I had so many things to buy for Jyoti, that I could not manage to return sooner. But they had had a good feed in the market."

Mokshada could hardly restrain herself. Still she made a brave attempt at appearing indifferent and asked, "Who on earth is Jyoti? Have you changed your daughter's name?"

"Not at all," said Shiveswar rather embarrassed. "Mukti is still Mukti. But have you not seen the new boy? I have taken him in I want to train him up into a gentleman. I shall bring him to you to-day."

"Thank you," said his mother icily, is not always you show me so much consideration. You have become quite a learned Sahib now, whereas I am nothing but an ignorant country-woman. So I don't presume to advise you in anything."

Shiveswar felt rather at a loss for an answer. "No mother," he said at last, "I had decided to tell you. Only I was hesitating, knowing that you will be angry."

"Oh, much you care for my anger," said the old lady. "Very well, if you want to adopt a son, do it in a proper way. I don't want to hinder you. Call Brahmins and have the proper ceremonies. I hope, he comes of a good Brahmin family?"

Mokshada was nearly certain that the boy was not a Brahmin, else Shiveswar would not have been so eager to take him into his family. Still she wanted to make sure.

Shiveswar was beginning to lose his temper. "I don't know whether he comes of a good Brahmin family or a good Chandal family. The last is more likely. I don't want any information about his family, because I am not going to adopt it. If he is good and honest, that will be enough for me."

Mokshada put her fingers in her ears. "Gracious God in the heavens!" She cried in dismay. "You are going to adopt the son of a Chandal? You want him to give water to your ancestors? Can a Chandal ever become the son of a Brahmin?"

"I know he cannot," said her son. "How can he become any one else's son, except

that, of his own father? Neither a Chandal nor a Brahmin can do it. He will remain, what he was. I am only taking care of his education. I don't suppose, souls are ever thirsty for water. But if ever I do feel so, I hope the boy will oblige me. My ancestors can please themselves."

His mother stood as if thunderstruck. After a while, she cried out, "If the boy is of a low caste, I will go away from this house this very day. You are my son, but even for you I cannot tolerate such sacrilege."

Shiveswar scented danger and climbed down a bit. "I did not say that I knew him to be a Chandal."

"Then ask what caste he is," Shiveswar became obstinate again. "I won't ask him that," he said. "That he is born a human being should be enough."

"If you won't ask him, I will," said his mother.

"No mother, you won't," said Shiveswar firmly. "I don't want the boy to feel any difference between himself and all of us. I forbid you."

"How dare you say such things?" flared up his mother. "Do you take me for a servant? I shall go away at once. I won't have anything more to do with such a renegade as you." She left the room in fury. Shiveswar followed her, aiming at a reconciliation.

All this while, the two children were busy arranging Jyoti's room and looking over all the new purchases. They did not bother themselves about caste, creed, family or money.

Both of them sat ensconced in a chair, looking over the pictures of the Royal Natural History and talking for all they were worth. But Krishna interrupted and took them away to the dining room for their midday meal. Mukti usually ate in her grand-mother's room, when home for the week-end, but to-day nobody called her there. She found her father absent, too. She asked Krishna, where her father was, but getting no satisfactory reply, she began to instruct Jyoti about the proper way of handling knives and forks.

A few days later Mukti came home for the Easter vacation. But this time she was not taken for long drives, as her father appeared very much pre-occupied and busy. Her grand-mother too had changed. Mukti did not like to go and talk to her now. So she devoted all her leisure to this new

friend of hers. They roamed about the garden in the hot sun, swung for hours and stuffed themselves full with green mangoes. Nobody hindered them. So they acted according to their own sweet will and derived no end of joy out of it. Mukti had learned to climb trees with Jyoti, and no one called her a tomboy for that. And Jyoti, too, had learned to skip and play and none called him a girl.

Thus the vacation passed off very well and Mukti went back to school. Jyoti, too, was sent to a boys' day school.

But in Shiveswar's house the clouds still hung heavy. Every moment a storm was threatened. His mother had put up with all the modernism of her son, but she could not reconcile herself to the virtual adoption of this low-caste boy. So she took every opportunity for creating trouble. She was afraid to leave her son's house, lest the boy should get too firm a foothold here, but staying on became more and more irksome. Besides, she had professed so great an orthodoxy, people must expect her to live up to her views and leave her apostate son. At first she had thought that, if she created trouble enough, Shiveswar would send away the boy somewhere. But Shiveswar had too firm a faith in his opinions to send Jyoti away, though he had sent away Mukti quite willingly.

Then came the long summer vacation. Mukti came home with her boxes, baskets, slate, books and clothes. She had many children's magazines and picture books with her. Jyoti, too, had collected numerous treasures by this time. He had learnt many things at school, which Mukti did not know. They expected to have great times together.

But poor Mukti's expectations remained unfulfilled. Her grand-mother had made up her mind at last. She was really going away to the countryhouse, and wanted to take Mukti along with her. Mukti protested; she cried and shouted. But her father said, "You must go, dear. Don't disobey grand-mother."

So Mukti went. But Shiveswar stayed on in Calcutta with Jyoti.

After the vacation Mukti came back, but her grand-mother did not return. Shiveswar could never manage an establishment. So he packed off Mukti to the school and went and took rooms in a hotel for himself and Jyoti. The house was locked up.

So Mukti could not come home for the

week-ends now. Shiveswar went and saw her every Saturday. He could stay only one hour. After that he had to leave and

return to the hotel, where bearded Mahomedan servants greeted his eyes on all sides.

(To be continued.)

THE MYSTICISM OF SAINT CATHERINE OF SIENA

By WENDELL M. THOMAS, Jr

IN the airy city of Siena in Italy, "lightly set on the summit of three hills which it crowns with domes and clustering towers, was born of simple townspeople in 1347 the saintly Catherine. From the day that she could walk, she became very popular among her numerous relatives and her parents' friends, who gave her the pet name Euphrosyne to signify the grief-dispelling effect of her conversation, and who were constantly inviting her to their houses on some pretext or other. Sent one morning to the house of her married sister Bonaventura, she was favoured with a beautiful vision." (The Dialogue of St. Catherine of Siena, tr. by A. Thorold, London, 1907). She beheld Christ. He did not appear in some other-worldly realm or fashion. Neither did he call her away from this present life. He was clad in the papal robes (a symbol of earthly authority), and gave her his benediction. Henceforth Catherine understood that He had called her to serve Him by serving His brothers and sisters.

Now visions are not essential to mysticism. They simply show that the beholder is what the psychologists term a "Visile," one in whom the visual images common to all are unusually intense and lifelike. Though not essential, still their capacity to inspire and encourage throughout a lifetime is just so much gain. The persistent and winsome religious service of Sadhu Sundar Singh and C. E. Andrews, for instance, was originated by a vivid vision of Christ.

Catherine's deep religious purpose thus arose very early. When twelve she cut off her blood hair to escape unwelcome attentions. At fifteen, by entering the neighbouring monastery of St. Dominic, she publicly devoted her life to the service of Christ. In order to make her body a fit and controllable instrument for spiritual service,

she adopted a severe routine. her bed was a board, her clothing coarse, her diet completely meatless. It is to be noticed that she practised not asceticism but rigourism. She did not torture her body to free her soul from the drag of the world; she disciplined her body to devote her soul to save the world. At nineteen she appeared in public and gradually gathered about her a small group of disciples both men and women. She was favoured with sublime and intensely intimate visions, in which she married Christ with a ring, and drank the blood which flowed from his wounded side.

"Much might be said of the action of Catherine on her generation. Few individuals perhaps have ever led so active a life or have succeeded in leaving so remarkable an imprint of their personality on the events of their time. Catherine, the Peacemaker, reconciles warring factions in her native city, and heals an international feud between Florence and the Holy See. Catherine, the consolator pours the balm of her gentle spirit into the lacerated souls of the suffering wherever she finds them, in the condemned cell or in the hospital ward. She is one of the most voluminous of letter writers, keeping up a constant correspondence with a band of disciples male and female all over Italy, and last but not least, with the distant Pope at Avignon."

Her greatest achievement was to induce the Pope, who at this time was suffering the "Babylonian Captivity" under the secular influence of the king of France, to return to Rome and restore the dignity of sacred authority to the decadent Church.

This amazingly fruitful work, this sane and winsome character had its source in continual mystic communion with the God of Love revealed by Christ. "She intuitively perceived life under the highest possible forms, the forms of Beauty and Love. Truth and Goodness were, she thought, means for the achievement of those two supreme ends.

The sheer beauty of the soul in a 'state of Grace' is a point on which she constantly dwells, hanging it as a bait before those whom she would induce to turn from evil. Similarly, the ugliness of sin should warn us of its true nature. "Truth" was for her the handmaid of the spiritualized imagination not, as too often in these days of the twilight of the soul, its tyrant and its gaoler." although Catherine as a child of her age necessarily used the formulas of current theology, [her emphasis rested upon their ethical demands and their aesthetic glory. Under her cleansing touch, the time-worn and faded paintings of dogma were restored to their pristine colours, and glowed with eternal health.

The burden of Catherine's message is the progress of the soul to God. The first stage is to turn from the paths of the wicked into the path of the righteous. The second stage brings the soul to hatred and renunciation of all desires not inspired by God. In the third stage the soul is lost in God, and finds ineffable joy in that "Sea Pacific." The fourth stage, which is all-inclusive love for neighbour, flows directly from the third. To love God is to love your neighbour: you cannot love your neighbour without loving God. Immersion in the love of God and all his creatures in a life of beauty and service is the goal not only in earth but also in Heaven. Supreme in its eternal achievements, no higher life can be imagined.

The first stage, then, is purification from sin. Catherine's motive for purification is to be carefully noticed. It is not a selfish desire for individual salvation or private enjoyment, but a boundless sympathy for human misery coupled with a realization of her responsibility for its relief. With keen spiritual penetration Mahatma Gandhi realizes that social blunders may be due to his own sin or shortcoming, and accordingly he repents by fasting. Catherine likewise understood that responsibility never rests in another but always in the self, for it is only through the self that any influence whatever can be exerted on another. And until the self can claim the perfection of the supreme morally creative person, namely, the sinless Jesus Christ, its consciousness of responsibility induces the sense of personal sin. Out of her sensitive love she cries—

"For what is it to me if I have life, and Thy people death and the clouds of darkness cover

Thy spouse (the true Church) when it is my own sins and not those of Thy other creatures that are the principle cause of this? I desire then and beg of Thee by Thy grace that Thou have mercy on Thy people."

The second stage is renunciation. The purification of the self from injurious desires is not sufficient. Desires must be not only harmless but also positively creative. Above the stage of tolerance, sympathy and peace, is the stage of perfect loving devotion. It is to be noticed that Catherine does not renounce the world, or desire in general, but only selfish desires, the desires that fail to express the heart of God's purpose for the world. She renounces not the humble self in tune with the Absolute Self, but merely the proud, discordant self. This stage may also be called illumination, since the moral renunciation kindles a blaze of light resulting in knowledge of the relation between the personal and divine. While in a trance Catherine dictates this message from God.

"All scandals, hatred, cruelty and every sort of trouble proceed from this perverse root of self-love, which has poisoned the entire world and weakened the mystical body of the Holy Church and the universal body of believers in the Christian religion. The humble self is likened to a good and fruitful tree: "Knowledge of thyself and of Me is found in the earth of true humility, which is as wide as the diameter of the circle, that is, of the knowledge of the self and of Me...Then, the tree of love feeds itself on humility, bringing forth from its side the offshoot of true discretion..."

The proud self on the contrary, is compared to a tree that is rotten and evil.

"Inside the tree is nourished,.....conscience, which while man lives in mortal sin is blinded by self-love and therefore felt, but little; the fruits of this tree are mortal, for they have drawn their nourishment.....from the root of pride, and the miserable soul is full of ingratitude whence proceeds every evil."

The third stage is ecstasy, the eternal blissful fulfilment of the ethical devotion of the soul to God in His work of creative and redeeming love. Catherine tries to recall by the use of mere feeble words the glory of her unspeakable experience of union with the divine Reality:

"Then this soul exclaimed with ardent love, 'O Inestimable Charity, sweet above all sweetness! Who would not be inflamed by such great love? What heart can help breaking at such tenderness? It seems, O Abyss of Charity, as if Thou wert mad with love of Thy creature..."

The fourth stage of glad social service flows from the third. A path leads from struggling variety up to blissful unity in

three stages. Another path leads down again from the blissful unity to the struggling variety. And both paths are divine. There can be no unity without variety, no bliss without struggle. God is One, and embraces all in loving care. Humanity and the world are not outside Him but within Him. The world is God's creation, humanity is one of God's creative agents. The whole creation is the continuous and necessary finite expression of the infinite God, the worthy fruit of His outgoing love. Catherine hears the divine voice telling her that social service in the midst of the world is the beloved child of ecstatic joy.

"When she has thus conceived by the affection of love, she immediately is delivered of fruit for her neighbour, because in no other way can she act out the truth she has conceived in herself, but loving Me in truth, in the same truth she serves her neighbour--The soul that knows Me immediately expands to the love of her neighbour, because she sees that I love that neighbour ineffably, and so herself loves the object which she sees me to have loved still more. She further knows that she can be of no use to me and can in no way repay me, that pure love with which she feels herself to be loved by Me, and therefore endeavours to repay it through the medium which I have given her, namely, her neighbour, who is the medium through which you can all serve me."

To Catherine, the metaphysical, the mystical and the ethical are all one. She knows no love for God which is not expressed in love for man. Indeed, the soul's love for God becomes transformed in the complete mystical union into God's love for man; for the soul is now no longer its former self, but God it has climbed through time to the peak of eternity, it has harmonized its variety in the divine unity; hence it can no longer love God as another, but *in* and *of* God must express itself in the loving salvation of man. Again and again in God's message to Catherine occurs the refrain--"For My honour and the salvation of souls," in which the mystical and the ethical are linked in one.

Now genuine service sooner or later involves sacrifice, the willingness to bear pain and hardship for the sake of a better experience; and Catherine soon came to realize God's

truth and freedom through the triumph of burden-bearing.

"Very pleasing to me, dearest daughter, is the willing desire to bear every pain and fatigue even unto death for the salvation of souls, for the more the soul endures, the more she shows that she loves Me; loving Me she comes to know more of My truth.....No one born passes this life without pain, bodily or mental. Bodily pain my servants bear, but their minds are free that is, they do not feel the weariness of the pain; for their will is accorded with Mine, and it is the will that gives trouble to man."

With Catherine, the sorrow for the sins of others was increased by the knowledge of God, only to be diminished; for with expanding compassion there surged forth the aggressive saving grace sufficient to meet and overcome all hindrances to eternal beauty--even sin.

According to Catherine, the sacrifice that springs thus from divine love cannot be called suffering if suffering means misery. (It can be called suffering only if suffering--according to its etymological derivation--means carrying from underneath, bearing, supporting.) The suffering of misery, or the pain of mind or soul, is solely the punishment of sin; whereas in loving sacrifice only the body suffers--the soul does not suffer but continually rejoices in hardship, for it is working in God who Himself has created the variety so strenuously turned into unity.

The mysticism of St. Catherine has its source in the mystic communion of Jesus Christ with the divine Father. Her mysticism is true to His. It is the Christ way of life the way of cosmic love, the way of union with the Supreme Being. If other mystics do not entirely agree with Catherine, the fault lies not in mysticism, for it is simply a fine method of self-control aiming at union with the Supreme Being. If the method is to achieve its aim, the object to which it adapts itself must of course be truly the Supreme Being, and not an abstract, thought-constituted realm from which the world of life is in one way or another divorced and separated. The being with whom St. Catherine and her saviour before her hold communion is the Absolute One and Only, embracing all worlds in creative bliss or loving care.

THE ABOLITION OF SATI

BY N. C. GANGULY

[Part of a chapter from the author's forth-coming work on *Ram Mohun Roy*, to be published in the "Builders of India" series]

LORD Amherst left India in March 1828, and Lord William Bentinck came as the Governor-General. Amherst's "otiose optimism" in face of the sudden increase of Sati from 577 to 639 cases in 1825 was a point which did not escape the practical vision of Bentinck, whose name is immortalised by the abolition of the wicked custom. It was not in the nature of Amherst to take the prohibitory action recommended individually by Judges Smith and Ross of the Calcutta Nizamat Court in November 1826; but by 1829 all the judges were unanimous, as well as most of the officers in the country, as to the necessity of putting a stop to the barbarous practice. Resident Britishers were no less anxious to see it somehow discontinued, when Indian opinion had undergone considerable modification through Ram Mohun's agitation. The matter was consequently left to Bentinck to deal with in his characteristically practical way.

The new Governor-General first made enquiries regarding the attitude of the military to the question. He wanted the sympathy and support of the Indian Army in an action which might rouse great and extensive opposition in the country. He was satisfied that the Sepoy who fought for the British had no such strong feelings over the continuance of the rite and the Army officers were mostly in favour of its contemplated suppression. But Indian opinion in general could not be easily and properly gauged; it meant the feeling and disposition of the people at large, thought must be remembered that Ram Mohun's efforts had cleared the ground a good deal since 1815 specially among the educated classes. He had a strong and influential following of educated men who acted from their convictions and faced trials. Ram Kamal Sen, the grand-father of Keshab Chandra Sen, and Rashamay Dutt, afterwards a judge of the Small Causes Court, showed that courage which was necessary on the part of real will-wishers

of reform. At a farewell meeting arranged purely by Indians for the first time, in honour of Lord Hastings, a resolution was stopped by these two young men, for it praised the retiring Governor-General for "allowing widow-burning." The meeting was going to be wrecked in Hastings' presence and hence the last words of the resolution were changed into "non-interference with Hindu rites."* A fact like this speaks a volume about the reformer's powerful influence on his countrymen. Dr. Thompson says that Ram Mohun "awakened a conscience in his own countrymen which presently found expression in protests in native newspapers and the number of suttees never reached this height."†

Bentinck naturally fixed his eyes on the great champion of Indian womanhood, whose name was now widely known and honoured and who combined in himself the best in the Eastern and Western civilisations. The reformer was sent for by the Governor-General under such circumstances; but he was not till then aware of the steel elements in the make-up of this man of so kindly a disposition. What the Sanskrit poet has said was the true Ram Mohun—"his heart was softer than a flower but at the same time harder than the thunderbolt."‡ The incident is told by Dr. Macdonald of the Calcutta Presbyterian Mission in his Lecture on Raja Ram Mohun Roy—

"Lord William Bentinck, the Governor-General, on hearing that he would likely receive considerable help from the Raja in suppressing the pernicious custom of widow-burning, sent one of his aide-de-camp to him, expressing his desire to see him. To this the Raja replied, 'I have now given up all worldly avocations and am engaged in religious culture and in the investigation of truth. Kindly express my humble respects to the Governor-General and inform him

* Life and Times Carey, Marshman and Word. p. 271. Heber's Journal (Abridged), p. 131.

† Satee, p. 70.

‡ Bhababhuti—Uttara-Rama-Charita.

that I have no inclination to appear before his august presence and therefore I hope that he will kindly pardon me.' These words the aide-camp conveyed to the Viceroy who enquired, 'What did you say to Ram Mohun Roy?' The aide-camp replied, 'I told him that Lord William Bentinck, the Governor-General, would be pleased to see him.' The Governor-General answered, 'Go, back and tell him again that Mr. William Bentinck will be highly obliged to him if he will kindly see him once.' This the aide-camp did and Ram Mohun Roy could no longer refuse the urgent and polite request of his lordship.*

It was a happy occasion when both these magnanimous men met on the common ground of their magnanimity. How appropriate to this episode are the lines of Kipling? "There is neither East nor West, when two strong men stand face to face." The unpopularity of the reformer on the low plane of competition among unsympathetic Britishers in India was much counter-balanced by the human attitude of Bentinck. The reformer's refusal to see him had something to do with the typical Anglo-Indian antagonism to his reforming activities and movement for freedom in general in every thing concerning life. His appeals against the Press Act had particularly brought him into conflict with them and their nascent Imperialism and this was increased by his open Letter on Education. A tinge of disappointment was produced in Ram Mohun, who was never daunted by failures but was probably embittered by the usual official procedure of the British. Miss Collet traces the affair to Ram Mohun's aversion to all showy court functions,† which were childish in his spiritual eyes. But the cause was certainly deeper and 'yet when Bentinck approached him as a man, he gladly accepted him as a man for all that,' for 'deep called unto deep' in both. The *India Gazette* of 27th July, 1829, gave an official version of the incident, which is almost beyond recognition—It is as follows—

"An eminent native philanthropist, who has long taken the lead of his countrymen in this great question, has been encouraged to submit his views of it in a written form, and has been subsequently honoured with an audience by the Governor-General, who, we learn, has expressed his anxious desire to put an end to a custom constituting so foul a blot."§

The editors of the *Gazette*, as usual with government officers, had the capacity, if

required, of seeing Helen's beauty in Egypt's brow, but they failed in this case to perceive and realise the mighty heart-beats of these two men whose meeting they tried to describe but really spoiled its epic character with elements of court sycophancy. The *Gazette* went on to advise that the Government could choose between three alternatives in dealing with Sati, viz. (1) strict application of existing regulations, (2) suppression in Bengal and Behar, or (3) total abolition in the provinces.

The result of the meeting between Bentinck and Ram Mohun is recorded in the Governor-General's minute of 8, Nov. 1829. The reformer was always cautious like a consummate statesman in everything he said or did, and the same quality is revealed in his advice to Lord William Bentinck. He pointed out the possibility of popular excitement, if drastic measures were suddenly introduced. This danger was also feared by Mr Horace Wilson, the Sanskrit Scholar, and Bentinck's minute could not but take into account—

"I must acknowledge that a similar opinion as to the probable excitation of a deep distrust of our future intentions was mentioned to me in conversation by that enlightened native Ram Mohun Roy, a warm advocate for the abolition of Sati and all other superstitions and corruptions engrained on the Hindu religion, which he considers originally to have been a pure Deism. It was his opinion that the practice might be suppressed quietly and unobservedly by increasing the difficulties and by the indirect agency of the police. He apprehended that any public enactment would give rise to public apprehension and the reasoning would be: 'while the English were contending for power they deemed it politic to allow universal toleration and to reconquer our religion, but having obtained the supremacy their first act is a violation of their profession and the next will probably be, like the Mahammadan conquerors, to force upon us their own religion.'"

Miss Collet thinks that this cautious advice was due to Ram Mohun's "constitutional aversion to coercion."† This is quite true; but another side of the truth lies in the fact that the reformer's method went deeper, as he tried to remove the cause by enlightening the national mind. He wanted to root out and not simply to stop the evil, a principle not understood by Dr. Thompson in his book on Sati** It was also noticed that the Lower Provinces showed more cases of Sati than the Upper, Calcutta

* Lecture on Raja Rana Mohun Roy, Calcutta 1879.

§ Satta, p. 78

alone accounting for 267 out of 464 cases in the year 1828. Yet the Lower Provinces were, more submissive and less sturdy, and "insurrection or hostile opposition," according to the reformer, would be almost unimaginable and impossible in this field, unlike the Upper Provinces where danger would be probable to a certain extent. "But as the faculty of resistance had all but died out of the chief practisers of Sati, their apprehensions and suspicions might be safely disregarded."* This hint was, of course, enough for a strong man of action of Bentinck's type, who on 4th Dec., 1829, did away with Sati altogether by passing the Anti-Sati Regulation, which declared the rite illegal and consequently criminal and punishable as an offence against law. Its preamble showed distinct traces of Ram Mohun's influence and of thought drawn from his writings on Sati. The following lines bear unmistakable resemblance to passages in the two *Conferences on Sati* and were certainly taken out of them.

"The practice of Sati, or of burning and burying alive the widows of Hindus is revolting to the feelings of human nature; it is nowhere enjoined by the religion of the Hindus as an imperative duty; on the contrary, a life of purity and retirement on the part of the widows is more specially and, preferably inculcated... It is notorious that in many instances acts of atrocity have been perpetrated which have been shocking to the Hindus themselves and in their eyes unlawful and wicked... and the Governor-General in Council is deeply impressed with the conviction that the abuses in question cannot be effectively put an end to without abolishing the practice altogether."†

The phrases, ideas, and accepted arguments can leave no doubt that Bentinck was fully convinced by Ram Mohun and read the reformer's works quite carefully. Dr. Thompson's conclusion has gone rather too wide of the mark respecting the reformer's share in this momentous decision.‡

Miss Collet has observed that "but for the researches and agitation carried on by Ram Mohun, it is a question whether this preamble could have been written at all."** It is certain that the authority of Hindu sacred Law quoted by Bentinck would have had no influence on the people, had not the ground been thoroughly prepared by the reformer, and "the truth

driven home" by his writings in books and newspapers and through his speeches and conversations.* After all Lord Hastings did not wait in vain. The fight had to be well fought before any effect could be produced on the Indian mind of the time, so as to make the suppression and abolition possible and safe. Both these stalwart champions deserve the everlasting gratitude of the nation for their bold stand and strong action. And indeed "there ought to have been by now", as said by Akashay Kumar Dutt, "a statue of Ram Mohun beside that of Bentinck in the Calcutta Maidan."† Under their lead a more obnoxious evil than slave trade was removed from India three years before slavery was finally abolished in England through the labours of Wilberforce and Buxton.

What happened in the wake of the abolition of Sati may be easily summarised from the newspapers of the time for never was the orthodox Hindu community prepared to let it go without remonstrance. The orthodox were very much shocked and their organ, the *Samachara Chandrika* raised a great outcry over it. According to the *India Gazette* of November of that year a petition against it was hatched post haste. Ram Mohun's paper, the *Sambad Kaumudi*, which had already wielded its strong pen against Sati, supported the action of the Government and was followed by another liberal paper the *Banga Dut*. The *Asiatic Journal* § said that the authorities had taken action after proper consideration and sure conviction, and in fact, when it asserted that the majority of *Indian opinion* was solidly against the practice, it only attested to the journalistic activities of the reformer during the past years in creating a public sentiment against the inhuman character of the rite based on the best findings of Hindu Law itself. Ram Mohun was highly praised by the *Indian Gazette* just five months before the Anti-Sati enactment** for his efforts in this respect and his services were fully and gratefully acknowledged. Dr. Thompson seems to have partially failed to notice this incident and its significance.

The *India Gazette* expected that the liberal papers would be able to set right the mis-

conceptions among the less educated sections of the community. But this was not to be. On the 14th January, 1830, the orthodox leaders drew up a petition against the Act of abolition signed by eight hundred inhabitants of Calcutta, and they went so far as to say that the Governor-General was misled by renegade Hindus, meaning, of course, Ram Mohun and his followers. Another small petition was appended to it, with the signatures of one hundred and twenty Pandits, to show that Sati was a religious duty and that the Governor-General and his Council were arrogating to themselves "the difficult task of regulating the conscience of a whole people." * A third petition had three hundred and forty-six signatures of "respectable persons" from the interior of the country, with that of twenty-eight Pandits. Counter representations became necessary in the face of such facts and one was forthwith presented to Bentinck by the Christian inhabitants of Calcutta with eight hundred signatures just two days after the last orthodox representation. Ram Mohun himself sent another, which had three hundred signatures, including those of his well-known friends. Ram Chandra Vidyabagish, the preacher of the Brahmo Samaj, could not sign this application for fear of molestation from the Hindus. † Ram Mohun himself was threatened with loss of life for his supposed anti-Hindu action, but he all along retained a calm and persevering patience, like that of Wilberforce under similar conditions. At last Bentinck had to allow the orthodox to appeal to the King in Council, if they thought the decision of the Governor-General and his Council was unsatisfactory. This was done at once and Ram Mohun had to expedite his departure in order to be in England in time to fight the cause of Indian womanhood. The public address presented to Bentinck by the reformer and his friends expressed "the deepest gratitude and utmost reverence" for the service rendered by him to the country through his courageous and determined action.

On the day following (7th January 1830) an orthodox organisation called the *Dharma Sabha* (Religious Society) was formed, as a counter-blast in opposition to the Brahmo Samaj of Ram Mohun, which was the representative of progressive views. Many rich persons

joined it, so that a sum of Rs. 11,260 was subscribed quite easily. Its aim was to counteract Brahmo influence, and to outcast from society any who did not adhere to Hindu rites. A permanent house for it was in contemplation but did not materialise. They said, "they would crush the Brahmo Samaj as a fisherman crushes a small fish under her thumb." * Only six days after the foundation of this Sabha the new building of the Brahmo Samaj was consecrated, its Trust Deed having been executed only a fortnight ago. It is said that Raja Radha Kanta Deb was the leader of the Dharma Sabha.

In 1830 the reformer brought out an *Abstract of the Arguments* against Sati, as a rejoinder to arouse public interest and attention.

The Raja's departure from India had to be expedited for two considerations of a pressing nature. The first was the renewal of the East India Company's Charter, and the second, the petition of the infuriated pro-Sati Hindus, which proved unavailing. He felt he would be able to use his influence to counteract these machinations, and place before the authorities in England reasonable grounds to mould their judgments in favour of the cause of India. On the 8th January he informed the Governor-General of his contemplated voyage and the title given him by the Moghul Emperor, as well as the position of an envoy, together with a seal specially made for that purpose at Delhi. He wrote to Bentinck:—

"I beg leave to submit to your Lordship—that His Majesty has appraised your Lordship of my appointment of his Elchee (envoy) to the Court of Great Britain and of his having been pleased to invest me as His Majesty's Servant with the title of Raja in consideration of the respectability attached to that situation—Not being anxious for titular distinction, I have hitherto refrained from availing myself of the honour conferred on me by His Majesty—I therefore take the liberty of laying the subject before your Lordship, hoping that you will be pleased to sanction my adoption of such title accordingly—consisting with former usage as established by a Regulation of Government on the subject in 1827." †

The Government of course did not sanction the title nor recognise the appointment. On 15th June 1830 the reply was sent through Mr. Stirling, Secretary, to the Government. The heir-apparent of Delhi brought some false charges against the Raja but this did not

produce any effect like the legal proceedings of the Raja of Burdwan. But Ram Mohun became suspicious lest the Indian Government should refuse him a passport and hence he decided to proceed to England as a private individual divesting himself of all public character and capacity.* The very day after the receipt of the refusal from the Government the reformer took the lead

in presenting a congratulatory address to Bentinck for passing the Sati Act. Miss Collet says "the rebuff did not hinder Ram Mohun from appearing at the Governor-General's with the Anti-Sati address of congratulation."† Indeed; he was too big for such common feelings which might cross the mind of ordinary people.

SIGNIFICANCE OF BARDOLI

BY RANGILDAS M. KAPADIA

NOW that the Bardoli Campaign is over, one can take an dispassionate review of the movement at this distance of time without the least fear of prejudicing the import thereof. As one who has taken part, though a very insignificant one, in the campaign, I had the occasion to watch the movement in its different stages, the slow and steady evolution of the struggle from a modest beginning to the important aspect it assumed as the days rolled on. I feel, we are yet far from fully realising the true significance of the movement. Our reading of it to-day cannot be perfect and yet one may attempt, however humbly, to see and find out through the process a true genesis thereof.

To the people of Bardoli the campaign at first was but a constitutional effort to vindicate and get redressed their just and legitimate grievance against questionable enhancement in the assessment of their land. It was nothing more than a mere resistance against the executive fiat of an irresponsible bureaucracy. And so really it was when a handful of leaders from the Taluka in early February approached the indefatigable Suba of Gujarat to come over to Bardoli and give them a lead. The Sardar too, all through, was modest enough not to claim for his movement a greater significance than this. But it must be admitted, as has been both by the adverse critics and sympathetic admirers, that the Bardoli Satyagraha had a much greater and a much

wider significance than what its promoters claimed for it. When the All-Party Conference was under session in Bombay, May last, Pandit Matilalji, while speaking on the main resolution of the day (there was much ado about nothing over the so-called constitution-making), spoke at length on the import and significance of framing a constitution as a retort to Birkenhead's bluff. A friend sitting near by remarked that constitutions were not made by pious resolutions at conferences, the real constitution was being framed by Vallabhbhai Patel at Bardoli. And this was the real significance of Bardoli. The eventual victory of the popular Will over an ultra obdurate and obstinate officialdom fully justifies to-day the poignant remarks of that friend. The world has given its verdict that in fighting that small yet heroic constitutional battle against the arbitrary executive decree, Sit. Patel was making history, not for Gujarat only, but for India.

It was not for the first time that the nature of the land revenue system of this Government was brought home to us in Bardoli. The agriculturist of India was groaning under this crushing and soulless system for years so much so that he had bent down and been impoverished to his utmost capacity. And yet there was no united and organised effort to either thwart the process of ruination or to avert it. Bardoli furnished that one illuminating instance of an organised and concentrated action on the part of the agriculturists, dumb and down-

trodden, illiterate toilers of land, bent down double under the weight of an unnatural land revenue enforced upon them by an alien rule without their sanction to do so. It was not that they had cultivated a class consciousness so much as that they felt the weight of the burden imposed. The class consciousness, the new spirit and awakening were I believe, all later phases of this momentous fight. The Kunbi agriculturist of Bardoli hardly had an idea of the potential powers lying dormant in him. Nor had he ever acquired the knowledge, either from book or from heresy, that his brother in the other part of the globe by force of a consolidated action and organised effort had been able to bring down to dust the crown of the mightiest autocrat the world had ever seen, the CZAR of all the Russias. The Government may well to-day under these circumstances thank themselves for this phase—rousing the class consciousness in the agriculturist of Bardoli and as a matter of that of Gujarat and India. The echoes of Bardoli have by now reached the remotest and most isolated parts of the land and Government with all the forces at its command will not be able to stem the tide of this wave. Both the peasantry and workers have fully realised that if they were to unite, educate, organise and agitate, they could bend down even a hard "steel frame".

The second great good that Bardoli did to the country is the full realisation of the efficacy of the weapon of Satyagraha and practicability of mass action. Since Gandhiji abandoned Satyagraha in 1922 at Bardoli, people were gradually losing all confidence in the efficacy of this weapon. If they did not take Gandhiji and his method of non-violent coercion as exotic, they at least treated it as a highly unpractical and impracticable proposition. Even the campaign at Bardoli from the day it was launched right up to the end of April was not taken so seriously by the country at large and was even ridiculed by some of our sagacious politicians. The peasants of the Taluka had exhausted all constitutional means at their disposal—they had petitioned, they had sought redress through the members of the Council, the so-called accredited representatives of the people in the provincial legislature. But to a Government which could ill brook even a gesture of protest, one demand for a departmental re-inquiry into what they (the people) believed to be an unjust increment in the assessment was unacceptable. The

Government left to the people no other alternative but to gather their forces and try the erstwhile neglected weapon of SATYAGRAHA.

Borsad, Kaira, Nagpur, and Petlad were no doubt milestones on the way to Swaraj and yet in spite of them sceptics were not wanting. Besides, the political horizon of the country was eclipsed by clouds of communal strifes. Bardoli under the circumstances came as a harmonising balm to an ailing Indian populace. It turned many a sceptic into a confirmed optimist. Many came there to scoff and parted to bless the movement. A day in the land of those heroic and brave peasants, an hour in the midst of the "amazons" of Bardoli, the undaunted and heroic womanfolk of the Taluka who reminded one of the Kshatriya woman-warriors of yore, a short ramble into the deserted streets of a village there, were enough to drive even a snaking "loyalist" into a sturdy Non-Co-operationist. Munshi comes there a thorough constitutionalist, many believed, prudently to make amends or atone for his sins of commission and omission in the University Bill bungle; goes to a village with a Bombay Counsel's searching and vigilant eye, says after an hour's minute cross-examination, that he could have visualised all that from his chambers in Bombay, attends a meeting in the evening and witnesses with a bowldering look the scenes of how the ladies in hundreds received their Sardar, how they worshipped him with Kumkum and flowers, how fearlessly they sang what the *Times of India* correspondent described as seditious songs, and lo, Munshi, the erstwhile constitutionalist, is soon disillusioned! "Heroism he could not come across even after a minute search through the pages of the history of medieval Gujarat he found roaming from door to door in Bardoli." Bardoli to him today is a living epic of the age. This purifying atmosphere was all through conspicuous and the unprecedented success was the direct outcome thereof. Their sufferings and hardships the people of Bardoli never minded. Their Sardar had taught them to die and die bravely. They had learnt thoroughly the *Mantra* of their Master.

Another striking significance of the movement that compelled attention even of the critics was the people's readiness for any amount of sacrifice and an admirable sense of service. Thousands that visited Bardoli—it was almost a place of pilgrimage to a few

hundred daily--during the struggle, carried this contagion home to serve them in times of need. Though the volunteers were comparatively few in number, when questioned as to their total strength, I once told a friend they were 80,000 strong. That explained how so rapidly the news used to spread from one place to another, perhaps more rapidly than the telegraphic service could flash them around. Every one felt that he was doing something and that for a noble purpose. An order is issued at the Headquarters and within an hour or two you find that it reaches the farthest corner of the Taluka. This trained and disciplined band of soldiers made it possible for S. J. Patel to terminate the historic episode so splendidly. Of course S. J. Patel's sagacity, wonderful power of organisation, admirable coolness of head, a marvellous clear-headedness and a grit for prompt action could in no way be less credited for the attainment of victory. This trained, disciplined army of volunteers will be another tangible gift of Bardoli to Gujarat. That Bardoli in this sense has paved the way for future struggles in and out of Gujarat cannot be denied. This revolt of the peasants will serve like a beacon light when the country someday in the near future launches upon a much greater campaign for freedom from British domination.

Another very happy feature of the campaign was to be seen all throughout in the disappearance of all differences, communal, political, social or otherwise. They were all sunk fathoms deep and

an unseen equality, equality between the Shaunkar and the farmer, the rich and the poor, the Brahmin and the Untouchable, the Ujjaliat and the Raviparaj was the rule of the day. In the whole Taluka there was not even a shadow of litigation; not that there were no differences or quarrels but then everybody under the serene, purifying atmosphere thought it to be too criminal to resort to a Court of Law to get the differences settled. Even after the ending of the struggle the people of the Taluka and the District have applied themselves to the more onerous task of social emancipation and reconstruction work. They want to avail themselves of the general awakening born of the struggle. The struggle itself was a passing phase, mere spade work. The real work comes on now. And we find it there in the birth of the Prohibition League, with that restless, indefatigable soul, Mithuben Petit, as the moving spirit. Mammoth meetings are being held in villages; and villages after villages are pledging themselves to the vow of running dry. The hitherto slumbering castes have awakened to work out a scheme of social reforms for the amelioration of their generation. It is by this constructive piece of work that the future generations will value the merits or otherwise of the Bardoli struggle. It has ended and yet it just begins.

The significance of Bardoli thus can be summed up by saying that it was self-respecting India trying to challenge the moral right of Britain to rule her destiny.

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc., will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc., according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

COMMUNISM AND CHRISTIANISM: By Bishop Wm. M. Brown, D. D. Bradford-Brown Educational Co., Galion, Ohio, U. S. A. 251 pp. Price 35 cents, paper. Cloth \$1.10, postage paid.

THE PROFITS OF RELIGION:—By Upton Sinclair. Vanguard Press, 50 Fifth Avenue, New York City. 247 pp. Price 60 cents, postage paid.

RELIGION AND THE SOVIETS: By Prof. Julius F. Hecker. Vanguard Press, 50 Fifth Avenue, New York City. 207 pp. Price 60 cents, postage paid.

Bishop Brown's book is a remarkable document as one may well expect. For it was upon this book that he was tried for heresy by and expelled from the House of Episcopal Bishops in the United States. As he says in one place—"at the age of 66, when I was being tried for heresy, I was half dead. Now look at me! That was 6 years ago. In these 6 years I have lived more than I did in the 40 years before. If I can only induce the United States Government to try me for sedition, for Communism, I think I would live to be as old as Methuselah!"

Bishop Brown is now a famous man, at least in the so-called Christian world. Since he was tried for heresy, he has had calls for lectures from one end of United States to the other, and his books have sold by the hundreds of thousands, while the gentlemen who tried him now sit and stew in their own juice and you cannot pay people to read their books.

To Bishop Brown, Jesus Christ was a social revolutionary who was murdered because of his revolutionary teachings against the system of his time. He was a Jewish criminal, crucified like any other ordinary criminal. The "best people" of the time, the "respectable" people were certain that he was an ordinary agitator and "ought to be hung" just like "respectable," "best families" think of "agitators," "extremists," and Communists of to-day. Were Jesus to walk on earth, he would at least fall under Sections 121 and 124 A of the

Indian Penal Code. That is being mild, for he would undoubtedly be hanged to-day like an ordinary criminal as he was 1928 years ago.

Bishop Brown is a Marxist. He was past 60 when he began to study Marxism and learned that he had spent the best part of his life doing what he calls preaching lies. His book on "Communism and Christianity" is a Marxist document, a passionate outpouring of a man who has passed through hell searching for the truth and trying to read just himself to it.

His faith in the institution of the church that he had given his life to, vanished. He says:

"Happily, where faith went out, courage came in, and it increased with my desparation until (though standing on the shore of death where the deep and unknown stream lies darkly between the present and the future) I could and I did undertake the supreme task of my life—the breaking of the chains by which I was bound as a slave to the degrading superstition that I was, both by an inherited and cultivated disposition, a doomed man, and by an inherent weakness, a helpless one with no power to emancipate myself. Of such enslaving chains I mention three among the strongest, the severed links of which, with those of all the rest, now lie scattered about me; (1) the chain of the fear of God; (2) the chain of the fear of the devil, and (3) the chain of the fear of man. ... There is only one fear which saves, and that is the fear of ignorance. ... The world's saviour-god is knowledge. There is no other Christ on earth or in any heaven above it, and this one lives, moves and has his being in the fear of ignorance."

Apart from the book on which Bishop Brown was tried for heresy, this volume contains some of his latest lectures—one on "Evolution and Revolution" (his defense of revolution); "The Heresy Problem," in which he reviews his own trial, ending with something like this: "In the Middle Ages, when one was tried for heresy people shuddered; to-day—we just laugh." A lecture of deepest interest is on "The Chinese Problem,"—

a defense of the Chinese Revolution and, an attack on the American policy of intervention. "Ours is a representative government," he says; "It is always representing someone. I am certain it isn't representing me, and that it is not representing the vast masses of the United States. If we can solve the problem of whom it is representing, we can solve the problem of murder."

When you read this book, you say: "Well, of course, he is guilty of heresy! May he live long and prosper and commit heresy every day of his life. May he live long—this grand old man who has exposed and attacked the church and saved his own soul by devoting the remnant of his life to destroying the system of capitalism."

Upton Sinclair's book on 'The Profits of Religion' is an admirable answer to those who speak of the "Profits of Religion." For he gives facts and figures—heaping them up, sky-high—to show how "Profits" have meant "profits." His attack is on the Christian religion and church, but this is only because he knows them better. Were he a Muslim or a Hindu he would have exposed their practices and their intimate connection with the ruling classes and financial interests.

Sinclair's analysis of the various freak religions or cults that have sprung up in America during the past few years is admirable. His analysis of the Church of England—he spent much time in England studying church institutions—is likewise most admirable. He shows among other things the intimate relationship between the Church of England and the British ruling class and government. We learn that "seven men own practically all the land of the city and county of London, and collect tribute from 7 millions of people. . . . The tribute which London pays is more than a \$100 million a year." In reply to those Englishmen who welcome his exposure of American corruption, he proves that English corruption is just as widespread and devastating.

"The fact is that the new men in England, the lords of coal and iron and shipping and beer, have bought their way in to the landed aristocracy for cash, just as our American senators have done; they have bought the political parties with campaign gifts, precisely as in America; they have taken over the press, whether by outright purchase like Northcliffe, or by advertising subsidy both of which methods we Americans know . . . and not merely is this the same class of men as in America, it frequently consists of the same individuals. These are the big money-lenders, the international financiers who are the fine and final flower of the capitalist system. These gentlemen make the world their home—or, as Shakespeare puts it, their orster."

Then, he proceeds to show how the church, with all its bishops and what-not are a part of this system, willing and loyal agents of it, blood of its blood and bone of its bone. How this class has, through its priestly agents given its "sacred" sanction to one system of spoliation after another, fighting progress every step of the way, against free public education, the abolition movement against serfdom and then against Negro slavery: the freedom of subjected countries and

peoples: and the emancipation of the working class. He quotes Bishops who say that "famines are caused by God to teach the poor to be grateful to the rich." He quotes a Catholic priest in America who, in 1910, said:

"Human society has its origin from God and is constituted of two classes, the rich and the poor, which respectively represent capital and labour. Hence it follows that according to the ordinance of God, human society is composed of superiors and subjects, masters and servants, learned and unlettered, rich and poor, nobles and plebeians."

In another place, he says, "It is a curious thing to observe—the natural instinct which, all over the world, draws Superstition and exploitation together." And he asserts, the "Holy Book" is filled with polygamy, slavery, rape, and wholesale murder, committed by priests and rulers under the direct orders of God." He quotes William Lloyd Garrison that great American who gave his life in fighting Negro slavery:

"American Christianity is the main pillar of American slavery", and another abolitionist as saying, "We had almost to abolish the Church before we could reach the dreadful institution at all."

But Upton Sinclair defends Jesus Christ, and holds that the church and its professionals who profit from it today are exploiters who pervert the doctrines of Jesus. "Jesus, as we have pointed out, was a carpenter's son," he says, "a thoroughly class-conscious proletarian. He denounced the exploiters of his own time with ferocious bitterness, he drove the money-changers out of the temple with whips, and he finally died the death of a common criminal. . . . Beyond all question, the supreme irony of history is the use which has been made of Jesus of Nazareth as the Head God of this blood-thirsty system; it is cruelty beyond all language, a blasphemy beyond the power of art to express. Read the man's words, furious as those of any modern agitator that I have heard in twenty years of revolutionary experience."

In this book, portraying the Christian Church as the servant and henchmen of Big Business, Hindus and Muslims may rejoice. But what about their own religious institutions, resting upon the ignorance of the people? Upton Sinclair is an honest man; there are few such in the east or the west. I personally disagree with his defense of Jesus, because the teachings of Jesus are so wound up with the systems of exploitation and slavery throughout the ages that it is a waste of time to try and separate them. The so-called followers of Jesus have, in his name, taught Indian converts to Christianity to despise their own people and land to support a system of political slavery. What they have done in India they have done in every other land under the sun. There is no need to waste time over Jesus today; men just as good, just as great, live in our midst giving their lives in the struggle against the things that make life on this earth a hell. These men and women today do not teach their followers to "render unto Caesar what is Caesar's", nor do they teach them that, in order to reach a land of happiness they have to lie down and die. Our new morality is not one of submission, but of freedom; not one of suffering but of joy; not of faith, but of reason; not of inaction, but of development; not of self-destruction, but of a joyous life of love and freedom.

Indians would do well to read this book, if for nothing else but to study the methods used by Sinclair. The book is cheap—one of the Vanguard Press volumes published so cheaply that no profit is made. It is worth a thousand times more than it costs.

The last-listed book is a study of religion in Russia before, during and after the Russian Revolution. It is a scholarly volume, written by a Professor of Social Ethics in the Moscow Theological Academy today.

Most of us have but the faintest, most general idea of the Church in Russia, or of the role played by the Greek Orthodox Church before, during and after the Revolution. This work is thorough, by no means a propaganda volume. It is one of the twelve volumes of the Vanguard Press admirable series on Soviet Russia, no similar study has yet been published. Through it we see how the Orthodox Church in Russia was, not only in its teachings, but in its system of organization, an actual part of the State machinery of Czarist Russia. Above the Holy Synod managing the Church was the High Procurator, representing the Czar, whose duty it was to see that the affairs of the Church were carried on in conformity with the imperial decrees. He was responsible to no one but the Czar. Military men were preferred as High Procurators, and many military men—booted and spurred,—held this position.

We learn also that the priests worked in the closest harmony with the Russian Secret Service, and the confessional was used for spying purposes. More than 10,000 school teachers alone were imprisoned or sent into exile due to the espionage work of the priests.

During the Revolution the Church, true to its tradition of black reaction, not only threw all its weight against the Revolution, but it actually worked with the various Czarist armies of invasion. During the terrible famine when the Government decided to take a part of the gold and precious stones in the churches—treasures taken by committees of churchmen and used only for the relief of dying people—the church fought again, ferociously. Their wealth, lying unused, was considered of more value than the thousands of dying men, women and children.

This little volume also gives an account of the laws, promulgated by the Soviet Government, by which the Church and State was separated, the Church deprived of all financial support from the State, deprived of control over schools, and deprived of its vast estates. In other words, the Soviet Government cut the economic foundation from under the Church, but told it to exist if its spiritual appeal was not just based upon its wealth. The Government took action against the heads of the Church only when they openly waged war on the Government and united with the Czarists. A number of leading church authorities, convicted of espionage and counter-revolution, were, of course, shot. Others were given an opportunity to read just their ideas in prison, and to learn to work.

Here is also an account of the development of the "Living Church", under young and progressive priests, during and after the Revolution. These men were not opposed to the Revolution, but regarded it as the beginning of a new life for the

Russian people, and the opportunity for the Church to show that it stood, not for reaction and counter-revolution, but for progress and revolution. The struggle within the Church between the young, revolutionary priests, and the old orthodox reactionaries, is brilliantly outlined. In the meantime, the Soviet Government watched and listened. The attitude of the ruling party, the Communists, is also well-developed, together with the intensive educational and propaganda work of the Communists against religion. There are very interesting chapters, the many sects and religious groupings within the Union, and also, one on the "The Religious Tragedy of the Intellectual Class in Russia" in which a study is made of such religious leaders as Tolstoy, Dostoevsky, Merezhkovsky, and Berdyaev. The last chapter on "To be or not to be" is an excellent picture of the forces at work to-day within the Soviet Union. On the one hand, we see absolute religious liberty, and a straight denial of the freakish tales about the attacks of the Soviet Government upon religion. Since the Revolution, many new sects and denominations have begun work although these were formerly suppressed by the Czarist regime because they competed with the Orthodox Greek Church. In fact, after studying the activities of the Church before and during the Revolution, one is constantly amazed at the leniency and tolerance of the Soviet Government. The activities of the Church were sufficient to entitle it to be levelled to the dust along with other rotten institutions.

We may close by quoting the Communist attitude towards religion, as given in the books—

"The future, he (the Communist) believes, belongs to the materialist philosophy, according to which all things, visible or invisible, tangible or spiritual, including man, are an expression of cosmic energy or matter. Man cannot be separated from the planet upon which he lives; he must determine his own destiny; he cannot expect any help from gods or demons; he is his own God and is master or slave of nature. There are no other lives to come for him and therefore he must make the most of this life upon this earth. His means are science and co-operative toil and his goal is beauty and the good life, where there is no exploitation of wealth and no privileged class, but where all races live and work in co-operation with each other for the common good. Religion, he believes, is a reactionary phenomenon inherited from the period in the history of man when he was helpless in the struggle against nature and lived in an imaginary world of fear and baseless hopes. Historically, religion has been one of the chief weapons in the exploitation of classes and in the oppression of the poor, of which the Czarist regime is a most glaring example."

Agnes Smedley

MAHATMA GANDHI: Romain Rolland, Century Co., New York.

GANDHI THE APOSTLE: Haridas Mazumdar. Universal Pub. Co., Chicago.

INDIA IN FERMENT: C. H. Van Tyne, Appleton and Co., New York.

MAHATMA GANDHI AN ESSAY: Gray and Parekh, Association Press, Calcutta.

GANDHI AND NON-VIOLENT RESISTANCE: *Blanche Watson, Ganesh and Co., Madras.*

GANDHI: VOICE OF THE NEW REVOLUTION: *Blanche Watson, Sarawatty Co., Calcutta.*

THE CHRIST OF INDIA: *John Haynes Holmes, Tagore and Co., Madras.*

YOUNG INDIA: *Gandhi, Huebsch, New York.*

Mahatma Gandhi of India, widely called the greatest living figure of our day and age, has already been the subject of many biographies, all of which prove his right to be called "Hero-in-Action" (Karma-Vira), as they prove, too, the validity of the title *Mahatma* (Great Soul). Not the least impressive part of this body of Gandhiana is that made up of magazine articles which have appeared literally in all parts of the world in publications representing every possible shade of religious and political opinion, beginning with the one by Gilbert Murray, which appeared in the *Hibbert Journal* in 1917, a ray of white light projected into the darkness of that awful period. This biographical record is being written today in many languages, and the volume is surprising in view of the fact that barring that excellent "Life of Gandhi" by Rev. J. E. Doke written during Gandhi's South African period—the greater part of it has appeared during the years between 1921 and 1924.

As a preliminary to the more comprehensive biographies, came in 1921, "*Gandhi: Voice of the New Revolution*," by the review described by an Indian as "a fresh, stirring and authentic account of the first year of non-co-operation and 'The Christ of To-day,'" a reprint by a Madras firm, of Rev. John Haynes Holmes's sermons, "Who is the Greatest Man in the World Today" and "The Spiritual Significance of the Non-cooperation Movement." These sermons, preached at the Community Church, New York, have been considerably read in pamphlet form in this country. In the year 1923 appeared two books of antithetical character, "*Gandhi The Apostle*" by Haridas Muzumdar, and "*India in Ferment*" by Claude H. Van Tyne. To anyone who has any sort of an understanding of the situation in India since 1919, when the massacre of Amritsar startled the civilized world, the admixture of truth—all too often carefully distorted to suit the author's obvious bias—near-truth and flagrant untruth, gossip, sophistry and irrelevant facts make the latter book as vicious a thing as was ever put between two covers. The hardly concealed contempt for things Indian that pervades the volume; the author's prefatory recognition of obligation for the "guiding hand" of the British governmental officials during the 5,000 miles of travel in that upset and unhappy land, together with his frank admission of sympathy with the "unreconcilables" rather than with the "superstition, religious fanaticism of the people of the country is a hall-mark of prejudice that one can neither ignore nor misunderstand. The comment of *The Bombay Chronicle* that "all doors were open to Mr. Van Tyne but that he opened the wrong ones" should be borne in mind by all who take this book in their hands.

Muzumdar's Gandhi the Apostle is admittedly pro-Indian, but that does not make it untruthful or even biased. A book that could be described by a creditable Englishman of imperialistic bent, as

sane and satisfactory presentation of a difficult situation, and by another, as "surprisingly fair, don't you know?" surely merits the consideration one gives to an accurate and dispassionate study. It is in truth more of a study of the author's great compatriot, than a biography. It is prefaced by a Panorama of Indian history which furnishes an illuminating and informative background for what a prominent Chicago critic called one of the most absorbing life stories ever written. That a well known German house has chosen this work for publication is a tribute not to be overlooked. One cannot read the record here set down without feeling with the writer that "spiritual forces of incalculable strength, generated by the non-cooperation movement and today permeating the national life of India, are bound to secure her a place in the forefront of the nations, and thus help (her) realize pristine glory." As a careful student of Indian affairs the reviewer would testify to Muzumdar's transparent sincerity and extraordinary adherence to fact. His is a book to be trusted.

Then appeared in 1924, the book that the world had been awaiting, *Mahatma Gandhi* a translation from the French of Romain Rolland's three essays which had appeared the previous year. "The combination of these two names, one as subject and the other as author," said Mr. Holmes, "was like the conjunction of two planets." Dr. J. T. Sunderland, one of the first to write of Gandhi in this country, said of the book:

"One cannot in any degree do justice to the exquisite comprehension of the Gandhi philosophy which M. Rolland manifests, or to the intuitional character and the beauty and clarity of its presentation."

The great French pacifist perceives the fact which many utterly fail to grasp, that non-cooperation—the refusal to assist in the perpetuation of evil—is even more a positive constructive force creating in the Indian nation a new psychology and a new spirit. He sees that in Gandhi India has found itself, and that this finding of self has its roots in a great spiritual awakening. He understands that Gandhi—by means of the new-old dynamic of non-violence plus a "weapon" that touches the economic mainspring of the usurping government—has set the face of India toward freedom. "India had lost the power of saying, 'no,' and Gandhi has given it back to her. But this is not all. Romain Rolland tells us too that the Gandhi message is for the whole world."

"India alone could formulate (it) (he says) but this would mean little, if the surging spirit of Asia did not become the vehicle for a new ideal of life and of death, and what is more, of action for all humanity."

This, according to the author, of this heartening and altogether lovely book, is the revelation of Mahatma Gandhi.

Between the extremes of this great Frenchman's book and the American, Van Tyne's utterly untrustworthy volume, lies one—the result of the combined efforts of an Indian and an Englishman—wherein truth and fallacy, wisdom and sophistry are presented in about equal degree. *Mahatma Gandhi: An Essay* by Gray and Parekh is indeed a dual appreciation. In many respects it is scrupulously fair, in others it is undeniably misleading and unjust,—whether 'unconscious bias or with intent, one may not say. Facts are respected by these

authors, often, but they are quite as often placed in strange company or set now in a softening, now in a magnifying light that is most confusing, sometimes all but concealing the real truth. The characterization of the truly Christ like Gandhi policy, for instance, as "mischievous," illustrates the latter point. A misleading thing is the naming of the Amritsar massacre, with its casualty list of something like 2,000 (if one accepts a mean between the Indian and the Government figures), as "disorder" and the Chauri Chaura riot—a sporadic affair which resulted in the death of but 21 policemen as "a shocking outbreak which horrified the country." The array of facts concerning this situation given in Appendix one, shows the quality of presentation that marks the entire book. Did the authors realize that some people do not read appendices?

Two conspicuous errors outmar this work. One is the unwillingness to realize that India is in revolution. This is very likely due to the antagonism of the Englishman. The other is the inability or the unwillingness to understand that India's loyalty to the British broke for good and all under the terrific strain of the Punjab horrors of 1919. This may well be the result of Mr. Parekh's astigmatism, in the enjoyment of which he has distinguished company. The charging to Gandhi's account of the violence that Indians have manifested in various parts of the country, instead of putting the blame of it where it belongs (as a hint in Appendix I might lead a careful reader to surmise what was true) on the Government with its repressive activity toward men whose only crime was working for the freedom of the land of their fathers,—this reversing of the truth, one may safely maintain, is rightly to be characterized as misleading and unjust. But, after all this has been said, there remains a need of sincere appreciation rendered to a great man whom the authors of this essay declare, wanted his people "to be morally supreme in the world." The reader will find in this volume a corroboration of a "great deal that Mahatma Muzumdar has said in Gandhi the Apostle, and a denial of much of the content and spirit of Mr. Van Dyne's 'India in Ferment'."

No review of biographical material about Gandhi would be complete without mention of the compilation "Gandhi and Non-violent Resistance" reviewed elsewhere in this issue, and "Young India," compiled to the extent of 1,200 pages from the writings of Gandhi as set down in his little paper during the fateful years, with a foreword by Rajendra Prasad. The latter is not a book about Mahatma Gandhi—it is the man himself; the former is contemporary Indian, English and American opinion concerning him. Both are excellent source books,—more perhaps for the future than for to-day—giving, as they do the ideals and aims of non-co-operation, and the genesis and progress of the movement that the spiritual genius of India's supreme figure is shaping, interpreting to us the urge which is finding outlet in that country to-day,—as Romain Rolland has so beautifully said in the active force of love, faith, and self-sacrifice. In this path some of us feel lies the only hope of world peace.

— BLANCHÉ WATSON

NRITANJALI:—An introduction to Hindu Dancing by Sri Ragini. New York, Hari G. Gouri Inc.

"Ever since the dawn of time, human beings have danced as an outlet for their emotions when they have been too great for expression in words. So the poetry of motions is an international language—only the dialects vary in their different countries."

"Why is it then that the different races have prevailing types of dancing by which each may be distinguished from the other? I think it is because the best characteristics of each race find outlet through its particular dances."

"Although there is no posing in the modern dance—it is far too rapid for that—yet posing plays a great part in the historical interests of the world's measures."

"It is obvious that dances of various kinds are the translation into movement of certain emotions out of which they are conceived."

So writes Mme. Anna Pavlova, the world's greatest dancer of to-day (*The Strand Magazine*, Dec. 1926), and in the light of those opinions, the beautiful little brochure before us is conceived and written in the right spirit.

We are glad to see that Ragini Devi is trying to interpret the Art of Indian Dancing in the terms of the Ancients. A revival of this beautiful but dying art is desirable indeed, but that revival must be achieved along the lines of Classical Purity in order that it may be a true Renaissance.

Ragini Devi's attempt carries great promise, for in her concise delineation of the Hindu art of Dancing she has succeeded in bringing out its high cultural basis in strong relief. The technical portion is well-written and supported by authority. There are a few inaccuracies in the Mythology given, but nothing very serious.

The book is well-written and got up and beautifully illustrated Mrs. Mary K. Day's introduction shows that the authoress is a true artist, and, as such, we consider her attempt extremely laudable.

THE YAKSHAS.—By Ananda K. Coomaraswamy. Published by the Smithsonian Institution. *South-Asian Miscellaneous Collections*. Vol. 80. No. 6. Pp. 43 and 23 plates.

The author has given a very concise survey of the Yakshas and Yakshi cult in the literature and Archaeology of India. The survey does not extend to the present day legends and beliefs, such as the Bengali legend that misers entomb little boys alive together with their hoards. The boy (or rather his spirit), after a slow death, is presumed to take the form of a Yaksha—known as Yaksha in Bengal—and stand guard over the treasure.

As a result of this survey, the author has come to the conclusion that "Kuvera and other Yakshas are indigenous non-Aryan deities or geni, usually beneficent powers of wealth and fertility. Before Buddhism and Jainism they had been accepted as orthodox in Brahminical theology."

He further indicates Yaksha worship as being "the natural source of the Shakti elements common to the whole sectarian development which was taking place before the beginning of the Kusana period," and further the Yaksha iconography as having formed the foundation of later Hindu and Buddhist iconography. The History of Yakshas, he considers, "is of significance not only in itself and for its own sake but as throwing light upon the origins of cult and iconography, as well as dogma in fully evolved sectarian Hinduism and Buddhism."

The discussion and arguments in the work

under consideration are rather too concise, probably due to considerations of space, but all the same as a survey it is fairly successful and therefore can be regarded as the beginning of a new chapter in the researches into Indian mythology and folklore started by Fergusson with his "Tree and Serpent Worship." The book is well-illustrated—as is usual with Mr. Coomaraswamy—by means of twenty-three excellent plates.

K. N. C.

THE MADRAS STATES DIRECTORY, 1923. Formerly the *Pearl Press Annual*. The Pearl Press, Cochin. Price Rs. 2-8

It is a pictorial reference book of statistical, historical and commercial information regarding the five Madras States of Cochin, Travancora, Pudukottai, Sandur and Banganapalle. In these days when the future of the Indian States is engaging considerable attention in the press and on the platform, both in India and England, the usefulness of a publication of the kind giving fairly exhaustive information regarding the Madras States which are among those in the forefront of the Indian States in point of their high level of culture and progressive administration, can hardly be exaggerated. The Directory reflects credit on the publishers. Over a dozen views from Cochin and Travancora are published, besides photographic reproductions of the Sovereigns and Ruling Princes of the States. There is a separate "Who's Who" section for the Cochin State wherein about 200 biographical sketches of prominent men and women in Cochin are given, interspersed with fine half-tone reproductions which form perhaps the most attractive feature of the publication. The information contained under the various sections is exhaustive. There is an interesting article on the Cochin Harbour which contains a succinct account of the progress of the scheme from its very inception. Much valuable information is given relating to trade and commerce. The get-up and the illustrations are fine, the publication deserves the patronage of the enlightened public in the States and outside.

THE BUDDHIST ANNUAL OF CEYLON, Vol. III, No. 2. Printed and Published by W. E. Bastian and Co., Colombo, Ceylon. Price Rs. 1-5-0.

It is a well got-up miscellany, containing numerous illustrations, several poems, many articles and stories, notes and news, and reviews and notices. The contents are both interesting and valuable.

THE "ANNIVERSARY NUMBER OF THE "SEARCHLIGHT", 1923. Search-light Machine Press, Patna. Price twelve annas

This annual contains articles by many well-known writers on political, economic, social, religious, historical, medical, scientific and other topics. There are many illustrations. Considering the variety and value of the contents the price is remarkably moderate.

BRABMO SAMAJ: ITS MESSAGE AND ITS FUTURE. Based on the Centennial Proceedings, Calcutta: August, 1923. Published by Brahmo Yubak Samiti, 210-G, Cornwallis Street, Calcutta. Price Four Annas.

This booklet of about 50 pages gives much

information about the Brahm Samaj in a compact form. Besides the principles of Brahmoism and an introduction, it contains Rabinadrath Tagore's centenary pronouncement on Ram Mohun Roy; Messages of the Brahm Samaj as expressed in the speeches of Brahmos from different parts of India; proceedings of a religious convention in which followers of most historic faiths took active part; proceedings of the Youngmen's Conference; Romain Rolland on Ram Mohun Roy and the Indian Renaissance, proceedings of denominational conferences, dealing with individual and congregational life and its problems, social problems of the Samaj and expansion work (i. church organisation, ii. mission work). Report of the Ladies' Conference, and a list of Brahm Institutions (educational and social). The last item—the list of Brahm institutions—gives, unintentionally, a wrong idea of Brahm activities, which are much greater than it indicates. It should be made complete.

ANNUAL REPORT OF THE COMMISSIONER OF LABOUR STATISTICS for the Fiscal year ended June 30, 1927. United States Department of Labor. Pp. 44, 10 cents.

This important report deals with the following topics: Industrial accident prevention conference; fireworks containing phosphorus; Wages and Hours of Labour by Industries; Union scales of Wages and Hours of Labour; Strikes and Lockouts and Collective Agreements; Employment in Selected Manufacturing Industries; Wholesale Prices; Retail Prices; Cost of Living; Productivity of Labour; Industrial Accidents; Industrial Safety Codes; Labour Legislation in the Various States and Decisions of courts affecting Labour; Building operations in Principal Cities of the United States; Co-operation (other than Agricultural); Industrial Hygiene; Workmen's Compensation; Special surveys; Future Investigations; Editorial Division; Financial.

We have given only the main headings. The report concludes with Recommendations.

Does the Government of India issue any such report?

HANDBOOK OF LABOR STATISTICS, 1924-1926. June, 1927. U. S. Department of Labor. Price one dollar. pp. xi+828.

Our publicists, labour leaders, employers of labour and other persons interested in all that relates to labour should all furnish themselves with a copy of this Handbook. It contains statistics and descriptive matter relating to—

Apprenticeship; Arbitration and Conciliation; Child Labour; Convict Labour; Cooperation; Cost of living; Employment statistics; Family allowances and child endowment; Hawaii—Labor conditions, Housing; Immigration and emigration; Industrial accidents; Industrial diseases and poisons; Insurance and benefit plans; Invention by employees; Labour organisations; Legal aid; Minimum wage; Negro in industry; Occupational distribution of population; old age pensions and relief; Philippine Islands—Labour conditions; Physical examination of workers; Porto Rico—Labour Conditions; Prices—wholesale and retail; Productivity of Labour; Sickness statistics; Strikes and lockouts; Turnover of labour; Unemployment insurance and stabilization of employment; Vocations; Vocational education; Women in industry; Workers' educa-

tion : Workmen's compensation ; Wages and hours of labour.

Only the main headings have been given, as it would take several pages to mention the sub-headings.

SANSKRIT-ENGLISH

BRABMO DHARMA (of Maharshi Debendra Nath Tagore). *Translated into English By Hem Chandra Sarkar, M. A. Brahma Classics Centenary Edition. Calcutta. 1928. Price Rs. 3. Pp. XIII+221. Cloth. gilt letters.*

This edition contains the Sanskrit text and the Maharshi's Sanskrit commentary thereupon in Devanagari script. English translation of the text according to the Maharshi's interpretation, English translation of the Maharshi's exposition of the text, and notes in English indicating the sources of the Sanskrit verses forming the text.

Mr. Hem Chandra Sarkar says in the Introduction, which is valuable :—

"Though the Brahma Samaj has declared Truth to be the eternal and imperishable scripture and does not recognise any book as the scripture, the Brahma Dharma of Maharshi Devendranath, has come to be regarded as an authoritative exposition of the principles of Brahmoism. Maharshi composed the book in that hope. Afterwards, Keshub Chunder Sen, compiled another book of a similar nature with a broader basis under the name *Shloksangraha*, having taken its contents from the scriptures of all important religions. Though this latter is more in consonance with the universal spirit of Brahmoism it is remarkable that it has not been as widely adopted in the Brahma Samaj as the Brahma Dharma of Maharshi. Within a few decades, it was translated into several vernaculars of India, and has passed through many editions in Bengali. The story of its composition is well-known, and has been recorded by Maharshi himself in his autobiography, chapter 23. It was written in the year 1848 (1770 Sak). Devendranath was then 31 years of age..... Maharshi looked upon it as a work of inspiration. He has deliberately written in the autobiography : 'It is not the product of my feeble intellect. * * * It is the truth of God which welled up in my heart. These living truths came down to my heart from Him who is the life and light of truth.' The actual process has thus been described in the autobiography : 'Now I began to think a book is required for the Brahmos. Then I said to Akshay Kumar Dutta 'please sit down with paper and pen, and take down what I dictate.' Now I turned my heart towards God, with single-mindedness, I began to dictate with authority in the language of the Upanishads, like the current of a river, the spiritual truths which flashed in my mind by His Grace; and Akshaykumar took them down. In three hours the first part was completed. Maharshi has said, 'it did not involve any labour on my part, but though it took three hours to write out the book, my whole life would be spent and yet I shall not fully understand and assimilate its deep significance.' Thus was the first part written. The second part was compiled sometime afterwards, and the expository notes in Bengalee were added

later on after the first and second parts had been published. The *Brahmo Dharma* is a work of unique significance. Though the language is that of the Upanishads it is an original work..... Maharshi Devendranath, while using the language of the Upanishads, has produced an original work, which has not always followed the ideas of the Upanishads. The various Upanishads and even the different parts of the individual Upanishads are not always consistent. Maharshi Devendranath had in his mind a consistent conception of the Religion of the Brahma Samaj, and he gave an expression to it in the language of the Upanishads. In order to do that Devendranath took considerable liberty with the ideas as well as with the texts."

The English translation is clear and elegant. Mr. Sarkar's edition has met a felt need.

The printing is clear and legible and the binding handsome.

R. C.

MALAYALAM

KALANTE-KOLAYARA —(with illustrations) : *By Rao Sahib O. M. Cheryan B.A., L.T. Published by K. G. Parameswaran Pillai, Sriramanilassam Press. Quilon. Pp 143. Price not given.*

This book is full of fictitious narrations which read like the wonderful adventures of Sindbad the sailor. The numerous illustrations that it contains add further impulse to go through its contents.

CHINTA-SANTANAM :—(Part 3) : *By R. Iswara Pillai B.A. Published by C. G. Brothers, Vatakke-kara, N. Parur (Travancore) Pp. 197. Price as. 10.*

Composed in his usual inimitable style Sjt. R. Iswara Pillai now lays before the public the 3rd part of his *Chinta-Santanam*. The book contains twenty short essays on different subjects, such as, Nature, Atmosphere, Liberty, Moon, etc.—subjects which are too abstruse, yet at the same time dealt in a most simple way. We commend the book particularly to the student population.

DHRODATT-KATHAKAL :—(Tales of Chivalry, Part 1). *By E.M. Joseph. Puthen Petta. Trichur. Pp 166. Price as. 10.*

The book contains a great deal of historical information relating to Mughal History, and there is sufficient verity also in the stories and sketches that are culled from different sources. We are sure the book will receive kind reception at the hands of the educated public. We congratulate the young author on his chivalrous endeavour.

P. ANJAN ACHARYA

MARATHI

'1857'.—*By Prof. N. K. Behere. Publisher M. N. Kulkarni, Karnatak Press, Bombay. Pages 540. Price Rs. 3-8.*

A brightly written, exhaustive, very readable and spirited account of the so-called Indian Sepoy Mutiny (termed by some writers as the 'Indian War of Independence) of 1857. A remarkable production

under consideration are rather too concise, probably due to considerations of space, but all the same as a survey it is fairly successful and therefore can be regarded as the beginning of a new chapter in the researches into Indian mythology and folklore started by Fergusson with his "Tree and Serpent Worship." The book is well-illustrated—as is usual with Mr. Coomaraswamy—by means of twenty-three excellent plates.

K. N. C.

THE MADRAS STATES DIRECTORY, 1928. *Formerly the Pearl Press Annual. The Pearl Press, Cochin. Price Rs. 2-8*

It is a pictorial reference book of statistical, historical and commercial information regarding the five Madras States of Cochin, Travancore, Pudukottai, Sandur and Banganapalle. In these days when the future of the Indian States is engaging considerable attention in the press and on the platform, both in India and England, the usefulness of a publication of the kind giving fairly exhaustive information regarding the Madras States which are among those in the forefront of the Indian States in point of their high level of culture and progressive administration, can hardly be exaggerated. The Directory reflects credit on the publishers. Over a dozen views from Cochin and Travancore are published, besides photographic reproductions of the Sovereigns and Ruling Princes of the States. There is a separate "Who's Who" section for the Cochin State wherein about 200 biographical sketches of prominent men and women in Cochin are given, interspersed with fine half-tone reproductions which form perhaps the most attractive feature of the publication. The information contained under the various sections is exhaustive. There is an interesting article on the Cochin Harbour which contains a succinct account of the progress of the scheme from its very inception. Much valuable information is given relating to trade and commerce. The get-up and the illustrations are fine, the publication deserves the patronage of the enlightened public in the States and outside.

THE BUDDHIST ANNUAL OF CEYLON, Vol. III, No. 2. *Printed and Published by W. E. Bastian and Co., Colombo, Ceylon. Price Rs. 1-5-0.*

It is a well got-up miscellany, containing numerous illustrations, several poems, many articles and stories, notes and news, and reviews and notices. The contents are both interesting and valuable.

THE ANNIVERSARY NUMBER OF THE "SEARCHLIGHT", 1928. *Searchlight Machine Press, Putna. Price twelve annas*

This annual contains articles by many well-known writers on political, economic, social, religious, historical, medical, scientific and other topics. There are many illustrations. Considering the variety and value of the contents the price is remarkably moderate.

BRAHMO SAMAJ: ITS MESSAGE AND ITS FUTURE. *Based on the Centennial Proceedings, Calcutta; August, 1928. Published by Brahmo Yubak Samiti, 270-6, Cornwallis Street, Calcutta. Price Four Annas.*

This booklet of about 50 pages gives much

information about the Brahmo Samaj in a compact form. Besides the principles of Brahmoism and an introduction, it contains Rabindranath Tagore's centenary pronouncement on Ram Mohun Roy; Messages of the Brahmo Samaj as expressed in the speeches of Brahmos from different parts of India; proceedings of a religious convention in which followers of most historic faiths took active part; proceedings of the Youngmen's Conference; Romain Rolland on Ram Mohun Roy and the Indian Renaissance, proceedings of denominational conferences, dealing with individual and congregational life and its problems, social problems of the Samaj and expansion work (i. church organisation, ii. mission work), Report of the Ladies' Conference, and a list of Brahmo Institutions (educational and social). The last item—the list of Brahmo institutions—gives, unintentionably, a wrong idea of Brahmo activities, which are much greater than it indicates. It should be made complete.

ANNUAL REPORT OF THE COMMISSIONER OF LABOUR STATISTICS for the Fiscal year ended June 30, 1927. *United States Department of Labor. Pp. 41, 10 cents.*

This important report deals with the following topics: Industrial accident prevention conference; fireworks containing phosphorus; Wages and Hours of Labour by Industries; Union scales of Wages and Hours of Labour; Strikes and Lockouts and Collective Agreements; Employment in Selected Manufacturing Industries; Wholesale Prices; Retail Prices; Cost of Living; Productivity of Labour; Industrial Accidents; Industrial Safety Codes; Labour Legislation in the Various States and Decisions of courts affecting Labour; Building operations in Principal Cities of the United States; Co-operation (other than Agricultural); Industrial Hygiene; Workmen's Compensation; Special surveys; Future Investigations; Editorial Division; Financial.

We have given only the main headings. The report concludes with Recommendations.

Does the Government of India issue any such report?

HANDBOOK OF LABOR STATISTICS, 1924-1926. *June, 1927. U. S. Department of Labor. Price one dollar, pp. xi+828.*

Our publicists, labour leaders, employers of labour and other persons interested in all that relates to labour should all furnish themselves with a copy of this Handbook. It contains statistics and descriptive matter relating to—

Apprenticeship; Arbitration and Conciliation; Child Labour; Convict Labour; Cooperation; Cost of living; Employment statistics; Family allowances and child endowment; Hawaii—Labor conditions, Housing; Immigration and emigration; Industrial accidents; Industrial diseases and poisons; Insurance and benefit plans; Invention by employees; Labour organisations; Legal aid; Minimum wage; Negro in industry; Occupational distribution of population; old age pensions and relief; Philippine Islands—Labour conditions; Physical examination of workers; Porto Rico—Labour Conditions; Prices—wholesale and retail; Productivity of Labour; Sickness statistics; Strikes and lockouts; Turnover of labour; Unemployment insurance and stabilization of employment; Vocations; Vocational education; Women in industry; Workers' educa-

AN EARLY CHAPTER OF THE PRESS IN BENGAL :

By BRAJENDRANATH BANERJEE

THE first English newspaper printed in India was Hickey's *Bengal Gazette*, which commenced publication on 29th January, 1790. It had a short life and was suppressed by Warren Hastings for the offence of publishing libels on his wife and other persons. Then followed the *India Gazette*, the *Calcutta Gazette*, the *Bengal Harlaru* and some other journals. Most of these papers were considered by the Government to be violent in manner and scurrilous in tone, and Lord Wellesley found it necessary to restrict the libertinism of the Press by introducing certain regulations and creating a censorship (13 May, 1799). His successors made the rules imposed on the editors still more stringent. Then came Lord Hastings, a man of very liberal views, who abolished the censorship (19 August, 1818) and only laid down some general rules for the guidance of the editors.

The honour of being the first published Bengali newspaper belong to the *Samachar Darpan*, a weekly, which was ushered into existence by the Serampur Mission on 23rd May, 1818. Lord Hastings' liberal orders, however, tempted several newspapers, both English and vernacular, to appear in Calcutta. The *Sambad Kaumudi*, a Bengali weekly, conducted entirely by Indians, appeared on 4th December, 1821. Ram Mohun Roy was one of its promoters. The *Mirat-ul-Akhbar*, a Persian weekly, made its appearance early in 1822 under his editorship. In 1822 there were four vernacular newspapers (all weeklies), published in Calcutta, two in Bengali and two in Persian, viz. :—

The *Sambad Kaumudi*,
Samachar Chandrika,
Jam-i-Jahan Numa,
 and *Mirat-ul-Akhbar*

But the Press in Bengal enjoyed this spell of freedom for a very short time. Mr. James Silk Buckingham, the editor of the *Calcutta Journal*, published articles, which the Government thought to be of an offensive and mischievous character. He was repeatedly warned and at last deported; and the Government finally contemplated the

reimposition of rules for shackling the Press. On 10th October, 1822 Mr. W. B. Bayley delivered in the Calcutta Council a lengthy Minute regarding the tendency of the Native Press. This Minute, which is reproduced below, is an important and hitherto unpublished document and discloses many interesting facts. It will be seen from it that even the Vernacular Press did not enjoy a higher reputation than the English. It also gives full details about Ram Mohun Roy's *Mirat-ul-Akhbar* and tells us about the "objectionable" nature of some of its articles.

"The subject which has been brought under the notice of the Board in Mr. Adam's Minute of the 14th August demands in my opinion the most serious consideration.

"Mr. Adam has very fully discussed the important question of the freedom of the Press in its application to the present state of society in this country. he has stated his conviction that the licence recently claimed and exercised in this respect has tended to weaken the proper influence of the Government and to excite much discontent and insubordination without any compensating benefit, and he has suggested that the attention of the authorities at home be drawn to the subject, in order that they may determine whether any steps should be taken to procure an Act of the Legislature vesting the Governments in India with sufficient power to restrain the abuses of the Press, and to correct the evils which are to be anticipated from its continued and increasing licentiousness.

"In the view which Mr. Adam has taken of this important subject I entirely concur, and I regret that he has abstained from discussing that branch of the question which relates to the Native Press.

"Feeling, however, as I do that the latter may be converted into an engine of the most serious mischief, I shall submit to the Board some brief remarks on the recent establishment in Calcutta of newspapers in the Native languages, and shall state the grounds on which I consider it essential that the Government should be vested with legal power to control the excesses of the Native as well as of the European Press.

"Previously, however, to entering upon that topic, I propose, with reference to the publication which more immediately led to Mr. Adam's Minute, to advert to the circumstances under which Mr. Jameson's appointment to the office of Superintendent of the School for Native Doctors took place, and also to notice some other points connected with the general question.

"The outline of the plan of the School for Native Doctors was originally drawn up by Mr. A.

REGENERATION OF THE HINDU SAMAJ:—By Mahadeo Shastri Diwar. Published by the author himself at Pradna Pathashala, War. Pages 176. Price annas twelve.

It is remarkable that the author, though educated in an old-fashioned Sanskrit toli, has a catholic mind and advocates certain much needed reforms, such as removal of untouchability, shuddhi, disbelief in fatalism and in ghosts, as also in divine Avatars working for your regeneration, when you yourself are sitting fold-handed. He has adduced very plausible reasons and quoted Sanskrit texts in support of his statements.

FUSION OF BRAHMIN SECTS, PARTS I AND II:—By the same author. Price Re. one and annas eight respectively.

In these two books is given a very valuable and interesting account of the Panchdravid and Panch Gaud Brahmins with their sub-sects in Maharashtra, and has powerfully advocated the advisability of their fusion into one general class of Brahmins. The author seems to have taken great pains in collecting information and the care and judgment he has exercised in putting it on paper is evident in every page.

RAI RASOOLAS:—By Balkrishna Bhan Joshi, Manager Deyan Vilas Press, Poona. Pages 215. Price Rs. 1-8.

A skilful adaptation of the classical English novel, *Ras-e-las* of Dr. Johnson. The adaptation is cleverly done and forms an interesting reading.

NAVATODADHARMA OR HISTORY OF MODERN RELIGIOUS ACTIVITIES IN INDIA VOL. I:—By Sadashiv Krishna Phadke of Pune. Pages 876. Price Rs. Four.

In this bulky volume which is to be followed by three others, the author has given an exhaustive account of the Brahma Samaj (including the Prarthana Samaj) and the Devsamaj and freely criticised their doctrines as well as certain acts of their leaders, which, in the opinion of the author, called for criticism. Such a book would have surely been warmly welcomed, had the author been fair in representing facts and kept his balance in criticism. But he has instead wilfully or unwittingly made baseless statements and innuendoes, which hardly do credit to his intelligence and judgment. The author has evidently gone through a vast mass of literature on the subject and utilised it in a manner likely to prejudice the minds of his readers against the new religious movement. A number of learned men in Maharashtra, not acquainted with facts about the Brahma Samaj, have fallen an easy prey to the author's fascinating style and deceptive arguments and have showered praise on the author's achievement. But one who has an insight into the subject and possesses a fair and incredulous mind can easily see through the game and will utter the cry, "Beware, dear readers, beware!"

V. G. AITE

GUJARATI

BEAUTIFUL NIGHT (RABUVALI RAT) PART III:—By Jhaverchand Meghani, printed at the Navrasna Press, Bombay. Paper cover. Pp. 81. Price Re. 0-8-0 (1927).

This third collection of regular stories sung by

females in Kathiawad is in keeping with the two former ones in excellence and in serving to perpetuate what otherwise would have perished in this branch of literature, as these songs have never been collected and printed before. The most useful part, however, of the book is its well-written Introduction, whether the ballad literature of our province has been examined in the light of European ballad literature with the eye and intelligence of an experienced critic. It is the first contribution of its kind and as such very valuable.

SHRI VISHESH AVASHYAK BHASHANTAR, PART II:—By Shah Chunilal Hakamchand. Printed at the Virashansa Printing Press, Ahmedabad. Cloth bound. Pp. 527. Price Rs. 3-0-0 (1927).

This is a most important book of Jain religious literature, and is a *viratan* of the *Samayik Sutra*. Those who cannot follow the original text will be gratified at its Gujarati version which is well-done.

KOKIL NIKUNJ:—By Mahavir Prasad Dadhich, B. A. Printed at the Jagadishwar Printing Press, Bombay. Paper cover. Pp. 82. Price Re. 0-8-0 (1927).

Though a Marwadi by birth Mr. Dadhich has acquired a very good hold over Gujarati. He is saturated with the spirit of English and Sanskrit poetry and hence has been apt to compose short poems breathing the joyousness of the cuckoo in spring time. His work is certainly admirable.

MARRIED OR UNMARRIED:—By Dayashanker M. Bhatt. Printed at the Bharat Vijaya Printing Press, Ahmedabad. Paper cover. Pp. 32. Price Re. 0-8-0 (1927).

The question is propounded to ridicule the present state of Hindu Society where a girl of six is married to a man of thirty-five and who on growing up wants to marry a young man of her choice, under the impression that her first marriage, being without her consent, was no marriage at all. The presentation though crude is sure to attract readers.

GUJARAT NO RAJRAJ:—By Balubhai P. Bhatt, L. C. C. and Monishankar D. Joshi B. A. (Hons.). Printed at the Kalamayya Printing Works, Surat. Cloth bound. Pp. 191. Price Rs. 2-0-0 (1927).

A book giving all-round information about Gujarat, geographical, historical and artistic. It is written with the best of ambitions and is packed with information about Old and Modern Gujarat.

AND BHASHYA PART I (Adh. 1, 2):—By Jethalal G. Shah, M. A. Printed at different Presses in Ahmedabad, published by the Seventh Vaishnav Parshad. Cloth bound. Pp. 171. Price Rs. 3-8-0 (1927). Illustrated.

Shrimad Vallabhacharya is one of the *Bhashyalara* of the Brahmastra, and his *Bhashya* is known as the *Anu Bhashya*, and is a treatise on the 'Shuddhadwaid' cult. It is a very important treatise bearing on Vallabh's Sampradaya, and its translation into Gujarati was overdue. This book is however more than a translation. It is full of notes and dissertations and comparisons with other similar compositions. The translator has exhausted all available materials in writing his Introduction and produced a very informative contribution on the subject. It is a valuable addition to our religious literature.

K. M. J.

as the importance of obtaining such legal powers, was immediately felt and acknowledged by the Local Government, but it was re-olved to suspend the adoption of any resolution on the subject until the return of the Governor-General who was then in the Western Provinces.

"On His Lordship's arrival at the Presidency, the consideration of the subject was resumed, and it was finally resolved on the 19th of August 1818 to abolish the Censorship, and to sub-titute in its place some general rules for the guidance of the editors, calculated to prevent the discussion of topics likely to affect the authority of this Government or to be injurious to the public interests.

"The establishment of rules of that nature was of such obvious expediency with reference both to the structure of our Government, and to the limited extent and component parts of the British Society in India, that no apprehension was entertained of the probability of their being grossly and systematically violated by any British editor.

"The discretionary power however known to be vested in the Supreme authority of removing any British subject whose conduct might be such as to render him underserving of the confidence and protection of the Government, was considered to be abundantly sufficient either to discourage any wanton or dangerous abuse of the Press by a British subject, or to vindicate the authority of the Government, if recourse to extreme measures should in any instance be found necessary.

It was however fully felt and acknowledged at the time, and the fact is adverted to in the Governor-General's Minute, that the Government did not possess legal power to enforce any rules for the regulation or control of the Press, so far as related to publications issued within the limits of the jurisdiction of the Supreme Court when conducted by persons coming under the denomination of Natives.

"It was in consequence intended by Government to point out to the Court of Directors this defect, with a view to obtain sufficient legal authority to control the Press, when in the hands of individuals not being British European subjects. I do not find however that any Official representation has yet been made to the Court of Directors on this subject, and until the recent establishment of newspapers in the Native languages, the question has not been again brought under the consideration of Government, by any specific act of impropriety on the part of persons not being British European subjects.

"I concur in the opinion expressed by the Governor-General, that the removal of Mr. Buckingham from the country would very probably be followed by the substitution in his room of one or more individuals, who not being British European subjects, could not be visited by a similar penalty.

"The establishment of such a system of counter-action, aided and superintended as it probably would be by those who now support the *Calcutta Journal*, might certainly be attended with consequences even more injurious to the public interests, than those already experienced.

"Such individuals (as in the instances of Mr. Healy of Mr. Charles Reed) might undoubtedly become the real or nominal editors and proprietors of the newspapers and might circulate the most licentious publications without incurring

any danger or responsibility, unless they should be so unguarded as to subject themselves to the penalties of the English law of Libel, and even then the excited state of feeling which prevails amongst the class of individuals from whom Petty Juries in Calcutta are formed, would render the success of legal prosecutions for libel exceedingly doubtful.

"The same remarks are applicable to Natives being the editors and publishers of newspapers in the languages of the country.

"So long therefore as the Press is under no other legal restraint than that imposed by the vague apprehension of conviction and punishment for libel, it will be in the power of factions or mischievous individuals, acting either under the influence of British European subjects, or independently of such influence, to disseminate the most injurious reports and in various ways to embarrass the proceedings and weaken the authority of the Government, and it may reasonably be asked whether with reference to the present state of this society, and to the constitution of the Local Governments in India, such evils are likely to be compensated by any advantages derivable from a Free Press, either as it affects the Native population, or British born subjects residing in India.

"With regard to the latter class, it is well known that under the system of policy hitherto pursued by Great Britain, their access to India is repressed and discouraged; and that beyond the precincts of the towns of Calcutta, Madras and Bombay the acquisition and possession by them of real property is prohibited.

"Of the number of British subjects actually resident, a considerable proportion have no legal authority for residing here, and those who possess such legal authority are liable to be removed from the country, whenever their conduct may, in the judgement of the Governor-General, appear to be such as to render them undeserving of countenance and protection.

"Independently of British subjects in the immediate service of His Majesty or of the Honorable Company or paid and supported by the Government in subordinate situations, the total number of British subjects residing in India is exceedingly small.

"I have not the means of immediately ascertaining the actual number of such individuals residing within the territories subordinate to the Presidencies of Fort St. George and Bombay.

"As far as relates to this Presidency however, I can venture to assert, that the total number of such British subjects does not exceed the proportion of one to 50,000 Natives, and that beyond the immediate precincts of Calcutta and its suburbs, the proportion is less than one to one hundred thousand.* It is however a portion of this small class of persons which arrogates to itself an influence similar to that really possessed by the public of Great Britain, and

*The number of British European subjects not in the Service or pay of His Majesty or of the Hon'ble Company residing beyond the suburbs of Calcutta, in the territories subordinate to this Presidency, amounts to about 300, the Native population being estimated at from 45 to 50 millions.

as the importance of obtaining such legal powers, was immediately felt and acknowledged by the Local Government, but it was resolved to suspend the adoption of any resolution on the subject until the return of the Governor-General who was then in the Western Provinces.

"On His Lordship's arrival at the Presidency, the consideration of the subject was resumed, and it was finally resolved on the 19th of August 1818 to abolish the Censorship, and to substitute in its place some general rules for the guidance of the editors, calculated to prevent the discussion of topics likely to affect the authority of this Government or to be injurious to the public interests.

"The establishment of rules of that nature was of such obvious expediency with reference both to the structure of our Government, and to the limited extent and component parts of the British Society in India, that no apprehension was entertained of the probability of their being grossly and systematically violated by any British editor.

"The discretionary power however known to be vested in the Supreme authority of removing any British subject whose conduct might be such as to render him underserving of the confidence and protection of the Government, was considered to be abundantly sufficient either to discourage any wanton or dangerous abuse of the Press by a British subject, or to vindicate the authority of the Government, if recourse to extreme measures should in any instance be found necessary.

It was however fully felt and acknowledged at the time, and the fact is adverted to in the Governor-General's Minute, that the Government did not possess legal power to enforce any rules for the regulation or control of the Press, so far as related to publications issued within the limits of the jurisdiction of the Supreme Court when conducted by persons coming under the denomination of Natives.

"I have not the means of immediately ascertaining the actual number of such individuals residing within the territories subordinate to the Presidencies of Fort St. George and Bombay.

"As far as relates to this Presidency however, I can venture to assert, that the total number of such British subjects does not exceed the proportion of one to 50,000 Natives, and that beyond the immediate precincts of Calcutta and its suburbs, the proportion is less than one to one hundred thousand.* It is however a portion of this small class of persons which arrogates to itself an influence similar to that really possessed by the public of Great Britain, and

*The number of British European subjects not in the Service or pay of His Majesty or of the Hon'ble Company residing beyond the suburbs of Calcutta, in the territories subordinate to this Presidency, amounts to about 300, the Native population being estimated at from 45 to 50 millions.

claims to exercise a beneficial control over the acts and policy of the Government through the medium of a Free Press.

"Supposing for a moment that the interests of that class might be partially promoted by the operation of a Free Press, would it be wise for the sake of such an advantage to overlook the consequences which might ensue from any diminution of the influence and authority of the Government over its own servants and Native subjects?

"The stability of the British dominion in India mainly depends upon the cheerful obedience and subordination of the Officers of the Army, on the fidelity of the Native Troops, on the supposed character and power of the Government, and upon the opinion which may be entertained by a superstitious and unenlightened Native population of the motives and tendency of our actions as affecting their interests.

"The liberty of the Press, however essential to the Nature of a free state, is not in my judgment, consistent with the character of our institutions in this Country, or with the extraordinary nature of our dominion in India.

The Native subject to the British Government in India do not amount to less than 80 millions. No portion of this number are represented in any form. They have no voice or participation in framing or administering the Laws (which are enacted or rescinded at the mere discretion of the Government), in apportioning the revenue or taxes levied from them, in revising the public expenditure, or in controlling the administration. The Government in its relation to them is in fact substantially, and necessarily despotic.

"In such a state of things, is it desirable that any factious or discontented individual should have it in his power to publish and circulate strictures calculated to excite dissatisfaction amongst his brother Officers with regard to their prospects and situation in life, to canvass the propriety of orders issued by his Superior Officers, or by other direct or indirect methods to encourage and disseminate opinions adverse to subordination and discipline? It is desirable that any one should have it in his power to weaken the fidelity of the Native Troops by dwelling on the fatigues, privations and hardships to which they are subjected and the restrictions by which the most deserving are precluded from rising beyond the humbler ranks of their profession; that on occasions when partial or temporary feelings of discontent or suspicion (such as have occurred and may again occur) prevail, they should be made acquainted with their own powers of resistance, that the Native population should be encouraged to appeal from the acts and proceedings of the Local Authorities, or of Government itself, to the tribunal of public opinion, and to seek that participation in framing the Laws or in controlling the measures of the Executive Government which is exercised by the representatives of the people in a free state? It may be said that these and other similar dangers and inconveniences are altogether chimerical, or at all events of improbable and remote occurrence. Judging however from what we have already seen, I think that some of these and other injurious consequences would ere long be experienced, and thinking so, I apprehend, that the unfettered liberty of the Press, as it exists in

our Native country, is totally unsuited to the present state of our dominion in the East.

"But even admitting the sophistry to pass current which asserts the advantages of a Free Press and Independent Journals conducted by Englishmen, in subjecting the acts of the Indian Authorities to the scrutiny of the British public, the wildest reformer will scarcely argue seriously if at least our Empire in Hindustan is to be maintained that it is wise or politic to allow our Native subjects unrestrained liberty of discussing and publishing in the native languages, speculations on points of the nature above noticed or strictures on the proceedings of States in alliance with the Company, on the conduct, characters, and public acts of their English rulers, or on the comparative merits of the several religious systems professed by the various Nations which compose the curiously asserted population of this Presidency, and of India generally. My views extend however only to the necessity of a controlling power being lodged in the hands of the Local Governments, and by no means to the abolition of the practice of printing and circulating newspapers or journals in the Native languages.

"It is a primary and, I will add, a most humane part of our policy in this country to adapt our laws to the state of society, and not prematurely to introduce the institutions of a highly civilized, among a less enlightened people. The principle appears to me to be at least as applicable to the question regarding the Native Press as to any other. In England the laws regarding the press have kept pace with the progress of public opinion and with the other institutions of a free people. The minds of men have been gradually prepared for the exaggeration and misrepresentation which must ever attend freedom of publication. But I know no language which can convey in adequate terms how foreign to the ideas of the subjects of an Asiatic State, is a Free Press employed as a means of controlling the Government. Suddenly to attempt to overturn all previous habits of thinking and acting on such subjects, would, I conceive, be a blind and hazardous neglect of all the sound and cautious lessons which experience has taught us.

"I am fully sensible of the benefits which may be expected to attend eventually the operations of a Native Press, duly regulated and conducted by intelligent and well-intentioned individuals, as strikingly illustrated in the case of the periodical paper issued from the Serampur Institution under the direction of the Baptist Missionaries. No engine indeed can be conceived more powerful and effectual for diffusing useful knowledge amongst the population of this country, than a Press circulating cheaply and periodically articles of intelligence calculated to instruct and improve the public mind, under the guidance of judicious and properly qualified conductors, and in exact proportion must be the evils of an ill-regulated and licentious Press.

"The measure suggested in Mr. Adam's Minute of vesting the local Governments with the power of licensing printing offices seems to me highly desirable, and quite effectual for the accomplishment of the end in view. The general supervision of newspapers published in the Native languages might under such an arrangement be vested in the Persian Secretary to Government,

ments of trade, valued at 10,000 Rupees, to be tossed into the river. A prior number had accused His Majesty of the inconceivable folly of taking out of his wardrobe an immense quantity of valuable articles, and setting them on fire merely to enjoy the pleasure of seeing them burn.

At an early stage of the Oude discussions, a passage appears in one of the numbers as the sentiment of a correspondent, that there is no remedy for the evils which afflict the country, but the direct interference of the English Government. The *Calcutta Journal* goes still further, and plainly states the entire assumption of the Government of Oude as the only cure. The *Jam-i-Jahan Numa* of the 12th June charges the British authorities directly with injustice and disregard of the obligations of good faith, in allowing a British force to be employed against Kasim Ali, the zamindar of Akbarpur, adding however, that the British Government is bound by treaties and cannot help itself, though in reality it groans at the conduct of Agha Mir (the Minister) who, is the cause of all the mischief.

In a recent number of the *Jam-i-Jahan Numa*, is a detailed statement of the domestic disputes which prevail in the family of the King of Oude and of the distressing events at Lucknow recently reported by the Resident in his dispatches of the 16th and 20th August last.

"I cannot conceive anything more calculated to excite disgust and indignation in the mind of the King than this printed exposure of the intrigues carrying on in the interior of his palace, and of the dissensions between himself and his nearest connections.

A subsequent number of the same paper contains an article on Lahore news, coming from a source obviously quite different from the ordinary Native akhbars, which ascribes to Raja Ranjit Singh acts, measures and language indicating the most decidedly hostile views towards the British Government, and which may very naturally prove a ground of offence to that Chief.

"The official remonstrances received from the King of Oude, and the dispatches from the Resident at Lucknow shew that the attacks above alluded to have excited very deep feelings of disgust and dissatisfaction in the mind of our ally, who sees too certainly in such unceasing clamours against his Government, and such pointed allusions to the only remedy for his alleged mismanagement, the prospect of extended disorders and opposition, threatening the ultimate annihilation of his power; and who cannot separate from the authority of a Government supreme and despotic throughout India the lucubrations of a Press, operating under its immediate eye, at the very seat of its splendour and power. To tell his Majesty that he has a remedy in the Supreme Court in the event of any rebellious and unfounded statement being published, is to apprise him distinctly that there are no available means of redress open to him, as with the known inveterate prejudices of Natives of Sovereign rank in India, he would of course deem any reproach or indignity more tolerable than an appeal for justice like a common complainant to such a tribunal.

In fact, the Government has already found it

necessary to prohibit the editors of the several English newspapers from publishing attacks of this nature. One of those editors has publicly announced to his readers, that he considers the prohibitory order in question, merely as a request on the part of Government, to be attended to or not, as suits his judgment and convenience.

"The same attacks are still however, continued in a form immeasurably more offensive and distressing to the existing Government of Oude, that is to say, in the very language which is read and understood by every well educated Native throughout India.

"The account given in the *Jam-i-Jahan Numa* of the late duel between Mr. Jameson and Mr. Buckingham and the causes of it is not unworthy of notice in this review. It not ambiguously announces to the Natives of India, the editor of the *Calcutta Journal*, as a sort of Censor of the Government, who will not as far as his powers extend permit them to do any wrong.

"I believe it is pretty well known, that as far as Native feeling is concerned regarding the Press, the impression on the part of the few who have as yet considered the subject attentively is, that Mr. Buckingham is an akhbar-navis or news-writer stationed by the King of England in Calcutta to report and deliver his opinions freely respecting the conduct of the Local Government. This is ridiculous enough at present, and it is true that the Persian papers have as yet contained little which merits particularly serious notice or consideration, but to judge from the tone and avowed objects of their patrons and supporters, the result will probably be that the Native editors will advance step by step and grow bold by the experience of impunity, that they will hereafter engage in the discussion of all measures, and gradually assume a right of censoring public acts and public officers, and, as the law now stands, how is the Government (in a more advanced stage of public feeling) to guard effectually against their circulating statements, tending to influence and mislead in questions likely to awaken the passions and religious prejudices of the mass of our Indian subjects, such as the abolition of *Satis* or measures connected with the discipline or organization of our Indian Army.

"The contents of the other Persian paper the *Mirat-ul-Akhbar* have been much in the same style as the above, but the editor's known disposition for theological controversy had led him to seize an occasion for publishing remarks on the Trinity, which, although covertly and insidiously conveyed, strike me as being exceedingly offensive. The circumstance in which the discussion originated was a notice in the above paper on the subject of the death of Dr. Middleton, the late Bishop of Calcutta. After some laudatory remarks on his learning and dignity the article concludes by stating that the Bishop having been now relieved from the cares and anxieties of this world, had 'tumbled on the shoulders of the

mercy of God the Father, God the Son, and God the Holy Ghost.'

"The expression coming from a known impugner of the doctrine of the Trinity, could only be considered as ironical, and was noticed in one of the other papers as objectionable and offensive. It might have been sufficient for the editor of the *Mirat-ul-Akhbar* on finding that he had given offence to have expressed his regret, to have disclaimed all such intention and thus to let the subject drop. But this course was not suited to the polemic disposition of the editor. In the paper of the 19th July he enters into a long justification of his obituary notice and affectedly misunderstanding the real purport of the objection taken to his introduction of the mention of [the] Trinity, he makes use of observations which in my mind constitute an aggravation of the offence. He says 'with respect to what was said of God the Father, Son and Holy Ghost, since the Preachers of the Christian religion constantly in every Church throughout the year read their articles of faith with a loud voice, not regarding the presence of either Hindu or Musalman, and declare their conviction that salvation is to be found only in the belief of the Three in One, what doubt can there be then, but they believe in the Three whom I have mentioned.' And again 'But since it seems that the mere mention in the Persian language of the essential principles of the Christian religion is an aspersion of the faith professed by the Governor-General and all its followers, I shall therefore avoid this fault in future.'

"In the paper of the 9th August, the discussion is revived and the objections are treated in the same style.

"It is asked 'if any one in inviting an obituary notice of a Hindu should mention the Ganges or other object of worship of that nation would the Hindus take offence', and afterwards the editor quotes a verse which he ascribes to some Persian poet, meaning as follows:—'whose-ever religion is such that the mere mention of the God of it, is a cause of shame, we may readily guess what kind of a religion that is, and what sort of a people are its professors.'

"A striking instance of the idle and groundless nature of the stories put forth in these intelligencers is afforded in the account recently given in the *Mirat-ul-Akhbar* of an occurrence of importance at the Presidency itself—i.e., the visit of the Persian Prince to

the Governor-General. It is said that the Marquis of Hastings sent out a *Battalion of European troops* to meet him and conduct him to the Government House, and himself received the Prince at the head of the staircase.

"This exaggerated statement has been probably published with the design (and will doubtless have the effect) of spreading both in India and Persia, extremely false notions of the nature of the attentions shewn to the Prince, and of the importance attached by the Indian Government to his visit.

"The following objectionable passage contained in the *Mirat-ul-Akhbar* of the 4th instant has been brought under the notice of Government by the Acting Persian Secretary.

"One day the Minister, who is the Governor* of Oude, sent for Mir Fazl Ali to give in an account of the stipend of Muhasan-ud-daula. The Prince prohibited his compliance with this requisition, and the Padshah Begam observed that she alone had the control of the said stipend and would only render an account of it when all the other accounts of the country became due.

"After this the Padshah Begam and the Prince in consequence of the enmity and malevolence of the Minister determined to move away altogether, and summoning their dependants told them that whoever would engage to follow and defend them might come—the others should receive their pay and dismissal. Every man of them solemnly engaged to adhere to their cause. The Prince accordingly gave to each, presents and shawls accordingly to their several ranks. When the Minister saw such numbers collected together he represented to the King that the Prince had certainly conceived some evil design, and that with such disturbances threatening it was necessary to take steps for His Majesty's safety and protection. The King being taken in by the cajoling of that false Minister (literally like *Damnah* in allusion to a Jackal in one of the well-known fables of Pulpay) concurred in his suggestions. Upon which that despicable minded personage with the royal permission began to collect troops and to call for the aid of the English forces.

*The terms used are "Wazir Farman-rawa-i-Oude," and may be construed simply 'the Minister of the King of Oude.' The king however is in no other place designated by the term Farman-rawa.

"The rest we shall give in the next number of our paper."

"I refrain from noticing other objectionable passages which occur both in the Persian newspapers above quoted, and in those in the Bengallee language. In the latter much bitter and acrimonious controversy has been introduced regarding the *Sati* question; were this dispute voluntarily and really conducted by the Natives without the intervention of Europeans, the discussion might lead to beneficial results.

"It is obvious, however that the editors of the papers in the Native languages have already been and will continue to be liable to the influence of their European friends and patrons, and that in the progress of the free Native Press of India, the pages of the Native newspapers may become the channel of spreading throughout the country such reports and strictures and doctrines as the bigotry, self-interest, disappointment or malignity of European British subjects may choose to circulate. On the contrary, if superintended with prudence and under the restraint of legal authority, the Native newspapers may be made the instrument of extraordinary and extensive benefit, in disseminating useful knowledge in correcting prejudices, and in facilitating the accomplishment of those measures which may be directed by Government, with a view to the improvement of

our institutions, and to the promotion of happiness, prosperity and civilization amongst the numerous and rapidly increasing population of British India.

"I earnestly hope that the authorities in England (with whom the determination of this important question must now rest) will carefully consider the subject with reference to the nature of the society and Government of this country, and that the result of their deliberations may be such as by upholding the authority of the British Government in India, may promote the security of our dominion, and the real interest of those subject to our rule."

There were other Minutes, besides the above, in the same strain, by John Adam and John Fendall on the Press in India. On the departure of Lord Hastings from India (Jany. 1823) the Acting Governor-General, John Adam, passed on 14th March 1823, a rigorous Press Ordinance, which was duly registered by the Supreme Court on 4th April. One effect of the new regulations was the closing of Ram Mohun's *Mirat*, immediately after these regulations had been registered by the Supreme Court.

* *Bengal Public Consultations*, Vol. 55, 17 Octr., 1822, No. 8 Minute. (India Office Records).

SIR JAGADIS CHANDRA BOSE A LEADING FIGURE OF ASIATIC RENAISSANCE

By DR. TARAKNATH DAS, Ph. D.

THE twentieth century is the era of Asiatic renaissance and various political and military leaders of the New Orient have captured the imagination and admiration of the world. It is a fact that the present-day political civilization places greater value upon the achievements of military and political leaders than those of men and women who silently, facing all odds, work in the cultural field. However, in our estimation a Noguehi is no less a hero than a Togo. In the history of the cultural revival of Asia, Sir Jagadis Chandra Bose will, among others, have a most prominent place.

THE REVELATIONS OF LIFE

The triumph that attended Sir J. C. Bose's recent visit to Europe is undoubtedly a very

important event in the history of Science. His numerous discoveries have made the strongest appeal, not only to specialists in Science, but to all intellectuals, including philosophers and men of letters. This Indian pioneer of science has three times astonished the world with the results of his discoveries, first, on the property of invisible electric waves, then in revealing the inner and invisible activities of plant life, thirdly, in establishing the unique generalisation of the unity of all life.

When he commenced his investigations more than a third of a century ago, there were for him no facilities of research, no laboratory worth the name, and no instrument-makers to construct the necessary apparatus. But difficulties, apparently insur-

mountable, did not deter him from the pursuit of his quest; it was not for him to follow the beaten track. The lure that draws heroic souls is not success, but defeat and tribulations in the pursuit of the unattainable. He declared that it is not for man to complain of circumstances but bravely to accept, to confront and dominate them. The history of his struggles for more than twenty-five years will give courage to those who want to dedicate themselves to the establishment of truth.

HIS FIRST DISCOVERIES

The present generation is not aware of the difficulties which confronted this Indian pioneer of science, arising from the widely accepted view that no great advance could be made in Oriental countries in the domain of positive knowledge. Yet his first discoveries on the optical properties of electric waves filled Lord Kelvin, the greatest physicist of the age "with wonder and admiration". Year after year his discoveries in the realm of the invisible light were published by the Royal Society. He had the unique honor, in 1896, of being asked to deliver a Friday Evening Discourse at the Royal Institution, from the same place where Davy and Faraday announced their epoch-making discoveries. His success at various scientific centres of Europe was equally striking. An account of his discoveries is given in the *Encyclopaedia Britannica*, and in all important text-books. Sir J. J. Thomson, the eminent physicist has recently written :

"The study of the properties of electric waves was facilitated by the method introduced by Bose of generating extremely short electric waves. By this method he obtained important results on coherence, polarisation, double refraction and rotation of plane of polarisation. Another aspect of his work is that they mark the dawn of the revival of interest in India, of researches in Physical Science; this which has been so marked a feature of the last thirty years, is very largely due to the work and influence of Sir Jagadis Bose."

The most recent German Encyclopaedia '*Mensch und Menschenerke*' writes :

"Professor Bose's first researches were on the production of shortest electric waves. At this time (1894) he was occupied on the technical problem of firing weapons and explosives at a distance by means of wireless waves. This was one of the first experiments at using electric waves as transmitters of energy. In this great *Indian Scientist*, the pure passion for truth is allied to the most rare cosmic vision."

And here we come to the second and the

most important period of his life when he relinquished his brilliant and assured career in Physical Science for his great adventure into the mystery of life and its numerous manifestations. In pursuing his investigations on the properties of inorganic matter, he was amazed to find boundary lines vanishing and points of contact emerging between the realms of the *Living and Non-living*. Metals he found responding to stimulus; they are subject to fatigue, stimulated by certain drugs and 'killed' by poisons. Matter had thus the promise and potency of life. This most astonishing discovery, announced before the International Science Congress in Paris in 1900, created a great sensation among the assembled scientists of the world. Between the inorganic life at one end and highly sentient animal life at the other, there was spread the vast inarticulate life of the world of plants seemingly inert and impassive. Was there a continuity amidst such bewildering diversities? In other words, was the world a Chaos or a Cosmos in which the human mind is to discover an uniform sequence of law and order? His Indian mind could not be satisfied with arbitrary barriers that separated different branches of knowledge. But what of the glaring difference which divide the two living kingdoms of plant and animal? We cannot see the plants move, whilst the restless animal is in a state of constant motion. But have we the acuteness of vision to see imperceptible tremors of excitement in a plant?

"Out of the imperfections of his senses", says Bose, "man has built himself a raft of thought to adventure into the seas of the unknown. Where visible light ends, he still follows the invisible; where the note of the audible reaches the unheard, even there he gathers the tremulous message." When our microscopic vision failed, he invented instruments of surpassing delicacy which could visualise movements which no human eye beheld before. He succeeded by the invention of his famous *Electric Probe* to exhibit how the plant gave an electric twitch to every shock. He demonstrated this in his second Friday Evening Discourse before the Royal Institution in 1901, and at the meeting of the Royal Society. It was then that he roused the intense hostility of some specialists who like Burdon Sanderson resented the intrusion of a physicist into the preserve of the physiologist. Because Burdon Sanderson failed to discover any response of the ordinary plant like the

response of the animal, so the gap between the two could never be bridged. Bosc that day took up the challenge, he was to devote all his life for the establishment of a new science which unified all life. It was to be years of conflict of a single mind against a solid phalanx of opposition.

apparatus, that gradually broke down the opposition. His marvellous technique, and unflinching success in the most difficult scientific demonstrations won for him recognition as the prince of experimentalists.

OPPOSITION TO NEW ADVANCE IN SCIENCE

Advance in Science can only be made by demolition of old and unfounded speculations of men who occupy leading positions. They cannot welcome new knowledge which make theirs antiquated and out of date. The authors of "Text Books" and Professors of the old school find their position untenable. Then there are human gramophones who without understanding love to repeat their master's voice. The difficulty of novel doctrines can be realised from the opposition to Darwin, who would have been crushed but for the able championship of his devoted friends. But Bosc was a stranger from the East, the land of dreamers, who alone challenged the conceptions accepted by the West. His opponents point out that India was a land of magic, and that Bosc is possessed of a speculative type of mind and that in all likelihood he is swayed by the intangible mysticism common to his country. Even his recent admirers regard him as the Plant Wizard, Edison being the Wizard of Menlo Park. Bosc succeeded in the impossible task of compelling the inarticulate plants to write down the history of their inner experiences. Nothing short of a magic could have done it!

Not merely a vague charge of Eastern mysticism but open hostility stood in Bosc's way. In the West, inquirers flock to the laboratory of the inventor to appraise his discoveries and inventions. But who would ever travel to the distant East to test the miracles? And so Bosc faced the problem in his characteristic way; he decided to carry his laboratory and his plants to all scientific centres and meet his opponents. He had to face exceptional hardships in his scientific mission round the world, and also in his visits, more than a dozen times, to the scientific centres of Europe, where he gave demonstrations of his discoveries. His delicate instruments he had to carry personally. It was his dominant personality, his lucid exposition of the most difficult problems, the incredible perfection of his

RECOGNITION OF HIS REVOLUTIONARY WORK

In this way his work won the enthusiastic appreciation of the most eminent plant physiologists of the present age, including Timiriazeff of Moscow, Pfeffer of Leipzig, Haberlandt of Berlin, Chodat of Geneva, Vinos of Oxford, and Molisch of Vienna. Space only permits a few quotations. Chodat who followed Bosc's works for many years wrote:—

"About a quarter of a century ago, having been invited by Vinos, the great Oxford plant physiologist, to attend the meeting of the Linnæan Society, I was privileged that evening to hear a young Hindu speak on a fascinating subject, the analogy which he had discovered between the response of plants and animals. What made that memorable conference particularly sensational was the marvellous methods of experimentation and the automatic records which the plants were made to give of their reactions. Thus our inferior dumb brothers showed that they registered a number of impressions from their surroundings, retaining within themselves memories, like their superior brothers the animals. It is to this mysterious problem of plant-reflexes that Bosc, with a perseverance rare in Scientific History, has consecrated an entire life-time of patient research, inventing every time a new apparatus capable of manifesting the secret reactions of the sensitive protoplasm. No one has been able to elucidate the interior excitation of plant-life more than he; for this the ingenuity and precision of the physicist had to find embodiment in the physiologist. The penetrating mind of the Indian Savant, ridding itself of non-essentials, is able to see beneath deceptive appearance the unity of life and brotherhood of all living beings."

Vinos, whose work on plant Physiology is still the standard work in the English language, wrote for *Nature* its leading article on Bosc Institute in which, after describing his most striking researches and discoveries, he concludes that the Bosc Institute has from the beginning expanded both materially and intellectually in a career of "ever-increasing brilliance, more than fulfilling the most sanguine expectations of its founder and reviving the ancient reputation of India as a home of learning."

One of the greatest of plant physiologists is the eminent Russian Timiriazeff whose work is regarded as classical. He realised from the very beginning that at last, the study of life was pursued in a truly

scientific way, and not evade the real issue by vague assumption of Vitalism which explained nothing. In realising the significance of Bose's doctrine, he wrote :—

"A very remarkable example of the application of exact physical methods to the physiology of plants is afforded by the labours of the Indian Savant whose very name indicates a new era in the development of science in general. His work must at once be acknowledged as a classic in the field of physiological research. Bose declares that "only by studying the simple phenomena in the plant-organism can we hope to disentangle the most intricate responses of animal tissues. He thus demonstrates the bankruptcy of present physiological theorists: his has been a true triumph of scientific physiology and a fresh defeat of Vitalism."

DISCOURSE AT THE OXFORD MEETING OF THE BRITISH ASSOCIATION

Perhaps one of the greatest scientific triumphs of Bose was at the British Association; of which the *New York Times* wrote :—

"Rarely in all its history of nearly a hundred years of scientific achievement has the British Association for the Advancement of Science, witnessed a more remarkable scene than when Sir Jagadis Bose, the Hindu Savant, demonstrated to an audience listening with absorbed interest the experiments by which he proved that plants live a life akin to human beings Savants watching him felt like pinching themselves to see if they were dreaming as Sir Jagadis in a matter of fact way revealed the wonders of life."

OVATION AT THE UNIVERSITY OF VIENNA

Vienna is the great centre of biological science, and its Medical Faculty holds unique position. It was here that Bose's years of unremitting toil received the highest recognition. Here he met the greatest and most critical specialists of the day. Long before the hour the auditorium was crammed to point of suffocation, and the audience stood breathless in watching the marvels. Now and then was the deep silence broken by deafening applause. The Rector of the University declared that Bose by his discoveries had opened new gates of knowledge and had rendered possible explorations into regions which had hitherto been regarded as closed. These discoveries would be of the greatest benefit to humanity in advancing Agriculture and Medicine. Prof. Molesch, one of the greatest living physiologists, said that he would undertake the journey to India to work in the Temple of Science (the Bose Institute) and be inspired by the new methods which had created so great a revolu-

tion in our concepts of the functions of life.

Here as elsewhere his opponents became his warmest admirers and adherents, and they crowned the innovator by conferring the rare honor of electing him, by an overwhelming majority, as a Member of the Academy of Sciences of Vienna.

MEETING OF SPECIALISTS

For removing the misgiving that none but its inventor could work the extra-ordinarily sensitive instruments, Bose held a special meeting of the leading scientific men and of the foremost specialists of medicine so that they could take the instrument to pieces, reassemble them and repeat the experiments themselves. The head of the department for construction of high-class precision instruments for research of the Vienna University was also present to take notes and sketches of the different parts of the apparatus. It was realised how direct and simple was the principle involved; but the head of the instrument-makers soon confessed that the perfection of the apparatus, due to the extra-ordinary skill of men trained in the Bose Institute, could not be approached elsewhere, and the world must be dependent upon the Indian source of supply. An eye-witness thus describes the marvellous scene witnessed at that memorable occasion :

"Sir Jagadis passed a feeble current of electricity through the plant, and simultaneously through one of the world-famous scientists, who was in the same circuit. The human being felt nothing, but we all saw the responsive indicator of light flicker and dance as the plant twitched at the shock. Then he electrocuted the plant and we saw it writhe in death-agony. After this, repeated applications of the shock failed to produce the slightest response of the electrocuted body. Now this was a miracle—not merely to the eyes of the laymen, but to those of the foremost specialists of this great scientific city, who pressed round the Indian savant to snake his hand in their unbounded enthusiasm.

"The Plant-Man now took on the more human role of the rescuer of the dying. A dying and a drooping plant was given a dose of stimulant; it at once raised its head in token of revived life. Hardly was the act of mercy complete, then for our benefit, the plant, was given a dose of poison. The leaves drooped as we watched them during the death-struggle. Sir Jagadis was watching his "patent" as a physician employing a deadly drug in an emergency, watches his. Quick now the antidote! Twenty drops of life-saving fluid was given, and the march of death became arrested. For a minute there was stillness. Then, slowly, stuffy at first, the heart-beat of the plant became revived.

"He then showed us a frog apparently dead, whose heart had ceased to beat. A few drops of the newly discovered Indian drug was now applied, and the greatest feat of the evening was in progress. The heart of the apparently dead animal became revived; it rose and fell rhythmically before our eyes, lifting and lowering a lever quarter of an inch at each beat, recording in a smoked glass plate the precise graph of the heart's action."

RECEPTION AT THE UNIVERSITY OF MUNICH

An equally enthusiastic reception was accorded to Bose when he gave his discourses before the University of Munich. At a special dinner in his honour given by the Rector and the Faculty, Goheimrat Goebel, the Director of the famous Botanical Gardens, and the author of the classical work on Organography said—

"We all know how much India has given to the world in religion, philosophy and art; now we are privileged to see a new epoch of Indian influence when the light of Asia is shining brightly to illuminate the darkness which surrounded the science of life."

THE WEB OF LIFE

What is the true significance of the new discoveries? *The Manchester Guardian* lays special emphasis on the new discoveries about the similarities of animal and vegetable life of which the Bose Institute has been so important a centre and says:

"Sir Jagadis has been called the 'Darwin of Botany' but the phrase is not a happy one. The Darwinian theory laid its special emphasis on the conflict underlying existence, while the researches for which Sir Jagadis has been most renowned have thrown new light on the Unity of Nature. The Nineteenth Centuries' Science studies Nature's red tooth and claw, while the new investigation has revealed many harmonies in the web of life. Sir Jagadis has viewed the life of the forest as a kind of unity in which the flora are closely related to the fauna, and his investigations on the nervous system of plants have led to a new knowledge which overthrows our conception of the lies of the field as remote and unfeeling adjuncts of life."

[DAWN OF A NEW ERA

In the remarkable philosophic work on *Life's Unity and Rhythm* published in the series of To-day and To-morrow, the author says:

"A portent has appeared which is of the greatest significance; shadows that we look for substantial barriers are being dissipated by the painstaking method of scientific experiment, and a whole collection of categories that we had come to accept as facts have been revealed as being but mere fictions born partly of our ignorance, partly

of the characteristically 'Western' inability to see anything whole and undivided. An Eastern mind, seeing Nature whole and working with the critical experimental success of the West was needed, and in the fulness of time was forthcoming, the full genius Jagadis Bose, the Bengali physicist. Centuries hence men may point to Bose as a conveniently identifiable point from which to date the dawn of the new thought, just as we today put our finger on Socrates when we wish to focus our view of the beginning of that new thought which inspired the West for centuries and to say 'Here is our landmark, here the new can be said to have been first recognizable, as something that was characteristically different.'"

INFLUENCE ON MODERN THOUGHT

Bernard Shaw after seeing one of Bose's demonstrations presented him with a special edition of his collected works bearing the inscription "From the least to the greatest biologist". Roman Rolland sent his *Jean Christophe* with the note "To the Revolver of a New World". The editor of the *Spectator* of London organised a lunch in his honor where the greatest literary people like Galsworthy, Noyes, Rebecca West, Norman Angel, Yeats Brown and others came to offer congratulations to one who had in so eminent a degree enriched human thought. They asked him to tell them the significance of his discoveries, and the aspirations of India and the influences which contributed to the new renaissance.

Bose's address in reply produced the most profound impression among his distinguished audience who had no difficulty in realising the baselessness of the slander against the people of India that had been circulated for propagandist purposes. The *Spectator* published several articles from the pen of its literary editor, who also contributed a striking article in the *Fortnightly Review*; the following extracts are taken from these articles:

"In Bose is seen an invincible, perhaps immortal quality which has given a permanence to the Indian civilization such as no other nation has approached. In Sir Jagadis the culture of thirty centuries has blossomed into a scientific brain of an order which we cannot duplicate in the West. We find in him a spiritual sense difficult to define, intangible yet evident, preeminently of the East; the quality out of which all great faiths have grown."

"His life is entirely given to the institute that bears his name. It is a threshold whence we may see visions of a future emancipated by science, as a worshipper in an Indian temple may see from the glare and din without, the cool shadow of an inner shrine. Beyond that lie other shrines, other mysteries. To the lanes of India the devoted bring offerings of white jasmine, sym-

is of pure in heart. It is such a wreath that Sir Jagadish had laid upon the altars of Science."

But is not the woman of India taking her proper share in the great national revival? The writer answers:—

"Bose has three gifts of the gods—a heart for any fate; a democratic education amongst his own people, who number among them some of the subtlest thinkers in the world; and a helper in

Lady Bose who is a type of all that is brave and most beautiful in Indian womanhood. She has been his mainstay throughout the difficult years of struggle, and she is beside him now that he is famous. Together they have achieved a great work for scientific progress, and they have set a sign and seal on the character of India's right to be a leader in civilisation."

RAJA RAM MOHAN ROY

By C. F. ANDREWS

THE centenary of the founding of the Brahmo Samaj makes evident to us the fact, that Raja Ram Mohan Roy's greatness increases as the centuries pass and his light does not grow dim. It may be regarded as certain that, in another century's time, his name will stand out even more prominently in human history, and his pioneer work will be recognised by East and West alike as of paramount importance.

For it is not sufficient to regard him as merely one among the many great men of the Nineteenth Century. He stands in the very front rank of all, as the originator in the East of the vast movement of human thought that bound the two hemispheres of humanity closely together. He held a unique position, at the head of one of the supreme moral revolutions in the history of Man. It was through his genius, that Asia awoke and realised her true self in contact with the West.

Again, it is not enough to call him the founder of the Bengal Renaissance, or even of the Indian Renaissance merely,—though he was that in a superlative degree. But he was much more than that. For the Bengal Movement of last century, which he created, led the way to almost every subsequent awakening in Asia. Consider, for instance, the origin of the Meiji, or Era of Enlightenment, in Japan. Its beginning came nearly half a century later than that of Bengal, and it undoubtedly owed much at the start to the fact that another part of Asia was already remarkably awake. It would be possible to trace the effect of the Bengal Renaissance on different parts of India and through them on Western Asia.

Raja Ram Mohan, by his amazing genius, not only led the way, he also gave the principles which should direct the whole of this Movement in Asia forward on its right course. He realised that East and West had at last finally met. He grasped the true inner meaning of their meeting at a time when everything depended on the turn the movement would take in its first stage.

Ram Mohan Roy's further 'magnanimity' was this,—I am using the word in its literal sense of 'greatness of soul',—he aimed at a new era in Asia not merely in intellectual and social reform but also in religious thinking. He based everything he tried to accomplish upon the higher moral conception of God and he kept that conception of God pure and spiritual.

The Brahmo Samaj, since his time, may possibly be regarded by those who have never thought much about the subject as small in numbers. But the spread of its seed-thoughts continues, and these are of far greater importance to mankind than the popularity of the mass mind. It is true, in all the highest spiritual things, that 'many are called, but few are chosen'. Thus Raja Ram Mohan Roy sowed in his own life-time seed-thoughts, which are beginning to bear fruit in our times,—a century later. They will continue to do so for many centuries hence, when other Movements much more popular today, and numerically much more powerful, are completely forgotten.

It is difficult, even in our own age, either to think or to speak too highly of such a genius as Raja Ram Mohan Roy. Indeed, it is practically certain, that we have

not yet been able rightly to envisage his true greatness in the vast perspective of the ages; for he will come gradually to his own, as one who was literally centuries before his time. What can be truly said is this, that the century that has now passed, since he founded the Brahmo Samaj, has been full of new discovery. Yet it has in no way superseded or made antiquated the central religious thoughts of Ram Mohan Roy himself. Much rather is it literally true to say, that his ideas about universal religion were so premature that they are only now at last coming to be fully understood and appreciated. Men are thinking their own thoughts after him, hardly realising that he had thought them out long ago.

A very interesting illustration,—which happened to me personally quite recently,—will serve to illustrate what I mean. I was staying with Dr. Barnes, the Bishop of Birmingham, whose reputation at Trinity College, Cambridge, as a mathematician and a man of science, is very high indeed. He is one of the few 'modernists' among the bishops in the Church of England to-day, and as such has been bitterly attacked by those who hold what are called fundamentalist doctrines about the Christian religion. He has also been attacked by the High Church Anglicans at the same time.

While coming over to France in the S. S. Athos II from Colombo, I had read carefully his book on Christianity. What immediately struck me was the likeness of his book on certain important subjects,—such as the magical theory of worship which he unreservedly condemned,—with that of Raja Ram Mohan Roy. The very argument against any use of idolatry, or magic, that the Bishop uses, as savouring of magic, is virtually the same as that used a hundred years ago by the Raja.

Another test may be applied, which is a very severe one on books of religious controversy. Usually, in such controversies, the writing about them dies a natural death along with the controversy itself. I have gone through one room after another, in the Cambridge University library, where books of this kind are piled high and never disturbed from their shelves. The dispute itself has been long forgotten and the books are forgotten with it. But whenever I have studied Raja Ram Mohan Roy's English works, it has always been borne in upon me, that what he has written

is living still and can be profitably read over and over again. For he always went down to principles and carried out his thinking work so thoroughly, that his words are fresh and living even to-day. It is good news that a collected edition of his works is being published, as a Centenary Memorial. Such a programme of revival of his writings ought to have heartiest sympathy and support.

Here again, I am not speaking merely from hearsay, but from my own practical experience. In the year 1917, when I was going out to Fiji alone, it happened that I had kept with me an old edition of his English works. These so absorbed my interest,—in spite of the usual sea-sickness that I have on every voyage,—that not only did I read through the whole from beginning to end, but when I had finished, I actually went through most of his writings a second time on the same voyage,—a thing I rarely am able to do, even with a modern book, however interesting and important.

This article is in no sense intended to be comprehensive. It is written under great difficulty owing to lack of leisure. But it is not possible to conclude it without a reference to his character and personality. These in many ways were as unique and outstanding as his thoughts and writings. He was a moral hero among men.

The boy who, at the age of fifteen or sixteen, could dare to make alone on his own initiative a perilous journey across inaccessible mountain passes into Tibet, simply in order to obtain first-hand knowledge about another religion, while he was making a comparative study of the different religions of mankind,—such a boy is *certainly* a unique figure in human history. He ranks, even on that account alone, with the greatest names as a scientific explorer. He may truly be called the founder, in our Modern Age, of the science of Comparative Religion. It must also be remembered, that the idea of religious harmony, came to him, not in the midst of an intellectual ferment surrounding him on every side, but rather in the midst of a Brahmin Orthodoxy so confined that there seemed hardly any escape from its bondage. Not only did this young boy leave his home on this adventure, but he was able afterwards to reconcile his orthodox father to what he had done, bringing him in the end to recognise his moral purpose and high endeavour. It has also to be remembered,

that his personal courage was so great that he went about for many years in almost daily danger of death at the hands of those who bitterly resisted his reforming spirit and misinterpreted his motives. His courage never failed him, nor did his immediate forgiveness of personal injuries ever grow dim. He was ever large-hearted, charitable and generous in his thoughts and actions

There is one pilgrimage I always wish to pay in England, whenever I return there from India. It is to the last earthly resting place of the mortal remains of Raja Ram Mohan Roy,—the one human being of modern times, who has done more than anyone else to reconcile East with West and West with East

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words—Editor. The Modern Review.]

Mr. Dilip Kumar Roy on Musical Education in Bengal

May I humbly suggest that your paper at least should be superior to countenancing bitter personal attacks which contain venom in lieu of argument? If I differ from Grasshopper on musical grounds by all means let us controvert each other by reasoning. But why such virulent personal attack and that too not openly? Why does not Grasshopper disclose his name? Very soon a letter will be published in the press in which Pandit Bhatkhande has expressed his poor opinion of the Bisnampur style. It is against this style that we wage war—not against any personalities. So why bring in personalities in such a respected journal as yours and that under a mask? I have never attacked Gopewar Babu personally. I have only depreciated his style.

I will not reply to the challenge of the Grasshopper of my musical ability because I cannot accept a challenge unless I know the identity as well as bonafides of the man who throws down the gauntlet. Otherwise, I would easily show to him that I can sing *Multan* or *Lalit* (though Sri I cannot sing well) to the *talas*, *madhyaman* or *arethaka*. If however "Grasshopper" is sincerely open to conviction I am agreeable to inviting him to a musical demonstration as well as discussion which will be presided over by a man like Bhatkhande or Rai Bahadur Surendra Nath Majumdar (whom Rabindranath considers to-day as the greatest living classical Bengali singer). But as I am not quite sure whether Grasshopper wants simply to discredit me with insinuations and imprecations, I will try to prove that these are not true.

(1) First, as for my silence touching Doctorate of Music. It is quite a few years when I first

publicly proclaimed that I was not a doctor of Music. See our well-known controversy in the *Forward* entitled 'Comments and Reflection on classical Indian Music' between me and Sri Pramathanath Banerji—the musician against whom Sarat Chandra took up his sarcastic pen in the *Bharatbarsha* (I refer to this to show that the controversy is well known). In this letter I wrote "First of all I must let Mr. Banerji know that I am not a Doctor of Music. I do not know why he has taken me for one." If "Grasshopper" wants I can show him the whole letter. I have its cutting still. Then again in the Lucknow University where I was given a reception by the students and professors—a gathering of over 1500 people—I had interrupted the President G. M. Chakravarti, the late Vice-Chancellor when he had referred to me as a Bachelor of Music. I can say with absolute honesty that I have never let such statements pass unchallenged or wanted to profit dishonourably therefrom. But surely one could not go on contradicting till doomsday if people would persist in calling me Doctor—my public declaration notwithstanding?

(2) Secondly, as for my conversation with Tagore entitled 'The Function of Women's Shakti'. I beg to claim that it was published in the *Vishva-Bharati* without my knowledge. Thus I am not responsible for the omission of the preface which Tagore had written at the head of the original Bengali version. If anybody is responsible for this omission it is either Rabindranath or Surendranath, editor of the *Vishva-Bharati* Quarterly. I vouch for it that both will testify to this truth. In the preface of my book which will soon be published in the West under the name "Among the Great" containing my authorised interviews with Rolland, Russell, Tagore and Aurobindo you will see this acknowledgment made in the preface. This is now with Sri Aurobindo at

not yet been able rightly to envisage his true greatness in the vast perspective of the ages; for he will come gradually to his own, as one who was literally centuries before his time. What can be truly said is this, that the century that has now passed, since he founded the Brahma Samaj, has been full of new discovery. Yet it has in no way superseded or made antiquated the central religious thoughts of Ram Mohan Roy himself. Much rather is it literally true to say, that his ideas about universal religion were so premature that they are only now at last coming to be fully understood and appreciated. I have never attacked Gopeswar Babu personally. I have only depreciated his style.

I will not reply to the challenge of the Grasshopper of my musical ability because I cannot accept a challenge unless I know the identity as well as bonafides of the man who throws down the gauntlet. Otherwise, I would easily show to him that I can sing *Multan* or *Lalit* (though Sri I cannot sing well) to the *talas*, *madhyaman* or *arethaka*. If however "Grasshopper" is sincerely open to conviction I am agreeable to inviting him to a musical demonstration as well as discussion which will be presided over by a man like Bhatkhande or Rai Bahadur Surendra Nath Majumdar (whom Rabindranath considers to-day as the greatest living classical Bengali singer). But as I am not quite sure whether Grasshopper wants simply to discredit me with insinuations and imprecation, I will try to prove that these are not true.

(1) First, as for my silence touching Doctorate of Music. It is quite a few years when I first

publicly proclaimed that I was not a doctor of Music. See our well-known controversy in the *Forward* entitled "Comments and Reflection on classical Indian Music" between me and Sr. Pramathanath Banerji—the musician against whom Sarat Chandra took up his sarcastic pen in the *Bharatbarsha* (I refer to this to show that the controversy is well-known). In this letter I wrote "First of all, I must let Mr. Banerji know that I am not a Doctor of Music. I do not know why he has taken me for one." If "Grasshopper" wants I can show him the whole letter. I have its cutting still! Then again in the Lucknow University where I was given a reception by the students and professors—a gathering of over 1500 people—I had interrupted the President G. M. Chakravarti, the late Vice-Chancellor when he had referred to me as a Bachelor of Music. I can say with absolute honesty that I have never let such statements pass unchallenged or wanted to profit dishonourably therefrom. But surely one could not go on contradicting till doomsday if people would persist in calling me Doctor—my public declaration notwithstanding?

(2) Secondly, as for my conversation with Tagore entitled "The Function of Woman's Shakti" I beg to claim that it was published in the *Vishva-Bharati* without my knowledge. Thus I am not responsible for the omission of the preface which Tagore had written at the head of the original Bengali version. If anybody is responsible for this omission it is either Rabindranath or Surendranath, editor of the *Vishva-Bharati Quarterly*. I vouch for it that both will testify to this truth. In the preface of my book which will soon be published in the West under the name "Among the Great" containing my authorised interviews with Rolland, Russell, Tagore and Aurobindo you will see this acknowledgment made in the preface. This is now with Sri A. at

Pondicherry who is revising my report. The "Grasshopper" can verify this if he writes to Anubindo for the paragraph wherein I have admitted that this article was not written by me at all except for my questions therein. Surely, this should be convincing as showing that this preface I wrote in August last before the accusation of Grasshopper.

(3) Thirdly, I want to maintain that it was no snubbing that I had from Rolland. He simply took it amiss that I should have published his letters without authorisation and that with comments. I had apologised to him and he has been corresponding with me as affectionately as ever as will be shown when I will shortly publish his last long letter (dated 22.8.28) in which he has corrected all my interviews. I can show this letter to Grasshopper if he really wants to be convinced. He will then probably agree that my interview with Rolland on Vivekananda was simply misreported at places. That is all. There are three other reports which have needed very little revision as I can show Grasshopper if he comes to inspect Rolland's marginal corrections with his own hand. It will take too long to expound where I differed from Rolland in music. Suffice it therefore to say that it was not ancient European music but apropos appreciation of Indian music in the West. Thus I have never indulged in wise dissertations on *European music*; I had only expressed my doubts whether European musicians could be quickly emotionally moved by our high-class *Raga* improvisations. Surely on this point I may well have my doubts!

One last point. I have never attacked Gopewar Babu personally. It is his Bishnupur style I am up against. I know even this cannot but pain the admirers of that style now, but as I believe that if people heard really good styles in music they would lose their admiration of this indifferent style, I am for introducing the best style. That is all. I do not see why this should anger Grasshopper so much.

Let me end with a citation from a letter of Pundit Bhatkhande (dated 3.10.28 from Bombay) which is extremely relevant particularly at this juncture:—

I. and was read out the 14th September at the Rotunda meeting.

But surely such attempts on the part of the poet or of Pundit Bhatkhande do not mean that they bear a personal grudge against Gopewar Babu?

DILIP KUMAR ROY

"Grasshopper's" Rejoinder

I have gone through Mr. D. K. Roy's answer to my letter a copy of which you so kindly sent me. D. K. R. seems to be more concerned over vindicating his own honour, which he believes has been besmirched by my "personal attack" than with music and its teaching in Bengal. I shall therefore first of all take up this question of "personal attack" and then proceed to other things.

The point at issue was the musical knowledge and skill of S. Gopewar Banerjee, and S. Dilip K. Roy was the principal critic of G. B. The practice of music is a part of culture and, it was for this reason, that I attempted to put to test the musical and cultural pretensions of the critic D. K. R. If in the course of my examination of D. K. R.'s credentials, I have presumed to suggest that he is not above narrow bias and intensive dislike or love of persons as against principles, it was not with a view to lower D. K. R. the man in the public eye; but to arrive at a proper valuation of the critic D. K. R. This was no "personal attack" just as D. K. R.'s attempt at discrediting G. B. in every conceivable way before the public was no personal attack.

D. K. R. is very frank regarding his lack of a Doctorate. If he openly declares in a paper like the *Modern Review* that he has never received any degree or diploma in music anywhere I have nothing more to say on the point.

I am also glad to learn that he was not responsible for the mistake in the *Star*, which credited him with the authorship of things written by Rabindranath Tagore. I hope that the recent article on "Simplicity and Elaboration in Music" in the *Svaran* number of the *Visa-Bharati Quarterly* is really by himself and not again a mistake; for frequent mistakes react injuriously on public credulity.

D. K. R. says that M. Rolland did not "snub" him and that he still has great affection for D. K. R. In my opinion one can snub a person as well as have affection for him, and that even such *enfants terribles* as D. K. R. himself are sometimes extremely lovable persons. Rolland wrote about D. K. R. as follows in the *Prabuddha Bharat* of June 1923.

"I have read in the February *Prabuddha Bharat* an interview which Dilip Kumar Roy has published about me—I am much dissatisfied with it...He attributes to me remarks entirely different from those which I made.

Then Rolland points out four glaring misrepresentation by D. K. R. connected with his views about Europe's interest in Asia, the Schopenhauer Society, Gandhi and Social Service and other things. If D. K. R. refuses to feel snubbed after this, I only admire his grit and apologise for having attributed him with such sensibilities.

We now come to music, style, Bhatkhande, etc.

I find that D. K. R.'s main grievance against Gopeswar Banerjee is that his songs and style are not liked by Hindustani singers and by Bhattachande. This does not convince us. Bengalees often like things what men of other parts of India do not like and vice versa. This does not prove anything about the excellence things Bengalee or Hindustani. Secondly teaching of music has more to do with grammar than with "style." Gopeswar Banerjee's pupils do not (unfortunately for them) always attain to his style. Some of them sing quite like D. K. R. when they choose the path of cheap decorative variations and leave that of the grander syntheses found in the great *Ragas* and their expression in the difficult *Talas*. By D. K. R.'s own confession we learn that he cannot sing *Sriraga* nor in the more difficult *talas* like *Choutal*, *Dhamar*, *Surfacta*, etc. I am of opinion that *Dhrupad*, is the soul of Indian music. A system in which there is no place for *Dhrupad*, as evidently will be any system which D. K. R. instals, is as effective in keeping the spirit of our music alive as any system of art instruction, which scratches out drawing life study, nature study etc., and fills up the whole curriculum with decorative designing only. Like literature which contains only lyrics, skits and sketches it will turn its students into cultural Surf-riders who after all do not rule the waves, as do the battleships, merchant men and submarines. I believe D. K. R.'s choice of musical style is merely the outcome of that superb eclecticism of his which is ever outward-bound for finding his own nation's soul, collecting knick knacks from the surface of all cultures and expecting to put life into his own national culture by polishing and adorning its surface only, leaving the vitals to take care of themselves. Style is found in men's clothing, character in their soul. We want our musical instruction to mould our musical character and this Gopeswar Banerjee can achieve much better than anybody else including Surendranath Mazumdar the greatest musical genius of Bengal.

yours etc.

Grasshopper
P. S. D. K. R. bemoans G. R.'s inability to pronounce Hindi words correctly. Assuming this to be true, we are not ashamed of G. R. for this failing Bhattachande in his letter published in the *Forward* says that if he were to arrange musical instruction in Bengal, he would allow the pupils to be taught one or two Bengali songs. I hope I shall die before I hear the wonderful songs of Rabindranath or some other composer mispronounced by *Hindustani Ostia*s who will be teaching music in Bengal.

A Letter from Rabindranath

To
The Editor,
Dear Sir,
Mr. Dilip Kumar Roy on reading the comments

in *Modern Review* with reference to himself has written a letter to Rabindranath. The poet had asked me to let you know his views on the matter which are as follows:—

"My discussions with Sriman Dilip Kumar Roy were published in *Probasi* in Bengali and in *The Viswasabharati Quarterly* in English. I had to say in the prefatory remarks of the said article in *Probasi* that the language of the article was entirely mine. I left out that portion of my article in the English translation as irrelevant. For this reason the public might have thought that as the article contained the name of Mr. Dilip Kumar Roy, both the English and Bengali versions of it were written by himself. But, Mr. Dilip Kumar is not responsible for that idea of the readers. When he would be publishing these articles in some periodical or in the book form, he would undoubtedly disclose their true authorship.

"Srijut Gopeswar Bandopadhyaya unquestionably deserves to be regarded as the greatest musician of Bengal. There is no reason to deny that he has acquired high proficiency by cultivating the Hindusthani music for generations. I believe that Srijut Bhattachande is second to none in his knowledge of the science and technique of Music. I do not however, approve of it that any other master should be cried down simply to show off 'S' Bhattachande."

Yours etc
Amiya K. Chakravarty.

Pt. Jawaharlal's Address at the Students Conference

In your issue for October you have been good enough to comment on my address at the Bengal Students' Conference. In one of your quotations a slight but vital error has crept in and you will permit me, I hope, to correct it. Speaking of communism I said—

"I do not propose to discuss it here but I wish to tell you that though personally I do not agree with many of the methods of the communists and I am by no means sure to what extent communism can suit present conditions in India, I do believe in communism as an ideal of society. For essentially it is Socialism, and Socialism I think is the only way if the world is to escape disaster.

By an unfortunate error I have been reported in some papers as having said that "I do not believe in communism as an ideal of society."

JAWAHARLAL NEHRU

Editor's Note. We took the extract from a daily paper.—E. L. M. R.

* This is a free translation of Mr. Chakravarty's original letter, which was in Bengali.

INDIAN Womanhood

The Hindusthan Association of America, New York, and the Indian community of the city gave a farewell picnic in honour of Miss PRANJAN THAKOR, BSC, MA. (about whose academic distinctions we referred to in *The Modern Review* for August) and Miss SYBIL FRAMILA PETERS, B.A., on the eve of

the Hindusthan Association, Miss THAKOR being one of the Vice-Presidents. In the course of her special work in connection with training in rural education, Miss THAKOR had to travel extensively in America. She was awarded by the Teachers' College, Columbia Univer-

Miss Pranjan Thakor

Srimati T. Kanaka Lakshamma

their departure for India. They have decided to take up educational works, particularly rural education, in India. Both the ladies were among the active members of

sity, New York, one of the Macy Scholarships of the International Institute. Prof. William H. Kilpatrick of the Columbia University, and Prof. Mabel Carney the Head of the Department of Rural Education, spoke highly of her attainments and character.

Miss PETERS who comes from the Isabella Thoburn College of Lucknow, studied at

Miss A. C. Kuriyan

the Lincoln University, Nebraska, receiving her B.A. degree in June 1928. In her college work Miss PETERS majored in education. In India she expects to devote herself to the village school organization.

MISS A. C. KURIYAN, B.A., has recently been appointed a *Barbour Scholar* in the University of Machigau, U. S. A. She has

Miss B. Indiramma

done teaching work in Travancore for two years and on her return from America she will be attached to the Post-graduate Department of the Faculty of Education.

MISS B. INDIRAMMA, B.A., has proceeded to England to qualify herself for the M. ED. degree of the Leeds University.

SRIMATI T. KANAKA LAKSHMANA M.A. (Mysore), B.A. (Lond.) of the Mysore Education Service has recently been appointed as an honorary professor in Jaya Tilak's Ananda College, Ceylon. She is also highly proficient in music.

GLEANINGS

The Tradition of False Face

The mask is returning to our theater. Eugene O'Neill seems to be obsessed with the fact that in life we are all hidden behind our masks and in two of his latest plays the mask is an important feature. The *Illustrierte Zeitung* (Leipzig) recalls in an interesting article by Dr. Georg Jacob Wolf, the historic use and abuse of the mask. For their high birth and connections we must, he insists, "go back to the most ancient times and to the farthest zones" where we find these little objects given "something precious, something in the nature of a religious cult, which endows them with reason and a deeper meaning." For "When the carefree Greeks celebrated the feast of Dionysius, the great or rustic Dionysian

feasts, at which life and lust were more deeply penetrated, they painted themselves with wine dregs—a sort of war-paint of joy. Later they preferred the use of red lead; then they covered their faces with vine leaves, still later they chose, in place of these, a covering of linen which was painted and had slits for the eyes and mouth. The linen, in turn, made way for leather which was occasionally gilded. Finally, masks, the genesis of which we have before us, were carved of wood, or they were formed of clay and baked. During the course of centuries actors indeed were the real rumpuses of the Dionysians, and their masks had developed along two lines: tragedy and comedy. For example, the double mask with the serious, and the humorous, fawnlike laughing face.

The Romans placed the greatest emphasis on

CLASSIC AND MEDIEVAL MASKS

the mouthpiece as being the characteristic of the mask. The mask, which had now become particularly hideous, was no stranger to the mystery theaters of the Middle Ages which, like the antique drama, had grown out of the cult which originally dealt only with themes religious and solely served the Church...

FASHIONABLE LADY AND SERVANT Masks for the Japanese No Dance.

Through Gozzi and Goldoni, Venice became the center of the *Commedia dell'arte* and the mask descended from the stage to the people. One cannot imagine Venice in the throes of carnival without masks. At the same time the memory of paintings by Tiepolo, Longhi, and Guardi arise, with their rococo Venetians who appeared so often with masks that one was forced to realize that the Venetians and masks were inseparable. This was not only true of the merry carnival period, but it was also true in Venice of the seventeenth and eighteenth centuries, at all times of the year."

JAPANESE FEMALE AND DEMON MASKS

The writer now turns to others: those of the Orientals, the court masks, the

temple masks, and the demon masks: "In Africa, in the Far East, occasionally in Japan, in China, in Siam, in the South Seas and in Central America the mask has been known and used from ancient times as it was known and used in Egypt....And this proves a basic reason for the wearing of all masks. Man wishes to be other than he is usually mightier or more powerful. ...The fundamental idea is this: escape from oneself to an imaginary individuality a sort of reincarnation here on earth all brought about by the small object which we place in front of our real face at carnival without giving so much as a single thought to the cultural meaning of the mask and the thousand years of its development."

The End of the Mammals

In *Discovery* (London), H. J. Massingham gives some startling facts to show how rapidly man is exterminating other forms of mammalian life, largely for commercial reasons "We have first of all to record the total disappearance of such animals and birds as the Blue Buck, the Quagga, Burchell's Zebra, the Passenger Pigeon, the Great Auk, Steller's Sea-cow, some of the great Land Tortoises, and other species of bird, mammal and reptile within the last hundred years....Deer was declared extinct all over the 'dry zone' of Burma, and the once-common Swamp Deer was very scarce. The Indian Gazelle was reduced to a like poverty of numbers by the method of driving the terrified animals into ravines with nets stretched across them. In the once teeming country of Nepal Terai, it is now extremely unusual to see any

A DISAPPEARING GIANT

The white rhinoceros, the third largest land mammal living, seems doomed to speedy extinction. Last year it was estimated that only one hundred and fifty specimens of this species remained.

deer at all. The Pink-headed Duck is now extinct, while the Great Indian One-horned Rhinoceros only survives in a small district of British Assam. ...Lieutenant-Colonel Fawcett concluded that 'within a measurable space of time there will be practically no game (outside the Government Forest Reserves) left in India.' The 'spread of

THE NORTHERN SEA-ELEPHANT

civilization' is often quoted as the inevitable cause for this impoverishment, whereas a consultation of data reveals that commerce is the real angel of Death.

Brains—How Come?

His better brain makes man supreme over the other animals. The gap is wide between him and his nearest rival, there is a real problem here, the problem of how man got that way. The modern scientific answer is that man's hands made his brains. It must be confessed that the earliest grandfather of them all, old Pithecanthropus Erectus of Java, was an unlovely low-brow. He was not an ape, oh no, but he certainly had the marks. In the scale of brains, he stood right between the ape below and ourselves above. With hands he handles things, examines them, does things to them. He always learns best by doing. He learned reality by doing, for it really works. Apply an idea and you test

it. If it is true, it works; if false, it fails. Man got his truths that way. As he does his doing with his hands, he got his truths through his

Man

Ape-man

Ape

never more than minor assets if they have no hands to do their stuff. Brains without hands never amounted to much, so they did not evolve. Brains with hands meant a lot, so they evolved rapidly.

As long as we travelled on four feet, the hands were kept busy as feet and could not develop into real hands. This held the brain, the partner, down too. Luckily for us, one of our ancestors made just the right move. He climbed into the trees. That is how he got his hands. The brain followed.

Some of the descendants grew big, much too heavy for tree life and so they took to the ground. In the trees they had acquired the semi-erect attitude which partially freed the hands and as the free hands were too handy to lose, they became more and more erect. The tools of the hand relieved the heavy work of the jaws and the jaw grew smaller. The lower face receded, while the growing brain-case bulged up-ward. Man became a high-brow.

—Evolution

Farming Under Paper

We may grow all our crops under paper before long, thinks Milton Wright, who contributes an

HOW PAPER HELPS THE ONION CROP

The unprotected soil in the box on the left formed a hard cake, through which the onions had difficulty in forcing their way. The onions on the right were planted under paper, which kept the moisture in the soil.

CUCUMBERS GROWN WITH PAPER AND WITHOUT
The luxuriant cucumber plants on the reader's left were grown under mulch paper, while those on the right were raised in the usual way.
Note the difference.

hands. This was one of those partnerships between a thinker and doers, in which either would fail without the other. Brains are usually assets, but

article on this subject to *The Scientific American* (New York). His conclusion is based on the success of this method in Hawaii. The pineapple growers of that territory last year paid \$500,000 for paper under which to grow pineapples. The growers raise 30 per cent. more pineapples than they otherwise would—and there is a tremendous saving in labor. He goes on: "On a sugar plantation near Honolulu, before the World War, Charles F. Eckart found it a stupendous task to keep down the weeds. 'If only Eckart could find a mulch that would control the weeds permanently, he would be making a tremendous stride forward. At last he hit upon a tough kind of paper. The sharp shoots of the young plants easily stabbed their way through, but the weeds were smothered. The idea grew. The use of black paper, it was

found, raised the temperature of the soil. The activity of bacteria was increased. The moisture remained in the ground until it was absorbed by the plant roots instead of being wasted quickly by evaporation. Then, too, the paper preserved the original cultivation of the soil throughout the growing period. 'Applying mulch paper to a crop area is simplicity itself. The paper comes in rolls—150 or 300 yards long, and in widths of 18 and 36 inches. The farmer lays the roll down across one end of a row of cultivated soil and unrolls it to the other end over or between the beds. The paper is thus in direct surface contact with the beds. Where drill crops are to be planted a strip of two inches or less is left between successive strips. The paper is anchored to the ground with stones, staples, or with dirt turned over the edges."

This great stone symbol of American-Chinese amity at Chafoo, China, with a quartette American sailors, bears the following inscription on its centre tablet (top)—Dedicated to and Erected in honour of the Citizens of the United States of America—Our Friends across the seas, May there be eternal peace between our two peoples—Lin Tze Heng—September 1921.

An Amsterdam View of the Kellogg Pact which will be appreciated now, when the Anglo-French Naval Pact is said to have "angered" Coolidge

We must have absolute control of the body. We must have absolute control of the mind. The mind is always in some sort of disturbance. Anything that comes along—any outside object, any slightest word that is said to us, any memory floating up from the past—can throw the mind into agitation, even positive passion; and in a moment all our high aims and intents are put to rout. How can the Soul, the Highest, be perceived, when all these blurring mind-waves are continually obstructing our true vision?

To control these waves, we must control their fine causes—the fine memories and impressions buried deep down in their subterranean labyrinths. Patanjali, thirty hundred years ago, worked five out a system of analysis and control of the subconscious, beside which modern psychoanalysis looks like a child's primer. Its strength is in its linking of the spiritual, mental and emotional natures. Modern psychoanalysis gives mental training without high spiritual aspiration. It cleanses but does not inspire. It gives no driving motive other than the well-being of the social group. Most religions, on the other hand, furnish plenty of inspiration and emotional drive, but have no psychological technique for wisely guiding or using the emotional force they rouse. They have one or two blanket formulas which they urge indiscriminately on individuals.

"Be good" say all the religions. "Be social" says modern psychology. But why? What I want is to be happy. And how?—when they are all these instincts stronger than I am, clamoring for satisfaction. Yoga links man's strongest desire (for greatest possible happiness) with his highest religious aspiration (for God, the supreme state of consciousness), and then furnishes him with a practical system of mental and spiritual training, by which to achieve the two in one.

Through Patanjali's system a man gets control of the body, control of the mind, control of the outside universe. When we have knowledge of a thing, full knowledge of it, we have control over it. By concentration, prolonged meditation on any object, we can get knowledge of and control over that object. When all the rays of the mind are focussed, we see that object in full light.

Education and the Nehru Committee Report

The Educational Review for August observes editorially:

Amidst all the political excitement in which the Nehru Committee has drawn its report of a future constitution for India, embodying Dominion status to the country, it has not forgotten the needs of education. There are two clauses of the Declaration of Fundamental Rights to which we should like to refer. Clause (v) runs: "All citizens in the Commonwealth of India have the right to free elementary education without any distinction of cast or creed in the matter of admission into any educational institution, maintained or aided by the State, and such right shall be enforceable as soon as due arrangements shall have been made by competent authority." It will

no longer be possible for Governments to plead want of funds in the spread of elementary education, nor can they take refuge behind the theory that the country is not ripe for the introduction of compulsion. Clause (xi) runs: "No person attending any school, receiving State aid or other public money, shall be compelled to attend the religious instruction that may be given in the school." The introduction of a conscience clause has been the subject of keen controversy for several decades in many provinces, but it is now happily a settled fact at least in some of them, and we are glad the Nehru Committee is giving the weight of its support to the idea underlying it.

Some Practical Projects

Miss A B Van Doren writes in the October issue of the *National Christian Council Review*:

A complaint sometimes brought against the Project Method is that in many cases the projects introduced are artificial and in some cases useless. Successive classes build houses which in turn have to be demolished to make way for the work of the next year. In some cases it may be possible to avoid these difficulties by carrying on as projects the production of equipment really needed in school. In village schools, which are bare of furniture and equipment, why should not the project take the form of things actually needed for the carrying on of school activities?

As examples of such projects, one may mention the plans of a certain rural school in Burma. On Saturday morning the teacher and the older children co-operate in actually making the equipment that is necessary for the school. One morning they worked at cutting paper for school notebooks and stitching these together, and were able to sell the product at half the bazaar price. The next Saturday the village carpenter came and helped the boys to make a much-needed cupboard, in which books and equipment might be kept. The first products in this case will doubtless be somewhat crude, compared with the more careful workmanship produced by Sloyd and other formal methods of teaching. The motive, however, is so real and compelling that the teacher may feel assured of arousing genuine interest and purpose in the children, and hence of evoking an educational value greater than that produced by work mechanically perfect but disconnected with the needs and life of the school. This experiment was to be followed up by other attempts at necessary furniture.

The same school plans to attempt the preparation of simple text-books for the teaching of reading and arithmetic to the lower classes of the school. The teachers will plan easy lessons based on village life, so that books will be village-rather than town-centred. The sums and sentences which the teachers produce will be copied neatly by the older children in their transcription period. Little illustrations will be added by the children who take delight in drawing. The sheets will then be sewed together and bound in an inexpensive cover. Thus they hope to produce text-books at almost no expense, and at the same time to provide

is the most valuable asset. The objection that the Universities train more men for degrees than there are posts for them to occupy applies to other countries besides India. We hear in Scotland of graduates making their fiftieth unsuccessful application for a post, and of others who, recognising the conditions, make no attempt to secure employment in their Honours subject. Sweden has recently established an organization to find work for its unemployed graduates, and a similar scheme has been proposed in England. Nevertheless the University degree is steadily strengthening its position and, during the past 20 years, has beaten the technical college diploma out of the market.

The Peace of the World

In the September issue of the *Indian Review* Mr. C. F. Andrews records some of the efforts that have been made to bring about world peace by the big powers in Europe and elsewhere and attempts to appraise their real value. The writer observes in conclusion

My own heart is as sore as everyone else's when I look out on Europe and the World today. Politicians are trifling. Like foolish senseless children they are playing with fire. No lesson seems to have been learnt no warning appears to have gone home. The appeal is still to passion, not to reasons, to momentary excitement and applause, not to the eternal verities. Nevertheless, it is impossible to give way to despair. We must learn and hope. We must strive on without thought of despair.

I am writing this on board a French Steamer after a miserable buffeting in the monsoon waters. Day after day we seemed to make no progress: day after day it was harder to hold up one's head amid the miseries of sea-sickness. Yet here to-day the misery is past and calm waters have been reached. The parable is easy to read. Humanity is now in the trough of the monsoon seas, battered and tossed by the tempest. But we have only to keep our course straight and our hearts brave to come out at last into calmer waters peacefully and at rest.

Universal Suffrage and India's Womanhood

Referring to the legislation establishing universal suffrage in Britain *Stri-Dharma* for September observes editorially:

The legislation establishing universal suffrage in Britain comes into force from September 1. By virtue of this new Act, women will be entitled to vote at the age of 21 on the same terms as men. The number of women who will reach majority on that date is calculated at 51.4 millions. This will be a phenomenal windfall, over and above the millions of elder women already enfranchised. Thus the next elections will see a great stir at the polling booths. The long struggle of the

British women has at last ended in victory—as all struggle for freedom must, if carried on with faith, determination and self-sacrifice.

Judging from the social revolution in Turkey, and the awakening in India, the emancipation of the women of the East does not seem to have involved much noise and clatter. It is not that we have been without our pangs of struggle. Whether we have been spared unseemly wrangles by the chivalry of our men, or whether our abhorrence of scenes and dread of estrangement sustained our endurance, it is futile to discuss to-day. Time has not yet arrived to take a review with a historian's detachment. Besides, the fight is not all over. Unlike the West our fiercest battle will rage, not round the employment bureaus or qualifying academies, but round the domestic hearth. We are not out to compete with men for livelihood or profits, though we certainly claim the right to do so whenever necessary. Our vital need is freedom from the bondage of customs which exploit us for the selfish indulgence of man. It is in the home that we must assert our right to God's sunshine and air, to knowledge and cultured intercourse. Above all, it is there that our will must prevail in forming life's links and in determining life's goal.

It must be recorded, in justice to the present generation of men, that they are realising in growing numbers the iniquities of their forefathers, and have taken an early opportunity to share with us their growing political power. That power to us is but a means to an end. Men have made a mess of things everywhere. Problems of communal strife of criminal reform, of social evils, of labour and capital are all crying aloud for solution. It is time we tried our hand, not only at shaping our own lives, but also at setting our national house in order, and we are determined to do so with the help of this new power.

India and Modern Thought

In the course of an illuminating article in the *New Era*—a newly started monthly published from Madras, the Late Lord *Indians* expressed 'his opinion that there was a fundamental basis in common to the spirit in the East with that of the West, we read

The British Empire is entering on a new stage in its development. The principles recognised and adopted two years ago for that development express what is latent in the new stage. Wherever a dominion has reached a sufficient level in the practice of self-government, it is now recognised that it has freedom to govern itself without interference from London. It is open to it to secede from the British Empire if it should elect to do so. The movement has however been accompanied by another movement. The dominions generally have shown that they attach importance for themselves to remaining within the Empire on terms of complete liberty of action. Not only is this important to them from the point of view of wealth and power, but also from the point of view of culture and civilization.

subject matter well adapted to the needs of the children.

Various types of weaving and basket-making may be utilised for the supply of school requirements. A school in the Central Provinces, where hemp is plentiful, weaves mats on which the children sit, to protect themselves from the chill of the stone floor. In other places bamboo, reed, or grass mats can be woven for the same purpose. In Burmese schoolhouses each child needs a reed mat before him to keep his pencils, seeds, sticks, etc., from dropping through the cracks in the bamboo floor. In India children will delight in making themselves baskets or paper boxes in which to keep their pens, pencils, seeds and sticks. Children in the higher classes in geography may co-operate with their teachers in making sets of maps for the wall. Ordinary globes are far too expensive to be bought for village schools. Quite a satisfactory substitute can be made by setting an earthen pot on its mouth, and drawing in and then colouring the continents and oceans. No school need do without a globe when one can be produced for four annas. Large relief maps of clay can be made in a corner of a room and coloured with bazaar paints, or can be laid out in the playground with the outlines indicated by lines of flowering plants of various colours. One school in South India walled its playground with a row of stones alternately red-washed and white-washed in ones, twos, threes, etc., to provide a large and delightful means of learning addition tables. A school that can afford coloured paper can produce fascinating wall friezes of elephants, camels, palm-trees and other decorations belonging to their Indian environment.

—

Should the West Teach Honesty to India?

Mr. A. S. Panchspakesi Ayyar, M. A. (Oxon) I. C. S., observes in the *Garland*:

Some westerners have told us from time to time what we have to learn from them. These include honesty, brotherliness, morality in sexual relations, real religion as opposed to superstition, learning in the arts and sciences, courage, physical, mental and moral, kindness towards all living creatures, the dignity of labour, a robust optimism and a will to reform the world.

The writer then "dispassionately" examines these claims of the West one by one. Regarding Honesty we read:

No one can seriously hold that the West can teach honesty to the East. The village servants in India who are paid ten shillings six pence per month and get no pension are entrusted with hundreds of pounds of Government money for being transported across wild jungles to the government treasuries, and rarely is there a case of defalcation. So too, the equally miserably paid postal runners and postmen are entrusted every day with hundreds of rupees' worth of money orders and value payable parcels and discharge their trust with an honesty which has excited the admiration and wonder of many an English official. I challenge

any western country to beat this record of some of India's poorest and most illiterate children. This honesty did not begin with the British rule. The British only utilized the system they found before them. No doubt, I may be told western commercial honesty is greater. It is not greater in all western countries. It is certainly great now in England and Germany if we regard relatively fixed prices and same quality as tests. But if we are to take into account the monstrous swindles as perpetrated on the public by western countries including England and Germany, such swindles as are caricatured in Tono Bungray, we shall hesitate before praising the honesty of western firms. Add to this the fact that even in England there are sometimes different prices for different customers and that in France and Italy merchants are as unscrupulous as in India.

If English and German merchants have recently learnt to make goods correspond to sample and to charge each class of customers much the same price it is only intelligent self-interest which makes them do so and not any passion for honesty. The atrocious lies indulged in by western diplomats are further proofs that the west is not exactly fitted to teach anybody honesty.

If further proof were wanted to show the colossal unfitness of the would-be teacher of honesty the horrible, campaign of lies spread by both parties in the last War would be enough.

The only serious argument which an Englishman can bring is the comparative absence of corruption in England and its comparative presence in modern India. I must candidly admit that there is less corruption in the inferior public service and specially the constabulary in England than in the same cadres in India. The greatest reason for this is the ridiculously low pay of these people in India. The London constable gets more than fifty times the pay of his Indian brother; even allowing for the difference in the value of money and the cost of living this means that he is getting about three times the pay. If we pay three times the present pay and enforce discipline we can get educated men of character who will stand comparison with the London constables. So too with the low-paid clerks and other inferior servants. Given the same adequate pay, I do not think that the Indian will be behind any other race in honesty. The spoils system of America and its periodical prodigies of corruption are unknown to India. I must also add that inferior government servants in France and Italy appear to be no better than their confreres in this country.

—

Nishkamya Karma

In the course of his learned presidential address (published in the *Young Men of India* at the Andhradesa Social Service Conference Mr. K. T. Paul put forth a plea for a better understanding of social service. Concluding the speaker observes:

The Ancients knew human nature. They called service a *Yoga*, a process of discipline;

and so it is. They also reckoned it as one of the regular processes of discipline whereby the human soul is perfected in its long pilgrimage toward God. Karma Yoga is classed with Bhakti Yoga and Gnana Yoga, and it is recommended that all the three processes be pursued. But the essence of the discipline is in the freedom from Self. The supreme message was just on that point. It is there that a distinction was made; not *any Karma* but *Nishkama Karma*; the whole of the heart so filled with love that there is no room for Self. Not for the pleasure or profit of one's self or one's family or one's social group or one's sect or religion or even one's nation, but in pure human sympathy to which it is constrained by a relentless conscience should the heart instinctively feel in unison with suffering wherever it is found and the hand and the foot the whole body and mind must hasten to do acts of relief. It is only such spontaneity, such sustained continuity, such freedom from every corrosion of Self which deserves to be called service. That is Nishkama Karma. That and that alone can constitute to be a form of Yoga. Mark what our great Poet says:—

Leave this chanting and singing and telling of beads! Whom does thou worship in this lonely dark corner of a temple with doors all shut? Open thine eyes and see thy God is not before thee!

He is there where the tiller is tilling the hard ground and where the path-maker is breaking the stones. He is with them in sun and shower, and His garment is covered with dust. Put off thy holy mantle and even like Him come down on the dusty soil!

Deliverance? Where is this deliverance to be found? Our Master Himself has joyfully taken upon Him the bonds of creation; He is bound with us all for ever.

Come out of thy meditations and leave aside thy flowers and incense. What harm is there if thy clothes become tattered and stained? Meet Him and stand by Him in toil and in sweat of thy brow.

Litigation

We read in *Harmony*:

The three crushing evils that India today groans under, are landlordism, usury, and litigation. Of these three, litigation is the most to be deplored, for through it, our men of light and leading are leading a vampire life, fattening on the fruits of the honest labour of a famished peasantry, who, in civilized countries, are immune from every burden. Only the other day, Mr. Churchill, in placing the English Budget before the House of Commons, said, "agricultural production was to be permanently and completely relieved of all rates." And our Hindu patriots of the Swaraj party have not felt ashamed to perpetrate the bloodiest massacre of Innocents, in the name of amending the Bengal Tenancy Act! Alas, litigation is making the life-candle of India's *body politique* to burn at both ends, impoverishing the wealth-producers at one end, and demoralising our intelligentsia on the other, breeding in place of the amity, which prevailed fifty years ago, as we can ourselves testify,—breeding mutual jealousy

and hatred all round, dividing man from man, class from class, causing "a solution of continuity," and want of national cohesion, in our caste-divided *body politique*.

The best intellects of the civilized world, are leaving no stone unturned, for, increasing the wealth of their country and in combination with the capitalists of the country, they are finding work on a living wage, for their working proletariat. The best intellects as well as the capitalists of India on the other hand, are busy in the spoliation of those who produce food for them, and for us all! Is it not like children sucking the blood of their mothers, instead of their milk? O what monsters are we transforming ourselves into, by litigation! Our schools and colleges, which ought to train our budding youth to become the honest producers of food and wealth, are become nurseries for the training of the youth, in the nefarious arts of "suppressio veri" and "suggestio falsi," for is not litigation to-day become the true staple food-crop for our educated classes.

Academy of Music at Travancore

The *Scholar* observes editorially:

Travancore deserves to be congratulated on its decision to establish an Academy of Music. The objects as outlined at the preliminary meeting, which was held recently in Trivendrum are the laying down of definite lines on which Indian music deserves to be developed, establishment of a Music Library, publication of standard works in Music, and the establishment of training schools for music in the State. But we do not see why music should not also form part of the curriculum of teaching in all schools, made if necessary optional instead of compulsory, to suit the tastes of the unhappy few, if any, who could not constitutionally feel the ennobling effect of it. Many of the young boys of the school, undoubtedly possess not merely the ear for music, but also the capacity to give practical expression to it provided they are given opportunities to develop in this direction. But their development is left to be acquired by their own exertions, clandestinely practised in out of the way places as though it was an improper thing to do so. Their knowledge, therefore, is bound to be imperfect and crude like so many of our professional bhagavathars, who practise the art more for their livelihood than for art's sake. The educational authorities own it to them to help such of the pupils as have an inborn aptitude for it to improve themselves in this direction.

Buddhism and Hinduism

Sj. T. L. Vaswani writes in the *Kalpaka* that he does not regard "Buddhism as a revolt against Hindu Idealism." We are further told:

Buddhism was not a rebel of Hinduism. The Buddha came to renew the Religion of the Rishis. Like them he realised the spiritual value of com-

munion with Nature. "Here are trees", he would say to his disciples at the end of his discourse. "go and think it out!" The Rishis were not ascetics; nor was the Buddha. His "Middle Path" avoided extremes at once of asceticism and self-indulgence. Sajatā offered him with *Bhakti* milk and rice. Buddha was no dry ascetic. His heart bled the maiden. In the words of Edwin Arnold, he said to her:—

Wiser than wisdom is thy simple lore

.....Grow thou, flower!

"Thou who hast worshipped me, I worship thee!

Excellent heart! I learned unknowingly

As the dove which flieth home; by love.

Like the Rishis Buddha recognised the value of *tapasya* but rejected the ascetic theory and the ascetic method; for wisdom is born of reason and restraint, not torture of the Physical body. Speaking to a disciple, Buddha referred to the rigorous ascetic practices of the early period of his quest and their fruitlessness in the following words:—

"I used to go about naked, heedless of convention. I had declined to beg my food. I refused food brought to me. Nor did I accept alms. I partook of nourishment once a day, then once in two days, then once in 7 days. I took the vow to keep standing. When I lay down to rest it was with thorns upon my sides. The accumulated dust of years gathered on my body. I was in a woodland Place,—in solitude and seeing anybody I fled from grove to grove, from thicket to thicket, from glen to glen, from hill to hill,—so that he might not know me, nor I him. I lived in a dark and dreadful wood,—a fearsome forest,—burning in summer sun, frozen in winter's cold. I sat naked far in the forest-depths. In a place of graves I laid me down upon a heap of cracking bones. Yet by this method, with all these painful practices I did not attain to Knowledge and to Noble Wisdom I was not come."

The more one studies Hinduism and Buddhism the less do they, at their best, seem to stand apart. Hinduism to its great periods, has been a dynamical religion emphasising the value at once of action and self-reliance. The message of the Buddha, as I have repeatedly submitted, is not a retreat from life but a call to noble living. "Play the man!" said Buddha. And again:—"Come, rouse thyself!"

Colour Inheritance in Rice

We read in Rural India:

Among the workers on rice in India, Hector and Parrell have devoted sufficient time to the study of the inheritance of character in rice. They studied the effects of natural cross-fertilisation resulting from the cultivation, side by side, of a large number of different varieties. In their work on cross-fertilisation both Hector and Parrell realised the difficulty of working with so many different varieties with their respective colour combinations exhibiting in various parts of the plants as different patterns. As a result of successful investigations they have come to definite conclusions on many interesting phenomena. Doctor S. K. Mitra M. Sc. Ph. D. Economic Botanist to the Government of Assam and Messrs S. N.

Gupta and P. N. Ganguli assistants in Botany have been continuing the same work since 1921 and have obtained some definite results which are described in the Memoirs of the Department of Agriculture, Botanical series, Vol. XV No. 4.

As the result of detailed investigations and experiments spread over a long period, the authors have come to the following conclusion. (1) The inheritance of the colour in rice is very complicated. The colour complexes are not fixed in a particular part of any organ. (2) The factor that produces the colour exists in some part of the parent plants either visible or invisible, which effects the expression of colour when suitable factor combinations occur by cross-fertilisation. (3) The factors for purple, pink, brown, yellow, red, black, white and green are independent of each other and so is the actual shading of each one as light or deep colour. (4) Generally, coloured factors are dominant over non-coloured ones. Purple is dominant over green or white red over white, green or yellow over brown, and black over green or yellow.

India and the World

Mr. P. R. Singarachari contributes a paper under the caption "India: Her Function in Economy of Races" in the September issue of the *Humanist* from which we give the extract below:

Now, after a lapse of nearly thirteen hundred years since Harshavardhana, India, under the rule of the British race, is once more one country and is well connected with all the countries of a world wider than ever known or reached. Already India's doctrines are percolating in different directions through several agencies founded by leaders like Raja Ram Mohan Roy, Swami Vivekananda, Dr. Tagore and Dr. Bose. Others there are in the land even now living, like Gandhi, whose merits are not known either because of their nearness to us or because of the political colour which some of their activities seem to have taken. There are many more still, not generally known, but who are all men, good and true in their own ways. Even the Government, on certain occasions, feels compelled to send out India's children as ambassadors of peace to foreign lands. Men are sent to the League of Nations. Persons like the Rt. Hon'ble Srinivasa Sastri are sent as preachers of peace to the different parts of the British Empire. India's Universities also are sending out their professors and scholars to lecture on India's achievements before the cultured bodies of the world.

Thus, even in the 20th century, India has begun to discharge her function in the economy of races, which she discharged in the past. Her work is one of preaching the Absolute; and thereby bringing about an openness of heart, a free and noble intellect, both of which are essential to produce a Brotherhood of Humanity which every man, every community, every race very much desires, but which any one backed by commercial greed or pride of territorial possessions finds difficult to achieve.

Wealth

Dr. E. Asirvatham says in the *Indian Educator* :

From the moral and religious standpoint no one *owns* wealth. He simply *uses* it. It is a truth for which the trustee must render a faithful account to his Maker. For every penny that a man spends upon himself, he must be able to show that it is absolutely necessary for his maximum efficiency as a member of society and that it cannot produce a greater good elsewhere.

Sadhana and Mundane Duties

The following extract from the "Spiritual Talks of Swami Brahmananda" of the Ramkrishna Math, and published in the *Vedanta Keshari* for October, well repays perusal by every social worker :

Disciple :—Maharaj, while engaged in the Relief Work, I have to labour very hard all the day long; I have little or no opportunity to carry on my spiritual practices : I find no time at all ; so I do not feel inclined to do such work.

Swami :—But have you to work like that all through ?

D :—No Sir, for the first few days only.

S :—Then, why do you complain that you find no time ? It is the ordinary worldling who is often heard to grumble in this 'strain—that secular duties stand in the way of spiritual practices. Such flimsy argument, my boy, does not befit you, a Sadhu ; you have the power of Brahmacharya (absolute continence) in you ; you must carry on both spiritual practices and mundane duties simultaneously. My idea is that you do not possess any strong desire at heart for spiritual exercises ; you only like to pass your time in vain works, in fuss and meriment ; and your plea of shortness of time is nothing but a lame excuse. In Relief Operation the first few days may be a very busy time for you and I fully appreciate it ; but this state of things does not continue for long. What do you do then ? Why do you not carry on your Sadhana at that time ? Don't you feel ashamed to complain in this wise ? Fie on thee to grumble !

Those who are really inclined towards Sadhana do perform it under all circumstances ; only they do it more intensely whenever and wherever the opportunity is more favourable. But those who always complain of inconveniences of time and place can never do any progress in their life ; they wonder about like a "vagabond" and spend their precious time in vain."

The Late Maharajah of Mayurbhanj

The *Ravenshaw College Magazine* pays the following well-deserved tribute to the memory of Lt. Purnachandra Bhanja Deo, Maharajah of Mayurbhanj :

Our College is very greatly indebted in various

ways to the House of Mayurbhanj. The munificence of Rajah Krushnachandra Bhanj Deo gave shape to the dream of Mr. Ravenshaw and the College owed its very existence to that act of noble-minded generosity. Maharajah Purnachandra only followed the tradition of his ancestors when he gave more than a lakh of rupees for an electric installation in the College which makes the study of higher courses of Science possible and adds to the comfort and convenience of thousands of students who flock year after year to the only College of Orissa. During the short time that he was on the *Gadi* of Mayurbhanj, he gave away large sums in charity and the fine hall of the Utkal Sahitya Samaj would have remained incomplete if he had not taken the matter in hand.

Maharaja Purnachandra was endowed with all the noble qualities which made his father so great. He was an aristocrat of the right type, calm and dignified and yet approachable to the meanest of his subjects who had any matter which he thought claimed his personal attention. He had set up a Judicial Committee as a final Court of appeal in Mayurbhanj and he was contemplating a legislative chamber where his subjects could have a voice in framing the laws by which they would be governed. He had given local self-government to the people of Baripada who had their own Municipality to manage the affairs of their own town. In this way he endeared himself to everyone who came in touch with him and we are indeed sorry that death claimed him for its own so early in life.

Citrous Fruits

M. Hastings, Director, Physical Culture Food Research Laboratory, U.S.A., advocates the use of citrous fruits in place of Drugs in *Brahmacharya* for October :

In citrous fruits we have a real medicine brewed by air and sunshine instead of in an apothecary shop. Orange juice will prevent or cure the dread disease of scurvy ; lemonade (sweetened lemon juice) is most an excellent remedy for colds ; grape-fruit will prevent or check influenza. Any of these citrous fruits—for they are all similar in nature and effects—form remedial treatments for many ills ; they aid in the digestion of other foods, prevent nausea, build resistance to invading germs, prepare a patient to withstand the shock of ether, even check tooth decay, and serve as skin lotions.

Green Leaves or "Protective Foods"

Dr. H. C. Mankel, M. D., writes in the *Oriental Watchman and Herald of Health* for October :

The green leafy vegetables in their raw state form one of the most important food sources for vitamins and for this reason they are called "protective foods."

The dietary practises in India are very largely of a nature making it impossible to obtain the vitamins necessary for growth and health. This is conspicuously so in Central and Southern India. Likewise the diet of most Europeans in India is defective in these respects and account for much ill health that is usually blamed on climate or hard work.

For convenience in checking your daily dietary I have arranged an outline of vitamins known as A, B, C, D, & E, giving the functions performed by each in maintaining balanced nutrition; the result of a deficiency in quantity, and the principal food sources of each.

These substances are so minute, representing about five to six parts in 10,000, that they are difficult to separate or demonstrate. Their presence or absence from any class of food substance is ascertained mainly from observable effects of that particular food when experimentally fed to animals.

The matter of greatest importance is that many chronic invalids, who find little relief from medical treatment, are such because their food does not provide the full complement of the five essential vitamins. These minute food factors easily occupy a place of first importance in food requirements.

VITAMIN A

This vitamin is very essential to the child. It maintains normal development and resistance to infections in children and adults.

Deficiency of this vitamin in the diet results in eye trouble, retarded growth, loss of weight, lack of interest, susceptibility to infections and respiratory diseases.

Food Source of Vitamin A.—Whole milk, butter cream, cheese, codliver oil, fresh green vegetables, tomatoes, carrots, sweet potatoes, green peas.

VITAMIN B

This vitamin is necessary for the maintenance of life and health at all ages. Deficiency results in loss of appetite, retarded growth, serious digestive and nutritional disorders, diarrhoea and mucous colitis, constipation, beri-beri, neurotic.

Food Source of Vitamin B.—All green vegetable tissues, tomatoes, root-vegetables, fruits, nuts, whole cereals, yeast. Internal organs of animals, but not owls.

VITAMIN C

Deficiency of this vitamin produces pyorrhoea, of teeth, ulcerations of stomach and bowels,

poor digestion, under-nourishment, bleeding from mucous membranes, reddish skin eruptions.

Food Source of Vitamin C.—Lemons, oranges, pomelo, tomatoes, cabbage, lettuce, spinach, green beans, green peas, turnips, sprouted seeds. Internal organs of animals fed on green foods.

VITAMIN D

This vitamin prevents and cures rickets and other forms of mineral malnutrition.

Deficiency in a child's diet results in deformity and bone disease with anemia and undernourishment.

With adults the symptoms are those of acid autointoxication frequently terminating in rheumatism, neurotic, diabetes and Bright's disease.

Food Source of Vitamin D.—Ultra-violet spectral rays. Vitamin D is absorbed by the blood when the skin is exposed to the sun and rays from a quartz mercury vapour generator. Also foods exposed to such rays absorb and retain vitamin D.

It is also found in some specimens of codliver oil, egg yolk and milk, but not always.

The only reliable source is spectral rays.

VITAMIN E

Prevents and relieves sterility in both sexes.

Food Source of Vitamin E.—Lettuce, meat, whole wheat, wheat germ, rolled oats, large quantities of milk, dried alfalfa grass.

Lt. Col. R. McCarrison F. R. C. P., in reporting the results of detailed nutritional study of the various diets in different sections of India, concludes that the best Indian dietary is one which includes whole-wheat, (ata) sprouted gram, milk, milk products, green leafy vegetables, and fresh fruits.

This investigator finds that the whole wheat is of higher nutritive value than whole rice. The difference in food value between these two basic Indian foods is not so much in their protein content as in their vitamin and mineral salt content.

For these reason Col. MacCarrison suggests that every effort be made to increase the cultivation of wheat in India, and to increase its use in adequate combination with the so-called "protective foods"—green vegetables and fruits—as shown in the accompanying vitamin outline.

FOREIGN PERIODICALS

Turkish Women as Pioneers

'A Western Woman Resident in Turkey' gives a glimpse of the many-sided activities of the Turkish people and the emancipated womanhood of Turkey in *International Review of Missions*. Begins the writer:

Turkey to-day is a land of contrasts. In no areas are these contrasts more marked than in the life of its women. On the third anniversary of the proclamation of the Turkish Republic, October 29th, 1926, the Governor of Constantinople gave a ball in the historic building known as the Sublime Porte, and most of those present were Turks. Everything but the place was of the twentieth century. The Turkish women wore Parisian gowns, had bobbed hair and danced the Charleston to jazz played by American Negroes. On the same night, the President of the Republic gave a ball at Angora at which no man was received unless accompanied by a lady. This was to bring Turkish women out of their harems. Outside these ball-room windows ancient, Anatolian ox-carts were squeaking loudly along the dusty road, their oxen led by patient peasant women in baggy trousers and tight-fitting jackets with veils over their heads absolutely untouched by the western world within.

To some this may appear to be 'Europeanization with a vengeance.' But it is instructive to read the record of the Republic—its rapid but steady progress, especially in ameliorating the conditions of the Turkish women.

On October 29th, 1923, the Turkish Republic was proclaimed. Then began a series of amazing transformations benefiting women even more than men. The Koranic law, the Sheriah, proved too antiquated to direct a modern state. After vainly trying to reform it, the Grand National Assembly adopted *in toto* the civil code of Switzerland, the penal code of Italy and the commercial code of Germany. These went into effect October 1st, 1926.

The civil code abolishes polygamy, already out of favour in Turkey except among the peasants, where a man needs many women to work in his fields. Turkish girls used to marry men selected by their families, and a bride did not see her husband till he lifted her veil after the marriage. Even at the solemn religious ceremony, the *nigva* bride and groom were not present, being represented by two proxies who took the vows for them. No women could attend the *nigva*. At the *duyun*, or wedding reception, men and women were in separate rooms. A man could divorce his wife by

merely saying three times, 'I divorce you.' She had no redress. The new code prescribes a simple civil marriage and gives equal divorce rights to husband and wife. Divorce may be granted only after a period of three months. Under the new regime there is social freedom among young people and love matches are frequent.

A powerful factor in bringing about these legal reforms was a women's organization in Constantinople, "The Society for the Defence of the Rights of Women." Delegations of these Turkish women the most enlightened in the country, visited Angora and brought such pressure to bear on the Government that a number of important reforms were made even before the new code was adopted.

The Government has greatly encouraged women to come out of their seclusion and to mix with men. Harem curtains keeping women apart in trams, boats and other public places have been removed. In large cities most women have discarded the *charshof*, replacing it by modern dress and a veil like a toque, wound daintily around the head but never over the face. Some wear hats. The changes are coming far more slowly in interior towns, depending on local conditions. Home life also is being influenced and improved by the new education. Women study western books and magazines on home-making. Much credit is due to Turkish women for having been able to adapt themselves to the rapid transformation with dignity and energy, without indulging in much excess. Many of them feel their new responsibility and opportunity to work for their country. They have a number of welfare societies doing useful work. The Red Crescent is now carrying on industrial work and teaching poor girls to copy the beautiful old Turkish embroideries. The Green Crescent, largely composed of women, is working for temperance. Other organizations maintain baby clinics and care for orphan children in homes and orphanages.

The most encouraging indication of the development of women is the widespread interest in education. The Government, realizing that the lower schools are entirely inadequate in number and methods, has increased and improved its normal schools, especially for girls. Normal students pay no tuition fees, but must serve the Government for a term of years after graduation.

The Government has employed for the last three years an American teacher of household arts in a girls' lycee and in the Stamboul Normal School. This is a new and important subject in Turkey. The Stamboul University, entirely Turkish, now occupying the large building formerly used by the Ministry of War, has opened all its courses to women. The faculties most popular among women are medicine and law. In the medical school alone are enrolled four hundred and

fifty women, thirty of whom graduated this year. Medical graduates are required like teachers to practise for a few years in needy interior towns. Some Turkish girls have gone to Europe and America for further study; a few have made successful lecture tours in western lands.

There is more demand for higher education of the girls in India than before. But, we are afraid, few of them go in for medical education, though perhaps it is more imperative for them to get it. Again the health of the school-going girl has been a matter of great concern to all of our advocates of female education. Turkey has not neglected it:

In addition to many classes in physical training the department of health education conducts special normal courses for leaders who teach gymnastic and healthful recreation in the local schools and orphanages. This teaching, new in Turkey, has been so successful that the Minister of Education has secured Swedish teachers to give physical training to men and women students in the government normal schools. At the Y.W.C.A. summer camp on the Sea of Marmora hundreds of girls have discovered the joys of outdoor life and learned to love nature. Swimming and life-saving play an important part. Last summer three camp girls, one a Turk, rescued a man whose boat had capsized and who could not swim. Four girls—a Turk, a Greek and two Armenians—swam the Bosphorus, an unheard of feat for girls of Turkey.

Let us not fight shy of the word 'Europeanization' if that implies such healthy enlightenment.

Christianity to End Racial Hatred

At the Jerusalem Conference Christians the world over flocked to discuss among others the questions of racial hatred, industrial problems, rights of minorities, etc. Mr. Samuel Gay Inman in giving on account of the proceedings in the pages of the *Current History* holds up a mirror to the face of Christianity as he says:

"The World War was fought by so-called Christian nations, who were sending missionaries to so-called heathen nations. These same 'Christian nations' often shipped their munitions and fire-water on the same boat on which they sent their missionaries. In this very exploitation of the weaker peoples they appeared at times to be using the missionaries in programs of peaceful penetration.

"It was evident at the beginning of the conference that the old attitude of superiority of the West over the East, the regarding of Nordic civilization and the Christian religion as one and the same, was not acceptable. Prof. R. H. Tawney of Department of Economics of London

University said on the first day that he could not share the complacency of those who talk about all the good things we have to offer to backward peoples when we could not point out a single country in Europe where a real Christian civilization exists. He added that we are trying the impossible in offering to save the individual, yet leaving the social structure pagan. Bishop Francis J. M. Connell of the United States admitted that he came from a nation which is in some respects pagan, which subscribes to the doctrine of militarism and has given itself over to the pursuit of wealth. The report of the Committee on Industrial Problems declared.

"We acknowledge with shame and regret that the churches both in Europe and America, and the Missionary enterprise itself, coming as it does out of an economic order dominated almost entirely by the profit motive, have not been sufficiently sensitive of these aspects of the Christian message as to mitigate the evils advancing industrialization has brought in its train, and we believe that our failure in this respect has been a positive hindrance—perhaps the gravest of such hindrances—to the power and extension of missionary enterprise."

The Christian representatives of the depressed nationalities of the world, we read, openly aired their grievances against the Christian Western nations:

"Britishers and Indians, North Americans and Filipinos, Japanese and Koreans, African and American negroes with Southern whites, were among these groups which worked out special ways for the Christian forces to lead in abolishing hatreds and rivalries existent between these groups. The Philippine delegation invited the North American Christians to send a commission to the islands to study the growing prejudice against the United States because of the independence question, since, as Dean Bocobo of the National University said: 'Racial conflict between America and my country has made the Philippine islands one of the sorest spots in the world.'

"The British were told that revolution was bound to come in India unless conditions were changed. The Koreans pointed out to the Japanese delegates that out of eight heads of departments in the Korean Government seven were Japanese, and out of 18,454 government employees only 7,000 are Koreans. The Chinese delegates told their Western friends that exploitations by Foreign Powers in China are such as to make it impossible for us to revive ourselves until the death-grip of foreign imperialism upon the throat of the nation is removed. A South African negro pointed out how unchristian it was for a Great Power to foist on a country, where eight-ninth of the natives live in rural communities, a law providing that 88 per cent. of the land is for the foreigners and 12 per cent. for the natives. An Argentine delegate told of how certain interests of the United States brought economic pressure to bear on his Church because of its protest against the intervention of the United States in Nicaragua.

Man and His Mind

Dr. Sigmund Freud, much hated and much worshipped, arrests contemporary thought. In a sober discussion of his latest work *The Future of an Illusion*, *The Japan Weekly Chronicle* gives an instructive explanation and estimate of his ideas and theories in the following:

At the age of seventy-two Dr. Sigmund Freud is following with as great a zest as ever the problem of the human mind. His hypotheses are open to a great deal of dispute. His interpretation of dreams seems to many who have studied the subject one of the most absurd and unscientific ventures ever undertaken; and as regards the "libido," the "censor" and other technicalities of the Freudian method some of his closest associates arrive at different interpretations. Indeed, not only do Jung and Adler each have their own distinct schools, but there is a tendency for each psychoanalyst to branch out for himself in new discoveries. That in itself is rather encouraging except for one thing while it indicates independence of mind, which is the most valuable thing in scientific investigation, it also suggests that there is a great deal of hypothesis and not too much fact. Hypotheses are not always acceptable because they embrace a large number of facts: sometimes their comprehensiveness arises from their looseness of structure and vagueness of content. It was perhaps inevitable that since Freud founded so much in the human mind which had come down from remote periods, he should discover confirmation of his theories in the beliefs and practices of primitive people, and his *Totem and Tabu* marked a new phase not only in psychology but also in anthropology. Indeed, it has had a somewhat disastrous effect on anthropology, suggesting to sketchy investigators easy explanations for all manner of things. The fundamental error of seeking psychoanalytic confirmations in the doings of primitive people seems to be in the fact that these primitives are, after all, very much like ourselves and are by no means nosophisticated, while the conditions to which Freud refers the dark places in our minds were those of infinitely long ago.

In his latest work Dr. Freud discusses our cultural bonds and the possibility of dispensing with them. To many readers of psychoanalytic literature it must have seemed as though the Freudian theory was that all evils arise from the repression of natural instinct, and there has been a tendency, largely assisted by this literature, to discover in every kind of consciousness a laudable self-realisation and self-expression. The task of the psychoanalyst, of course, lies in a different direction that of explanation rather than encouragement to express instincts instead of repressing them; though many people who have tried to understand the theory have been some what mystified as to how a neurotic patient could gain comfort and consolation from the explanation that his distress of mind was merely the result of a suppressed desire to murder his father. Communal life requires a great deal of suppression of instinct, and Freud points out that it is remarkable that, little as men are able to exist in isolation, they should yet feel as a heavy burden the sacrifices that culture or civilisation expects of them—such

a burden that every individual is virtually an enemy of culture, which is nevertheless ostensibly an object of universal human concern. Culture must be defended against the individual, and its organisation, its institutions and its laws, are all directed to this end; they aim not only at establishing a certain distribution of property, but also at maintaining it, in fact, they must protect against the hostile impulses of mankind everything that contributes to the conquest of nature and the production of wealth.

Such a description of civilisation and its obligations indicates a rationally conservative attitude of mind, and would suggest to any ardent Communist some doubts of the qualifications of Freud as a teacher. He goes on to discuss religion as the fulfilment of a human need.

Next Quarter Century in Africa.

We read in *The New Republic* (Sept. 5)

Dr. R. L. Buell, of the Foreign Policy Association of the United States, is one of the world's chief authorities on the treatment of the natives of Africa by the European powers. Speaking the other day at the Williamstown Institute of Politics, he declared that the next quarter-century will see in that continent either "a great inter-racial war or a great experiment in inter-racial cooperation." He described the bad effects which European exploitation has had upon the natives in the past. Homes have been broken up, disease increased, and virtual anarchy created by the policy of moving large bodies of men away from their native villages to work. Death rates have run as high as 50 or 100 per 1,000 per annum, as compared to a normal rate of 10 or 12. In parts of Africa the native population is declining. On the other hand, he sees hope for the future in the new policy of some of the powers, which are beginning to foster education and sanitation, are restoring the natives to their homes and seeking to develop appropriate industrial occupations for them. The hope for the future lies in creating small farms, where the natives can stay on their own land and live in their own way. The record of Europe in Africa has been about as black as it could be, and it is cheering to know that there are even glimmers of something better in sight.

The Right of Self-Defence

The Inquirer informs us under the above caption:

Professor H. Darnley Naylor has drawn attention in *The Manchester Guardian* to one or two points that should be taken into consideration in connection with the abolition of war. Nations, for instance, in reserving the inalienable right of self-defence and of judging for themselves when self-defence is justifiable, are claiming privileges which are not permitted to the ordinary citizen, *i. e.* there is no "right" of self-defence if the police are at hand; and, in the absence of the police, the defender must justify his action before a court. Now, if the law were

fifty women, thirty of whom graduated this year. Medical graduates are required like teachers to practise for a few years in needy interior towns. Some Turkish girls have gone to Europe and America for further study; a few have made successful lecture tours in western lands.

There is more demand for higher education of the girls in India than before. But, we are afraid, few of them go in for medical education, though perhaps it is more imperative for them to get it. Again the health of the school-going girl has been a matter of great concern to all of our advocates of female education. Turkey has not neglected it:

In addition to many classes in physical training the department of health education conducts special normal courses for leaders who teach gymnastic and healthful recreation in the local schools and orphanages. This teaching, new in Turkey, has been so successful that the Minister of Education has secured Swedish teachers to give physical training to men and women students in the government normal schools. At the Y.W.C.A. summer camp on the Sea of Marmora hundreds of girls have discovered the joys of outdoor life and learned to love nature. Swimming and life-saving play an important part. Last summer three camp girls, one a Turk, rescued a man whose boat had capsized and who could not swim. Four girls—a Turk, a Greek and two Armenians—swam the Bosphorus, an unheard of feat for girls of Turkey.

Let us not fight shy of the word 'Europeanization' if that implies such healthy enlightenment.

Christianity to End Racial Hatred

At the Jerusalem Conference Christians the world over flocked to discuss among others the questions of racial hatred, industrial problems, rights of minorities, etc. Mr. Samuel Gay Inman in giving on account of the proceedings in the pages of the *Current History* holds up a mirror to the face of Christianity as he says:

"The World War was fought by so-called Christian nations, who were sending missionaries to so-called heathen nations. These same 'Christian nations' often shipped their munitions and fire-water on the same boat on which they sent their missionaries. In this very exploitation of the weaker peoples they appeared at times to be using the missionaries in programs of peaceful penetration.

"It was evident at the beginning of the conference that the old attitude of superiority of the West over the East, the regarding of Nordic civilization and the Christian religion as one and the same, was not acceptable. Prof. R. H. Tawney of the Department of Economics of London

University said on the first day that he could not share the complacency of those who talk about all the good things we have to offer to backward peoples when we could not point out a single country in Europe where a real Christian civilization exists. He added that we are trying the impossible in offering to save the individual, yet leaving the social structure pagan. Bishop Francis J. M. Connell of the United States admitted that he came from a nation which is in some respects pagan, which subscribes to the doctrine of militarism and has given itself over to the pursuit of wealth. The report of the Committee on Industrial Problems declared:

"We acknowledge with shame and regret that the churches both in Europe and America, and the Missionary enterprise itself, coming as it does out of an economic order dominated almost entirely by the profit motive, have not been sufficiently sensitive of these aspects of the Christian message as to mitigate the evils advancing industrialization has brought in its train, and we believe that our failure in this respect has been a positive hindrance—perhaps the gravest of such hindrances—to the power and extension of missionary enterprise."

The Christian representatives of the depressed nationalities of the world, we read, openly aired their grievances against the Christian Western nations:

"Britishers and Indians, North Americans and Filipinos, Japanese and Koreans, African and American negroes with Southern whites, were among these groups which worked out special ways for the Christian forces to lead in abolishing hatreds and rivalries existent between these groups. The Philippine delegation invited the North American Christians to send a commission to the islands to study the growing prejudice against the United States because of the independence question, since as Dean Bocobo of the National University said: 'Racial conflict between America and my country has made the Philippine islands one of the sorest spots in the world.'

"The British were told that revolution was bound to come in India unless conditions were changed. The Koreans pointed out to the Japanese delegates that out of eight heads of departments in the Korean Government seven were Japanese, and out of 18,451 government employees only 7,000 are Koreans. The Chinese delegates told their Western friends that exploitations by Foreign Powers in China are such as to make it impossible for us to revive ourselves until the death-grip of foreign imperialism upon the throat of the nation is removed. Man and His Mind

Dr. Sigmund Freud, much hated and much worshipped, arrests contemporary thought. In a sober discussion of his latest work 'The Future of an Illusion,' *The Japan Weekly Chronicle* gives an instructive explanation and estimate of his ideas and theories in the following:

At the age of seventy-two Dr. Sigmund Freud is following with as great a zest as ever the problem of the human mind. His hypotheses are open to a great deal of dispute. His interpretation of dreams seems to many who have studied the subject one of the most absurd and unscientific ventures ever undertaken; and as regards the "libido," the "censor" and other technicalities of the Freudian method some of his closest associates arrive at different interpretations. Indeed, not only do Jung and Adler each have their own distinct schools, but there is a tendency for each psychoanalyst to branch out for himself in new discoveries. That in itself is rather encouraging except for one thing while it indicates independence of mind, which is the most valuable thing in scientific investigation, it also suggests that there is a great deal of hypothesis and not too much fact. Hypotheses are not always acceptable because they embrace a large number of facts; sometimes their comprehensiveness arises from their looseness of structure and vagueness of content. It was perhaps inevitable that since Freud found so much in the human mind which had come down from remote periods, he should discover confirmation of his theories in the beliefs and practices of primitive people, and his *Totem and Tabu* marked a new phase not only in psychology but also in anthropology. Indeed, it has had a somewhat disastrous effect on anthropology, suggesting to sketchy investigators easy explanations for all manner of things. The fundamental error of seeking psychoanalytic confirmations in the doings of primitive people seems to lie in the fact that these primitives are, after all, very much like ourselves and are by no means unsophisticated, while the conditions to which Freud refers the dark places in our minds were those of infinitely long ago.

In his latest work, Dr. Freud discusses our cultural bonds and the possibility of dispensing with them. To many readers of psychoanalytic literature it must have seemed as though the Freudian theory was that all evils arise from the repression of natural instinct, and there has been a tendency, largely assisted by this literature, to discover in every kind of conspicuousness a laudable self-realisation and self-expression. The task of the psychoanalyst, of course, lies in a different direction that of explanation rather than encouragement to express instincts instead of repressing them - though many people who have tried to understand the theory have been some what mystified as to how a neurotic patient could gain comfort and consolation from the explanation that his distress of mind was merely the result of a suppressed desire to murder his father. Communal life requires a great deal of suppression of instinct, and Freud points out that it is remarkable that, little as men are able to exist in isolation, they should yet feel as a heavy burden the sacrifices that culture or civilisation expects of them - such

a burden that every individual is virtually an enemy of culture, which is nevertheless ostensibly an object of universal human concern. Culture must be defended against the individual, and its organisation, its institutions and its laws, are all directed to this end; they aim not only at establishing a certain distribution of property, but also at maintaining it, in fact they must protect against the hostile impulses of mankind everything that contributes to the conquest of nature and the production of wealth.

Such a description of civilisation and its obligations indicates a rationally conservative attitude of mind, and would suggest to any ardent Communist some doubts of the qualifications of Freud as a teacher. He goes on to discuss religion as the fulfilment of a human need.

Next Quarter Century in Africa.

We read in *The New Republic* (Sept. 5.)
